P R E F A C E.

THE following addresses, though spoken at different times, are intentionally connected in subject ; their aim being to set one or two main principles of art in simple light before the general student, and to indicate their practical bearing on modern design. The law which it has been my effort chiefly to illustrate is the dependence of all noble design, in any kind, on the sculpture or painting of Organic Form.

This is the vital law ; lying at the root of all that I have ever tried to teach respecting architecture or any other art. It is also the law most generally disallowed.

I believe this must be so in every subject. We are all of us willing enough to accept dead truths or blunt ones ; which can be fitted harmlessly into spare niches, or shrouded and confined at once out of the way, we holding complacently the cemetery keys, and supposing we have learned something. But a sapling truth, with earth at its root and blossom on its branches ; or a trenchant truth, that can cut its way through bars and sods ; most men, it seems to me, dislike the sight or entertainment of, if by any means such guest or vision may be avoided. And, indeed, this is no wonder ; for one such truth, thoroughly accepted, connects itself strangely with others, and there is no saying what it may lead us to.

And thus the gist of what I have tried to teach about architecture has been throughout denied by my architect readers, even when they thought what I said suggestive in other particulars. “Anything but that. Study Italian Gothic ?—perhaps it would be as well : build with pointed arches ?—there is no objection : use solid stone and well-burnt brick ?—by all means : but—learn to carve or paint organic form ourselves !

How can such a thing be asked? We are above all that. The carvers and painters are our servants—quite subordinate people. They ought to be glad if we leave room for them.”

Well: on that it all turns. For those who will not learn to carve or paint, and think themselves greater men because they cannot, it is wholly wasted time to read any words of mine; in the truest and sternest sense they *can* read no words of mine; for the most familiar I can use—“form,” “proportion,” “beauty,” “curvature,” “colour”—are used in a sense which by no effort I can communicate to such readers; and in no building that I praise, is the thing that I praise it for, visible to them.

And it is the more necessary for me to state this fully; because so-called Gothic or Romanesque buildings are now rising every day around us, which might be supposed by the public more or less to embody the principles of those styles, but which embody not one of them, nor any shadow or fragment of them; but merely serve to caricature the noble buildings of past ages, and to bring their form into dishonour by leaving out their soul.

The following addresses are therefore arranged, as I have just stated, to put this great law, and one or two collateral ones, in less mistakeable light, securing even in this irregular form at least clearness of assertion. For the rest, the question at issue is not one to be decided by argument, but by experiment, which if the reader is disinclined to make, all demonstration must be useless to him.

The lectures are for the most part printed as they were read, mending only obscure sentences here and there. The parts which were trusted to extempore speaking are supplied, as well as I can remember (only with an addition here and there of things I forgot to say), in the words, or at least the kind of words, used at the time; and they contain, at all events, the substance of what I said more accurately than hurried journal reports. I must beg my readers not in general to trust to such, for even in fast speaking I try to use words carefully; and any alteration of expression will sometimes involve a great alteration in meaning. A little while ago I had

to speak of an architectural design, and called it "elegant," meaning, founded on good and well "elected" models; the printed report gave "excellent" design (that is to say, design *excellingly* good), which I did not mean, and should, even in the most hurried speaking, never have said.

The illustrations of the lecture on iron were sketches made too roughly to be engraved, and yet of too elaborate subjects to allow of my drawing them completely. Those now substituted will, however, answer the purpose nearly as well, and are more directly connected with the subjects of the preceding lectures; so that I hope throughout the volume the student will perceive an insistance upon one main truth, nor lose in any minor direction of inquiry the sense of the responsibility which the acceptance of that truth fastens upon him; responsibility for choice, decisive and conclusive, between two modes of study, which involve ultimately the development, or deadening, of every power he possesses. I have tried to hold that choice clearly out to him, and to unveil for him to its farthest the issue of his turning to the right hand or the left. Guides he may find many, and aids many; but all these will be in vain unless he has first recognised the hour and the point of life when the way divides itself, one way leading to the Olive mountains—one to the vale of the Salt Sea. There are few cross roads, that I know of, from one to the other. Let him pause at the parting of THE TWO PATHS.

THE TWO PATHS

BE'NG

LECTURES ON ART, AND ITS APPLICATION TO DECORATION
AND MANUFACTURE DELIVERED IN 1858-9.

THE TWO PATHS.

LECTURE I.

THE DETERIORATIVE POWER OF CONVENTIONAL ART OVER NATIONS.

An Inaugural Lecture, Delivered at the Kensington Museum,¹ January, 1858.

As I passed, last summer, for the first time, through the north of Scotland, it seemed to me that there was a peculiar painfulness in its scenery, caused by the non-manifestation of the powers of human art. I had never travelled in, nor even heard or conceived of such a country before; nor, though I had passed much of my life amidst mountain scenery in the south, was I before aware how much of its charm depended on the little gracefulnesses and tendernesses of human work, which are mingled with the beauty of the Alps, or spared by their desolation. It is true that the art which carves and colours the front of a Swiss cottage is not of any very exalted kind; yet it testifies to the completeness and the delicacy of the faculties of the mountaineer; it is true that the remnants of tower and battlement, which afford footing to the wild vine on the Alpine promontory, form but a

¹ A few introductory words, in which, at the opening of this lecture, I thanked the Chairman (Mr. Cockerell), for his support on the occasion, and asked his pardon for any hasty expressions in my writings, which might have seemed discourteous towards him, or other architects whose general opinions were opposed to mine, may be found by those who care for preambles, not much misreported, in the *Building Chronicle*; with such comments as the genius of that journal was likely to suggest to it.

small part of the great serration of its rocks ; and yet it is just that fragment of their broken outline which gives them their pathetic power, and historical majesty. And this element among the wilds of our own country I found wholly wanting. The Highland cottage is literally a heap of gray stones, choked up, rather than roofed over, with black peat and withered heather ; the only approach to an effort at decoration consists in the placing of the clods of protective peat obliquely on its roof, so as to give a diagonal arrangement of lines, looking somewhat as if the surface had been scored over by a gigantic claymore.

And, at least among the northern hills of Scotland, elements of more ancient architectural interest are equally absent. The solitary peel-house is hardly discernible by the windings of the stream ; the roofless aisle of the priory is lost among the enclosures of the village ; and the capital city of the Highlands, Inverness, placed where it might ennoble one of the sweetest landscapes, and by the shore of one of the loveliest estuaries in the world ;—placed between the crests of the Grampians and the flowing of the Moray Firth, as if it were a jewel clasping the folds of the mountains to the blue zone of the sea,—is only distinguishable from a distance by one architectural feature, and exalts all the surrounding landscape by no other associations than those which can be connected with its modern castellated gaol.

While these conditions of Scottish scenery affected me very painfully, it being the first time in my life that I had been in any country possessing no valuable monuments or examples of art, they also forced me into the consideration of one or two difficult questions respecting the effect of art on the human mind ; and they forced these questions upon me eminently for this reason, that while I was wandering disconsolately among the moors of the Grampians, where there was no art to be found, news of peculiar interest was every day arriving from a country where there was a great deal of art, and art of a delicate kind, to be found. Among the models set before you in this institution, and in the others established throughout the kingdom for the teaching of design, there are, I suppose, none in their

kind more admirable than the decorated works of India. They are, indeed, in all materials capable of colour, wool, marble, or metal, almost inimitable in their delicate application of divided hue, and fine arrangement of fantastic line. Nor is this power of theirs exerted by the people rarely, or without enjoyment; the love of subtle design seems universal in the race, and is developed in every implement that they shape, and every building that they raise; it attaches itself with the same intensity, and with the same success, to the service of superstition, of pleasure or of cruelty; and enriches alike, with one profusion of enchanted iridescence, the dome of the pagoda, the fringe of the girdle, and the edge of the sword.

So then you have, in these two great populations, Indian and Highland—in the races of the jungle and of the moor—two national capacities distinctly and accurately opposed. On the one side you have a race rejoicing in art, and eminently and universally endowed with the gift of it; on the other you have a people careless of art, and apparently incapable of it, their utmost effort hitherto reaching no farther than to the variation of the positions of the bars of colour in square chequers. And we are thus urged naturally to enquire what is the effect on the moral character, in each nation, of this vast difference in their pursuits and apparent capacities? and whether those rude chequers of the tartan, or the exquisitely fancied involutions of the Cashmere, fold habitually over the noblest hearts? We have had our answer. Since the race of man began its course of sin on this earth, nothing has ever been done by it so significative of all bestial, and lower than bestial degradation, as the acts the Indian race in the year that has just passed by. Cruelty as fierce may indeed have been wreaked, and brutality as abominable been practised before, but never under like circumstances; rage of prolonged war, and resentment of prolonged oppression, have made men as cruel before now; and gradual decline into barbarism, where no examples of decency or civilization existed around them, has sunk, before now, isolated populations to the lowest level of possible humanity. But cruelty stretched to its fiercest against the gentle and unoffending, and corruption festered

to its loathsomest in the midst of the witnessing presence of a disciplined civilization,—these we could not have known to be within the practicable compass of human guilt, but for the acts of the Indian mutineer. And, as thus, on the one hand, you have an extreme energy of baseness displayed by these lovers of art; on the other,—as if to put the question into the narrowest compass—you have had an extreme energy of virtue displayed by the despisers of art. Among all the soldiers to whom you owe your victories in the Crimea, and your avenging in the Indies, to none are you bound by closer bonds of gratitude than to the men who have been born and bred among those desolate Highland moors. And thus you have the differences in capacity and circumstance between the two nations, and the differences in result on the moral habits of two nations, put into the most significant—the most palpable—the most brief opposition. Out of the peat cottage come faith, courage, self-sacrifice, purity, and piety, and whatever else is fruitful in the work of Heaven; out of the ivory palace come treachery, cruelty, cowardice, idolatry, bestiality,—whatever else is fruitful in the work of Hell.

But the difficulty does not close here. From one instance, of however great apparent force, it would be wholly unfair to gather any general conclusion—wholly illogical to assert that because we had once found love of art connected with moral baseness, the love of art must be the general root of moral baseness; and equally unfair to assert that, because we had once found neglect of art coincident with nobleness of disposition, neglect of art must be always the source or sign of that nobleness. But if we pass from the Indian peninsula into other countries of the globe; and from our own recent experience, to the records of history, we shall still find one great fact fronting us, in stern universality—namely, the apparent connection of great success in art with subsequent national degradation. You find, in the first place, that the nations which possessed a refined art were always subdued by those who possessed none: you find the Lydian subdued by the Mede; the Athenian by the Spartan; the Greek by the Roman; the Roman by the Goth; the Burgundian by the

Switzer : but you find, beyond this—that even where no attack by any external power has accelerated the catastrophe of the state, the period in which any given people reach their highest power in art is precisely that in which they appear to sign the warrant of their own ruin ; and that, from the moment in which a perfect statue appears in Florence, a perfect picture in Venice, or a perfect fresco in Rome, from that hour forward, probity, industry, and courage seem to be exiled from their walls, and they perish in a sculpturesque paralysis, or a many-coloured corruption.

But even this is not all. As art seems thus, in its delicate form, to be one of the chief promoters of indolence and sensuality,—so, I need hardly remind you, it hitherto has appeared only in energetic manifestation when it was in the service of superstition. The four greatest manifestations of human intellect which founded the four principal kingdoms of art, Egyptian, Babylonian, Greek, and Italian, were developed by the strong excitement of active superstition in the worship of Osiris, Belus, Minerva, and the Queen of Heaven. Therefore, to speak briefly, it may appear very difficult to show that art has ever yet existed in a consistent and thoroughly energetic school, unless it was engaged in the propagation of falsehood, or the encouragement of vice.

And finally, while art has thus shown itself always active in the service of luxury and idolatry, it has also been strongly directed to the exaltation of cruelty. A nation which lives a pastoral and innocent life never decorates the shepherd's staff or the plough-handle, but races who live by depredation and slaughter nearly always bestow exquisite ornaments on the quiver, the helmet, and the spear.

Does it not seem to you, then, on all these three counts, more than questionable whether we are assembled here in Kensington Museum to any good purpose? Might we not justly be looked upon with suspicion and fear, rather than with sympathy, by the innocent and unartistical public? Are we even sure of ourselves? Do we know what we are about? Are we met here as honest people? or are we not rather so many Catilines assembled to devise the hasty degradation of

our country, or, like a conclave of midnight witches, to summon and send forth, on new and unexpected missions, the demons of luxury, cruelty, and superstition?

I trust, upon the whole, that it is not so: I am sure that Mr. Redgrave and Mr. Cole do not at all include results of this kind in their conception of the ultimate objects of the institution which owes so much to their strenuous and well-directed exertions. And I have put this painful question before you, only that we may face it thoroughly, and, as I hope, out-face it. If you will give it a little sincere attention this evening, I trust we may find sufficiently good reasons for our work, and proceed to it hereafter, as all good workmen should do, with clear heads, and calm consciences.

To return, then, to the first point of difficulty, the relations between art and mental disposition in India and Scotland. It is quite true that the art of India is delicate and refined. But it has one curious character distinguishing it from all other art of equal merit in design—it *never represents a natural fact*. It either forms its compositions out of meaningless fragments of colour and flowings of line; or if it represents any living creature, it represents that creature under some distorted and monstrous form. To all the facts and forms of nature it wilfully and resolutely opposes itself; it will not draw a man, but an eight-armed monster; it will not draw a flower, but only a spiral or a zigzag.

It thus indicates that the people who practise it are cut off from all possible sources of healthy knowledge or natural delight; that they have wilfully sealed up and put aside the entire volume of the world, and have got nothing to read, nothing to dwell upon, but that imagination of the thoughts of their hearts, of which we are told that "it is only evil continually." Over the whole spectacle of creation they have thrown a veil in which there is no rent. For them no star peeps through the blanket of the dark—for them neither their heaven shines nor their mountains rise—for them the flowers do not blossom—for them the creatures of field and forest do not live. They lie bound in the dungeon of their own corruption, encompassed only by doleful phantoms, or by spectral vacancy.

Need I remind you what an exact reverse of this condition of mind, as respects the observance of nature, is presented by the people whom we have just been led to contemplate in contrast with the Indian race? You will find upon reflection, that all the highest points of the Scottish character are connected with impressions derived straight from the natural scenery of their country. No nation has ever before shown, in the general tone of its language—in the general current of its literature—so constant a habit of hallowing its passions and confirming its principles by direct association with the charm, or power, of nature. The writings of Scott and Burns—and yet more, of the far greater poets than Burns who gave Scotland her traditional ballads,—furnish you in every stanza—almost in every line—with examples of this association of natural scenery with the passions;* but an instance of its farther connection with moral principle struck me forcibly just at the time when I was most lamenting the absence of art among the people. In one of the loneliest districts of Scotland, where the peat cottages are darkest, just at the western foot of that great mass of the Grampians which encircles the sources of the Spey and the Dee, the main road which traverses the chain winds round the foot of a broken rock called Crag, or Craig Ellachie. There is nothing remarkable in either its height or form; it is darkened with a few scattered pines, and touched along its summit with a flush of heather; but it constitutes a kind of headland, or leading promontory, in the group of hills to which it belongs—a sort of initial let-

* The great poets of Scotland, like the great poets of all other countries, never write dissolutely, either in matter or method; but with stern and measured meaning in every syllable. Here's a bit of first-rate work for example:

“Tweed said to Till,
 ‘What gars ye rin sae still?’
 Till said to Tweed,
 ‘Though ye rin wi’ speed,
 And I rin slaw,
 Whar ye droon ae man,
 I droon twa.’”

ter of the mountains ; and thus stands in the mind of the inhabitants of the district, the Clan Grant, for a type of their country, and of the influence of that country upon themselves. Their sense of this is beautifully indicated in the war-cry of the clan, "Stand fast, Craig Ellachie." You may think long over those few words without exhausting the deep wells of feeling and thought contained in them—the love of the native land, the assurance of their faithfulness to it ; the subdued and gentle assertion of indomitable courage—I *may* need to be told to stand, but, if I do, Craig Ellachie does. You could not but have felt, had you passed beneath it at the time when so many of England's dearest children were being defended by the strength of heart of men born at its foot, how often among the delicate Indian palaces, whose marble was pallid with horror, and whose vermilion was darkened with blood, the remembrance of its rough grey rocks and purple heaths must have risen before the sight of the Highland soldier ; how often the hailing of the shot and the shriek of battle would pass away from his hearing, and leave only the whisper of the old pine branches—"Stand fast, Craig Ellachie !"

You have, in these two nations, seen in direct opposition the effects on moral sentiment of art without nature, and of nature without art. And you see enough to justify you in suspecting—while, if you choose to investigate the subject more deeply and with other examples, you will find enough to justify you in *concluding*—that art, followed as such, and for its own sake, irrespective of the interpretation of nature by it, is destructive of whatever is best and noblest in humanity ; but that nature, however simply observed, or imperfectly known, is, in the degree of the affection felt for it, protective and helpful to all that is noblest in humanity.

You might then conclude farther, that art, so far as it was devoted to the record or the interpretation of nature, would be helpful and ennobling also.

And you would conclude this with perfect truth. Let me repeat the assertion distinctly and solemnly, as the first that I am permitted to make in this building, devoted in a way so

new and so admirable to the service of the art-students of England—Wherever art is practised for its own sake, and the delight of the workman is in what he *does* and *produces*, instead of what he *interprets* or *exhibits*,—there art has an influence of the most fatal kind on brain and heart, and it issues, if long so pursued, in the *destruction both of intellectual power and moral principal*; whereas art, devoted humbly and self-forgetfully to the clear statement and record of the facts of the universe, is always helpful and beneficent to mankind, full of comfort, strength, and salvation.

Now, when you were once well assured of this, you might logically infer another thing, namely, that when Art was occupied in the function in which she was serviceable, she would herself be strengthened by the service, and when she was doing what Providence without doubt intended her to do, she would gain in vitality and dignity just as she advanced in usefulness. On the other hand, you might gather, that when her agency was distorted to the deception or degradation of mankind, she would herself be equally misled and degraded—that she would be checked in advance, or precipitated in decline.

And this is the truth also; and holding this clue you will easily and justly interpret the phenomena of history. So long as Art is steady in the contemplation and exhibition of natural facts, so long she herself lives and grows; and in her own life and growth partly implies, partly secures, that of the nation in the midst of which she is practised. But a time has always hitherto come, in which, having thus reached a singular perfection, she begins to contemplate that perfection, and to imitate it, and deduce rules and forms from it; and thus to forget her duty and ministry as the interpreter and discoverer of Truth. And in the very instant when this diversion of her purpose and forgetfulness of her function take place—forgetfulness generally coincident with her apparent perfection—in that instant, I say, begins her actual catastrophe; and by her own fall—so far as she has influence—she accelerates the ruin of the nation by which she is practised.

The study, however, of the effect of art on the mind of na-

tions is one rather for the historian than for us ; at all events it is one for the discussion of which we have no more time this evening. But I will ask your patience with me while I try to illustrate, in some further particulars, the dependence of the healthy state and power of art itself upon the exercise of its appointed function in the interpretation of fact.

You observe that I always say *interpretation*, never *imitation*. My reason for so doing is, first, that good art rarely imitates ; it usually only describes or explains. But my second and chief reason is that good art always consists of two things : First, the observation of fact ; secondly, the manifesting of human design and authority in the way that fact is told. Great and good art must unite the two ; it cannot exist for a moment but in their unity ; it consists of the two as essentially as water consists of oxygen and hydrogen, or marble of lime and carbonic acid.

Let us inquire a little into the nature of each of the elements. The first element, we say, is the love of Nature, leading to the effort to observe and report her truly. And this is the first and leading element. Review for yourselves the history of art, and you will find this to be a manifest certainty, that *no great school ever yet existed which had not for primal aim the representation of some natural fact as truly as possible*. There have only yet appeared in the world three schools of perfect art—schools, that is to say, that did their work as well as it seems possible to do it. These are the Athenian,* Florentine, and Venetian. The Athenian proposed to itself the perfect representation of the form of the human body. It strove to do that as well as it could ; it did that as well as it can be done ; and all its greatness was founded upon and involved in that single and honest effort. The Florentine school proposed to itself the perfect expression of human emotion—the showing of the effects of passion in the human face and gesture. I call this the Florentine school, because, whether you take Raphael for the culminating master of expressional art in Italy, or Leonardo, or Michael Angelo, you will find that the

* See below, the farther notice of the real spirit of Greek work, in the address at Bradford.

whole energy of the national effort which produced those masters had its root in Florence ; not at Urbino or Milan. I say, then, this Florentine or leading Italian school proposed to itself human expression for its aim in natural truth ; it strove to do that as well as it could—did it as well as it can be done—and all its greatness is rooted in that single and honest effort. Thirdly, the Venetian school propose the representation of the effect of colour and shade on all things ; chiefly on the human form. It tried to do that as well as it could—did it as well as it can be done—and all its greatness is founded on that single and honest effort.

Pray, do not leave this room without a perfectly clear holding of these three ideas. You may try them, and toss them about afterwards, as much as you like, to see if they'll bear shaking ; but do let me put them well and plainly into your possession. Attach them to three works of art which you all have either seen or continually heard of. There's the (so-called) "Theseus" of the Elgin marbles. That represents the whole end and aim of the Athenian school—the natural form of the human body. All their conventional architecture—their graceful shaping and painting of pottery—whatsoever other art they practised—was dependent for its greatness on this sheet-anchor of central aim : true shape of living man. Then take, for your type of the Italian school, Raphael's "Disputa del Sacramento ;" that will be an accepted type by everybody, and will involve no possibly questionable points : the Germans will admit it ; the English academicians will admit it ; and the English purists and pre-Raphaelites will admit it. Well, there you have the truth of human expression proposed as an aim. That is the way people look when they feel this or that—when they have this or that other mental character : are they devotional, thoughtful, affectionate, indignant, or inspired ? are they prophets, saints, priests, or kings ? then—whatsoever is truly thoughtful, affectionate, prophetic, priestly, kingly—that the Florentine school tried to discern, and show : that they have discerned and shown ; and all their greatness is first fastened in their aim at this central truth—the open expression of the living human soul.

Lastly, take Veronese's "Marriage in Cana" in the Louvre. There you have the most perfect representation possible of colour, and light, and shade, as they affect the external aspect of the human form, and its immediate accessories, architecture, furniture, and dress. This external aspect of noblest nature was the first aim of the Venetians, and all their greatness depended on their resolution to achieve, and their patience in achieving it.

Here, then, are the three greatest schools of the former world exemplified for you in three well-known works. The Phidian "Theseus" represents the Greek school pursuing truth of form; the "Disputa" of Raphael, the Florentine school pursuing truth of mental expression; the "Marriage in Cana," the Venetian school pursuing truth of colour and light. But do not suppose that the law which I am stating to you—the great law of art-life—can only be seen in these, the most powerful of all art schools. It is just as manifest in each and every school that ever has had life in it at all. Wheresoever the search after truth begins, there life begins; wheresoever that search ceases, there life ceases. As long as a school of art holds any chain of natural facts, trying to discover more of them and express them better daily, it may play hither and thither as it likes on this side of the chain or that; it may design grotesques and conventionalisms, build the simplest buildings, serve the most practical utilities, yet all it does will be gloriously designed and gloriously done; but let it once quit hold of the chain of natural fact, cease to pursue that as the clue to its work; let it propose to itself any other end than preaching this living word, and think first of showing its own skill or its own fancy, and from that hour its fall is precipitate—its destruction sure; nothing that it does or designs will ever have life or loveliness in it more; its hour has come, and there is no work, nor device, nor knowledge, nor wisdom in the grave whither it goeth.

Let us take for example that school of art over which many of you would perhaps think this law had but little power—the school of Gothic architecture. Many of us may have been in the habit of thinking of that school rather as of one of

forms than of facts—a school of pinnacles, and buttresses, and conventional mouldings, and disguise of nature by monstrous imaginings—not a school of truth at all. I think I shall be able, even in the little time we have to-night, to show that this is not so ; and that our great law holds just as good at Amiens and Salisbury, as it does at Athens and Florence.

I will go back then first to the very beginnings of Gothic art, and before you, the students of Kensington, as an impanelled jury, I will bring two examples of the barbarism out of which Gothic art emerges, approximately contemporary in date and parallel in executive skill ; but, the one, a barbarism that did not get on, and could not get on ; the other, a barbarism that could get on, and did get on ; and you, the impanelled jury, shall judge what is the essential difference between the two barbarisms, and decide for yourselves what is the seed of life in the one, and the sign of death in the other.

The first,—that which has in it the sign of death,—furnishes us at the same time with an illustration far too interesting to be passed by, of certain principles much depended on by our common modern designers. Taking up one of our architectural publications the other day, and opening it at random, I chanced upon this piece of information, put in rather curious English ; but you shall have it as it stands—

“Aristotle asserts, that the greatest species of the beautiful are Order, Symmetry, and the Definite.”

I should tell you, however, that this statement is not given as authoritative ; it is one example of various Architectural teachings, given in a report in the *Building Chronicle* for May, 1857, of a lecture on Proportion ; in which the only thing the lecturer appears to have proved was that,—

“The system of dividing the diameter of the shaft of a column into parts for copying the ancient architectural remains of Greece and Rome, adopted by architects from Vitruvius (circa B.C. 25) to the present period, as a method for producing ancient architecture, is *entirely useless*, for the several parts of Grecian architecture cannot be reduced or subdivided by this system ; neither does it apply to the architecture of Rome.

Still, as far as I can make it out, the lecture appears to have been one of those of which you will just at present hear so many, the protests of architects who have no knowledge of sculpture—or of any other mode of expressing natural beauty—*against* natural beauty; and their endeavour to substitute mathematical proportions for the knowledge of life they do not possess, and the representation of life of which they are incapable. Now, this substitution of obedience to

mathematical law for sympathy with observed life, is the first characteristic of the hopeless work of all ages; as such, you will find it eminently manifested in the specimen I have to give you of the hopeless Gothic barbarism; the barbarism from which nothing could emerge—for which no future was possible but extinction. The Aristotelian principles of the Beautiful are, you remember, Order, Symmetry, and the Definite. Here

you have the three, in perfection, applied to the ideal of an angel, in a psalter of the eighth century, existing in the library of St. John's College, Cambridge.*

Now, you see the characteristics of this utterly dead school are, first the wilful closing of its eyes to natural facts;—for, however ignorant a person may be, he need only look at a human being to see that it has a mouth as well as eyes; and secondly, the endeavour to adorn or idealize natural fact according to its own notions: it puts red spots in the middle of the hands, and sharpens the thumbs, thinking to improve them. Here you have the most pure type possible of the principles of idealism in all ages: whenever people don't look at Nature, they always think they can improve her. You will also admire, doubtless, the exquisite result of the application of our great modern architectural principle of beauty—symmetry, or equal balance of part by part; you see even the eyes

* I copy this woodcut from Westwood's "Palæographia Sacra."

are made symmetrical—entirely round, instead of irregular, oval; and the iris is set properly in the middle, instead of—as nature has absurdly put it—rather under the upper lid. You will also observe the “principle of the pyramid” in the general arrangement of the figure, and the value of “series” in the placing of dots.

From this dead barbarism we pass to living barbarism—to work done by hands quite as rude, if not ruder, and by minds as uninformed; and yet work which in every line of it is prophetic of power, and has in it the sure dawn of day. You have often heard it said that Giotto was the founder of art in Italy. He was not: neither he, nor Giunta Pisano, nor Niccolò Pisano. They all laid strong hands to the work, and brought it first into aspect above ground; but the foundation had been laid for them by the builders of the Lombardic churches in the valleys of the Adda and the Arno. It is in the sculpture of the round arched churches of North Italy, bearing disputable dates, ranging from the eighth to the twelfth century, that you will find the lowest struck roots of the art of Titian and Raphael.* I go, therefore, to the church which is certainly the earliest of these, St. Ambrogio, of Milan, said still to retain some portions of the actual structure from which St. Ambrose excluded Theodosius, and at all events furnishing the most archaic examples of Lombardic sculpture in North Italy. I do not venture to guess their date; they are barbarous enough for any date.

We find the pulpit of this church covered with interlacing patterns, closely resembling those of the manuscript at Cambridge, but among them is figure sculpture of a very different kind. It is wrought with mere incisions in the stone, of which the effect may be tolerably given by single lines in a drawing. Remember, therefore, for a moment—as characteristic of culminating Italian art—Michael Angelo's fresco of the “Temptation of Eve,” in the Sistine chapel, and you will be more interested in seeing the birth of Italian art, illus-

* I have said elsewhere, “the root of *all* art is struck in the thirteenth century.” This is quite true: but of course some of the smallest fibres run lower, as in this instance.

trated by the same subject, from St. Ambrogio, of Milan, the "Serpent beguiling Eve." *

Yet, in that sketch, rude and ludicrous as it is, you have the elements of life in their first form. The people who could do that were sure to get on. For, observe, the workman's whole aim is straight at the facts, as well as he can get them; and not merely at the facts, but at the very heart of the facts. A common workman might have looked at nature for his serpent, but he would have thought only of its scales. But this fellow does not want scales, nor coils; he can do without

them; he wants the serpent's heart—malice and insinuation;—and he has actually got them to some extent. So also a common workman, even in this barbarous stage of art, might have carved Eve's arms and body a good deal better; but this man does not care about arms and body, if he can only get at Eve's mind—show that she is pleased at being flattered, and yet in a state of uncomfortable hesitation. And some look of listening, of complacency, and of embarrassment he has verily got:—note the eyes slightly askance, the lips compressed, and the right hand nervously grasping the left arm: nothing can be declared impossible to the people who could begin thus—the world is open to them, and all that is in it; while, on the

* This cut is ruder than it should be: the incisions in the marble have a lighter effect than these rough black lines; but it is not worth while to do it better.

contrary, nothing is possible to the man who did the symmetrical angel—the world is keyless to him ; he has built a cell for himself in which he must abide, barred up for ever—there is no more hope for him than for a sponge or a madrepora.

I shall not trace from this embryo the progress of Gothic art in Italy, because it is much complicated and involved with traditions of other schools, and because most of the students will be less familiar with its results than with their own northern buildings. So, these two designs indicating Death and Life in the beginnings of mediæval art, we will take an example of the *progress* of that art from our northern work. Now, many of you, doubtless, have been interested by the mass, grandeur, and gloom of Norman architecture, as much as by Gothic traceries ; and when you hear me say that the root of all good work lies in natural facts, you doubtless think instantly of your round arches, with their rude cushion capitals, and of the billet or zigzag work by which they are surrounded, and you cannot see what the knowledge of nature has to do with either the simple plan or the rude mouldings. But all those simple conditions of Norman art are merely the expiring of it towards the extreme north. Do not study Norman architecture in Northumberland, but in Normandy, and then you will find that it is just a peculiarly manly, and practically useful, form of the whole great French school of rounded architecture. And where has that French school its origin ? Wholly in the rich conditions of sculpture, which, rising first out of imitations of the Roman bas-reliefs, covered all the façades of the French early churches with one continuous arabesque of floral or animal life. If you want to study round-arched buildings, do not go to Durham, but go to Poitiers, and there you will see how all the simple decorations which give you so much pleasure even in their isolated application were invented by persons practised in carving men, monsters, wild animals, birds, and flowers, in overwhelming redundancy ; and then trace this architecture forward in central France, and you will find it loses nothing of its richness—it only gains in truth, and therefore in grace, until just at the moment of transition into the pointed style, you have

the consummate type of the sculpture of the school given you in the west front of the Cathedral of Chartres. From that front I have chosen two fragments to illustrate it.*

These statues have been long, and justly, considered as representative of the highest skill of the twelfth or earliest part of the thirteenth century in France; and they indeed possess a dignity and delicate charm, which are for the most part wanting in later works. It is owing partly to real nobleness of feature, but chiefly to the grace, mingled with severity, of the falling lines of excessively *thin* drapery; as well as to a most studied finish in composition, every part of the ornamentation tenderly harmonizing with the rest. So far as their power over certain tones of religious mind is owing to a palpable degree of non-naturalism in them, I do not praise it—the exaggerated thinness of body and stiffness of attitude are faults; but they are noble faults, and give the statues a strange look of forming part of the very building itself, and sustaining it—not like the Greek caryatid, without effort—nor like the Renaissance caryatid, by painful or impossible effort—but as if all that was silent and stern, and withdrawn apart, and stiffened in chill of heart against the terror of earth, had passed into a shape of eternal marble; and thus the Ghost had given, to bear up the pillars of the church on earth, all the patient and expectant nature that it needed no more in heaven. This is the transcendental view of the meaning of those sculptures. I do not dwell upon it. What I do lean upon is their purely naturalistic and vital power. They are all portraits—unknown, most of them, I believe,—but palpably and unmistakably portraits, if not taken from the actual person for whom the statue stands, at all events studied from some living person whose features might fairly represent those of the king or saint intended. Several of them I

* This part of the lecture was illustrated by two drawings, made admirably by Mr. J. T. Laing, with the help of photographs from statues at Chartres. The drawings may be seen at present at the Kensington Museum: but any large photograph of the west front of Chartres will enable the reader to follow what is stated in the lecture, as far as is needful.

suppose to be authentic: there is one of a queen, who has evidently, while she lived, been notable for her bright black eyes. The sculptor has cut the iris deep into the stone, and her dark eyes are still suggested with her smile.

There is another thing I wish you to notice specially in these statues—the way in which the floral moulding is associated with the vertical lines of the figure. You have thus the utmost complexity and richness of curvature set side by side with the pure and delicate parallel lines, and both the characters gain in interest and beauty; but there is deeper significance in the thing than that of mere effect in composition;—significance not intended on the part of the sculptor, but all the more valuable because unintentional. I mean the close association of the beauty of lower nature in animals and flowers, with the beauty of higher nature in human form. You never get this in Greek work. Greek statues are always isolated; blank fields of stone, or depths of shadow, relieving the form of the statue, as the world of lower nature which they despised retired in darkness from their hearts. Here, the clothed figure seems the type of the Christian spirit—in many respects feebler and more contracted—but purer; clothed in its white robes and crown, and with the riches of all creation at its side.

The next step in the change will be set before you in a moment, merely by comparing this statue from the west front of Chartres with that of the Madonna, from the south transept door of Amiens.*

This Madonna, with the sculpture round her, represents the culminating power of Gothic art in the thirteenth century. Sculpture has been gaining continually in the interval; gaining, simply because becoming every day more truthful, more tender, and more suggestive. By the way, the old Douglas motto, "Tender and true," may wisely be taken up again by all of us, for our own, in art no less than in other things. Depend upon it, the first universal characteristic of

* There are many photographs of this door and of its central statue. Its sculpture in the tympanum is farther described in the Fourth Lecture.

all great art is Tenderness, as the second is Truth. I find this more and more every day: an infinitude of tenderness is the chief gift and inheritance of all the truly great men. It is sure to involve a relative intensity of disdain towards base things, and an appearance of sternness and arrogance in the eyes of all hard, stupid, and vulgar people—quite terrific to such, if they are capable of terror, and hateful to them, if they are capable of nothing higher than hatred. Dante's is the great type of this class of mind. I say the *first* inheritance is Tenderness—the *second* Truth, because the Tenderness is in the make of the creature, the Truth in his acquired habits and knowledge; besides, the love comes first in dignity as well as in time, and that is always pure and complete: the truth, at best, imperfect.

To come back to our statue. You will observe that the arrangement of this sculpture is exactly the same as at Chartres—severe falling drapery, set off by rich floral ornament at the side; but the statue is now completely animated: it is no longer fixed as an upright pillar, but bends aside out of its niche, and the floral ornament, instead of being a conventional wreath, is of exquisitely arranged hawthorn. The work, however, as a whole, though perfectly characteristic of the advance of the age in style and purpose, is in some subtler qualities inferior to that of Chartres. The individual sculptor, though trained in a more advanced school, has been himself a man of inferior order of mind compared to the one who worked at Chartres. But I have not time to point out to you the subtler characters by which I know this.

This statue, then, marks the culminating point of Gothic art, because, up to this time, the eyes of its designers had been steadily fixed on natural truth—they had been advancing from flower to flower, from form to form, from face to face,—gaining perpetually in knowledge and veracity—therefore, perpetually in power and in grace. But at this point a fatal change came over their aim. From the statue they now began to turn the attention chiefly to the niche of the statue, and from the floral ornament to the mouldings that enclosed the floral ornament. The first result of this was, however,

though not the grandest, yet the most finished of northern genius. You have, in the earlier Gothic, less wonderful construction, less careful masonry, far less expression of harmony of parts in the balance of the building. Earlier work always has more or less of the character of a good solid wall with irregular holes in it, well carved wherever there is room. But the last phase of good Gothic has no room to spare; it rises as high as it can on narrowest foundation, stands in perfect strength with the least possible substance in its bars; connects niche with niche, and line with line, in an exquisite harmony, from which no stone can be removed, and to which you can add not a pinnacle; and yet introduces in rich, though now more calculated profusion, the living element of its sculpture: sculpture in the quatrefoils—sculpture in the brackets—sculpture in the gargoyles—sculpture in the niches—sculpture in the ridges and hollows of its mouldings,—not a shadow without meaning, and not a light without life.* But with this very perfection of his work came the unhappy pride of the builder in what he had done. As long as he had been merely raising clumsy walls and carving them like a child, in waywardness of fancy, his delight was in the things he thought of as he carved; but when he had once reached this pitch of constructive science, he began to think only how cleverly he could put the stones together. The question was not now with him, What can I represent? but, How high can I build—how wonderfully can I hang this arch in air, or weave this tracery across the clouds? And the catastrophe was instant and irrevocable. Architecture became in France a mere web of waving lines,—in England a mere grating of perpendicular ones. Redundance was substituted for invention, and geometry for passion; the Gothic art became a mere expression of wanton expenditure, and vulgar mathematics; and was swept away, as it then deserved to be swept away, by the severer pride,

* The two *transepts* of Rouen Cathedral illustrate this style. There are plenty of photographs of them. I take this opportunity of repeating what I have several times before stated, for the sake of travellers, that St. Ouen, impressive as it is, is entirely inferior to the transepts of Rouen Cathedral.

and purer learning, of the schools founded on classical traditions.

You cannot now fail to see how, throughout the history of this wonderful art—from its earliest dawn in Lombardy to its last catastrophe in France and England—*sculpture*, founded on love of nature, was the talisman of its existence ; wherever sculpture was practised, architecture arose—wherever that was neglected, architecture expired ; and, believe me, all you students who love this mediæval art, there is no hope of your ever doing any good with it, but on this everlasting principle. Your patriotic associations with it are of no use ; your romantic associations with it—either of chivalry or religion—are of no use ; they are worse than useless, they are false. Gothic is not an art for knights and nobles ; it is an art for the people : it is not an art for churches or sanctuaries ; it is an art for houses and homes : it is not an art for England only, but an art for the world : above all, it is not an art of form or tradition only, but an art of vital practice and perpetual renewal. And whosoever pleads for it as an ancient or a formal thing, and tries to teach it you as an ecclesiastical tradition or a geometrical science, knows nothing of its essence, less than nothing of its power.

Leave, therefore, boldly, though not irreverently, mysticism and symbolism on the one side ; cast away with utter scorn geometry and legalism on the other ; seize hold of God's hand and look full in the face of His creation, and there is nothing He will not enable you to achieve.

Thus, then, you will find—and the more profound and accurate your knowledge of the history of art the more assuredly you will find—that the living power in all the real schools, be they great or small, is love of nature. But do not mistake me by supposing that I mean this law to be all that is necessary to form a school. There needs to be much superadded to it, though there never must be anything superseding it. The main thing which needs to be superadded is the gift of design.

It is always dangerous, and liable to diminish the clearness of impression, to go over much ground in the course of one lecture. But I dare not present you with a maimed view of

this important subject: I dare not put off to another time, when the same persons would not be again assembled, the statement of the great collateral necessity which, as well as the necessity of truth, governs all noble art.

That collateral necessity is *the visible operation of human intellect in the presentation of truth*, the evidence of what is properly called design or plan in the work, no less than of veracity. A looking-glass does not design—it receives and communicates indiscriminately all that passes before it; a painter designs when he chooses some things, refuses others, and arranges all.

This selection and arrangement must have influence over everything that the art is concerned with, great or small—over lines, over colours, and over ideas. Given a certain group of colours, by adding another colour at the side of them, you will either improve the group and render it more delightful, or injure it, and render it discordant and unintelligible. “Design” is the choosing and placing the colour so as to help and enhance all the other colours it is set beside. So of thoughts: in a good composition, every idea is presented in just that order, and with just that force, which will perfectly connect it with all the other thoughts in the work, and will illustrate the others as well as receive illustration from them; so that the entire chain of thoughts offered to the beholder’s mind shall be received by him with as much delight and with as little effort as is possible. And thus you see design, properly so called, is human invention, consulting human capacity. Out of the infinite heap of things around us in the world, it chooses a certain number which it can thoroughly grasp, and presents this group to the spectator in the form best calculated to enable him to grasp it also, and to grasp it with delight.

And accordingly, the capacities of both gatherer and receiver being limited, the object is to make *everything that you offer helpful* and precious. If you give one grain of weight too much, so as to increase fatigue without profit, or bulk without value—that added grain is hurtful; if you put one spot or one syllable out of its proper place, that spot or sylla-

ble will be destructive—how far destructive it is almost impossible to tell : a misplaced touch may sometimes annihilate the labour of hours. Nor are any of us prepared to understand the work of any great master, till we feel this, and feel it as distinctly as we do the value of arrangement in the notes of music. Take any noble musical air, and you find, on examining it, that not one even of the faintest or shortest notes can be removed without destruction to the whole passage in which it occurs ; and that every note in the passage is twenty times more beautiful so introduced, than it would have been if played singly on the instrument. Precisely this degree of arrangement and relation must exist between every touch* and line in a great picture. You may consider the whole as a prolonged musical composition : its parts, as separate airs connected in the story ; its little bits and fragments of colour and line, as separate passages or bars in melodies ; and down to the minutest note of the whole—down to the minutest *touch*,—if there is one that can be spared—that one is doing mischief.

Remember therefore always, you have two characters in which all greatness of art consists:—First, the earnest and intense seizing of natural facts ; then the ordering those facts by strength of human intellect, so as to make them, for all who look upon them, to the utmost serviceable, memorable, and beautiful. And thus great art is nothing else than the type of strong and noble life ; for, as the ignoble person, in his dealings with all that occurs in the world about him, first sees nothing clearly,—looks nothing fairly in the face, and then allows himself to be swept away by the trampling torrent, and unescapable force, of the things that he would not foresee, and could not understand : so the noble person, looking the facts of the world full in the face, and fathoming them with deep faculty, then deals with them in unalarmed intelligence and unhurried strength, and becomes, with his human intellect and will, no unconscious nor insignificant agent, in consummating their good, and restraining their evil.

* Literally. I know how exaggerated this statement sounds ; but I mean it,—every syllable of it.—See Appendix IV.

Thus in human life you have the two fields of rightful toil for ever distinguished, yet for ever associated ; Truth first—plan or design, founded thereon ; so in art, you have the same two fields for ever distinguished, for ever associated ; Truth first—plan, or design, founded thereon.

Now hitherto there is not the least difficulty in the subject ; none of you can look for a moment at any great sculptor or painter without seeing the full bearing of these principles. But a difficulty arises when you come to examine the art of a lower order, concerned with furniture and manufacture, for in that art the element of design enters without, apparently, the element of truth. You have often to obtain beauty and display invention without direct representation of nature. Yet, respecting all these things also, the principle is perfectly simple. If the designer of furniture, of cups and vases, of dress patterns, and the like, exercises himself continually in the imitation of natural form in some leading division of his work ; then, holding by this stem of life, he may pass down into all kinds of merely geometrical or formal design with perfect safety, and with noble results.* Thus Giotto, being primarily a figure painter and sculptor, is, secondarily, the richest of all designers in mere mosaic of coloured bars and triangles ; thus Benvenuto Cellini, being in all the higher branches of metal work a perfect imitator of nature, is in all its lower branches the best designer of curve for lips of cups and handles of vases ; thus Holbein, exercised primarily in the noble art of truthful portraiture, becomes, secondarily, the most exquisite designer of embroideries of robe, and blazouries on wall ; and thus Michael Angelo, exercised primarily in the drawing of body and limb, distributes in the mightiest masses the order of his pillars, and in the loftiest shadow the hollows of his dome. But once quit hold of this living stem, and set yourself to the designing of ornamentation, either in the ignorant play of your own heartless fancy, as the Indian does, or according to received application of heartless laws, as the modern European does, and there is but one word for you—

* This principle, here cursorily stated, is one of the chief subjects of inquiry in the following Lectures.

Death :—death of every healthy faculty, and of every noble intelligence, incapacity of understanding one great work that man has ever done, or of doing anything that it shall be helpful for him to behold. You have cut yourselves off voluntarily, presumptuously, insolently, from the whole teaching of your Maker in His Universe ; you have cut yourselves off from it, not because you were forced to mechanical labour for your bread—not because your fate had appointed you to wear away your life in walled chambers, or dig your life out of dusty furrows ; but, when your whole profession, your whole occupation—all the necessities and chances of your existence, led you straight to the feet of the great Teacher, and thrust you into the treasury of His works ; where you have nothing to do but to live by gazing, and to grow by wondering ;—wilfully you bind up your eyes from the splendour—wilfully bind up your life-blood from its beating—wilfully turn your backs upon all the majesties of Omnipotence—wilfully snatch your hands from all the aids of love ; and what can remain for you, but helplessness and blindness,—except the worse fate than the being blind yourselves—that of becoming Leaders of the blind ?

Do not think that I am speaking under excited feeling, or in any exaggerated terms. I have *written* the words I use, that I may know what I say, and that you, if you choose, may see what I have said. For, indeed, I have set before you tonight, to the best of my power, the sum and substance of the system of art to the promulgation of which I have devoted my life hitherto, and intend to devote what of life may still be spared to me. I have had but one steady aim in all that I have ever tried to teach, namely—to declare that whatever was great in human art was the expression of man's delight in God's work.

And at this time I have endeavoured to prove to you—if you investigate the subject you may more entirely prove to yourselves—that no school ever advanced far which had not the love of natural fact as a primal energy. But it is still more important for you to be assured that the conditions of life and death in the art of nations are also the conditions of

life and death in your own ; and that you have it, each in his power at this very instant, to determine in which direction his steps are turning. It seems almost a terrible thing to tell you, that all here have all the power of knowing at once what hope there is for them as artists ; you would, perhaps, like better that there was some unremovable doubt about the chances of the future—some possibility that you might be advancing, in unconscious ways, towards unexpected successes—some excuse or reason for going about, as students do so often, to this master or the other, asking him if they have genius, and whether they are doing right, and gathering, from his careless or formal replies, vague flashes of encouragement, or fitfulnesses of despair. There is no need for this—no excuse for it. All of you have the trial of yourselves in your own power ; each may undergo at this instant, before his own judgment seat, the ordeal by fire. Ask yourselves what is the leading motive which actuates you while you are at work. I do not ask you what your leading motive is for working—that is a different thing ; you may have families to support—parents to help—brides to win ; you may have all these, or other such sacred and pre-eminent motives, to press the morning's labour and prompt the twilight thought. But when you are fairly *at* the work, what is the motive then which tells upon every touch of it ? If it is the love of that which your work represents—if, being a landscape painter, it is love of hills and trees that moves you—if, being a figure painter, it is love of human beauty and human soul that moves you—if, being a flower or animal painter, it is love, and wonder, and delight in petal and in limb that move you, then the Spirit is upon you, and the earth is yours, and the fulness thereof. But if, on the other hand, it is petty self-complacency in your own skill, trust in precepts and laws, hope for academical or popular approbation, or avarice of wealth,—it is quite possible that by steady industry, or even by fortunate chance, you may win the applause, the position, the fortune, that you desire ;—but one touch of true art you will never lay on canvas or on stone as long as you live.

Make, then, your choice, boldly and consciously, for one

way or other it *must* be made. On the dark and dangerous side are set, the pride which delights in self-contemplation—the indolence which rests in unquestioned forms—the ignorance that despises what is fairest among God's creatures, and the dulness that denies what is marvellous in His working: there is a life of monotony for your own souls, and of misguiding for those of others. And, on the other side, is open to your choice the life of the crowned spirit, moving as a light in creation—discovering always—illuminating always, gaining every hour in strength, yet bowed down every hour into deeper humility; sure of being right in its aim, sure of being irresistible in its progress; happy in what it has securely done—happier in what, day by day, it may as securely hope; happiest at the close of life, when the right hand begins to forget its cunning, to remember, that there never was a touch of the chisel or the pencil it wielded, but has added to the knowledge and quickened the happiness of mankind.

LECTURE II.

THE UNITY OF ART.

Part of an Address delivered at Manchester, 14th March, 1859.*

It is sometimes my pleasant duty to visit other cities, in the hope of being able to encourage their art students; but here it is my pleasanter privilege to come for encouragement my-

* I was prevented, by press of other engagements, from preparing this address with the care I wished; and forced to trust to such expression as I could give at the moment to the points of principal importance; reading, however, the close of the preceding lecture, which I thought contained some truths that would bear repetition. The whole was reported, better than it deserved, by Mr. Pitman, of the *Manchester Courier*, and published nearly verbatim. I have here extracted, from the published report, the facts which I wish especially to enforce; and have a little cleared their expression; its loose and colloquial character I cannot now help, unless by re-writing the whole, which it seems not worth while to do.

self. I do not know when I have received so much as from the report read this evening by Mr. Hammersley, bearing upon a subject which has caused me great anxiety. For I have always felt in my own pursuit of art, and in my endeavors to urge the pursuit of art on others, that while there are many advantages now that never existed before, there are certain grievous difficulties existing, just in the very cause that is giving the stimulus to art—in the immense spread of the manufactures of every country which is now attending vigorously to art. We find that manufacture and art are now going on always together; that where there is no manufacture there is no art. I know how much there is of pretended art where there is no manufacture: there is much in Italy, for instance; no country makes so bold pretence to the production of new art as Italy at this moment; yet no country produces so little. If you glance over the map of Europe, you will find that where the manufactures are strongest, there art also is strongest. And yet I always felt that there was an immense difficulty to be encountered by the students who were in these centres of modern movement. They had to avoid the notion that art and manufacture were in any respect one. Art may be healthily associated with manufacture, and probably in future will always be so; but the student must be strenuously warned against supposing that they can ever be one and the same thing, that art can ever be followed on the principles of manufacture. Each must be followed separately; the one must influence the other, but each must be kept distinctly separate from the other.

It would be well if all students would keep clearly in their mind the real distinction between those words which we use so often, "Manufacture," "Art," and "Fine Art." "MANUFACTURE" is, according to the etymology and right use of the word, "the making of anything by hands,"—directly or indirectly, with or without the help of instruments or machines. Anything proceeding from the hand of man is manufacture; but it must have proceeded from his hand only, acting mechanically, and uninfluenced at the moment by direct intelligence.

Then, secondly, Art is the operation of the hand and the intelligence of man together ; there is an art of making machinery ; there is an art of building ships ; an art of making carriages ; and so on. All these, properly called Arts, but not Fine Arts, are pursuits in which the hand of man and his head go together, working at the same instant.

Then FINE ART is that in which the hand, the head, and the *heart* of man go together.

Recollect this triple group ; it will help you to solve many difficult problems. And remember that though the hand must be at the bottom of everything, it must also go to the top of everything ; for Fine Art must be produced by the hand of man in a much greater and clearer sense than manufacture is. Fine Art must always be produced by the subtlest of all machines, which is the human hand. No machine yet contrived, or hereafter contrivable, will ever equal the fine machinery of the human fingers. Thoroughly perfect art is that which proceeds from the heart, which involves all the noble emotions ; — associates with these the head, yet as inferior to the heart ; and the hand, yet as inferior to the heart and head ; and thus brings out the whole man.

Hence it follows that since Manufacture is simply the operation of the hand of man in producing that which is useful to him, it essentially separates itself from the emotions ; when emotions interfere with machinery they spoil it : machinery must go evenly, without emotion. But the Fine Arts cannot go evenly ; they always must have emotion ruling their mechanism, and until the pupil begins to feel, and until all he does associates itself with the current of his feeling, he is not an artist. But pupils in all the schools in this country are now exposed to all kinds of temptations which blunt their feelings. I constantly feel discouraged in addressing them because I know not how to tell them boldly what they ought to do, when I feel how practically difficult it is for them to do it. There are all sorts of demands made upon them in every direction, and money is to be made in every conceivable way but the right way. If you paint as you ought, and study as you ought, depend upon it the public will take no notice of you

for a long while. If you study wrongly, and try to draw the attention of the public upon you,—supposing you to be clever students—you will get swift reward ; but the reward does not come fast when it is sought wisely ; it is always held aloof for a little while ; the right roads of early life are very quiet ones, hedged in from nearly all help or praise. But the wrong roads are noisy,—vociferous everywhere with all kinds of demand upon you for art which is not properly art at all ; and in the various meetings of modern interests, money is to be made in every way ; but art is to be followed only in *one* way. That is what I want mainly to say to you, or if not to you yourselves (for, from what I have heard from your excellent master to-night, I know you are going on all rightly), you must let me say it through you to others. Our Schools of Art are confused by the various teaching and various interests that are now abroad among us. Everybody is talking about art, and writing about it, and more or less interested in it ; everybody wants art, and there is not art for everybody, and few who talk know what they are talking about ; thus students are led in all variable ways, while there is only one way in which they can make steady progress, for true art is always and will be always one. Whatever changes may be made in the customs of society, whatever new machines we may invent, whatever new manufactures we may supply, Fine Art must remain what it was two thousand years ago, in the days of Phidias ; two thousand years hence, it will be, in all its principles, and in all its great effects upon the mind of man, just the same. Observe this that I say, please, carefully, for I mean it to the very utmost. *There is but one right way of doing any given thing required of an artist ;* there may be a hundred wrong, deficient, or mannered ways, but there is only one complete and right way. Whenever two artists are trying to do the same thing with the same materials, and do it in different ways, one of them is wrong ; he may be charmingly wrong, or impressively wrong—various circumstances in his temper may make his wrong pleasanter than any person's right ; it may for him, under his given limitations of knowledge or temper, be better perhaps that he should err in

his own way than try for anybody else's—but for all that his way is wrong, and it is essential for all masters of schools to know what the right way is, and what right art is, and to see how simple and how single all right art has been, since the beginning of it.

But farther, not only is there but one way of *doing* things rightly, but there is only one way of *seeing* them, and that is, seeing the whole of them, without any choice, or more intense perception of one point than another, owing to our special idiosyncrasies. Thus, when Titian or Tintoret look at a human being, they see at a glance the whole of its nature, outside and in; all that it has of form, of colour, of passion, or of thought; saintliness, and loveliness; fleshly body, and spiritual power; grace, or strength, or softness, or whatsoever other quality, those men will see to the full, and so paint, that, when narrower people come to look at what they have done, every one may, if he chooses, find his own special pleasure in the work. The sensualist will find sensuality in Titian; the thinker will find thought; the saint, sanctity; the colourist, colour; the anatomist, form; and yet the picture will never be a popular one in the full sense, for none of these narrower people will find their special taste so alone consulted, as that the qualities which would ensure their gratification shall be sifted or separated from others; they are checked by the presence of the other qualities which ensure the gratification of other men. Thus, Titian is not soft enough for the sensualist, Correggio suits him better; Titian is not defined enough for the formalist,—Leonardo suits him better; Titian is not pure enough for the religionist,—Raphael suits him better; Titian is not polite enough for the man of the world,—Vandyke suits him better; Titian is not forcible enough for the lovers of the picturesque,—Rembrandt suits him better. So Correggio is popular with a certain set, and Vandyke with a certain set, and Rembrandt with a certain set. All are great men, but of inferior stamp, and therefore Vandyke is popular, and Rembrandt is popular,* but nobody

* And Murillo, of all true painters the narrowest, feeblest, and most superficial, for those reasons the most popular.

cares much at heart about Titian; only there is a strange under-current of everlasting murmur about his name, which means the deep consent of all great men that he is greater than they—the consent of those who, having sat long enough at his feet, have found in that restrained harmony of his strength there are indeed depths of each balanced power more wonderful than all those separate manifestations in inferior painters: that there is a softness more exquisite than Correggio's, a purity loftier than Leonardo's, a force mightier than Rembrandt's, a sanctity more solemn even than Raffaele's.

Do not suppose that in saying this of Titian, I am returning to the old eclectic theories of Bologna; for all those eclectic theories, observe, were based, not upon an endeavour to unite the various characters of nature (which it is possible to do), but the various narrownesses of taste, which it is impossible to do. Rubens is not more vigorous than Titian, but less vigorous; but because he is so narrow-minded as to enjoy vigour only, he refuses to give the other qualities of nature, which would interfere with that vigour and with our perception of it. Again, Rembrandt is not a greater master of *chiaroscuro* than Titian;—he is a less master, but because he is so narrow-minded as to enjoy *chiaroscuro* only, he withdraws from you the splendour of hue which would interfere with this, and gives you only the shadow in which you can at once feel it.

Now all these specialties have their own charm in their own way: and there are times when the particular humour of each man is refreshing to us from its very distinctness; but the effort to add any other qualities to this refreshing one instantly takes away the distinctiveness, and therefore the exact character to be enjoyed in its appeal to a particular humour in us. Our enjoyment arose from a weakness meeting a weakness, from a partiality in the painter fitting to a partiality in us, and giving us sugar when we wanted sugar, and myrrh when we wanted myrrh; but sugar and myrrh are not meat: and when we want meat and bread, we must go to better men.

The eclectic schools endeavoured to unite these opposite partialities and weaknesses. They trained themselves under masters of exaggeration, and tried to unite opposite exaggerations. That was impossible. They did not see that the only possible eclecticism had been already accomplished;—the eclecticism of temperance, which, by the restraint of force, gains higher force; and by the self-denial of delight, gains higher delight. This you will find is ultimately the case with every true and right master; at first, while we are tyros in art, or before we have earnestly studied the man in question, we shall see little in him; or perhaps see, as we think, deficiencies; we shall fancy he is inferior to this man in that, and to the other man in the other; but as we go on studying him we shall find that he has got both that and the other; and both in a far higher sense than the man who seemed to possess those qualities in excess. Thus in Turner's lifetime, when people first looked at him, those who liked rainy weather, said he was not equal to Copley Fielding; but those who looked at Turner long enough found that he could be much more wet than Copley Fielding, when he chose. The people who liked force, said that "Turner was not strong enough for them; he was effeminate; they liked De Wint,—nice strong tone;—or Cox—great, greeny, dark masses of colour—solemn feeling of the freshness and depth of nature;—they liked Cox—Turner was too hot for them." Had they looked long enough they would have found that he had far more force than De Wint, far more freshness than Cox when he chose,—only united with other elements; and that he didn't choose to be cool, if nature had appointed the weather to be hot. The people who liked Prout said "Turner had not firmness of hand—he did not know enough about architecture—he was not picturesque enough." Had they looked at his architecture long, they would have found that it contained subtle picturesquenesses, infinitely more picturesque than anything of Prout's. People who liked Callcott said that "Turner was not correct or pure enough—had no classical taste." Had they looked at Turner long enough they would have found him as severe, when he chose, as the

greater Poussin ;—Callcott, a mere vulgar imitator of other men's high breeding. And so throughout with all thoroughly great men, their strength is not seen at first, precisely because they unite, in due place and measure, every great quality.

Now the question is, whether, as students, we are to study only these mightiest men, who unite all greatness, or whether we are to study the works of inferior men, who present us with the greatness which we particularly like? That question often comes before me when I see a strong idiosyncrasy in a student, and he asks me what he should study. Shall I send him to a true master, who does not present the quality in a prominent way in which that student delights, or send him to a man with whom he has direct sympathy? It is a hard question. For very curious results have sometimes been brought out, especially in late years, not only by students following their own bent, but by their being withdrawn from teaching altogether. I have just named a very great man in his own field—Prout. We all know his drawings, and love them : they have a peculiar character which no other architectural drawings ever possessed, and which no others can possess, because all Prout's subjects are being knocked down or restored. (Prout did not like restored buildings any more than I do.) There will never be any more Prout drawings. Nor could he have been what he was, or expressed with that mysteriously effective touch that peculiar delight in broken and old buildings, unless he had been withdrawn from all high art influence. You know that Prout was born of poor parents—that he was educated down in Cornwall ;—and that, for many years, all the art-teaching he had was his own, or the fishermen's. Under the keels of the fishing-boats, on the sands of our southern coasts, Prout learned all that he needed to learn about art. Entirely by himself, he felt his way to this particular style, and became the painter of pictures which I think we should all regret to lose. It becomes a very difficult question what that man would have been, had he been brought under some entirely wholesome artistic influence. He had immense gifts of composition. I do not

know any man who had more power of invention than Prout, or who had a sublimer instinct in his treatment of things; but being entirely withdrawn from all artistical help, he blunders his way to that short-coming representation, which, by the very reason of its short-coming, has a certain charm we should all be sorry to lose. And therefore I feel embarrassed when a student comes to me, in whom I see a strong instinct of that kind: and cannot tell whether I ought to say to him, "Give up all your studies of old boats, and keep away from the sea-shore, and come up to the Royal Academy in London, and look at nothing but Titian." It is a difficult thing to make up one's mind to say that. However, I believe, on the whole, we may wisely leave such matters in the hands of Providence; that if we have the power of teaching the right to anybody, we should teach them the right; if we have the power of showing them the best thing, we should show them the best thing; there will always, I fear, be enough want of teaching, and enough bad teaching, to bring out very curious erratical results if we want them. So, if we are to teach at all, let us teach the right thing, and ever the right thing. There are many attractive qualities inconsistent with rightness;—do not let us teach them,—let us be content to waive them. There are attractive qualities in Burns, and attractive qualities in Dickens, which neither of those writers would have possessed if the one had been educated, and the other had been studying higher nature than that of cockney London; but those attractive qualities are not such as we should seek in a school of literature. If we want to teach young men a good manner of writing, we should teach it from Shakspeare,—not from Burns; from Walter Scott,—and not from Dickens. And I believe that our schools of painting are at present inefficient in their action, because they have not fixed on this high principle what are the painters to whom to point; nor boldly resolved to point to the best, if determinable. It is becoming a matter of stern necessity that they should give a simple direction to the attention of the student, and that they should say, "This is the mark you are to aim at; and you are not to go about to the print-shops, and peep in, to see

how this engraver does that, and the other engraver does the other, and how a nice bit of character has been caught by a new man, and why this odd picture has caught the popular attention. You are to have nothing to do with all that ; you are not to mind about popular attention just now ; but here is a thing which is eternally right and good : you are to look at that, and see if you cannot do something eternally right and good too."

But suppose you accept this principle : and resolve to look to some great man, Titian, or Turner, or whomsoever it may be, as the model of perfection in art ;—then the question is, since this great man pursued his art in Venice, or in the fields of England, under totally different conditions from those possible to us now—how are you to make your study of him effective here in Manchester ? how bring it down into patterns, and all that you are called upon as operatives to produce ? how make it the means of your livelihood, and associate inferior branches of art with this great art ? That may become a serious doubt to you. You may think there is some other way of producing clever, and pretty, and saleable patterns than going to look at Titian, or any other great man. And that brings me to the question, perhaps the most vexed question of all amongst us just now, between conventional and perfect art. You know that among architects and artists there are, and have been almost always, since art became a subject of much discussion, two parties, one maintaining that nature should be always altered and modified, and that the artist is greater than nature ; they do not maintain, indeed, in words, but they maintain in idea, that the artist is greater than the Divine Maker of these things, and can improve them ; while the other party say that he cannot improve nature, and that nature on the whole should improve him. That is the real meaning of the two parties, the essence of them ; the practical result of their several theories being that the Idealists are always producing more or less formal conditions of art, and the Realists striving to produce in all their art either some image of nature, or record of nature ; these, observe, being quite different things, the image being a resemblance, and the record, something

which will give information about nature, but not necessarily imitate it.*

* * * * *

You may separate these two groups of artists more distinctly in your mind as those who seek for the pleasure of art, in the relations of its colours and lines, without caring to convey any truth with it; and those who seek for the truth first, and then go down from the truth to the pleasure of colour and line. Marking those two bodies distinctly as separate, and thinking over them, you may come to some rather notable conclusions respecting the mental dispositions which are involved in each mode of study. You will find that large masses of the art of the world fall definitely under one or the other of these heads. Observe, pleasure first and truth afterwards, (or not at all,) as with the Arabians and Indians; or, truth first and pleasure afterwards, as with Angelico and all other great European painters. You will find that the art whose end is pleasure only is pre-eminently the gift of cruel and savage nations, cruel in temper, savage in habits and conception; but that the art which is especially dedicated to natural fact always indicates a peculiar gentleness and tenderness of mind, and that all great and successful work of that kind will assuredly be the production of thoughtful, sensitive, earnest, kind men, large in their views of life, and full of various intellectual power. And farther, when you examine the men in whom the gifts of art are variously mingled, or universally mingled, you will discern that the ornamental, or pleasurable power, though it may be possessed by good men, is not in itself an indication of their goodness, but is rather, unless balanced by other faculties, indicative of violence of temper, inclining to cruelty and to irreligion. - On the other hand, so sure as you find any man endowed with a keen and separate faculty of representing natural fact, so surely you will find that man gentle and upright, full of nobleness and breadth of thought. I will give you two instances, the first

* The portion of the lecture here omitted was a recapitulation of that part of the previous one which opposed conventional art to natural art

peculiarly English, and another peculiarly interesting because it occurs among a nation not generally very kind or gentle.

I am inclined to think that, considering all the disadvantages of circumstances and education under which his genius was developed, there was perhaps hardly ever born a man with a more intense and innate gift of insight into nature than our own Sir Joshua Reynolds. Considered as a painter of individuality in the human form and mind, I think him, even as it is, the prince of portrait painters. Titian paints nobler pictures, and Vandyke had nobler subjects, but neither of them entered so subtly as Sir Joshua did into the minor varieties of human heart and temper ; and when you consider that, with a frightful conventionality of social habitude all around him, he yet conceived the simplest types of all feminine and childish loveliness ;—that in a northern climate, and with gray, and white, and black, as the principal colours around him, he yet became a colourist who can be crushed by none, even of the Venetians ;—and that with Dutch painting and Dresden china for the prevailing types of art in the saloons of his day, he threw himself at once at the feet of the great masters of Italy, and arose from their feet to share their throne—I know not that in the whole history of art you can produce another instance of so strong, so unaided, so unerring an instinct for all that was true, pure, and noble.

Now, do you recollect the evidence respecting the character of this man,—the two points of bright peculiar evidence given by the sayings of the two greatest literary men of his day, Johnson and Goldsmith? Johnson, who, as you know, was always Reynolds' attached friend, had but one complaint to make against him, that he hated nobody :—"Reynolds," he said, "you hate no one living ; I like a good hater !" Still more significant is the little touch in Goldsmith's "Retaliation." You recollect how in that poem he describes the various persons who met at one of their dinners at St. James's Coffee-house, each person being described under the name of some appropriate dish. You will often hear the concluding lines about Reynolds quoted—

"He shifted his trumpet," &c ;—

less often, or at least less attentively, the preceding ones, far more important—

“Still born to improve us in every part—
His pencil our faces, his *manners our heart* ;”

and never, the most characteristic touch of all, near the beginning :—

“Our dean shall be venison, just fresh from the plains ;
Our Burke shall be tongue, with a garnish of brains.
To make out the dinner, full certain I am,
That Rich is anchovy, and Reynolds is *lamb*.”

The other painter whom I would give you as an instance of this gentleness is a man of another nation, on the whole I suppose one of the most cruel civilized nations in the world—the Spaniards. They produced but one great painter, only one ; but he among the very greatest of painters, Velasquez. You would not suppose, from looking at Velasquez’ portraits generally, that he was an especially kind or good man ; you perceive a peculiar sternness about them ; for they were as true as steel, and the persons whom he had to paint being not generally kind or good people, they were stern in expression, and Velasquez gave the sternness ; but he had precisely the same intense perception of truth, the same marvellous instinct for the rendering of all natural soul and all natural form that our Reynolds had. Let me, then, read you his character as it is given by Mr. Stirling, of Kier :—

“Certain charges, of what nature we are not informed, brought against him after his death, made it necessary for his executor, Fuensalida, to refute them at a private audience granted to him by the king for that purpose. After listening to the defence of his friend, Philip immediately made answer : ‘I can believe all you say of the excellent disposition of Diego Velasquez.’ Having lived for half his life in courts, he was yet capable both of gratitude and generosity, and in the misfortunes, he could remember the early kindness of Olivares. The friend of the exile of Loeches, it is just to believe that he was also the friend of the all-powerful favourite at

Buenretiro. No mean jealousy ever influenced his conduct to his brother artists; he could afford not only to acknowledge the merits, but to forgive the malice, of his rivals. His character was of *that rare and happy kind, in which high intellectual power is combined with indomitable strength of will, and a winning sweetness of temper*, and which seldom fails to raise the possessor above his fellow-men, making his life a

‘laurelled victory, and smooth success
Be strewed before his feet.’”

I am sometimes accused of trying to make art too moral; yet, observe, I do not say in the least that in order to be a good painter you must be a good man; but I do say that in order to be a good natural painter there must be strong elements of good in the mind, however warped by other parts of the character. There are hundreds of other gifts of painting which are not at all involved with moral conditions, but this one, the perception of nature, is never given but under certain moral conditions. Therefore, now you have it in your choice; here are your two paths for you: it is required of you to produce conventional ornament, and you may approach the task as the Hindoo does, and as the Arab did, without nature at all, with the chance of approximating your disposition somewhat to that of the Hindoos and Arabs; or as Sir Joshua and Velasquez did, with, not the chance, but the certainty, of approximating your disposition, according to the sincerity of your effort—to the disposition of those great and good men.

And do you suppose you will lose anything by approaching your conventional art from this higher side? Not so. I called, with deliberate measurement of my expression, long ago, the decoration of the Alhambra “detestable,” not merely because indicative of base conditions of moral being, but because merely as decorative work, however captivating in some respects, it is wholly wanting in the real, deep, and intense qualities of ornamental art. Noble conventional decoration belongs only to three periods. First, there is the conventional decoration of the Greeks, used in subordination to their

sculpture. There are then the noble conventional decoration of the early Gothic schools, and the noble conventional arabesque of the great Italian schools. All these were reached from above, all reached by stooping from a knowledge of the human form. Depend upon it you will find, as you look more and more into the matter, that good subordinate ornament has ever been rooted in a higher knowledge ; and if you are again to produce anything that is noble, you must have the higher knowledge first, and descend to all lower service ; condescend as much as you like,—condescension never does any man any harm,—but get your noble standing first. So, then, without any scruple, whatever branch of art you may be inclined as a student here to follow,—whatever you are to make your bread by, I say, so far as you have time and power, make yourself first a noble and accomplished artist ; understand at least what noble and accomplished art is, and then you will be able to apply your knowledge to all service whatsoever.

I am now going to ask your permission to name the masters whom I think it would be well if we could agree, in our Schools of Art in England, to consider our leaders. The first and chief I will not myself presume to name ; he shall be distinguished for you by the authority of those two great painters of whom we have just been speaking—Reynolds and Velasquez. You may remember that in your Manchester Art Treasures Exhibition the most impressive things were the works of those two men—nothing told upon the eye so much ; no other pictures retained it with such a persistent power. Now, I have the testimony, first of Reynolds to Velasquez, and then of Velasquez to the man whom I want you to take as the master of all your English schools. The testimony of Reynolds to Velasquez is very striking. I take it from some fragments which have just been published by Mr. William Cotton—precious fragments—of Reynolds' diaries, which I chanced upon luckily as I was coming down here : for I was going to take Velasquez' testimony alone, and then fell upon this testimony of Reynolds to Velasquez, written most fortunately in Reynolds' own hand—you may see the manuscript. “What *we* are all,” said Rey-

nolds, "attempting to do with great labor, *Velasquez does at once.*" Just think what is implied when a man of the enormous power and facility that Reynolds had, says he was "trying to do with great labor" what Velasquez "did at once."

Having thus Reynolds' testimony to Velasquez, I will take Velasquez' testimony to somebody else. You know that Velasquez was sent by Philip of Spain to Italy, to buy pictures for him. He went all over Italy, saw the living artists there, and all their best pictures when freshly painted, so that he had every opportunity of judging; and never was a man so capable of judging. He went to Rome and ordered various works of living artists; and while there, he was one day asked by Salvator Rosa what he thought of Raphael. His reply, and the ensuing conversation, are thus reported by Boschini, in curious Italian verse, which, thus translated by Dr. Donaldson, is quoted in Mr. Stirling's *Life of Velasquez*:—

"The master" [Velasquez] "stiffly bowed his figure tall
And said, 'For Rafael, to speak the truth—
I always was plain-spoken from my youth—
I cannot say I like his works at all.'

"'Well,' said the other" [Salvator], "'if you can run down
So great a man, I really cannot see
What you can find to like in Italy;
To him we all agree to give the crown.'

"Diego answered thus: 'I saw in Venice
The true test of the good and beautiful;
First in my judgment, ever stands that school,
And Titian first of all Italian men is.'

"Tizian ze quel che porta lu bandiera."

Learn that line by heart, and act, at all events for some time to come, upon Velasquez' opinion in that matter. Titian is much the safest master for you. Raphael's power, such as it was, and great as it was, depended wholly upon transcendental characters in his mind; it is "Raphaelesque," properly so called; but Titian's power is simply the power of doing right. Whatever came before Titian, he did wholly as it *ought* to be

done. Do not suppose that now in recommending Titian to you so strongly, and speaking of nobody else to-night, I am retreating in anywise from what some of you may perhaps recollect in my works, the enthusiasm with which I have always spoken of another Venetian painter. There are three Venetians who are never separated in my mind—Titian, Veronese, and Tintoret. They all have their own unequalled gifts, and Tintoret especially has imagination and depth of soul which I think renders him indisputably the greatest *man*; but, equally indisputably, Titian is the greatest painter; and therefore the greatest painter who ever lived. You may be led wrong by Tintoret* in many respects, wrong by Raphael in more; all that you learn from Titian will be right. Then, with Titian, take Leonardo, Rembrandt, and Albert Durer. I name those three masters for this reason: Leonardo has powers of subtle drawing which are peculiarly applicable in many ways to the drawing of fine ornament, and are very useful for all students. Rembrandt and Durer are the only men whose actual work of hand you can have to look at; you can have Rembrandt's etchings, or Durer's engravings actually hung in your schools; and it is a main point for the student to see the real thing, and avoid judging of masters at second-hand. As, however, in obeying this principle, you cannot often have opportunities of studying Venetian painting, it is desirable that you should have a useful standard of colour, and I think it is possible for you to obtain this. I cannot, indeed, without entering upon ground which might involve the hurting the feelings of living artists, state exactly what I believe to be the relative position of various painters in England at present with respect to power of colour. But I may say this, that in the peculiar gifts of colour which will be useful to you as students, there are only one or two of the pre-Raphaelites, and William Hunt, of the old Water Colour Society, who would be safe guides for you; and as quite a safe guide, there is nobody but William Hunt, because the pre-Raphaelites are all more or less affected by enthusiasm and by various morbid conditions of intellect and temper; but old William Hunt—I am sorry to say "old," but

* See Appendix I.—"Right and Wrong."

I say it in a loving way, for every year that has added to his life has added also to his skill—William Hunt is as right as the Venetians, as far as he goes, and what is more, nearly as inimitable as they. And I think if we manage to put in the principal schools of England a little bit of Hunt's work, and make that somewhat of a standard of colour, that we can apply his principles of colouring to subjects of all kinds. Until you have had a work of his long near you ; nay, unless you have been labouring at it, and trying to copy it, you do not know the thoroughly grand qualities that are concentrated in it. Simplicity, and intensity, both of the highest character ;—simplicity of aim, and intensity of power and success, are involved in that man's unpretending labour.

Finally, you cannot believe that I would omit my own favourite, Turner. I fear from the very number of his works left to the nation, that there is a disposition now rising to look upon his vast bequest with some contempt. I beg of you, if in nothing else, to believe me in this, that you cannot further the art of England in any way more distinctly than by giving attention to every fragment that has been left by that man. The time will come when his full power and right place will be acknowledged ; that time will not be for many a day yet : nevertheless, be assured—as far as you are inclined to give the least faith to anything I may say to you, be assured—that you can act for the good of art in England in no better way than by using whatever influence any of you have in any direction to urge the reverent study and yet more reverent preservation of the works of Turner. I do not say “the exhibition” of his works, for we are not altogether ripe for it : they are still too far above us ; uniting, as I was telling you, too many qualities for us yet to feel fully their range and their influence ;—but let us only try to keep them safe from harm, and show thoroughly and conveniently what we show of them at all, and day by day their greatness will dawn upon us more and more, and be the root of a school of art in England, which I do not doubt may be as bright, as just, and as refined as even that of Venice herself. The dominion of the sea seems to have been associated, in past time, with dominion

in the arts also: Athens had them together; Venice had them together; but by so much as our authority over the ocean is wider than theirs over the Ægean or Adriatic, let us strive to make our art more widely beneficent than theirs, though it cannot be more exalted; so working out the fulfilment, in their wakening as well as their warning sense, of those great words of the aged Tintoret:

“SEMPRE SI FA IL MARE MAGGIORE.”

LECTURE III.

MODERN MANUFACTURE AND DESIGN.

A Lecture delivered at Bradford, March, 1859.

It is with a deep sense of necessity for your indulgence that I venture to address you to-night, or that I venture at any time to address the pupils of schools of design intended for the advancement of taste in special branches of manufacture. No person is able to give useful and definite help towards such special applications of art, unless he is entirely familiar with the conditions of labour and natures of material involved in the work; and indefinite help is little better than no help at all. Nay, the few remarks which I propose to lay before you this evening will, I fear, be rather suggestive of difficulties than helpful in conquering them: nevertheless, it may not be altogether unserviceable to define clearly for you (and this, at least, I am able to do) one or two of the more stern general obstacles which stand at present in the way of our success in design; and to warn you against exertion of effort in any vain or wasteful way, till these main obstacles are removed.

The first of these is our not understanding the scope and dignity of Decorative design. With all our talk about it, the very meaning of the words “Decorative art” remains confused and undecided. I want, if possible, to settle this question for you to-night, and to show you that the principles on which you

must work are likely to be false, in proportion as they are narrow ; true, only as they are founded on a perception of the connection of all branches of art with each other.

Observe, then, first—the only essential distinction between Decorative and other art is the being fitted for a fixed place ; and in that place, related, either in subordination or command, to the effect of other pieces of art. And all the greatest art which the world has produced is thus fitted for a place, and subordinated to a purpose. There is no existing highest-order art but is decorative. The best sculpture yet produced has been the decoration of a temple front—the best painting, the decoration of a room. Raphael's best doing is merely the wall-colouring of a suite of apartments in the Vatican, and his cartoons were made for tapestries. Correggio's best doing is the decoration of two small church cupolas at Parma ; Michael Angelo's of a ceiling in the Pope's private chapel ; Tintoret's, of a ceiling and side wall belonging to a charitable society at Venice ; while Titian and Veronese threw out their noblest thoughts, not even on the inside, but on the outside of the common brick and plaster walls of Venice.

Get rid, then, at once of any idea of Decorative art being a degraded or a separate kind of art. Its nature or essence is simply its being fitted for a definite place ; and, in that place, forming part of a great and harmonious whole, in companionship with other art ; and so far from this being a degradation to it—so far from Decorative art being inferior to other art because it is fixed to a spot—on the whole it may be considered as rather a piece of degradation that it should be portable. Portable art—independent of all place—is for the most part ignoble art. Your little Dutch landscape, which you put over your sideboard to-day, and between the windows to-morrow, is a far more contemptible piece of work than the extents of field and forest with which Benozzo has made green and beautiful the once melancholy arcade of the Campo Santo at Pisa ; and the wild boar of silver which you use for a seal, or lock into a velvet case, is little likely to be so noble a beast as the bronze boar who foams forth the fountain from under his tusks in the market-place of Florence. It is, indeed, pos-

sible that the portable picture or image may be first-rate of its kind, but it is not first-rate because it is portable ; nor are Titian's frescoes less than first-rate because they are fixed ; nay, very frequently the highest compliment you can pay to a cabinet picture is to say—"It is as grand as a fresco."

Keeping, then, this fact fixed in our minds,—that all art *may* be decorative, and that the greatest art yet produced has been decorative,—we may proceed to distinguish the orders and dignities of decorative art, thus:—

I. The first order of it is that which is meant for places where it cannot be disturbed or injured, and where it can be perfectly seen ; and then the main parts of it should be, and have always been made, by the great masters, as perfect, and as full of nature as possible.

You will every day hear it absurdly said that room decoration should be by flat patterns—by dead colours—by conventional monotonies, and I know not what. Now, just be assured of this—nobody ever yet used conventional art to decorate with, when he could do anything better, and knew that what he did would be safe. Nay, a great painter will always give you the natural art, safe or not. Correggio gets a commission to paint a room on the ground floor of a palace at Parma: any of our people—bred on our fine modern principles—would have covered it with a diaper, or with stripes or flourishes, or mosaic patterns. Not so Correggio: he paints a thick trellis of vine-leaves, with oval openings, and lovely children leaping through them into the room ; and lovely children, depend upon it, are rather more desirable decorations than diaper, if you can do them—but they are not quite so easily done. In like manner Tintoret has to paint the whole end of the Council Hall at Venice. An orthodox decorator would have set himself to make the wall look like a wall—Tintoret thinks it would be rather better, if he can manage it, to make it look a little like Paradise ;—stretches his canvas right over the wall, and his clouds right over his canvas ; brings the light through his clouds—all blue and clear—zodiac beyond zodiac ; rolls away the vaporous flood from under the feet of saints, leaving them at

last in infinitudes of light—unorthodox in the last degree, but, on the whole, pleasant.

And so in all other cases whatever, the greatest decorative art is wholly unconventional—downright, pure, good painting and sculpture, but always fitted for its place; and subordinated to the purpose it has to serve in that place.

II. But if art is to be placed where it is liable to injury—to wear and tear; or to alteration of its form; as, for instance, on domestic utensils, and armour, and weapons, and dress; in which either the ornament will be worn out by the usage of the thing, or will be cast into altered shape by the play of its folds; then it is wrong to put beautiful and perfect art to such uses, and you want forms of inferior art, such as will be by their simplicity less liable to injury; or, by reason of their complexity and continuousness, may show to advantage, however distorted by the folds they are cast into.

And thus arise the various forms of inferior decorative art, respecting which the general law is, that the lower the place and office of the thing, the less of natural or perfect form you should have in it; a zigzag or a chequer is thus a better, because a more consistent ornament for a cup or platter than a landscape or portrait is: hence the general definition of the true forms of conventional ornament is, that they consist in the bestowal of as much beauty on the object as shall be consistent with its Material, its Place, and its Office.

Let us consider these three modes of consistency a little.

(A.) Conventionalism by cause of inefficiency of material.

If, for instance, we are required to represent a human figure with stone only, we cannot represent its colour; we reduce its colour to whiteness. That is not elevating the human body, but degrading it: only it would be a much greater degradation to give its colour falsely. Diminish beauty as much as you will, but do not misrepresent it. So again, when we are sculpturing a face, we can't carve its eyelashes. The face is none the better for wanting its eyelashes—it is injured by the want; but would be much more injured by a clumsy representation of them.

Neither can we carve the hair. We must be content with the conventionalism of vile solid knots and lumps of marble, instead of the golden cloud that encompasses the fair human face with its waving mystery. The lumps of marble are not an elevated representation of hair—they are a degraded one; yet better than any attempt to imitate hair with the incapable material.

In all cases in which such imitation is attempted, instant degradation to a still lower level is the result. For the effort to imitate shows that the workman has only a base and poor conception of the beauty of the reality—else he would know his task to be hopeless, and give it up at once; so that all endeavours to avoid conventionalism, when the material demands it, result from insensibility to truth, and are among the worst forms of vulgarity. Hence, in the greatest Greek statues, the hair is very slightly indicated—not because the sculptor disdained hair, but because he knew what it was too well to touch it insolently. I do not doubt but that the Greek painters drew hair exactly as Titian does. Modern attempts to produce finished pictures on glass result from the same base vulgarity. No man who knows what painting means, can endure a painted glass window which emulates painter's work. But he rejoices in a glowing mosaic of broken colour: for that is what the glass has the special gift and right of producing.*

(b.) Conventionalism by cause of inferiority of place.

When work is to be seen at a great distance, or in dark places, or in some other imperfect way, it constantly becomes necessary to treat it coarsely or severely, in order to make it effective. The statues on cathedral fronts, in good times of design, are variously treated according to their distances: no fine execution is put into the features of the Madonna who rules the group of figures above the south transept of Rouen at 150 feet above the ground; but in base modern work, as Milan Cathedral, the sculpture is finished without any reference to distance; and the merit of every statue is supposed

* See Appendix II., Sir Joshua Reynolds's disappointment.

to consist in the visitor's being obliged to ascend three hundred steps before he can see it.

(c.) Conventionalism by cause of inferiority of office.

When one piece of ornament is to be subordinated to another (as the moulding is to the sculpture it encloses, or the fringe of a drapery to the statue it veils), this inferior ornament needs to be degraded in order to mark its lower office ; and this is best done by refusing, more or less, the introduction of natural form. The less of nature it contains, the more degraded is the ornament, and the fitter for a humble place ; but, however far a great workman may go in refusing the higher organisms of nature, he always takes care to retain the magnificence of natural lines ; that is to say, of the infinite curves, such as I have analyzed in the fourth volume of "Modern Painters." His copyists, fancying that they can follow him without nature, miss precisely the essence of all the work ; so that even the simplest piece of Greek conventional ornament loses the whole of its value in any modern imitation of it, the finer curves being always missed. Perhaps one of the dullest and least justifiable mistakes which have yet been made about my writing, is the supposition that I have attacked or despised Greek work. I have attacked Palladian work, and modern imitation of Greek work. Of Greek work itself I have never spoken but with a reverence quite infinite : I name Phidias always in exactly the same tone with which I speak of Michael Angelo, Titian, and Dante. My first statement of this faith, now thirteen years ago, was surely clear enough. "We shall see by this light three colossal images standing up side by side, looming in their great rest of spirituality above the whole world horizon. Phidias, Michael Angelo, and Dante,—from these we may go down step by step among the mighty men of every age, securely and certainly observant of diminished lustre in every appearance of restlessness and effort, until the last trace of inspiration vanishes in the tottering affectation or tortured insanities of modern times." ("Modern Painters," vol. ii., p. 253.) This was surely plain speaking enough, and from that day to this my effort has been not less continually to make the heart of Greek work known than the

heart of Gothic : namely, the nobleness of conception of form derived from perpetual study of the figure ; and my complaint of the modern architect has been not that he followed the Greeks, but that he denied the first laws of life in theirs as in all other art.

The fact is, that all good subordinate forms of ornamentation ever yet existent in the world have been invented, and others as beautiful *can* only be invented, by men primarily exercised in drawing or carving the human figure. I will not repeat here what I have already twice insisted upon, to the students of London and Manchester, respecting the degradation of temper and intellect which follows the pursuit of art without reference to natural form, as among the Asiatics : here, I will only trespass on your patience so far as to mark the inseparable connection between figure-drawing and good ornamental work, in the great European schools, and all that are connected with them.

Tell me, then, first of all, what ornamental work is usually put before our students as the type of decorative perfection ? Raphael's arabesques ; are they not ? Well, Raphael knew a little about the figure, I suppose, before he drew them. I do not say that I like those arabesques ; but there are certain qualities in them which are inimitable by modern designers ; and those qualities are just the fruit of the master's figure study. What is given the student as next to Raphael's work ? Cinquecento ornament generally. Well, cinquecento generally, with its birds, and cherubs, and wreathed foliage, and clustered fruit, was the amusement of men who habitually and easily carved the figure, or painted it. All the truly fine specimens of it have figures or animals as main parts of the design.

"Nay, but," some anciently or mediævally minded person will exclaim, "we don't want to study cinquecento. We want severer, purer conventionalism." What will you have ? Egyptian ornament ? Why, the whole mass of it is made up of multitudinous human figures in every kind of action—and magnificent action ; their kings drawing their bows in their chariots, their sheaves of arrows rattling at their shoulders ;

the slain falling under them as before a pestilence ; their captors driven before them in astonished troops ; and do you expect to imitate Egyptian ornament without knowing how to draw the human figure ? Nay, but you will take Christian ornament—purest mediæval Christian—thirteenth century ! Yes : and do you suppose you will find the Christian less human ? The least natural and most purely conventional ornament of the Gothic schools is that of their painted glass ; and do you suppose painted glass, in the fine times, was ever wrought without figures ? We have got into the way, among our other modern wretchednesses, of trying to make windows of leaf diapers, and of strips of twisted red and yellow bands, looking like the patterns of currant jelly on the top of Christmas cakes ; but every casement of old glass contained a saint's history. The windows of Bourges, Chartres, or Rouen have ten, fifteen, or twenty medallions in each, and each medallion contains two figures at least, often six or seven, representing every event of interest in the history of the saint whose life is in question. Nay, but, you say those figures are rude and quaint, and ought not to be imitated. Why, so is the leafage rude and quaint, yet you imitate that. The coloured border pattern of geranium or ivy leaf is not one whit better drawn, or more like geraniums and ivy, than the figures are like figures ; but you call the geranium leaf idealized—why don't you call the figures so ? The fact is, neither are idealized, but both are conventionalized on the same principles, and in the same way ; and if you want to learn how to treat the leafage, the only way is to learn first how to treat the figure. And you may soon test your powers in this respect. Those old workmen were not afraid of the most familiar subjects. The windows of Chartres were presented by the trades of the town, and at the bottom of each window is a representation of the proceedings of the tradesmen at the business which enabled them to pay for the window. There are smiths at the forge, carriers at their hides, tanners looking into their pits, mercers selling goods over the counter—all made into beautiful medallions. Therefore, whenever you want to know whether you have got any real power of composition or adap-

tation in ornament, don't be content with sticking leaves together by the ends,—anybody can do that ; but try to conventionalize a butcher's or a greengrocer's, with Saturday night customers buying cabbage and beef. That will tell you if you can design or not.

I can fancy your losing patience with me altogether just now. “We asked this fellow down to tell our workmen how to make shawls, and he is only trying to teach them how to caricature.” But have a little patience with me, and examine, after I have done, a little for yourselves into the history of ornamental art, and you will discover why I do this. You will discover, I repeat, that all great ornamental art whatever is founded on the effort of the workman to draw the figure, and, in the best schools, to draw all that he saw about him in living nature. The best art of pottery is acknowledged to be that of Greece, and all the power of design exhibited in it, down to the merest zigzag, arises primarily from the workman having been forced to outline nymphs and knights ; from those helmed and draped figures he holds his power. Of Egyptian ornament I have just spoken. You have everything given there that the workman saw ; people of his nation employed in hunting, fighting, fishing, visiting, making love, building, cooking—everything they did is drawn, magnificently or familiarly, as was needed. In Byzantine ornament, saints, or animals which are types of various spiritual power, are the main subjects ; and from the church down to the piece of enamelled metal, figure,—figure,—figure, always principal. In Norman and Gothic work you have, with all their quiet saints, also other much disquieted persons, hunting, feasting, fighting, and so on ; or whole hordes of animals racing after each other. In the Bayeux tapestry, Queen Matilda gave, as well as she could,—in many respects graphically enough,—the whole history of the conquest of England. Thence, as you increase in power of art, you have more and more finished figures, up to the solemn sculptures of Wells Cathedral, or the cherubic enrichments of the Venetian *Madonna dei Miracoli*. Therefore, I will tell you fearlessly, for I know it is true, you must raise your workman up to life, or you will never get

from him one line of well-imagined conventionalism. We have at present no good ornamental design. We can't have it yet, and we must be patient if we want to have it. Do not hope to feel the effect of your schools at once, but raise the men as high as you can, and then let them stoop as low as you need; no great man ever minds stooping. Encourage the students, in sketching accurately and continually from nature anything that comes in their way—still life, flowers, animals; but, above all, figures; and so far as you allow of any difference between an artist's training and theirs, let it be, not in what they draw, but in the degree of conventionalism you require in the sketch.

For my own part, I should always endeavour to give thorough artistical training first; but I am not certain (the experiment being yet untried) what results may be obtained by a truly intelligent practice of conventional drawing, such as that of the Egyptians, Greeks, or thirteenth century French, which consists in the utmost possible rendering of natural form by the fewest possible lines. The animal and bird drawing of the Egyptians is, in their fine age, quite magnificent under its conditions; magnificent in two ways—first, in keenest perception of the main forms and facts in the creature; and, secondly, in the grandeur of line by which their forms are abstracted and insisted on, making every asp, ibis, and vulture a sublime spectre of asp or ibis or vulture power. The way for students to get some of this gift again (*some only*, for I believe the fulness of the gift itself to be connected with vital superstition, and with resulting intensity of reverence; people were likely to know something about hawks and ibises, when to kill one was to be irrevocably judged to death) is never to pass a day without drawing some animal from the life, allowing themselves the fewest possible lines and colours to do it with, but resolving that whatever is characteristic of the animal shall in some way or other be shown.* I repeat, it cannot yet be judged what results might be obtained by a nobly practised conventionalism of this kind; but, however that

* Plate 75 in Vol. V. of Wilkinson's "Ancient Egypt" will give the student an idea of how to set to work.

may be, the first fact,—the necessity of animal and figure drawing, is absolutely certain, and no person who shrinks from it will ever become a great designer.

One great good arises even from the first step in figure drawing, that it gets the student quit at once of the notion of formal symmetry. If you learn only to draw a leaf well, you are taught in some of our schools to turn it the other way, opposite to itself; and the two leaves set opposite ways are called “a design:” and thus it is supposed possible to produce ornamentation, though you have no more brains than a looking-glass or a kaleidoscope has. But if you once learn to draw the human figure, you will find that knocking two men’s heads together does not necessarily constitute a good design; nay, that it makes a very bad design, or no design at all; and you will see at once that to arrange a group of two or more figures, you must, though perhaps it may be desirable to balance, or oppose them, at the same time vary their attitudes, and make one, not the reverse of the other, but the companion of the other.

I had a somewhat amusing discussion on this subject with a friend, only the other day; and one of his retorts upon me was so neatly put, and expresses so completely all that can either be said or shown on the opposite side, that it is well worth while giving it you exactly in the form it was sent to me. My friend had been maintaining that the essence of ornament consisted in three things:—contrast, series, and symmetry. I replied (by letter) that “none of them, nor

all of them together, would produce ornament. Here” —(making a ragged blot with the back of my pen on the paper)—“you have contrast; but it isn’t ornament: here, 1, 2, 3, 4, 5, 6,”—writing the numerals) —“You have series; but

it isn’t ornament: and here,”—(sketching this figure at the side)—“you have symmetry; but it isn’t ornament.”

My friend replied:—

“Your materials were not ornament, because you did not

apply them. I send them to you back, made up into a choice sporting neckerchief :

- Symmetrical figure Unit of diaper.
- Contrast Corner ornaments.
- Series Border ornaments.

Each figure is converted into a harmony by being revolved on its two axes, the whole opposed in contrasting series."

My answer was—or rather was to the effect (for I must expand it a little, here)—that his words, "because you did not apply them," contained the gist of the whole matter;—that the application of them, or any other things, was precisely the essence of design; the non-application, or wrong application, the negation of design: that his use of the poor materials was in this case admirable; and that if he could explain to me, in clear words, the principles on which he had so used them, he would be doing a very great service to all students of art.

“Tell me, therefore (I asked), these main points :

“1. How did you determine the number of figures you would put into the neckerchief? Had there been more, it would have been mean and ineffective,—a pepper-and-salt sprinkling of figures. Had there been fewer, it would have been monstrous. How did you fix the number?

“2. How did you determine the breadth of the border and relative size of the numerals?

“3. Why are there two lines outside of the border, and one only inside? Why are there no more lines? Why not three and two, or three and five? Why lines at all to separate the barbarous figures; and why, if lines at all, not double or treble instead of single?

“4. Why did you put the double blots at the corners? Why not at the angles of the chequers,—or in the middle of the border?

“It is precisely your knowing why *not* to do these things, and why to do just what you have done, which constituted your power of design; and like all the people I have ever known who had that power, you are entirely unconscious of the essential laws by which you work, and confuse other people by telling them that the design depends on symmetry and series, when, in fact, it depends entirely on your own sense and judgment.”

This was the substance of my last answer—to which (as I knew beforehand would be the case) I got no reply; but it still remains to be observed that with all the skill and taste (especially involving the architect's great trust, harmony of proportion), which my friend could bring to bear on the materials given him, the result is still only—a sporting neckerchief—that is to say, the materials addressed, first, to recklessness, in the shape of a mere blot; then to computativeness, in a series of figures; and then to absurdity and ignorance, in the shape of an ill-drawn caricature—such materials, however treated, can only work up into what will please reckless, computative, and vulgar persons,—that is to say, into a sporting neckerchief. The difference between this piece of ornamentation and Correggio's painting at Parma lies simply and

wholly in the additions (somewhat large ones), of truth and of tenderness: in the drawing being lovely as well as symmetrical—and representative of realities as well as agreeably disposed. And truth, tenderness, and inventive application or disposition are indeed the roots of ornament—not contrast, nor symmetry.

It ought yet farther to be observed, that *the nobler the materials, the less their symmetry is enduring*. In the present case, the sense of fitness and order, produced by the repetition of the figures, neutralizes, in some degree, their reckless vulgarity; and is wholly, therefore, beneficent to them. But draw the figures better, and their repetition will become painful. You may harmlessly balance a mere geometrical form, and oppose one quatrefoil or cusp by another exactly like it. But put two Apollo Belvideres back to back, and you will not think the symmetry improves them. *Whenever the materials of ornament are noble, they must be various*; and repetition of parts is either the sign of utterly bad, hopeless, and base work; or of the intended degradation of the parts in which such repetition is allowed, in order to foil others more noble.

Such, then, are a few of the great principles, by the enforcement of which you may hope to promote the success of the modern student of design; but remember, none of these principles will be useful at all, unless you understand them to be, in one profound and stern sense, useless.*

That is to say, unless you feel that neither you nor I, nor any one, can, in the great ultimate sense, teach anybody how to make a good design.

If designing *could* be taught, all the world would learn: as all the world reads—or calculates. But designing is not to be spelled, nor summed. My men continually come to me, in my drawing class in London, thinking I am to teach them what is instantly to enable them to gain their bread. “Please, sir, show us how to design.” “Make designers of us.” And

* I shall endeavour for the future to put my self-contradictions in short sentences and direct terms, in order to save sagacious persons the trouble of looking for them.

you, I doubt not, partly expect me to tell you to-night how to make designers of your Bradford youths. Alas! I could as soon tell you how to make or manufacture an ear of wheat, as to make a good artist of any kind. I can analyze the wheat very learnedly for you—tell you there is starch in it, and carbon, and silex. I can give you starch, and charcoal, and flint; but you are as far from your ear of wheat as you were before. All that can possibly be done for any one who wants ears of wheat is to show them where to find grains of wheat, and how to sow them, and then, with patience, in Heaven's time, the ears will come—or will perhaps come—ground and weather permitting. So in this matter of making artists—first you must find your artist in the grain; then you must plant him; fence and weed the field about him; and with patience, ground and weather permitting, you may get an artist out of him—not otherwise. And what I have to speak to you about, to-night, is mainly the ground and the weather, it being the first and quite most material question in this matter, whether the ground and weather of Bradford, or a good ground and weather of England in general,—suit wheat.

And observe in the outset, it is not so much what the present circumstances of England are, as what we wish to make them, that we have to consider. If you will tell me what you ultimately intend Bradford to be, perhaps I can tell you what Bradford can ultimately produce. But you must have your minds clearly made up, and be distinct in telling me what you do want. At present I don't know what you are aiming at, and possibly on consideration you may feel some doubt whether you know yourselves. As matters stand, all over England, as soon as one mill is at work, occupying two hundred hands, we try, by means of it, to set another mill at work, occupying four hundred. That is all simple and comprehensive enough—but what is it to come to? How many mills do we want? or do we indeed want no end of mills? Let us entirely understand each other on this point before we go any farther. Last week, I drove from Rochdale to Bolton Abbey; quietly, in order to see the country, and certainly it was well worth while. I never went over a more interesting twenty miles than those between

Rochdale and Burnley. Naturally, the valley has been one of the most beautiful in the Lancashire hills ; one of the far away solitudes, full of old shepherd ways of life. At this time there are not,—I speak deliberately, and I believe quite literally,—there are not, I think, more than a thousand yards of road to be traversed anywhere, without passing a furnace or mill.

Now, is that the kind of thing you want to come to everywhere? Because, if it be, and you tell me so distinctly, I think I can make several suggestions to-night, and could make more if you give me time, which would materially advance your object. The extent of our operations at present is more or less limited by the extent of coal and ironstone, but we have not yet learned to make proper use of our clay. Over the greater part of England, south of the manufacturing districts, there are magnificent beds of various kinds of useful clay ; and I believe that it would not be difficult to point out modes of employing it which might enable us to turn nearly the whole of the south of England into a brickfield, as we have already turned nearly the whole of the north into a coal-pit. I say “nearly” the whole, because, as you are doubtless aware, there are considerable districts in the south composed of chalk renowned up to the present time for their downs and mutton. But, I think, by examining carefully into the conceivable uses of chalk, we might discover a quite feasible probability of turning all the chalk districts into a limekiln, as we turn the clay districts into a brickfield. There would then remain nothing but the mountain districts to be dealt with ; but, as we have not yet ascertained all the uses of clay and chalk, still less have we ascertained those of stone ; and I think, by draining the useless inlets of the Cumberland, Welsh, and Scotch lakes, and turning them, with their rivers, into navigable reservoirs and canals, there would be no difficulty in working the whole of our mountain districts as a gigantic quarry of slate and granite, from which all the rest of the world might be supplied with roofing and building stone.

Is this, then, what you want? You are going straight at it at present ; and I have only to ask under what limitations I am to conceive or describe your final success? Or shall there

be no limitations? There are none to your powers; every day puts new machinery at your disposal, and increases, with your capital, the vastness of your undertakings. The changes in the state of this country are now so rapid, that it would be wholly absurd to endeavour to lay down laws of art education for it under its present aspect and circumstances; and therefore I must necessarily ask, how much of it do you seriously intend within the next fifty years to be coal-pit, brickfield, or quarry? For the sake of distinctness of conclusion, I will suppose your success absolute: that from shore to shore the whole of the island is to be set as thick with chimneys as the masts stand in the docks of Liverpool: and there shall be no meadows in it; no trees; no gardens; only a little corn grown upon the housetops, reaped and threshed by steam: that you do not leave even room for roads, but travel either over the roofs of your mills, on viaducts; or under their floors, in tunnels: that, the smoke having rendered the light of the sun unserviceable, you work always by the light of your own gas: that no acre of English ground shall be without its shaft and its engine; and therefore, no spot of English ground left, on which it shall be possible to stand, without a definite and calculable chance of being blown off it, at any moment, into small pieces.

Under these circumstances, (if this is to be the future of England,) no designing or any other development of beautiful art will be possible. Do not vex your minds, nor waste your money with any thought or effort in the matter. Beautiful art can only be produced by people who have beautiful things about them, and leisure to look at them; and unless you provide some elements of beauty for your workmen to be surrounded by, you will find that no elements of beauty can be invented by them.

I was struck forcibly by the bearing of this great fact upon our modern efforts at ornamentation in an afternoon walk, last week, in the suburbs of one of our large manufacturing towns. I was thinking of the difference in the effect upon the designer's mind, between the scene which I then came upon, and the scene which would have presented itself to the

eyes of any designer of the middle ages, when he left his workshop. Just outside the town I came upon an old English cottage, or mansion, I hardly know which to call it, set close under the hill, and beside the river, perhaps built somewhere in the Charles's time, with mullioned windows and a low arched porch; round which, in the little triangular garden, one can imagine the family as they used to sit in old summer times, the ripple of the river heard faintly through the sweetbrier hedge, and the sheep on the far-off wolds shining in the evening sunlight. There, uninhabited for many and many a year, it had been left in unregarded havoc of ruin; the garden-gate still swung loose to its latch; the garden, blighted utterly into a field of ashes, not even a weed taking root there; the roof torn into shapeless rents; the shutters hanging about the windows in rags of rotten wood; before its gate, the stream which had gladdened it now soaking slowly by, black as ebony, and thick with curdling scum; the bank above it trodden into unctuous, sooty slime: far in front of it, between it and the old hills, the furnaces of the city foaming forth perpetual plague of sulphurous darkness; the volumes of their storm clouds coiling low over a waste of grassless fields, fenced from each other, not by hedges, but by slabs of square stone, like gravestones, riveted together with iron.

That was your scene for the designer's contemplation in his afternoon walk at Rochdale. Now fancy what was the scene which presented itself, in his afternoon walk, to a designer of the Gothic school of Pisa—Nino Pisano, or any of his men.

On each side of a bright river he saw rise a line of brighter palaces, arched and pillared, and inlaid with deep red porphyry, and with serpentine; along the quays before their gates were riding troops of knights, noble in face and form, dazzling in crest and shield; horse and man one labyrinth of quaint colour and gleaming light—the purple, and silver, and scarlet fringes flowing over the strong limbs and clashing mail, like sea-waves over rocks at sunset. Opening on each side from the river were gardens, courts, and cloisters; long successions of white pillars among wreaths of vine; leaping

of fountains through buds of pomegranate and orange : and still along the garden-paths, and under and through the crimson of the pomegranate shadows, moving slowly, groups of the fairest women that Italy ever saw—fairest, because purest and thoughtfullest ; trained in all high knowledge, as in all courteous art—in dance, in song, in sweet wit, in lofty learning, in loftier courage, in loftiest love—able alike to cheer, to enchant, or save, the souls of men. Above all this scenery of perfect human life, rose dome and bell-tower, burning with white alabaster and gold ; beyond dome and bell-tower the slopes of mighty hills, hoary with olive ; far in the north, above a purple sea of peaks of solemn Apennine, the clear, sharp-cloven Carrara mountains sent up their steadfast flames of marble summit into amber sky ; the great sea itself, scorching with expanse of light, stretching from their feet to the Gorgonian isles ; and over all these, ever present, near or far—seen through the leaves of vine, or imaged with all its march of clouds in the Arno's stream, or set with its depth of blue close against the golden hair and burning cheek of lady and knight,—that untroubled and sacred sky, which was to all men, in those days of innocent faith, indeed the unquestioned abode of spirits, as the earth was of men ; and which opened straight through its gates of cloud and veils of dew into the awfulness of the eternal world ;—a heaven in which every cloud that passed was literally the chariot of an angel, and every ray of its Evening and Morning streamed from the throne of God.

What think you of that for a school of design ?

I do not bring this contrast before you as a ground of hopelessness in our task ; neither do I look for any possible renovation of the Republic of Pisa, at Bradford, in the nineteenth century ; but I put it before you in order that you may be aware precisely of the kind of difficulty you have to meet, and may then consider with yourselves how far you can meet it. To men surrounded by the depressing and monotonous circumstances of English manufacturing life, depend upon it, design is simply impossible. This is the most distinct of all the experiences I have had in dealing with the

modern workman. He is intelligent and ingenious in the highest degree—subtle in touch and keen in sight: but he is, generally speaking, wholly destitute of designing power. And if you want to give him the power, you must give him the materials, and put him in the circumstances for it. Design is not the offspring of idle fancy: it is the studied result of accumulative observation and delightful habit. Without observation and experience, no design—without peace and pleasurable occupation, no design—and all the lectures, and teachings, and prizes, and principles of art, in the world, are of no use, so long as you don't surround your men with happy influences and beautiful things. It is impossible for them to have right ideas about colour, unless they see the lovely colours of nature unspoiled; impossible for them to supply beautiful incident and action in their ornament, unless they see beautiful incident and action in the world about them. Inform their minds, refine their habits, and you form and refine their designs; but keep them illiterate, uncomfortable, and in the midst of unbeautiful things, and whatever they do will still be spurious, vulgar, and valueless.

I repeat, that I do not ask you nor wish you to build a new Pisa for them. We don't want either the life or the decorations of the thirteenth century back again; and the circumstances with which you must surround your workmen are those simply of happy modern English life, because the designs you have now to ask for from your workmen are such as will make modern English life beautiful. All that gorgeousness of the middle ages, beautiful as it sounds in description, noble as in many respects it was in reality, had, nevertheless, for foundation and for end, nothing but the pride of life—the pride of the so-called superior classes; a pride which supported itself by violence and robbery, and led in the end to the destruction both of the arts themselves and the States in which they flourished.

The great lesson of history is, that all the fine arts hitherto—having been supported by the selfish power of the noblesse, and never having extended their range to the comfort or the relief of the mass of the people—the arts, I say, thus prac-

tised, and thus matured, have only accelerated the ruin of the States they adorned ; and at the moment when, in any kingdom, you point to the triumphs of its greatest artists, you point also to the determined hour of the kingdom's decline. The names of great painters are like passing bells : in the name of Velasquez, you hear sounded the fall of Spain ; in the name of Titian, that of Venice ; in the name of Leonardo, that of Milan ; in the name of Raphael, that of Rome. And there is profound justice in this ; for in proportion to the nobleness of the power is the guilt of its use for purposes vain or vile ; and hitherto the greater the art, the more surely has it been used, and used solely, for the decoration of pride,* or the provoking of sensuality. Another course lies open to us. We may abandon the hope—or if you like the words better—we may disdain the temptation, of the pomp and grace of Italy in her youth. For us there can be no more the throne of marble—for us no more the vault of gold—but for us there is the loftier and lovelier privilege of bringing the power and charm of art within the reach of the humble and the poor ; and as the magnificence of past ages failed by its narrowness and its pride, ours may prevail and continue, by its universality and its lowliness.

And thus, between the picture of too laborious England, which we imagined as future, and the picture of too luxurious Italy, which we remember in the past, there may exist—there will exist, if we do our duty—an intermediate condition, neither oppressed by labour nor wasted in vanity—the condition of a peaceful and thoughtful temperance in aims, and acts, and arts.

We are about to enter upon a period of our world's history in which domestic life, aided by the arts of peace, will slowly, but at last entirely, supersede public life and the arts of war. For our own England, she will not, I believe, be blasted throughout with furnaces ; nor will she be encumbered with palaces. I trust she will keep her green fields, her cottages, and her homes of middle life ; but these ought to be, and I

* Whether religious or profane pride,—chapel or banqueting room,—is no matter.

trust will be enriched with a useful, truthful, substantial form of art. We want now no more feasts of the gods, nor martyrdoms of the saints; we have no need of sensuality, no place for superstition, or for costly insolence. Let us have learned and faithful historical painting—touching and thoughtful representations of human nature, in dramatic painting; poetical and familiar renderings of natural objects and of landscape; and rational, deeply-felt realizations of the events which are the subjects of our religious faith. And let these things we want, as far as possible, be scattered abroad and made accessible to all men.

So also, in manufacture: we require work substantial rather than rich in make; and refined, rather than splendid in design. Your stuffs need not be such as would catch the eye of a duchess; but they should be such as may at once serve the need, and refine the taste, of a cottager. The prevailing error in English dress, especially among the lower orders, is a tendency to flimsiness and gaudiness, arising mainly from the awkward imitation of their superiors.* It should be one of the first objects of all manufacturers to produce stuffs not only beautiful and quaint in design, but also adapted for every-day service, and decorous in humble and secluded life. And you must remember always that your business, as manufacturers, is to form the market, as much as

* If their superiors would give them simplicity and economy to imitate, it would, in the issue, be well for themselves, as well as for those whom they guide. The typhoid fever of passion for dress, and all other display, which has struck the upper classes of Europe at this time, is one of the most dangerous political elements we have to deal with. Its wickedness I have shown elsewhere (*Polit. Economy of Art*, p. 62, *et seq.*); but its wickedness is, in the minds of most persons a matter of no importance. I wish I had time also to show them its danger. I cannot enter here into political investigation; but this is a certain fact, that the wasteful and vain expenses at present indulged in by the upper classes are hastening the advance of republicanism more than any other element of modern change. No agitators, no clubs, no epidemical errors, ever were, or will be, fatal to social order in any nation. Nothing but the guilt of the upper classes, wanton, accumulated, reckless, and merciless, ever overthrows them. Of such guilt they have now much to answer for—let them look to it in time.

to supply it. If, in shortsighted and reckless eagerness for wealth, you catch at every humour of the populace as it shapes itself into momentary demand—if, in jealous rivalry with neighbouring States, or with other producers, you try to attract attention by singularities, novelties, and gaudinesses—to make every design an advertisement, and pilfer every idea of a successful neighbour's, that you may insidiously imitate it, or pompously eclipse—no good design will ever be possible to you, or perceived by you. You may, by accident, snatch the market; or, by energy, command it; you may obtain the confidence of the public, and cause the ruin of opponent houses; or you may, with equal justice of fortune, be ruined by them. But whatever happens to you, this, at least, is certain, that the whole of your life will have been spent in corrupting public taste and encouraging public extravagance. Every preference you have won by gaudiness must have been based on the purchaser's vanity; every demand you have created by novelty has fostered in the consumer a habit of discontent; and when you retire into inactive life, you may, as a subject of consolation for your declining years, reflect that precisely according to the extent of your past operations, your life has been successful in retarding the arts, tarnishing the virtues, and confusing the manners of your country.

But, on the other hand, if you resolve from the first that, so far as you can ascertain or discern what is best, you will produce what is best, on an intelligent consideration of the probable tendencies and possible tastes of the people whom you supply, you may literally become more influential for all kinds of good than many lecturers on art, or many treatise-writers on morality. Considering the materials dealt with, and the crude state of art knowledge at the time, I do not know that any more wide or effective influence in public taste was ever exercised than that of the Staffordshire manufacture of pottery under William Wedgwood, and it only rests with the manufacturer in every other business to determine whether he will, in like manner, make his wares educational instruments, or mere drugs of the market. You all should be, in a certain

sense, authors : you must, indeed, first catch the public eye, as an author must the public ear ; but once gain your audience, or observance, and as it is in the writer's power thenceforward to publish what will educate as it amuses—so it is in yours to publish what will educate as it adorns. Nor is this surely a subject of poor ambition. I hear it said continually that men are too ambitious : alas ! to me, it seems they are never enough ambitious. How many are content to be merely the thriving merchants of a state, when they might be its guides, counsellors, and rulers—wielding powers of subtle but gigantic beneficence, in restraining its follies while they supplied its wants. Let such duty, such ambition, be once accepted in their fulness, and the best glory of European art and of European manufacture may yet be to come. The paintings of Raphael and of Buonaroti gave force to the falsehoods of superstition, and majesty to the imaginations of sin ; but the arts of England may have, for their task, to inform the soul with truth, and touch the heart with compassion. The steel of Toledo and the silk of Genoa did but give strength to oppression and lustre to pride : let it be for the furnace and for the loom of England, as they have already richly earned, still more abundantly to bestow, comfort on the indigent, civilization on the rude, and to dispense, through the peaceful homes of nations, the grace and the preciousness of simple adornment, and useful possession.

LECTURE IV.

INFLUENCE OF IMAGINATION IN ARCHITECTURE.

An Address Delivered to the Members of the Architectural Association, in Lyon's Inn Hall, 1857.

IF we were to be asked abruptly, and required to answer briefly, what qualities chiefly distinguish great artists from feeble artists, we should answer, I suppose, first, their sensibility and tenderness ; secondly, their imagination ; and

thirdly, their industry. Some of us might, perhaps, doubt the justice of attaching so much importance to this last character, because we have all known clever men who were indolent, and dull men who were industrious. But though you may have known clever men who were indolent, you never knew a *great* man who was so ; and, during such investigation as I have been able to give to the lives of the artists whose works are in all points noblest, no fact ever looms so large upon me—no law remains so steadfast in the universality of its application, as the fact and law that they are all great workers : nothing concerning them is matter of more astonishment than the quantity they have accomplished in the given length of their life ; and when I hear a young man spoken of, as giving promise of high genius, the first question I ask about him is always—

Does he work ?

But though this quality of industry is essential to an artist, it does not in anywise make an artist ; many people are busy, whose doings are little worth. Neither does sensibility make an artist ; since, as I hope, many can feel both strongly and nobly, who yet care nothing about art. But the gifts which distinctively mark the artist—*without* which he must be feeble in life, forgotten in death—*with* which he may become one of the shakers of the earth, and one of the signal lights in heaven—are those of sympathy and imagination. I will not occupy your time, nor incur the risk of your dissent, by endeavouring to give any close definition of this last word. We all have a general and sufficient idea of imagination, and of its work with our hands and in our hearts : we understand it, I suppose, as the imaging or picturing of new things in our thoughts ; and we always show an involuntary respect for this power, wherever we can recognize it, acknowledging it to be a greater power than manipulation, or calculation, or observation, or any other human faculty. If we see an old woman spinning at the fireside, and distributing her thread dexterously from the distaff, we respect her for her manipulation—if we ask her how much she expects to make in a year, and she answers quickly, we respect her for her calculation—if

she is watching at the same time that none of her grandchildren fall into the fire, we respect her for her observation—yet for all this she may still be a commonplace old woman enough. But if she is all the time telling her grandchildren a fairy tale out of her head, we praise her for her imagination, and say, she must be a rather remarkable old woman.

Precisely in like manner, if an architect does his working-drawing well, we praise him for his manipulation—if he keeps closely within his contract, we praise him for his honest arithmetic—if he looks well to the laying of his beams, so that nobody shall drop through the floor, we praise him for his observation. But he must, somehow, tell us a fairy tale out of his head beside all this, else we cannot praise him for his imagination, nor speak of him as we did of the old woman, as being in any wise out of the common way, a rather remarkable architect. It seemed to me, therefore, as if it might interest you to-night, if we were to consider together what fairy tales are, in and by architecture, to be told—what there is for you to do in this severe art of yours “out of your heads,” as well as by your hands.

Perhaps the first idea which a young architect is apt to be allured by, as a head-problem in these experimental days, is its being incumbent upon him to invent a “new style” worthy of modern civilization in general, and of England in particular; a style worthy of our engines and telegraphs; as expansive as steam, and as sparkling as electricity.

But, if there are any of my hearers who have been impressed with this sense of inventive duty, may I ask them first, whether their plan is that every inventive architect among us shall invent a new style for himself, and have a county set aside for his conceptions, or a province for his practice? Or, must every architect invent a little piece of the new style, and all put it together at last like a dissected map? And if so, when the new style is invented, what is to be done next? I will grant you this Eldorado of imagination—but can you have more than one Columbus? Or, if you sail in company, and divide the prize of your discovery and the honour thereof, who is to come after you clustered Columbuses?

to what fortunate islands of style are your architectural descendants to sail, avaricious of new lands? When our desired style is invented, will not the best we can all do be simply--to build in it?—and cannot you now do that in styles that are known? Observe, I grant, for the sake of your argument, what perhaps many of you know that I would not grant otherwise—than a new style *can* be invented. I grant you not only this, but that it shall be wholly different from any that was ever practised before. We will suppose that capitals are to be at the bottom of pillars instead of the top; and that buttresses shall be on the tops of pinnacles instead of at the bottom; that you roof your apertures with stones which shall neither be arched nor horizontal; and that you compose your decoration of lines which shall neither be crooked nor straight. The furnace and the forge shall be at your service: you shall draw out your plates of glass and beat out your bars of iron till you have encompassed us all,—if your style is of the practical kind,—with endless perspective of black skeleton and blinding square,—or if your style is to be of the ideal kind—you shall wreath your streets with ductile leafage, and roof them with variegated crystal—you shall put, if you will, all London under one blazing dome of many colours that shall light the clouds round it with its flashing, as far as to the sea. And still, I ask you, What after this? Do you suppose those imaginations of yours will ever lie down there asleep beneath the shade of your iron leafage, or within the coloured light of your enchanted dome? Not so. Those souls, and fancies, and ambitions of yours, are wholly infinite; and, whatever may be done by others, you will still want to do something for yourselves; if you cannot rest content with Palladio, neither will you with Paxton: all the metal and glass that ever were melted have not so much weight in them as will clog the wings of one human spirit's aspiration.

If you will think over this quietly by yourselves, and can get the noise out of your ears of the perpetual, empty, idle, incomparably idiotic talk about the necessity of some novelty in architecture, you will soon see that the very essence of a Style, properly so called, is that it should be practised *for*

ages, and applied to all purposes ; and that so long as any given style is in practice, all that is left for individual imagination to accomplish must be within the scope of that style, not in the invention of a new one. If there are any here, therefore, who hope to obtain celebrity by the invention of some strange way of building which must convince all Europe into its adoption, to them, for the moment, I must not be understood to address myself, but only to those who would be content with that degree of celebrity which an artist may enjoy who works in the manner of his forefathers ;—which the builder of Salisbury Cathedral might enjoy in England, though he did not invent Gothic ; and which Titian might enjoy at Venice, though he did not invent oil painting. Addressing myself then to those humbler, but wiser, or rather, only wise students who are content to avail themselves of some system of building already understood, let us consider together what room for the exercise of the imagination may be left to us under such conditions. And, first, I suppose it will be said, or thought, that the architect's principal field for exercise of his invention must be in the disposition of lines, mouldings, and masses, in agreeable proportions. Indeed, if you adopt some styles of architecture, you cannot exercise invention in any other way. And I admit that it requires genius and special gift to do this rightly. Not by rule, nor by study, can the gift of graceful proportionate design be obtained ; only by the intuition of genius can so much as a single tier of façade be beautifully arranged ; and the man has just cause for pride, as far as our gifts can ever be a cause for pride, who finds himself able, in a design of his own, to rival even the simplest arrangement of parts in one by Sannicelli, Inigo Jones, or Christopher Wren.

Invention, then, and genius being granted, as necessary to accomplish this, let me ask you, What, after all, with this special gift and genius, you *have* accomplished, when you have arranged the lines of a building beautifully ?

In the first place you will not, I think, tell me that the beauty there attained is of a touching or pathetic kind. A well-disposed group of notes in music will make you some-

times weep and sometimes laugh. You can express the depth of all affections by those dispositions of sound: you can give courage to the soldier, language to the lover, consolation to the mourner, more joy to the joyful, more humility to the devout. Can you do as much by your group of lines? Do you suppose the front of Whitehall, a singularly beautiful one, ever inspires the two Horse Guards, during the hour they sit opposite to it, with military ardour? Do you think that the lovers in our London walk down to the front of Whitehall for consolation when mistresses are unkind; or that any person wavering in duty, or feeble in faith, was ever confirmed in purpose or in creed by the pathetic appeal of those harmonious architraves? You will not say so. Then, if they cannot touch, or inspire, or comfort any one, can your architectural proportions amuse any one? Christmas is just over; you have doubtless been at many merry parties during the period. Can you remember any in which architectural proportions contributed to the entertainment of the evening? Proportions of notes in music were, I am sure, essential to your amusement; the setting of flowers in hair, and of ribands on dresses, were also subjects of frequent admiration with you, not inessential to your happiness. Among the juvenile members of your society the proportion of currants in cake, and of sugar in comfits, became subjects of acute interest; and, when such proportions were harmonious, motives also of gratitude to cook and to confectioner. But did you ever see either young or old amused by the architrave of the door? Or otherwise interested in the proportions of the room than as they admitted more or fewer friendly faces? Nay, if all the amusement that there is in the best proportioned architecture of London could be concentrated into one evening, and you were to issue tickets for nothing to this great proportional entertainment;—how do you think it would stand between you and the Drury pantomime?

You are, then, remember, granted to be people of genius—great and admirable; and you devote your lives to your art, but you admit that you cannot comfort anybody, you cannot encourage anybody, you cannot improve anybody, and you

cannot amuse anybody. I proceed then farther to ask, Can you inform anybody? Many sciences cannot be considered as highly touching or emotional; nay, perhaps not specially amusing; scientific men may sometimes, in these respects, stand on the same ground with you. As far as we can judge by the results of the late war, science helps our soldiers about as much as the front of Whitehall; and at the Christmas parties, the children wanted no geologists to tell them about the behaviour of bears and dragons in Queen Elizabeth's time. Still, your man of science teaches you something; he may be dull at a party, or helpless in a battle, he is not always that; but he can give you, at all events, knowledge of noble facts, and open to you the secrets of the earth and air. Will your architectural proportions do as much? Your genius is granted, and your life is given, and what do you teach us?—Nothing, I believe, from one end of that life to the other, but that two and two make four, and that one is to two as three is to six.

You cannot, then, it is admitted, comfort any one, serve or amuse any one, nor teach any one. Finally, I ask, Can you be of Use to any one? "Yes," you reply; "certainly we are of some use—we architects—in a climate like this, where it always rains." You are of use certainly; but, pardon me, only as builders—not as proportionalists. We are not talking of building as a protection, but only of that special work which your genius is to do; not of building substantial and comfortable houses like Mr. Cubitt, but of putting beautiful façades on them like Inigo Jones. And, again, I ask—Are you of use to any one? Will your proportions of the façade heal the sick, or clothe the naked? Supposing you devoted your lives to be merchants, you might reflect at the close of them, how many, fainting for want, you had brought corn to sustain; how many, infected with disease, you had brought balms to heal; how widely, among multitudes of far-away nations, you had scattered the first seeds of national power, and guided the first rays of sacred light. Had you been, in fine, *anything* else in the world *but* architectural designers, you might have been of some use or good to people. Content to be petty tradesmen, you would have saved the time of mankind;—rough-handed

daily labourers, you would have added to their stock of food or of clothing. But, being men of genius, and devoting your lives to the exquisite exposition of this genius, on what achievements do you think the memories of your old age are to fasten? Whose gratitude will surround you with its glow, or on what accomplished good, of that greatest kind for which men show *no* gratitude, will your life rest the contentment of its close? Truly, I fear that the ghosts of proportionate lines will be thin phantoms at your bedsides—very speechless to you; and that on all the emanations of your high genius you will look back with less delight than you might have done on a cup of cold water given to him who was thirsty, or to a single moment when you had “prevented with your bread him that fled.”

Do not answer, nor think to answer, that with your great works and great payments of workmen in them, you would do this; I know you would, and will, as Builders; but, I repeat, it is not your *building* that I am talking about, but your *brains*; it is your invention and imagination of whose profit I am speaking. The good done through the building, observe, is done by your employers, not by you—you share in the benefit of it. The good that *you* personally must do is by your designing; and I compare you with musicians who do good by their pathetic composing, not as they do good by employing fiddlers in the orchestra; for it is the public who in reality do that, not the musicians. So clearly keeping to this one question, what good we architects are to do by our genius; and having found that on our proportionate system we can do no good to others, will you tell me, lastly, what good we can do to *ourselves*?

Observe, nearly every other liberal art or profession has some intense pleasure connected with it, irrespective of any good to others. As lawyers, or physicians, or clergymen, you would have the pleasure of investigation, and of historical reading, as part of your work: as men of science you would be rejoicing in curiosity perpetually gratified respecting the laws and facts of nature: as artists you would have delight in watching the external forms of nature: as day labourers or

petty tradesmen, supposing you to undertake such work with as much intellect as you are going to devote to your designing, you would find continued subjects of interest in the manufacture or the agriculture which you helped to improve; or in the problems of commerce which bore on your business. But your architectural designing leads you into no pleasant journeys,—into no seeing of lovely things,—no discerning of just laws,—no warmths of compassion, no humilities of veneration, no progressive state of sight or soul. Our conclusion is—must be—that you will not amuse, nor inform, nor help anybody; you will not amuse, nor better, nor inform yourselves; you will sink into a state in which you can neither show, nor feel, nor see, anything, but that one is to two as three is to six. And in that state what should we call ourselves? Men? I think not. The right name for us would be—numerators and denominators. Vulgar Fractions.

Shall we, then, abandon this theory of the soul of architecture being in proportional lines, and look whether we can find anything better to exert our fancies upon?

May we not, to begin with, accept this great principle—that, as our bodies, to be in health, must be *generally* exercised, so our minds, to be in health, must be *generally* cultivated? You would not call a man healthy who had strong arms but was paralytic in his feet; nor one who could walk well, but had no use of his hands; nor one who could see well, if he could not hear. You would not voluntarily reduce your bodies to any such partially developed state. Much more, then, you would not, if you could help it, reduce your minds to it. Now, your minds are endowed with a vast number of gifts of totally different uses—limbs of mind as it were, which, if you don't exercise, you cripple. One is curiosity; that is a gift, a capacity of pleasure in knowing; which if you destroy, you make yourselves cold and dull. Another is sympathy; the power of sharing in the feelings of living creatures, which if you destroy, you make yourselves hard and cruel. Another of your limbs of mind is admiration; the power of enjoying beauty or ingenuity, which, if you destroy, you make yourselves base and irreverent. Another is wit; or the power

of playing with the lights on the many sides of truth ; which if you destroy, you make yourselves gloomy, and less useful and cheering to others than you might be. So that in choosing your way of work it should be your aim, as far as possible, to bring out all these faculties, as far as they exist in you ; not one merely, nor another, but all of them. And the way to bring them out, is simply to concern yourselves attentively with the subjects of each faculty. To cultivate sympathy you must be among living creatures, and thinking about them ; and to cultivate admiration, you must be among beautiful things and looking at them.

All this sounds much like truism, at least I hope it does, for then you will surely not refuse to act upon it ; and to consider farther, how, as architects, you are to keep yourselves in contemplation of living creatures and lovely things.

You all probably know the beautiful photographs which have been published within the last year or two of the porches of the Cathedral of Amiens. I hold one of these up to you, (merely that you may know what I am talking about, as of course you cannot see the detail at this distance, but you will recognise the subject.) Have you ever considered how much sympathy, and how much humour, are developed in filling this single doorway * with these sculptures of the history of St. Honoré (and, by the way, considering how often we English are now driving up and down the Rue St. Honoré, we may as well know as much of the saint as the old architect cared to tell us). You know in all legends of saints who ever were bishops, the first thing you are told of them is that they didn't want to be bishops. So here is St. Honoré, who doesn't want to be a bishop, sitting sulkily in the corner ; he hugs his book with both hands, and won't get up to take his crosier ; and here are all the city aldermen of Amiens come to *poke* him up ; and all the monks in the town in a great puzzle what they shall do for a bishop if St. Honoré won't be ; and here's one of the monks in the opposite corner who is quite cool about it, and thinks they'll get on well enough without

* The tympanum of the south transept door ; it is to be found generally among all collections of architectural photographs.

St. Honoré,—you see that in his face perfectly. At last St. Honoré consents to be bishop, and here he sits in a throne, and has his book now grandly on his desk instead of his knees, and he directs one of his village curates how to find relics in a wood ; here is the wood, and here is the village curate, and here are the tombs, with the bones of St. Victorien and Gentien in them.

After this, St. Honoré performs grand mass, and the miracle occurs of the appearance of a hand blessing the wafer, which occurrence afterwards was painted for the arms of the abbey. Then St. Honoré dies ; and here is his tomb with his statue on the top ; and miracles are being performed at it—a deaf man having his ear touched, and a blind man groping his way up to the tomb with his dog. Then here is a great procession in honour of the relics of St. Honoré ; and under his coffin are some cripples being healed ; and the coffin itself is put above the bar which separates the cross from the lower subjects, because the tradition is that the figure on the crucifix of the Church of St. Firmin bowed its head in token of acceptance, as the relics of St. Honoré passed beneath.

Now just consider the amount of sympathy with human nature, and observance of it, shown in this one bas-relief ; the sympathy with disputing monks, with puzzled aldermen, with melancholy recluse, with triumphant prelate, with palsy-stricken poverty, with ecclesiastical magnificence, or miracle-working faith. Consider how much intellect was needed in the architect, and how much observance of nature before he could give the expression to these various figures—cast these multitudinous draperies—design these rich and quaint fragments of tombs and altars—weave with perfect animation the entangled branches of the forest.

But you will answer me, all this is not architecture at all—it is sculpture. Will you then tell me precisely where the separation exists between one and the other ? We will begin at the very beginning. I will show you a piece of what you will certainly admit to be a piece of pure architecture ;*

* See Appendix III., “Classical Architecture.”

it is drawn on the back of another photograph, another of these marvellous tympana from Notre Dame, which you call, I suppose, impure. Well, look on this picture, and on this. Don't laugh; you must not laugh, that's very improper of you, this is classical architecture. I have taken it out of the essay on that subject in the "Encyclopædia Britannica."

Yet I suppose none of you would think yourselves particularly ingenious architects if you had designed nothing more than this; nay, I will even let you improve it into any grand proportion you choose, and add to it as many windows as you choose; the only thing I insist upon in our specimen of pure architecture is, that there shall be no mouldings nor ornaments upon it. And I suspect you don't quite like your architecture so "pure" as this. We want a few mouldings, you will say—just a few. Those who want mouldings, hold up their hands. We are unanimous, I think. Will, you, then, design the profiles of these mouldings yourselves, or will you copy them? If you wish to copy them, and to copy them always, of course I leave you at once to your authorities, and your imaginations to their repose. But if you wish to design them yourselves, how do you do it? You draw the profile according to your taste, and you order your mason to cut it. Now, will you tell me the logical difference between drawing the profile of a moulding and giving *that* to be cut, and drawing the folds of the drapery of a statue and giving *those* to be cut. The last is much more difficult to do than the first; but degrees of difficulty constitute no specific difference, and you will not accept it, surely, as a definition of the difference between architecture and sculpture, that "architecture is doing anything that is easy, and sculpture anything that is difficult."

It is true, also, that the carved moulding represents nothing, and the carved drapery represents something; but you will not, I should think, accept, as an explanation of the difference between architecture and sculpture, this any more than the other, that "sculpture is art which has meaning, and architecture art which has none."

Where, then, is your difference? In this, perhaps, you will

say ; that whatever ornaments we can direct ourselves, and get accurately cut to order, we consider architectural. The ornaments that we are obliged to leave to the pleasure of the workman, or the superintendence of some other designer, we consider sculptural, especially if they are more or less extraneous and incrustated—not an essential part of the building.

Accepting this definition, I am compelled to reply, that it is in effect nothing more than an amplification of my first one—that whatever is easy you call architecture, whatever is difficult you call sculpture. For you cannot suppose the arrangement of the place in which the sculpture is to be put is so difficult or so great a part of the design as the sculpture itself. For instance : you all know the pulpit of Niccolo Pisano, in the baptistry at Pisa. It is composed of seven rich *relievi*, surrounded by panel mouldings, and sustained on marble shafts. Do you suppose Niccolo Pisano's reputation—such part of it at least as rests on this pulpit (and much does)—depends on the panel mouldings, or on the *relievi*? The panel mouldings are by his hand ; he would have disdained to leave even them to a common workman ; but do you think he found any difficulty in them, or thought there was any credit in them? Having once done the sculpture, those enclosing lines were mere child's play to him ; the determination of the diameter of shafts and height of capitals was an affair of minutes ; his *work* was in carving the Crucifixion and the Baptism.

Or, again, do you recollect Orcagna's tabernacle in the church of San Michele, at Florence? That, also, consists of rich and multitudinous bas-reliefs, enclosed in panel mouldings, with shafts of mosaic, and foliated arches sustaining the canopy. Do you think Orcagna, any more than Pisano, if his spirit could rise in the midst of us at this moment, would tell us that he had trusted his fame to the foliation, or had put his soul's pride into the panelling? Not so ; he would tell you that his spirit was in the stooping figures that stand round the couch of the dying Virgin.

Or, lastly, do you think the man who designed the procession on the portal of Amiens was the subordinate workman?

that there was an architect over *him*, restraining him within certain limits, and ordering of him his bishops at so much a mitre, and his cripples at so much a crutch? Not so. *Here*, on this sculptured shield, rests the Master's hand; *this* is the centre of the Master's thought; from this, and in subordination to this, waved the arch and sprang the pinnacle. Having done this, and being able to give human expression and action to the stone, all the rest—the rib, the niche, the foil, the shaft—were mere toys to his hand and accessories to his conception: and if once you also gain the gift of doing this, if once you can carve one fronton such as you have here, I tell you, you would be able—so far as it depended on your invention—to scatter cathedrals over England as fast as clouds rise from its streams after summer rain.

Nay, but perhaps you answer again, our sculptors at present do not design cathedrals, and could not. No, they could not; but that is merely because we have made architecture so dull that they cannot take any interest in it, and, therefore, do not care to add to their higher knowledge the poor and common knowledge of principles of building. You have thus separated building from sculpture, and you have taken away the power of both; for the sculptor loses nearly as much by never having room for the development of a continuous work, as you do from having reduced your work to a continuity of mechanism. You are essentially, and should always be, the same body of men, admitting only such difference in operation as there is between the work of a painter at different times, who sometimes labours on a small picture, and sometimes on the frescoes of a palace gallery.

This conclusion, then, we arrive at, *must* arrive at; the fact being irrevocably so:—that in order to give your imagination and the other powers of your souls full play, you must do as all the great architects of old time did—you must yourselves be your sculptors. Phidias, Michael Angelo, Orcagna, Pisano, Giotto,—which of these men, do you think, could not use his chisel? You say, “It is difficult; quite out of your way.” I know it is; nothing that is great is easy; and nothing that is great, so long as you study building without sculpture, can

be *in* your way. I want to put it in your way, and you to find your way to it. But, on the other hand, do not shrink from the task as if the refined art of perfect sculpture were always required from you. For, though architecture and sculpture are not separate arts, there is an architectural *manner* of sculpture; and it is, in the majority of its applications, a comparatively easy one. Our great mistake at present, in dealing with stone at all, is requiring to have all our work too refined; it is just the same mistake as if we were to require all our book illustrations to be as fine work as Raphael's. John Leech does not sketch so well as Leonardo da Vinci; but do you think that the public could easily spare him; or that he is wrong in bringing out his talent in the way in which it is most effective? Would you advise him, if he asked your advice, to give up his wood-blocks and take to canvas? I know you would not; neither would you tell him, I believe, on the other hand, that because he could not draw as well as Leonardo, therefore he ought to draw nothing but straight lines with a ruler, and circles with compasses, and no figure-subjects at all. That would be some loss to you; would it not? You would all be vexed if next week's *Punch* had nothing in it but proportionate lines. And yet, do not you see that you are doing precisely the same thing with *your* powers of sculptural design that he would be doing with his powers of pictorial design, if he gave you nothing but such lines. You feel that you cannot carve like Phidias; therefore you will not carve at all, but only draw mouldings; and thus all that intermediate power which is of especial value in modern days,—that popular power of expression which is within the attainment of thousands,—and would address itself to tens of thousands,—is utterly lost to us in stone, though in ink and paper it has become one of the most desired luxuries of modern civilization.

Here, then, is one part of the subject to which I would especially invite your attention, namely, the distinctive character which may be wisely permitted to belong to architectural sculpture, as distinguished from perfect sculpture on one side, and from mere geometrical decoration on the other.

And first, observe what an indulgence we have in the distance at which most work is to be seen. Supposing we were able to carve eyes and lips with the most exquisite precision, it would all be of no use as soon as the work was put far above the eye ; but, on the other hand, as beauties disappear by being far withdrawn, so will faults ; and the mystery and confusion which are the natural consequence of distance, while they would often render your best skill but vain, will as often render your worst errors of little consequence ; nay, more than this, often a deep cut, or a rude angle, will produce in certain positions an effect of expression both startling and true, which you never hoped for. Not that mere distance will give animation to the work, if it has none in itself ; but if it has life at all, the distance will make that life more perceptible and powerful by softening the defects of execution. So that you are placed, as workmen, in this position of singular advantage, that you may give your fancies free play, and strike hard for the expression that you want, knowing that, if you miss it, no one will detect you ; if you at all touch it, nature herself will help you, and with every changing shadow and basking sunbeam bring forth new phases of your fancy.

But it is not merely this privilege of being imperfect which belongs to architectural sculpture. It has a true privilege of imagination, far excelling all that can be granted to the more finished work, which, for the sake of distinction, I will call,—and I don't think we can have a much better term—“furniture sculpture ;” sculpture, that is, which can be moved from place to furnish rooms.

For observe, to that sculpture the spectator is usually brought in a tranquil or prosaic state of mind ; he sees it associated rather with what is sumptuous than sublime, and under circumstances which address themselves more to his comfort than his curiosity. The statue which is to be pathetic, seen between the flashes of footmen's livery round the dining-table, must have strong elements of pathos in itself ; and the statue which is to be awful, in the midst of the gossip of the drawing-room, must have the elements of awe wholly in itself. But the spectator is brought to *your*

work already in an excited and imaginative mood. He has been impressed by the cathedral wall as it loomed over the low streets, before he looks up to the carving of its porch—and his love of mystery has been touched by the silence and the shadows of the cloister, before he can set himself to decipher the bosses on its vaulting. So that when once he begins to observe your doings, he will ask nothing better from you, nothing kinder from you, than that you would meet this imaginative temper of his half way;—that you would farther touch the sense of terror, or satisfy the expectation of things strange, which have been prompted by the mystery or the majesty of the surrounding scene. And thus, your leaving forms more or less undefined, or carrying out your fancies, however extravagant, in grotesqueness of shadow or shape, will be for the most part in accordance with the temper of the observer; and he is likely, therefore, much more willingly to use his fancy to help your meanings, than his judgment to detect your faults.

Again. Remember that when the imagination and feelings are strongly excited, they will not only bear with strange things, but they will *look* into *minute* things with a delight quite unknown in hours of tranquillity. You surely must remember moments of your lives in which, under some strong excitement of feeling, all the details of visible objects presented themselves with a strange intensity and insistence, whether you would or no; urging themselves upon the mind, and thrust upon the eye, with a force of fascination which you could not refuse. Now, to a certain extent, the senses get into this state whenever the imagination is strongly excited. Things trivial at other times assume a dignity or significance which we cannot explain; but which is only the more attractive because inexplicable: and the powers of attention, quickened by the feverish excitement, fasten and feed upon the minutest circumstances of detail, and remotest traces of intention. So that what would at other times be felt as more or less mean or extraneous in a work of sculpture, and which would assuredly be offensive to the perfect taste in its moments of languor, or of critical judgment, will be grateful, and even

sublime, when it meets this frightened inquisitiveness, this fascinated watchfulness, of the roused imagination. And this is all for your advantage; for, in the beginnings of your sculpture, you will assuredly find it easier to imitate minute circumstances of costume or character, than to perfect the anatomy of simple forms or the flow of noble masses; and it will be encouraging to remember that the grace you cannot perfect, and the simplicity you cannot achieve, would be in great part vain, even if you could achieve them, in their appeal to the hasty curiosity of passionate fancy; but that the sympathy which would be refused to your science will be granted to your innocence: and that the mind of the general observer, though wholly unaffected by the correctness of anatomy or propriety of gesture, will follow you with fond and pleased concurrence, as you carve the knots of the hair, and the patterns of the vesture.

Farther yet. We are to remember that not only do the associated features of the larger architecture tend to excite the strength of fancy, but the architectural laws to which you are obliged to submit your decoration stimulate its *ingenuity*. Every crocket which you are to erect with sculpture,—every foliation which you have to fill, presents itself to the spectator's fancy, not only as a pretty thing, but as a *problematic* thing. It contained, he perceives immediately, not only a beauty which you wished to display, but a necessity which you were forced to meet; and the problem, how to occupy such and such a space with organic form in any probable way, or how to turn such a boss or ridge into a conceivable image of life, becomes at once, to him as to you, a matter of amusement as much as of admiration. The ordinary conditions of perfection in form, gesture, or feature, are willingly dispensed with, when the ugly dwarf and ungainly goblin have only to gather themselves into angles, or crouch to carry corbels; and the want of skill which, in other kinds of work, would have been required for the finishing of the parts, will at once be forgiven here, if you have only disposed ingeniously what you have executed roughly, and atoned for the rudeness of your hands by the quickness of your wits.

Hitherto, however, we have been considering only the circumstances in architecture favourable to the development of the *powers* of imagination. A yet more important point for us seems, to me, the place which it gives to all the *objects* of imagination.

For, I suppose, you will not wish me to spend any time in proving, that imagination must be vigorous in proportion to the quantity of material which it has to handle; and that, just as we increase the range of what we see, we increase the richness of what we can imagine. Granting this, consider what a field is opened to your fancy merely in the subject matter which architecture admits. Nearly every other art is severely limited in its subjects—the landscape painter, for instance, gets little help from the aspects of beautiful humanity; the historical painter, less, perhaps, than he ought, from the accidents of wild nature; and the pure sculptor, still less, from the minor details of common life. But is there anything within range of sight, or conception, which may not be of use to *you*, or in which your interest may not be excited with advantage to your art? From visions of angels, down to the least important gesture of a child at play, whatever may be conceived of Divine, or beheld of Human, may be dared or adopted by you: throughout the kingdom of animal life, no creature is so vast, or so minute, that you cannot deal with it, or bring it into service; the lion and the crocodile will couch about your shafts; the moth and the bee will sun themselves upon your flowers; for you, the fawn will leap; for you, the snail be slow; for you, the dove smooth her bosom; and the hawk spread her wings toward the south. All the wide world of vegetation blooms and bends for you; the leaves tremble that you may bid them be still under the marble snow; the thorn and the thistle, which the earth casts forth as evil, are to you the kindest servants; no dying petal, nor drooping tendril, is so feeble as to have no more help for you; no robed pride of blossom so kingly, but it will lay aside its purple to receive at your hands the pale immortality. Is there anything in common life too mean,—in common things too trivial,—to be ennobled by your touch? As there

is nothing in life, so there is nothing in lifelessness which has not its lesson for you, or its gift; and when you are tired of watching the strength of the plume, and the tenderness of the leaf, you may walk down to your rough river shore, or into the thickest markets of your thoroughfares, and there is not a piece of torn cable that will not twine into a perfect moulding; there is not a fragment of cast-away matting, or shattered basket-work, that will not work into a chequer or capital. Yes: and if you gather up the very sand, and break the stone on which you tread, among its fragments of all but invisible shells you will find forms that will take their place, and that proudly, among the starred traceries of your vaulting; and you, who can crown the mountain with its fortress, and the city with its towers, are thus able also to give beauty to ashes, and worthiness to dust.

Now, in that your art presents all this material to you, you have already much to rejoice in. But you have more to rejoice in, because all this is submitted to you, not to be dissected or analyzed, but to be sympathized with, and to bring out, therefore, what may be accurately called the moral part of imagination. We saw that, if we kept ourselves among lines only, we should have cause to envy the naturalist, because he was conversant with facts; but you will have little to envy now, if you make yourselves conversant with the feelings that arise out of his facts. For instance, the naturalist coming upon a block of marble, has to begin considering immediately how far its purple is owing to iron, or its whiteness to magnesia; he breaks his piece of marble, and at the close of his day, has nothing but a little sand in his crucible and some data added to the theory of the elements. But *you* approach your marble to sympathize with it, and rejoice over its beauty. You cut it a little indeed; but only to bring out its veins more perfectly; and at the end of your day's work you leave your marble shaft with joy and complacency in its perfectness, as marble. When you have to watch an animal instead of a stone, you differ from the naturalist in the same way. He may, perhaps, if he be an amiable naturalist, take delight in having living creatures round him;—still, the ma-

for part of his work is, or has been, in counting feathers, separating fibres, and analyzing structures. But *your* work is always with the living creature ; the thing you have to get at in him is his life, and ways of going about things. It does not matter to you how many cells there are in his bones, or how many filaments in his feathers ; what you want is his moral character and way of behaving himself ; it is just that which your imagination, if healthy, will first seize—just that which your chisel, if vigorous, will first cut. You must get the storm spirit into your eagles, and the lordliness into your lions, and the tripping fear into your fawns ; and in order to do this, you must be in continual sympathy with every fawn of them ; and be hand-in-glove with all the lions, and hand-in-claw with all the hawks. And don't fancy that you will lower yourselves by sympathy with the lower creatures ; you cannot sympathize rightly with the higher, unless you do with those : but you have to sympathize with the higher, too—with queens, and kings, and martyrs, and angels. Yes, and above all, and more than all, with simple humanity in all its needs and ways, for there is not one hurried face that passes you in the street that will not be impressive, if you can only fathom it. All history is open to you, all high thoughts and dreams that the past fortunes of men can suggest, all fairy land is open to you—no vision that ever haunted forest, or gleamed over hill-side, but calls you to understand how it came into men's hearts, and may still touch them ; and all Paradise is open to you—yes, and the work of Paradise ; for in bringing all this, in perpetual and attractive truth, before the eyes of your fellow-men, you have to join in the employment of the angels, as well as to imagine their companies.

And observe, in this last respect, what a peculiar importance, and responsibility, are attached to your work, when you consider its permanence, and the multitudes to whom it is addressed. We frequently are led, by wise people, to consider what responsibility may sometimes attach to words, which yet, the chance is, will be heard by few, and forgotten as soon as heard. But none of *your* words will be heard by few, and none will be forgotten, for five or six hundred years,

if you build well. You will talk to all who pass by ; and all those little sympathies, those freaks of fancy, those jests in stone, those workings-out of problems in caprice, will occupy mind after mind of utterly countless multitudes, long after you are gone. You have not, like authors, to plead for a hearing, or to fear oblivion. Do but build large enough, and carve boldly enough, and all the world will hear you ; they cannot choose but look.

I do not mean to awe you by this thought ; I do not mean that because you will have so many witnesses and watchers, you are never to jest, or do anything gaily or lightly ; on the contrary, I have pleaded, from the beginning, for this art of yours, especially because it has room for the whole of your character—if jest is in you, let the jest be jested ; if mathematical ingenuity is yours, let your problem be put, and your solution worked out, as quaintly as you choose ; above all, see that your work is easily and happily done, else it will never make anybody else happy ; but while you thus give the rein to all your impulses, see that those impulses be headed and centred by one noble impulse ; and let that be Love—triple love—for the art which you practise, the creation in which you move, and the creatures to whom you minister.

I. I say, first, Love for the art which you practise. Be assured that if ever any other motive becomes a leading one in your mind, as the principal one for exertion, except your love of art, that moment it is all over with your art. I do not say you are to desire money, nor to desire fame, nor to desire position ; you cannot but desire all three ; nay, you may—if you are willing that I should use the word Love in a desecrated sense—love all three ; that is, passionately covet them, yet you must not covet or love them in the first place. Men of strong passions and imaginations must always care a great deal for anything they care for at all ; but the whole question is one of first or second. Does your art lead you, or your gain lead you ? You may like making money exceedingly ; but if it come to a fair question, whether you are to make five hundred pounds less by this business, or to spoil your building, and you choose to spoil your building, there's an

end of you. So you may be as thirsty for fame as a cricket is for cream ; but, if it come to a fair question, whether you are to please the mob, or do the thing as you know it ought to be done ; and you can't do both, and choose to please the mob, it's all over with you—there's no hope for you ; nothing that you can do will ever be worth a man's glance as he passes by. The test is absolute, inevitable—Is your art first with you ? Then you are artists ; you may be, after you have made your money, misers and usurers ; you may be, after you have got your fame, jealous, and proud, and wretched, and base : but yet, *as long as you won't spoil your work*, you are artists. On the other hand—Is your money first with you, and your fame first with you ? Then, you may be very charitable with your money, and very magnificent with your money, and very graceful in the way you wear your reputation, and very courteous to those beneath you, and very acceptable to those above you ; but you are *not artists*. You are mechanics, and drudges.

II. You must love the creation you work in the midst of. For, wholly in proportion to the intensity of feeling which you bring to the subject you have chosen, will be the depth and justice of our perception of its character. And this depth of feeling is not to be gained on the instant, when you want to bring it to bear on this or that. It is the result of the general habit of striving to feel rightly ; and, among thousands of various means of doing this, perhaps the one I ought specially to name to you, is the keeping yourselves clear of petty and mean cares. Whatever you do, don't be anxious, nor fill your heads with little chagrins and little desires. I have just said, that you may be great artists, and yet be miserly and jealous, and troubled about many things. So you may be ; but I said also that the miserliness or trouble must not be in your hearts all day. It is possible that you may get a habit of saving money ; or it is possible, at a time of great trial, you may yield to the temptation of speaking unjustly of a rival,—and you will shorten your powers and dim your sight even by this ;—but the thing that you have to dread far more than any such unconscious habit, or any such momentary fall—is the *constancy of small emotions* ;—the anxiety whether

Mr. So-and-so will like your work ; whether such and such a workman will do all that you want of him, and so on ;—not wrong feelings or anxieties in themselves, but impertinent, and wholly incompatible with the full exercise of your imagination.

Keep yourselves, therefore, quiet, peaceful, with your eyes open. It doesn't matter at all what Mr. So-and-so thinks of your work ; but it matters a great deal what that bird is doing up there in its nest, or how that vagabond child at the street corner is managing his game of knuckle-down. And remember, you cannot turn aside from your own interests, to the birds' and the children's interests, unless you have long before got into the habit of loving and watching birds and children ; so that it all comes at last to the forgetting yourselves, and the living out of yourselves, in the calm of the great world, or if you will, in its agitation ; but always in a calm of your own bringing. Do not think it wasted time to submit yourselves to any influence which may bring upon you any noble feeling. Rise early, always watch the sunrise, and the way the clouds break from the dawn ; you will cast your statue-draperies in quite another than your common way, when the remembrance of that cloud motion is with you, and of the scarlet vesture of the morning. Live always in the spring-time in the country ; you do not know what leaf-form means, unless you have seen the buds burst, and the young leaves breathing low in the sunshine, and wondering at the first shower of rain. But above all, accustom yourselves to look for, and to love, all nobleness of gesture and feature in the human form ; and remember that the highest nobleness is usually among the aged, the poor, and the infirm ; you will find, in the end, that it is not the strong arm of the soldier, nor the laugh of the young beauty, that are the best studies for you. Look at them, and look at them reverently ; but be assured that endurance is nobler than strength, and patience than beauty ; and that it is not in the high church pews, where the gay dresses are, but in the church free seats, where the widows' weeds are, that you may see the faces that will fit best between the angels' wings, in the church porch.

III. And therefore, lastly, and chiefly, you must love the creatures to whom you minister, your fellow-men ; for, if you do not love them, not only will you be little interested in the passing events of life, but in all your gazing at humanity, you will be apt to be struck only by outside form, and not by expression. It is only kindness and tenderness which will ever enable you to see what beauty there is in the dark eyes that are sunk with weeping, and in the paleness of those fixed faces which the earth's adversity has compassed about, till they shine in their patience like dying watchfires through twilight. But it is not this only which makes it needful for you, if you would be great, to be also kind ; there is a most important and all-essential reason in the very nature of your own art. So soon as you desire to build largely, and with addition of noble sculpture, you will find that your work must be associative. You cannot carve a whole cathedral yourself—you can carve but few and simple parts of it. Either your own work must be disgraced in the mass of the collateral inferiority, or you must raise your fellow-designers to correspondence of power. If you have genius, you will yourselves take the lead in the building you design ; you will carve its porch and direct its disposition. But for all subsequent advancement of its detail, you must trust to the agency and the invention of others ; and it rests with you either to repress what faculties your workmen have, into cunning subordination to your own ; or to rejoice in discovering even the powers that may rival you, and leading forth mind after mind into fellowship with your fancy, and association with your fame.

I need not tell you that if you do the first—if you endeavour to depress or disguise the talents of your subordinates—you are lost ; for nothing could imply more darkly and decisively than this, that your art and your work were not beloved by you ; that it was your own prosperity that you were seeking, and your own skill only that you cared to contemplate. I do not say that you must not be jealous at all ; it is rarely in human nature to be wholly without jealousy ; and you may be forgiven for going some day sadly home, when you find some youth, unpractised and unapproved, giving the life-stroke to

his work which you, after years of training, perhaps, cannot reach ; but your jealousy must not conquer—your love of your building must conquer, helped by your kindness of heart. See—I set no high or difficult standard before you. I do not say that you are to surrender your pre-eminence in *mere* unselfish generosity. But I do say that you must surrender your pre-eminence in your love of your building helped by your kindness ; and that whomsoever you find better able to do what will adorn it than you,—that person you are to give place to ; and to console yourselves for the humiliation, first, by your joy in seeing the edifice grow more beautiful under his chisel, and secondly, by your sense of having done kindly and justly. But if you are morally strong enough to make the kindness and justice the first motive, it will be better ;—best of all, if you do not consider it as kindness at all, but bare and stern justice ; for, truly, such help as we can give each other in this world is a *debt* to each other ; and the man who perceives a superiority or a capacity in a subordinate, and neither confesses, nor assists it, is not merely the withholder of kindness, but the committer of injury. But be the motive what you will, only see that you do the thing ; and take the joy of the consciousness that, as your art embraces a wider field than all others—and addresses a vaster multitude than all others—and is surer of audience than all others—so it is profounder and holier in Fellowship than all others. The artist, when his pupil is perfect, must see him leave his side that he may declare his distinct, perhaps opponent, skill. Man of science wrestles with man of science for priority of discovery, and pursues in pangs of jealous haste his solitary inquiry. You alone are called by kindness,—by necessity,—by equity, to fraternity of toil ; and thus, in those misty and massive piles which rise above the domestic roofs of our ancient cities, there was—there may be again—a meaning more profound and true than any that fancy so commonly has attached to them. Men say their pinnacles point to heaven. Why, so does every tree that buds, and every bird that rises as it sings. Men say their aisles are good for worship. Why, so is every mountain glen, and rough sea-shore. But this they

have of distinct and indisputable glory,—that their mighty walls were never raised, and never shall be, but by men who love and aid each other in their weakness ;—that all their interlacing strength of vaulted stone has its foundation upon the stronger arches of manly fellowship, and all their changing grace of depressed or lifted pinnacule owes its cadence and completeness to sweeter symmetries of human soul.

LECTURE V.

THE WORK OF IRON, IN NATURE, ART, AND POLICY.

A Lecture Delivered at Tunbridge Wells, February, 1858.

WHEN first I heard that you wished me to address you this evening, it was a matter of some doubt with me whether I could find any subject that would possess any sufficient interest for you to justify my bringing you out of your comfortable houses on a winter's night. When I venture to speak about my own special business of art, it is almost always before students of art, among whom I may sometimes permit myself to be dull, if I can feel that I am useful : but a mere talk about art, especially without examples to refer to (and I have been unable to prepare any careful illustrations for this lecture), is seldom of much interest to a general audience. As I was considering what you might best bear with me in speaking about, there came naturally into my mind a subject connected with the origin and present prosperity of the town you live in ; and, it seemed to me, in the out-branchings of it, capable of a very general interest. When, long ago (I am afraid to think how long), Tunbridge Wells was my Switzerland, and I used to be brought down here in the summer, a sufficiently active child, rejoicing in the hope of clambering sandstone cliffs of stupendous height above the common, there used sometimes, as, I suppose, there are in the lives of all children at the Wells, to be dark days in my life—days of condemnation to the pantiles and band—under which calam-

ities my only consolation used to be in watching, at every turn in my walk, the welling forth of the spring over the orange rim of its marble basin. The memory of the clear water, sparkling over its saffron stain, came back to me as the strongest image connected with the place; and it struck me that you might not be unwilling, to-night, to think a little over the full significance of that saffron stain, and of the power, in other ways and other functions, of the steely element to which so many here owe returning strength and life;—chief as it has been always, and is yet more and more markedly so day by day, among the precious gifts of the earth.

The subject is, of course, too wide to be more than suggestively treated; and even my suggestions must be few, and drawn chiefly from my own fields of work; nevertheless, I think I shall have time to indicate some courses of thought which you may afterwards follow out for yourselves if they interest you; and so I will not shrink from the full scope of the subject which I have announced to you—the functions of Iron, in Nature, Art, and Policy.

Without more preface, I will take up the first head.

I. IRON IN NATURE.—You all probably know that the ochreous stain, which, perhaps, is often thought to spoil the basin of your spring, is iron in a state of rust: and when you see rusty iron in other places you generally think, not only that it spoils the places it stains, but that it is spoiled itself—that rusty iron is spoiled iron.

For most of our uses it generally is so; and because we cannot use a rusty knife or razor so well as a polished one, we suppose it to be a great defect in iron that it is subject to rust. But not at all. On the contrary, the most perfect and useful state of it is that ochreous stain; and therefore it is endowed with so ready a disposition to get itself into that state. It is not a fault in the iron, but a virtue, to be so fond of getting rusted, for in that condition it fulfils its most important functions in the universe, and most kindly duties to mankind. Nay, in a certain sense, and almost a literal one, we may say that iron rusted is Living; but when pure or polished, Dead. You all probably know that in the mixed

air we breathe, the part of it essentially needful to us is called oxygen ; and that this substance is to all animals, in the most accurate sense of the word, “breath of life.” The nervous power of life is a different thing ; but the supporting element of the breath, without which the blood, and therefore the life, cannot be nourished, is this oxygen. Now it is this very same air which the iron breathes when it gets rusty. It takes the oxygen from the atmosphere as eagerly as we do, though it uses it differently. The iron keeps all that it gets ; we, and other animals, part with it again ; but the metal absolutely keeps what it has once received of this aerial gift ; and the ochreous dust which we so much despise is, in fact, just so much nobler than pure iron, in so far as it is *iron and the air*. Nobler, and more useful—for, indeed, as I shall be able to show you presently—the main service of this metal, and of all other metals, to us, is not in making knives, and scissors, and pokers, and pans, but in making the ground we feed from, and nearly all the substances first needful to our existence. For these are all nothing but metals and oxygen—metals with breath put into them. Sand, lime, clay, and the rest of the earths—potash and soda, and the rest of the alkalis—are all of them metals which have undergone this, so to speak, vital change, and have been rendered fit for the service of man by permanent unity with the purest air which he himself breathes. There is only one metal which does not rust readily ; and that, in its influence on Man hitherto, has caused Death rather than Life ; it will not be put to its right use till it is made a pavement of, and so trodden under foot.

Is there not something striking in this fact, considered largely as one of the types, or lessons, furnished by the inanimate creation ? Here you have your hard, bright, cold, lifeless metal—good enough for swords and scissors—but not for food. You think, perhaps, that your iron is wonderfully useful in a pure form, but how would you like the world, if all your meadows, instead of grass, grew nothing but iron wire—if all your arable ground, instead of being made of sand and clay, were suddenly turned into flat surfaces of steel—if the whole earth, instead of its green and glowing sphere, rich

with forest and flower, showed nothing but the image of the vast furnace of a ghastly engine—a globe of black, lifeless, excoriated metal? It would be that,—probably it was once that; but assuredly it would be, were it not that all the substance of which it is made sucks and breathes the brilliancy of the atmosphere; and as it breathes, softening from its merciless hardness, it falls into fruitful and beneficent dust; gathering itself again into the earths from which we feed, and the stones with which we build;—into the rocks that frame the mountains, and the sands that bind the sea.

Hence, it is impossible for you to take up the most insignificant pebble at your feet, without being able to read, if you like, this curious lesson in it. You look upon it at first as if it were earth only. Nay, it answers, “I am not earth—I am earth and air in one; part of that blue heaven which you love, and long for, is already in me; it is all my life—without it I should be nothing, and able for nothing; I could not minister to you, nor nourish you—I should be a cruel and helpless thing; but, because there is, according to my need and place in creation, a kind of soul in me, I have become capable of good, and helpful in the circles of vitality.”

Thus far the same interest attaches to all the earths, and all the metals of which they are made; but a deeper interest, and larger beneficence belong to that ochreous earth of iron which stains the marble of your springs. It stains much besides that marble. It stains the great earth wheresoever you can see it, far and wide—it is the colouring substance appointed to colour the globe for the sight, as well as subdue it to the service of man. You have just seen your hills covered with snow, and, perhaps, have enjoyed, at first, the contrast of their fair white with the dark blocks of pine woods; but have you ever considered how you would like them always white—not pure white, but dirty white—the white of thaw, with all the chill of snow in it, but none of its brightness? That is what the colour of the earth would be without its iron; that would be its colour, not here or there only, but in all places, and at all times. Follow out that idea till you get it in some detail. Think first of your pretty gravel walks in

your gardens, yellow and fine, like plots of sunshine between the flower-beds ; fancy them all suddenly turned to the colour of ashes. That is what they would be without iron ochre. Think of your winding walks over the common, as warm to the eye as they are dry to the foot, and imagine them all laid down suddenly with gray cinders. Then pass beyond the common into the country, and pause at the first ploughed field that you see sweeping up the hill sides in the sun, with its deep brown furrows, and wealth of ridges all a-glow, heaved aside by the ploughshare, like deep folds of a mantle of russet velvet—fancy it all changed suddenly into grisly furrows in a field of mud. That is what it would be without iron. Pass on, in fancy, over hill and dale, till you reach the bending line of the sea shore ; go down upon its breezy beach—watch the white foam flashing among the amber of it, and all the blue sea embayed in belts of gold : then fancy those circlets of far sweeping shore suddenly put into mounds of mourning—all those golden sands turned into gray slime, the fairies no more able to call to each other, “Come unto these yellow sands ;” but, “Come unto these drab sands.” That is what they would be, without iron.

Iron is in some sort, therefore, the sunshine and light of landscape, so far as that light depends on the ground ; but it is a source of another kind of sunshine, quite as important to us in the way we live at present—sunshine, not of landscape, but of dwelling-place.

In these days of swift locomotion I may doubtless assume that most of my audience have been somewhere out of England—have been in Scotland, or France, or Switzerland. Whatever may have been their impression, on returning to their own country, of its superiority or inferiority in other respects, they cannot but have felt one thing about it—the comfortable look of its towns and villages. Foreign towns are often very picturesque, very beautiful, but they never have quite that look of warm self-sufficiency and wholesome quiet with which our villages nestle themselves down among the green fields. If you will take the trouble to examine into the sources of this impression, you will find that by far the greater

part of that warm and satisfactory appearance depends upon the rich scarlet colour of the bricks and tiles. It does not belong to the neat building—very neat building has an uncomfortable rather than a comfortable look—but it depends on the *warm* building; our villages are dressed in red tiles as our old women are in red cloaks; and it does not matter how worn the cloaks, or how bent and bowed the roof may be, so long as there are no holes in either one or the other, and the sobered but unextinguishable colour still glows in the shadow of the hood, and burns among the green mosses of the gable. And what do you suppose dyes your tiles of cottage roof? You don't paint them. It is nature who puts all that lovely vermilion into the clay for you; and all that lovely vermilion is this oxide of iron. Think, therefore, what your streets of towns would become—ugly enough, indeed, already, some of them, but still comfortable-looking—if instead of that warm brick red, the houses became all pepper-and-salt colour. Fancy your country villages changing from that homely scarlet of theirs which, in its sweet suggestion of laborious peace, is as honourable as the soldiers' scarlet of laborious battle—suppose all those cottage roofs, I say, turned at once into the colour of unbaked clay, the colour of street gutters in rainy weather. That's what they would be, without iron.

There is, however, yet another effect of colour in our English country towns which, perhaps, you may not all yourselves have noticed, but for which you must take the word of a sketcher. They are not so often merely warm scarlet as they are warm purple;—a more beautiful colour still: and they owe this colour to a mingling with the vermilion of the deep grayish or purple hue of our fine Welsh slates on the more respectable roofs, made more blue still by the colour of intervening atmosphere. If you examine one of these Welsh slates freshly broken, you will find its purple colour clear and vivid; and although never strikingly so after it has been long exposed to weather, it always retains enough of the tint to give rich harmonies of distant purple in opposition to the green of our woods and fields. Whatever brightness or power there is in the hue is entirely owing to the oxide of iron.

Without it the slates would either be pale stone colour, or cold gray, or black.

Thus far we have only been considering the use and pleasantness of iron in the common earth of clay. But there are three kinds of earth which in mixed mass and prevalent quantity, form the world. Those are, in common language, the earths of clay, of lime, and of flint. Many other elements are mingled with these in sparing quantities; but the great frame and substance of the earth is made of these three, so that wherever you stand on solid ground, in any country of the globe, the thing that is mainly under your feet will be either clay, limestone, or some condition of the earth of flint, mingled with both.

These being what we have usually to deal with, Nature seems to have set herself to make these three substances as interesting to us, and as beautiful for us, as she can. The clay, being a soft and changeable substance, she doesn't take much pains about, as we have seen, till it is baked; she brings the colour into it only when it receives a permanent form. But the limestone and flint she paints, in her own way, in their native state: and her object in painting them seems to be much the same as in her painting of flowers; to draw us, careless and idle human creatures, to watch her a little, and see what she is about—that being on the whole good for us,—her children. For Nature is always carrying on very strange work with this limestone and flint of hers: laying down beds of them at the bottom of the sea; building islands out of the sea; filling chinks and veins in mountains with curious treasures; petrifying mosses, and trees, and shells; in fact, carrying on all sorts of business, subterranean or submarine, which it would be highly desirable for us, who profit and live by it, to notice as it goes on. And apparently to lead us to do this, she makes picture-books for us of limestone and flint; and tempts us, like foolish children as we are, to read her books by the pretty colours in them. The pretty colours in her limestone-books form those variegated marbles which all mankind have taken delight to polish and build with from the beginning of time;

and the pretty colours in her flint-books form those agates, jaspers, cornelians, bloodstones, onyxes, cairngorms, chryso-prases, which men have in like manner taken delight to cut, and polish, and make ornaments of, from the beginning of time ; and yet, so much of babies are they, and so fond of looking at the pictures instead of reading the book, that I question whether, after six thousand years of cutting and polishing, there are above two or three people out of any given hundred, who know, or care to know, how a bit of agate or a bit of marble was made, or painted.

How it was made, may not be always very easy to say ; but with what it was painted there is no manner of question. All those beautiful violet veinings and variegations of the marbles of Sicily and Spain, the glowing orange and amber colours of those of Siena, the deep russet of the *Rosso antico*, and the blood-colour of all the precious jaspers that enrich the temples of Italy ; and, finally, all the lovely transitions of tint in the pebbles of Scotland and the Rhine, which form, though not the most precious, by far the most interesting portion of our modern jewellers' work ;—all these are painted by nature with this one material only, variously proportioned and applied—the oxide of iron that stains your *Tunbridge* springs.

But this is not all, nor the best part of the work of iron. Its service in producing these beautiful stones is only rendered to rich people, who can afford to quarry and polish them. But Nature paints for all the world, poor and rich together : and while, therefore, she thus adorns the innermost rocks of her hills, to tempt your investigation, or indulge your luxury, —she paints, far more carefully, the outsides of the hills, which are for the eyes of the shepherd and the ploughman. I spoke just now of the effect in the roofs of our villages of their purple slates : but if the slates are beautiful even in their flat and formal rows on house-roofs, much more are they beautiful on the rugged crests and flanks of their native mountains. Have you ever considered, in speaking as we do so often of distant blue hills, what it is that makes them blue ? To a certain extent it is distance ; but distance alone will not do it. Many hills look white, however distant. That

lovely dark purple colour of our Welsh and Highland hills is owing, not to their distance merely, but to their rocks. Some of their rocks are, indeed, too dark to be beautiful, being black or ashy gray ; owing to imperfect and porous structure. But when you see this dark colour dashed with russet and blue, and coming out in masses among the green ferns, so purple that you can hardly tell at first whether it is rock or heather, then you must thank your old Tunbridge friend, the oxide of iron.

But this is not all. It is necessary for the beauty of hill scenery that Nature should colour not only her soft rocks, but her hard ones ; and she colours them with the same thing, only more beautifully. Perhaps you have wondered at my use of the word “purple,” so often of stones ; but the Greeks, and still more the Romans, who had profound respect for purple, used it of stone long ago. You have all heard of “porphyry” as among the most precious of the harder massive stones. The colour which gave it that noble name, as well as that which gives the flush to all the rosy granite of Egypt—yes, and to the rosiest summits of the Alps themselves—is still owing to the same substance—your humble oxide of iron.

And last of all :

A nobler colour than all these—the noblest colour ever seen on this earth—one which belongs to a strength greater than that of the Egyptian granite, and to a beauty greater than that of the sunset or the rose—is still mysteriously connected with the presence of this dark iron. I believe it is not ascertained on what the crimson of blood actually depends ; but the colour is connected, of course, with its vitality, and that vitality with the existence of iron as one of its substantial elements.

Is it not strange to find this stern and strong metal mingled so delicately in our human life, that we cannot even blush without its help ? Think of it, my fair and gentle hearers ; how terrible the alternative—sometimes you have actually no choice but to be brazen-faced, or iron-faced !

In this slight review of some of the functions of the metal, you observe that I confine myself strictly to its operations as

a colouring element. I should only confuse your conception of the facts, if I endeavoured to describe its uses as a substantial element, either in strengthening rocks, or influencing vegetation by the decomposition of rocks. I have not, therefore, even glanced at any of the more serious uses of the metal in the economy of nature. But what I wish you to carry clearly away with you is the remembrance that in all these uses the metal would be nothing without the air. The pure metal has no power, and never occurs in nature at all except in meteoric stones, whose fall no one can account for, and which are useless after they have fallen: in the necessary work of the world, the iron is invariably joined with the oxygen, and would be capable of no service or beauty whatever without it.

II. IRON IN ART.—Passing, then, from the offices of the metal in the operations of nature to its uses in the hands of man, you must remember, in the outset, that the type which has been thus given you, by the lifeless metal, of the action of body and soul together, has noble antitype in the operation of all human power. All art worthy the name is the energy—neither of the human body alone, nor of the human soul alone, but of both united, one guiding the other: good craftsmanship and work of the fingers, joined with good emotion and work of the heart.

There is no good art, nor possible judgment of art, when these two are not united; yet we are constantly trying to separate them. Our amateurs cannot be persuaded but that they may produce some kind of art by their fancy or sensibility, without going through the necessary manual toil. That is entirely hopeless. Without a certain number, and that a very great number, of steady acts of hand—a practice as careful and constant as would be necessary to learn any other manual business—no drawing is possible. On the other side, the workman, and those who employ him, are continually trying to produce art by trick or habit of fingers, without using their fancy or sensibility. That also is hopeless. Without mingling of heart-passion with hand-power, no art is possible.*

* No fine art, that is. See the previous definition of fine art at p. 38.

The highest art unites both in their intensest degrees : the action of the hand at its finest, with that of the heart at its fullest.

Hence it follows that the utmost power of art can only be given in a material capable of receiving and retaining the influence of the subtlest touch of the human hand. That hand is the most perfect agent of material power existing in the universe ; and its full subtlety can only be shown when the material it works on, or with, is entirely yielding. The chords of a perfect instrument will receive it, but not of an imperfect one ; the softly bending point of the hair pencil, and soft melting of colour, will receive it, but not even the chalk or pen point, still less the steel point, chisel, or marble. The hand of a sculptor may, indeed, be as subtle as that of a painter, but all its subtlety is not bestowable nor expressible : the touch of Titian, Correggio, or Turner,* is a far more marvellous piece of nervous action than can be shown in anything but colour, or in the very highest conditions of executive expression in music. In proportion as the material worked upon is less delicate, the execution necessarily becomes lower, and the art with it. This is one main principle of all work. Another is, that whatever the material you choose to work with, your art is base if it does not bring out the distinctive qualities of that material.

The reason of this second law is, that if you don't want the qualities of the substance you use, you ought to use some other substance : it can be only affectation, and desire to display your skill, that lead you to employ a refractory substance, and therefore your art will all be base. Glass, for instance, is eminently, in its nature, transparent. If you don't want transparency, let the glass alone. Do not try to make a window look like an opaque picture, but take an opaque ground to begin with. Again, marble is eminently a solid and massive substance. Unless you want mass and solidity, don't work in marble. If you wish for lightness, take wood ; if for freedom, take stucco ; if for ductility, take glass. Don't try to carve feathers, or trees, or nets, or foam, out of marble. Carve white limbs and broad breasts only out of that.

* See Appendix IV., "Subtlety of Hand."

So again, iron is eminently a ductile and tenacious substance—tenacious above all things, ductile more than most. When you want tenacity, therefore, and involved form, take iron. It is eminently made for that. It is the material given to the sculptor as the companion of marble, with a message, as plain as it can well be spoken, from the lips of the earth-mother, “Here’s for you to cut, and here’s for you to hammer. Shape this, and twist that. What is solid and simple, carve out; what is thin and entangled, beat out. I give you all kinds of forms to be delighted in;—fluttering leaves as well as fair bodies; twisted branches as well as open brows. The leaf and the branch you may beat and drag into their imagery: the body and brow you shall reverently touch into their imagery. And if you choose rightly and work rightly, what you do shall be safe afterwards. Your slender leaves shall not break off in my tenacious iron, though they may be rusted a little with an iron autumn. Your broad surfaces shall not be unsmoothed in my pure crystalline marble—no decay shall touch them. But if you carve in the marble what will break with a touch, or mould in the metal what a stain of rust or verdigris will spoil, it is your fault—not mine.”

These are the main principles in this matter; which, like nearly all other right principles in art, we moderns delight in contradicting as directly and specially as may be. We continually look for, and praise, in our exhibitions the sculpture of veils, and lace, and thin leaves, and all kinds of impossible things pushed as far as possible in the fragile stone, for the sake of showing the sculptor’s dexterity.* On the other hand,

* I do not mean to attach any degree of blame to the effort to represent leafage in marble for certain expressive purposes. The later works of Mr. Munro have depended for some of their most tender thoughts on a delicate and skilful use of such accessories. And in general, leaf sculpture is good and admirable, if it renders, as in Gothic work, the grace and lightness of the leaf by the arrangement of light and shadow—supporting the masses well by strength of stone below; but all carving is base which proposes to itself *slightness* as an aim, and tries to imitate the absolute thinness of thin or slight things, as much modern wood carving does. I saw in Italy, a year or two ago, a marble sculpture of birds’ nests.

we *cast* our iron into bars—brittle, though an inch thick—sharpen them at the ends, and consider fences, and other work, made of such materials, decorative! I do not believe it would be easy to calculate the amount of mischief done to our taste in England by that fence iron-work of ours alone. If it were asked of us by a single characteristic, to distinguish the dwellings of a country into two broad sections; and to set, on one side, the places where people were, for the most part, simple, happy, benevolent, and honest; and, on the other side, the places where at least a great number of the people were sophisticated, unkind, uncomfortable, and unprincipled, there is, I think, one feature that you could fix upon as a positive test: the uncomfortable and unprincipled parts of a country would be the parts where people lived among iron railings, and the comfortable and principled parts where they had none. A broad generalization, you will say! Perhaps a little too broad; yet, in all sobriety, it will come truer than you think. Consider every other kind of fence or defence, and you will find some virtue in it; but in the iron railing none. There is, first, your castle rampart of stone—somewhat too grand to be considered here among our types of fencing; next, your garden or park wall of brick, which has indeed often an unkind look on the outside, but there is more modesty in it than unkindness. It generally means, not that the builder of it wants to shut you out from the view of his garden, but from the view of himself: it is a frank statement that as he needs a certain portion of time to himself, so he needs a certain portion of ground to himself, and must not be stared at when he digs there in his shirt-sleeves, or plays at leapfrog with his boys from school, or talks over old times with his wife, walking up and down in the evening sunshine. Besides, the brick wall has good practical service in it, and shelters you from the east wind, and ripens your peaches and nectarines, and glows in autumn like a sunny bank. And, moreover, your brick wall, if you build it properly, so that it shall stand long enough, is a beautiful thing when it is old, and has assumed its grave purple red, touched with mossy green.

Next to your lordly wall, in dignity of enclosure, comes

your close-set wooden paling, which is more objectionable, because it commonly means enclosure on a larger scale than people want. Still it is significative of pleasant parks, and well-kept field walks, and herds of deer, and other such aristocratic pastoralisms, which have here and there their proper place in a country, and may be passed without any discredit.

Next to your paling, comes your low stone dyke, your mountain fence, indicative at a glance either of wild hill country, or of beds of stone beneath the soil; the hedge of the mountains—delightful in all its associations, and yet more in the varied and craggy forms of the loose stones it is built of; and next to the low stone wall, your lowland hedge, either in trim line of massive green, suggested of the pleasancess of old Elizabethan houses, and smooth alleys for aged feet, and quaint labyrinths for young ones, or else in fair entanglement of eglantine and virgin's bower, tossing its scented luxuriance along our country waysides;—how many such you have here among your pretty hills, fruitful with black clusters of the bramble for boys in autumn, and crimson hawthorn berries for birds in winter. And then last, and most difficult to class among fences, comes your handrail, expressive of all sorts of things; sometimes having a knowing and vicious look, which it learns at race-courses; sometimes an innocent and tender look, which it learns at rustic bridges over cressy brooks; and sometimes a prudent and protective look, which it learns on passes of the Alps, where it has posts of granite and bars of pine, and guards the brows of cliffs and the banks of torrents. So that in all these kinds of defence there is some good, pleasant, or noble meaning. But what meaning has the iron railing? Either, observe, that you are living in the midst of such bad characters that you must keep them out by main force of bar, or that you are yourself of a character requiring to be kept inside in the same manner. Your iron railing always means thieves outside, or Bedlam inside; it *can* mean nothing else than that. If the people outside were good for anything, a hint in the way of fence would be enough for them; but because they are violent and at enmity with you, you are forced to put the close bars and the spikes at the top

Last summer I was lodging for a little while in a cottage in the country, and in front of my low window there were, first some beds of daisies, then a row of gooseberry and currant bushes, and then a low wall about three feet above the ground, covered with stone-cress. Outside, a corn-field, with its green ears glistening in the sun, and a field path through it, just past the garden gate. From my window I could see every peasant of the village who passed that way, with basket on arm for market, or spade on shoulder for field. When I was inclined for society, I could lean over my wall, and talk to anybody; when I was inclined for science, I could botanize all along the top of my wall—there were four species of stone-cress alone growing on it; and when I was inclined for exercise, I could jump over my wall, backwards and forwards. That's the sort of fence to have in a Christian country; not a thing which you can't walk inside of without making yourself look like a wild beast, nor look at out of your window in the morning without expecting to see somebody impaled upon it in the night.

And yet farther, observe that the iron railing is a useless fence—it can shelter nothing, and support nothing; you can't nail your peaches to it, nor protect your flowers with it, nor make anything whatever out of its costly tyranny; and besides being useless, it is an insolent fence;—it says plainly to everybody who passes—"You may be an honest person,—but, also, you may be a thief: honest or not, you shall not get in here, for I am a respectable person, and much above you; you shall only see what a grand place I have got to keep you out of—look here, and depart in humiliation."

This, however, being in the present state of civilization a frequent manner of discourse, and there being unfortunately many districts where the iron railing is unavoidable, it yet remains a question whether you need absolutely make it ugly, no less than significative of evil. You must have railings round your squares in London, and at the sides of your areas; but need you therefore have railings so ugly that the constant sight of them is enough to neutralise the effect of all the schools of art in the kingdom? You need not. Far from

such necessity, it is even in your power to turn all your police force of iron bars actually into drawing masters, and natural historians. Not, of course, without some trouble and some expense; you can do nothing much worth doing, in this world, without trouble, you can get nothing much worth having without expense. The main question is only—what is worth doing and having:—Consider, therefore, if this be not. Here is your iron railing, as yet, an uneducated monster; a sombre seneschal, incapable of any words, except his perpetual “Keep out!” and “Away with you!” Would it not be worth some trouble and cost to turn this ungainly ruffian porter into a well-educated servant; who, while he was severe as ever in forbidding entrance to evilly-disposed people, should yet have a kind word for well-disposed people, and a pleasant look, and a little useful information at his command, in case he should be asked a question by the passers-by?

We have not time to-night to look at many examples of ironwork; and those I happen to have by me are not the best; ironwork is not one of my special subjects of study; so that I only have memoranda of bits that happened to come into picturesque subjects which I was drawing for other reasons. Besides, external ironwork is more difficult to find good than any other sort of ancient art; for when it gets rusty and broken, people are sure, if they can afford it, to send it to the old iron shop, and get a fine new grating instead; and in the great cities of Italy, the old iron is thus nearly all gone: the best bits I remember in the open air were at Brescia;—fantastic sprays of laurel-like foliage rising over the garden gates; and there are a few fine fragments at Verona, and some good trellis-work enclosing the Scala tombs; but on the whole, the most interesting pieces, though by no means the purest in style, are to be found in out-of-the-way provincial towns, where people do not care, or are unable, to make polite alterations. The little town of Bellinzona, for instance, on the south of the Alps, and that of Sion on the north, have both of them complete schools of ironwork in their balconies and vineyard gates. That of Bellinzona is the best, though not very old—I suppose most of it of the seventeenth century; still it is very

quaint and beautiful. Here, for example, (see frontispiece), are two balconies, from two different houses ; one has been a cardinal's, and the hat is the principal ornament of the balcony ; its tassels being wrought with delightful delicacy and freedom ; and catching the eye clearly even among the mass of rich wreathed leaves. These tassels and strings are precisely the kind of subject fit for ironwork—noble in ironwork, they would have been entirely ignoble in marble, on the grounds above stated. The real plant of oleander standing in the window enriches the whole group of lines very happily.

The other balcony, from a very ordinary-looking house in the same street, is much more interesting in its details. It is shown in the plate as it appeared last summer, with convolvulus twined about the bars, the arrow-shaped living leaves mingled among the leaves of iron ; but you may see in the centre of these real leaves a cluster of lighter ones, which are those of the ironwork itself. This cluster is worth giving a little larger to show its treatment. Fig. 2 (in Appendix V.) is the front view of it : Fig. 4, its profile. It is composed of a large tulip in the centre ; then two turkscap lilies ; then two pinks, a little conventionalized ; then two narcissi ; then two nondescripts, or, at least, flowers I do not know ; and then two dark buds, and a few leaves. I say, *dark* buds, for all these flowers have been coloured in their original state. The plan of the group is exceedingly simple : it is all enclosed in a pointed arch (Fig. 3, Appendix V.) : the large mass of the tulip forming the apex ; a six-foiled star on each side ; then a jagged star ; then a five-foiled star ; then an unjagged star or rose ; finally a small bud, so as to establish relation and cadence through the whole group. The profile is very free and fine, and the upper bar of the balcony exceedingly beautiful in effect ;—none the less so on account of the marvellously simple means employed. A thin strip of iron is bent over a square rod ; out of the edge of this strip are cut a series of triangular openings—widest at top, leaving projecting teeth of iron (Appendix, Fig. 5) ; then each of these projecting pieces gets a little sharp tap with the hammer in front, which

beaks its edge inwards, tearing it a little open at the same time, and the thing is done.

The common forms of Swiss ironwork are less naturalistic than these Italian balconies, depending more on beautiful arrangements of various curve; nevertheless, there has been a rich naturalist school at Fribourg, where a few bell-handles are still left, consisting of rods branched into laurel and other leafage. At Geneva, modern improvements have left nothing; but at Annecy, a little good work remains; the balcony of its old *hôtel de ville* especially, with a trout of the lake—presumably the town arms—forming its central ornament.

I might expatiate all night—if you would sit and hear me—on the treatment of such required subject, or introduction of pleasant caprice by the old workmen; but we have no more time to spare, and I must quit this part of our subject—the rather as I could not explain to you the intrinsic merit of such ironwork without going fully into the theory of curvilinear design; only let me leave with you this one distinct assertion—that the quaint beauty and character of many natural objects, such as intricate branches, grass, foliage (especially thorny branches and prickly foliage), as well as that of many animals, plumed, spined, or bristled, is sculpturally expressible in iron only, and in iron would be majestic and impressive in the highest degree; and that every piece of metal work you use might be, rightly treated, not only a superb decoration, but a most valuable abstract of portions of natural forms, holding in dignity precisely the same relation to the painted representation of plants, that a statue does to the painted form of man. It is difficult to give you an idea of the grace and interest which the simplest objects possess when their forms are thus abstracted from among the surrounding of rich circumstance which in nature disturbs the feebleness of our attention. In Plate 2, a few blades of common green grass, and a wild leaf or two—just as they were thrown by nature,—are thus abstracted from the associated redundance of the forms about them, and shown on a dark ground: every cluster of herbage would furnish fifty such groups, and every such

group would work into iron (fitting it, of course, rightly to its service) with perfect ease, and endless grandeur of result.

III. IRON in POLICY.—Having thus obtained some idea of the use of iron in art, as dependent on its ductility, I need not, certainly, say anything of its uses in manufacture and commerce; we all of us know enough,—perhaps a little too much—about *them*. So I pass lastly to consider its uses in policy; dependent chiefly upon its tenacity—that is to say, on its power of bearing a pull, and receiving an edge. These powers, which enable it to pierce, to bind, and to smite, render it fit for the three great instruments, by which its political action may be simply typified; namely, the Plough, the Fetter, and the Sword.

On our understanding the right use of these three instruments, depend, of course, all our power as a nation, and all our happiness as individuals.

I. THE PLOUGH.—I say, first, on our understanding the right use of the plough, with which, in justice to the fairest of our labourers, we must always associate that feminine plough—the needle. The first requirement for the happiness of a nation is that it should understand the function in this world of these two great instruments: a happy nation may be defined as one in which the husband's hand is on the plough, and the housewife's on the needle; so in due time reaping its golden harvest, and shining in golden vesture: and an unhappy nation is one which, acknowledging no use of plough nor needle, will assuredly at last find its storehouse empty in the famine, and its breast naked to the cold.

Perhaps you think this is a mere truism, which I am wasting your time in repeating. I wish it were.

By far the greater part of the suffering and crime which exist at this moment in civilized Europe, arises simply from people not understanding this truism—not knowing that produce or wealth is eternally connected by the laws of heaven and earth with resolute labour; but hoping in some way to cheat or abrogate this everlasting law of life, and to feed where they have not furrowed, and be warm where they have not woven.

I repeat, nearly all our misery and crime result from this one misapprehension. The law of nature is, that a certain quantity of work is necessary to produce a certain quantity of good, of any kind whatever. If you want knowledge, you must toil for it : if food, you must toil for it ; and if pleasure, you must toil for it. But men do not acknowledge this law, or strive to evade it, hoping to get their knowledge, and food, and pleasure for nothing ; and in this effort they either fail of getting them, and remain ignorant and miserable, or they obtain them by making other men work for their benefit ; and then they are tyrants and robbers. Yes, and worse than robbers. I am not one who in the least doubts or disputes the progress of this century in many things useful to mankind ; but it seems to me a very dark sign respecting us that we look with so much indifference upon dishonesty and cruelty in the pursuit of wealth. In the dream of Nebuchadnezzar it was only the *feet* that were part of iron and part of clay ; but many of us are now getting so cruel in our avarice, that it seems as if, in us, the *heart* were part of iron, and part of clay.

From what I have heard of the inhabitants of this town, I do not doubt but that I may be permitted to do here what I have found it usually thought elsewhere highly improper and absurd to do, namely, trace a few Bible sentences to their practical result.

You cannot but have noticed how often in those parts of the Bible which are likely to be oftenest opened when people look for guidance, comfort, or help in the affairs of daily life, namely, the Psalms and Proverbs, mention is made of the guilt attaching to the *Oppression* of the poor. Observe : not the neglect of them, but the *Oppression* of them : the word is as frequent as it is strange. You can hardly open either of those books, but somewhere in their pages you will find a description of the wicked man's attempts against the poor : such as—" He doth ravish the poor when he getteth him into his net."

" He sitteth in the lurking places of the villages ; his eyes are privily set against the poor."

“In his pride he doth persecute the poor, and blesseth the covetous, whom God abhorreth.”

“His mouth is full of deceit and fraud ; in the secret places doth he murder the innocent. Have the workers of iniquity no knowledge, who eat up my people as they eat bread ? They have drawn out the sword, and bent the bow, to cast down the poor and needy.”

“They are corrupt, and speak wickedly concerning oppression.”

“Pride compasseth them about as a chain, and violence as a garment.”

“Their poison is like the poison of a serpent. Ye weigh the violence of your hands in the earth.”

Yes : “Ye weigh the violence of your hands :”—weigh these words as well. The last things we ever usually think of weighing are Bible words. We like to dream and dispute over them ; but to weigh them, and see what their true contents are—anything but that. Yet, weigh these ; for I have purposely taken all these verses, perhaps more striking to you read in this connection, than separately in their places, out of the Psalms, because, for all people belonging to the Established Church of this country these Psalms are appointed lessons, portioned out to them by their clergy to be read once through every month. Presumably, therefore, whatever portions of Scripture we may pass by or forget, these at all events, must be brought continually to our observance as useful for direction of daily life. Now, do we ever ask ourselves what the real meaning of these passages may be, and who these wicked people are, who are “murdering the innocent ?” You know it is rather singular language this !—rather strong language, we might, perhaps, call it—hearing it for the first time. Murder ! and murder of innocent people !—nay, even a sort of cannibalism. Eating people,—yes, and God’s people, too—eating *My* people as if they were bread ! swords drawn, bows bent, poison of serpents mixed ! violence of hands weighed, measured, and trafficked with as so much coin ! where is all this going on ? Do you suppose it was only going on in the time of David, and that nobody but Jews ever murder the

poor? If so, it would surely be wiser not to mutter and mumble for our daily lessons what does not concern us; but if there be any chance that it may concern us, and if this description, in the Psalms, of human guilt is at all generally applicable, as the descriptions in the Psalms of human sorrow are, may it not be advisable to know wherein this guilt is being committed round about us, or by ourselves? and when we take the words of the Bible into our mouths in a congregational way, to be sure whether we mean merely to chant a piece of melodious poetry relating to other people—(we know not exactly to whom)—or to assert our belief in facts bearing somewhat stringently on ourselves and our daily business. And if you make up your minds to do this no longer, and take pains to examine into the matter, you will find that these strange words, occurring as they do, not in a few places only, but almost in every alternate psalm and every alternate chapter of proverb, or prophecy, with tremendous reiteration, were not written for one nation or one time only; but for all nations and languages, for all places and all centuries; and it is as true of the wicked man now as ever it was of Nabal or Dives, that “his eyes are set against the poor.”

Set *against* the poor, mind you. Not merely set *away* from the poor, so as to neglect or lose sight of them, but set *against*, so as to afflict and destroy them. This is the main point I want to fix your attention upon. You will often hear sermons about neglect or carelessness of the poor. But neglect and carelessness are not at all the points. The Bible hardly ever talks about neglect of the poor. It always talks of *oppression* of the poor—a very different matter. It does not merely speak of passing by on the other side, and binding up no wounds, but of drawing the sword and ourselves smiting the men down. It does not charge us with being idle in the pest-house, and giving no medicine, but with being busy in the pest-house, and giving much poison.

May we not advisedly look into this matter a little, even to-night, and ask first, Who are these poor?

No country is, or ever will be, without them: that is to say, without the class which cannot, on the average, do more

by its labour than provide for its subsistence, and which has no accumulations of property laid by on any considerable scale. Now there are a certain number of this class whom we cannot oppress with much severity. An able-bodied and intelligent workman—sober, honest, and industrious, will almost always command a fair price for his work, and lay by enough in a few years to enable him to hold his own in the labour market. But all men are not able-bodied, nor intelligent, nor industrious; and you cannot expect them to be. Nothing appears to me at once more ludicrous and more melancholy than the way the people of the present age usually talk about the morals of labourers. You hardly ever address a labouring man upon his prospects in life, without quietly assuming that he is to possess, at starting, as a small moral capital to begin with, the virtue of Socrates, the philosophy of Plato, and the heroism of Epaminondas. “Be assured, my good man,”—you say to him,—“that if you work steadily for ten hours a day all your life long, and if you drink nothing but water, or the very mildest beer, and live on very plain food, and never lose your temper, and go to church every Sunday, and always remain content in the position in which Providence has placed you, and never grumble nor swear; and always keep your clothes decent, and rise early, and use every opportunity of improving yourself, you will get on very well, and never come to the parish.”

All this is exceedingly true; but before giving the advice so confidently, it would be well if we sometimes tried it practically ourselves, and spent a year or so at some hard manual labour, not of an entertaining kind—ploughing or digging, for instance, with a very moderate allowance of beer; nothing but bread and cheese for dinner; no papers nor muffins in the morning; no sofas nor magazines at night; one small room for parlour and kitchen; and a large family of children always in the middle of the floor. If we think we could, under these circumstances, enact Socrates or Epaminondas entirely to our own satisfaction, we shall be somewhat justified in requiring the same behaviour from our poorer neighbours; but if not, we should surely consider a little whether among

the various forms of the oppression of the poor, we may not rank as one of the first and likeliest—the oppression of expecting too much from them.

But let this pass ; and let it be admitted that we can never be guilty of oppression towards the sober, industrious, intelligent, exemplary labourer. There will always be in the world some who are not altogether intelligent and exemplary ; we shall, I believe, to the end of time find the majority somewhat unintelligent, a little inclined to be idle, and occasionally, on Saturday night, drunk ; we must even be prepared to hear of reprobates who like skittles on Sunday morning better than prayers ; and of unnatural parents who send their children out to beg instead of to go to school.

Now these are the kind of people whom you *can* oppress, and whom you do oppress, and that to purpose,—and with all the more cruelty and the greater sting, because it is just their own fault that puts them into your power. You know the words about wicked people are, “ He doth ravish the poor when he getteth him *into his net*.” This getting into the net is constantly the fault or folly of the sufferer—his own heedlessness or his own indolence ; but after he is once in the net, the oppression of him, and making the most of his distress, are ours. The nets which we use against the poor are just those worldly embarrassments which either their ignorance or their improvidence are almost certain at some time or other to bring them into : then, just at the time when we ought to hasten to help them, and disentangle them, and teach them how to manage better in future, we rush forward to *pillage* them, and force all we can out of them in their adversity. For, to take one instance only, remember this is literally and simply what we do, whenever we buy, or try to buy, cheap goods—goods offered at a price which we know cannot be remunerative for the labour involved in them. Whenever we buy such goods, remember we are stealing somebody's labour. Don't let us mince the matter. I say, in plain Saxon, STEALING—taking from him the proper reward of his work, and putting it into our own pocket. You know well enough that the thing could not have been offered you at that price, un-

less distress of some kind had forced the producer to part with it. You take advantage of this distress, and you force as much out of him as you can under the circumstances. The old barons of the middle ages used, in general, the thumb-screw to extort property ; we moderns use, in preference, hunger or domestic affliction : but the fact of extortion remains precisely the same. Whether we force the man's property from him by pinching his stomach, or pinching his fingers, makes some difference anatomically ;—morally, none whatsoever : we use a form of torture of some sort in order to make him give up his property ; we use, indeed, the man's own anxieties, instead of the rack ; and his immediate peril of starvation, instead of the pistol at the head ; but otherwise we differ from Front de Bœuf, or Dick Turpin, merely in being less dexterous, more cowardly, and more cruel. More cruel, I say, because the fierce baron and the redoubted highwayman are reported to have robbed, at least by preference, only the rich ; *we* steal habitually from the poor. We buy our liveries, and gild our prayer-books, with pilfered pence out of children's and sick men's wages, and thus ingeniously dispose a given quantity of Theft, so that it may produce the largest possible measure of delicately distributed suffering.

But this is only one form of common oppression of the poor—only one way of taking our hands off the plough handle, and binding another's upon it. This first way of doing it is the economical way—the way preferred by prudent and virtuous people. The bolder way is the acquisitive way :—the way of speculation. You know we are considering at present the various modes in which a nation corrupts itself, by not acknowledging the eternal connection between its plough and its pleasure ;—by striving to get pleasure, without working for it. Well, I say the first and commonest way of doing so is to try to get the product of other people's work, and enjoy it ourselves, by cheapening their labour in times of distress : then the second way is that grand one of watching the chances of the market ;—the way of speculation. Of course there are some speculations that are fair and honest—speculations made with our own money, and which do not involve in their suc-

cess the loss, by others, of what we gain. But generally modern speculation involves much risk to others, with chance of profit only to ourselves: even in its best conditions it is merely one of the forms of gambling or treasure hunting; it is either leaving the steady plough and the steady pilgrimage of life, to look for silver mines beside the way; or else it is the full stop beside the dice-tables in Vanity Fair—investing all the thoughts and passions of the soul in the fall of the cards, and choosing rather the wild accidents of idle fortune than the calm and accumulative rewards of toil. And this is destructive enough, at least to our peace and virtue. But is usually destructive of far more than *our* peace, or *our* virtue. Have you ever deliberately set yourselves to imagine and measure the suffering, the guilt, and the mortality caused necessarily by the failure of any large-dealing merchant, or largely-branched bank? Take it at the lowest possible supposition—count, at the fewest you choose, the families whose means of support have been involved in the catastrophe. Then, on the morning after the intelligence of ruin, let us go forth amongst them in earnest thought; let us use that imagination which we waste so often on fictitious sorrow, to measure the stern facts of that multitudinous distress; strike open the private doors of their chambers, and enter silently into the midst of the domestic misery; look upon the old men, who had reserved for their failing strength some remainder of rest in the evening-tide of life, cast helplessly back into its trouble and tumult; look upon the active strength of middle age suddenly blasted into incapacity—its hopes crushed, and its hardly earned rewards snatched away in the same instant—at once the heart withered, and the right arm snapped; look upon the piteous children, delicately nurtured, whose soft eyes, now large with wonder at their parents' grief, must soon be set in the dimness of famine; and, far more than all this, look forward to the length of sorrow beyond—to the hardest labour of life, now to be undergone either in all the severity of unexpected and inexperienced trial, or else, more bitter still, to be begun again, and endured for the second time, amidst the ruins of cherished hopes and the feebleness of advancing years, em-

bittered by the continual sting and taunt of the inner feeling that it has all been brought about, not by the fair course of appointed circumstance, but by miserable chance and wanton treachery ; and, last of all, look beyond this—to the shattered destinies of those who have faltered under the trial, and sunk past recovery to despair. And then consider whether the hand which has poured this poison into all the springs of life be one whit less guiltily red with human blood than that which literally pours the hemlock into the cup, or guides the dagger to the heart? We read with horror of the crimes of a Borgia or a Tophana ; but there never lived Borgias such as live now in the midst of us. The cruel lady of Ferrara slew only in the strength of passion—she slew only a few, those who thwarted her purposes or who vexed her soul ; she slew sharply and suddenly, embittering the fate of her victims with no foretastes of destruction, no prolongations of pain ; and, finally and chiefly, she slew, not without remorse, nor without pity. But *we*, in no storm of passion—in no blindness of wrath,—we, in calm and clear and untempted selfishness, pour our poison—not for a few only, but for multitudes ;—not for those who have wronged us, or resisted,—but for those who have trusted us and aided :—we, not with sudden gift of merciful and unconscious death, but with slow waste of hunger and weary rack of disappointment and despair ;—we, last and chiefly, do our murdering, not with any pauses of pity or scorching of conscience, but in facile and forgetful calm of mind—and so, forsooth, read day by day, complacently, as if they meant any one else than ourselves, the words that forever describe the wicked : “ The *poison of asps* is under their lips, and their *feet are swift to shed blood.*”

You may indeed, perhaps, think there is some excuse for many in this matter, just because the sin is so unconscious ; that the guilt is not so great when it is unapprehended, and that it is much more pardonable to slay heedlessly than purposefully. I believe no feeling can be more mistaken, and that in reality, and in the sight of heaven ; the callous indifference which pursues its own interests at any cost of life, though it does not definitely adopt the purpose of sin, is a

state of mind at once more heinous and more hopeless than the wildest aberrations of ungoverned passion. There may be, in the last case, some elements of good and of redemption still mingled in the character ; but, in the other, few or none. There may be hope for the man who has slain his enemy in anger ; hope even for the man who has betrayed his friend in fear ; but what hope for him who trades in unregarded blood, and builds his fortune on unrepented treason ?

But, however this may be, and wherever you may think yourselves bound in justice to impute the greater sin, be assured that the question is one of responsibilities only, not of facts. The definite result of all our modern haste to be rich is assuredly, and constantly, the murder of a certain number of persons by our hands every year. I have not time to go into the details of another—on the whole, the broadest and terriblest way in which we cause the destruction of the poor—namely, the way of luxury and waste, destroying, in improvidence, what might have been the support of thousands ;* but if you follow out the subject for yourselves at home—and what I have endeavoured to lay before you to-night will only be useful to you if you do—you will find that wherever and whenever men are endeavouring to *make money hastily*, and to avoid the labour which Providence has appointed to be the only source of honourable profit ;—and also wherever and whenever they permit themselves to *spend it luxuriously*, without reflecting how far they are misguiding the labour of others ;—there and then, in either case, they are literally and infallibly causing, for their own benefit or their own pleasure, a certain annual number of human deaths ; that, therefore,

* The analysis of this error will be found completely carried out in my lectures on the political economy of art. And it is an error worth analyzing ; for until it is finally trodden under foot, no healthy political, economical, or moral action is *possible* in any state. I do not say this impetuously or suddenly, for I have investigated this subject as deeply, and as long, as my own special subject of art ; and the principles of political economy which I have stated in those lectures are as sure as the principles of Euclid. Foolish readers doubted their certainty, because I told them I had “ never read any books on Political Economy.” Did they suppose I had got my knowledge of art by reading books ?

the choice given to every man born into this world is, simply, whether he will be a labourer, or an assassin ; and that who-soever has not his hand on the Stilt of the plough, has it on the Hilt of the dagger.

It would also be quite vain for me to endeavour to follow out this evening the lines of thought which would be suggested by the other two great political uses of iron in the Fetter and the Sword : a few words only I must permit myself respecting both.

2. THE FETTER.—As the plough is the typical instrument of industry, so the fetter is the typical instrument of the restraint or subjection necessary in a nation—either literally, for its evil-doers, or figuratively, in accepted laws, for its wise and good men. You have to choose between this figurative and literal use ; for depend upon it, the more laws you accept, the fewer penalties you will have to endure, and the fewer punishments to enforce. For wise laws and just restraints are to a noble nation not chains, but chain mail—strength and defence, though something also of an incumbrance. And this necessity of restraint, remember, is just as honourable to man as the necessity of labour. You hear every day greater numbers of foolish people speaking about liberty, as if it were such an honourable thing : so far from being that, it is, on the whole, and in the broadest sense, dishonourable, and an attribute of the lower creatures. No human being, however great or powerful, was ever so free as a fish. There is always something that he must, or must not do ; while the fish may do whatever he likes. All the kingdoms of the world put together are not half so large as the sea, and all the railroads and wheels that ever were, or will be, invented are not so easy as fins. You will find, on fairly thinking of it, that it is his Restraint which is honourable to man, not his Liberty ; and, what is more, it is restraint which is honourable even in the lower animals. A butterfly is much more free than a bee ; but you honour the bee more, just because it is subject to certain laws which fit it for orderly function in bee society. And throughout the world, of the two abstract things, liberty and restraint, restraint is always the more honourable. It is

true, indeed, that in these and all other matters you never can reason finally from the abstraction, for both liberty and restraint are good when they are nobly chosen, and both are bad when they are basely chosen ; but of the two, I repeat, it is restraint which characterizes the higher creature, and betters the lower creature : and, from the ministering of the archangel to the labour of the insect,—from the poisoning of the planets to the gravitation of a grain of dust,—the power and glory of all creatures, and all matter, consist in their obedience, not in their freedom. The Sun has no liberty—a dead leaf has much. The dust of which you are formed has no liberty. Its liberty will come—with its corruption.

And, therefore, I say boldly, though it seems a strange thing to say in England, that as the first power of a nation consists in knowing how to guide the Plough, its second power consists in knowing how to wear the Fetter :—

3. THE SWORD.—And its third power, which perfects it as a nation, consist in knowing how to wield the sword, so that the three talismans of national existence are expressed in these three short words—Labour, Law, and Courage.

This last virtue we at least possess ; and all that is to be alleged against us is that we do not honour it enough. I do not mean honour by acknowledgment of service, though sometimes we are slow in doing even that. But we do not honour it enough in consistent regard to the lives and souls of our soldiers. How wantonly we have wasted their lives you have seen lately in the reports of their mortality by disease, which a little care and science might have prevented ; but we regard their souls less than their lives, by keeping them in ignorance and idleness, and regarding them merely as instruments of battle. The argument brought forward for the maintenance of a standing army usually refers only to expediency in the case of unexpected war, whereas, one of the chief reasons for the maintenance of an army is the advantage of the military system as a method of education. The most fiery and headstrong, who are often also the most gifted and generous of your youths, have always a tendency both in the lower and upper classes to offer themselves for your soldiers : others,

weak and unserviceable in a civil capacity, are tempted or entrapped into the army in a fortunate hour for them : out of this fiery or uncouth material, it is only a soldier's discipline which can bring the full value and power. Even at present, by mere force of order and authority, the army is the salvation of myriads ; and men who, under other circumstances, would have sunk into lethargy or dissipation, are redeemed into noble life by a service which at once summons and directs their energies. How much more than this military education is capable of doing, you will find only when you make it education indeed. We have no excuse for leaving our private soldiers at their present level of ignorance and want of refinement, for we shall invariably find that, both among officers and men, the gentlest and best informed are the bravest ; still less have we excuse for diminishing our army, either in the present state of political events, or, as I believe, in any other conjunction of them that for many a year will be possible in this world.

You may, perhaps, be surprised at my saying this ; perhaps surprised at my implying that war itself can be right, or necessary, or noble at all. Nor do I speak of all war as necessary, nor of all war as noble. Both peace and war are noble or ignoble according to their kind and occasion. No man has a profounder sense of the horror and guilt of ignoble war than I have : I have personally seen its effects, upon nations, of unmitigated evil, on soul and body, with perhaps as much pity, and as much bitterness of indignation, as any of those whom you will hear continually declaiming in the cause of peace. But peace may be sought in two ways. One way is as Gideon sought it, when he built his altar in Ophrah, naming it, " God send peace," yet sought this peace that he loved, as he was ordered to seek it, and the peace was sent, in God's way :—" the country was in quietness forty years in the days of Gideon." And the other way of seeking peace is as Menahem sought it when he gave the King of Assyria a thousand talents of silver, that " his hand might be with him." That is, you may either win your peace, or buy it :—win it, by resistance to evil ;—buy it, by compromise with evil. You may buy

your peace, with silenced consciences ;—you may buy it, with broken vows,—buy it, with lying words,—buy it, with base connivances,—buy it, with the blood of the slain, and the cry of the captive, and the silence of lost souls—over hemispheres of the earth, while you sit smiling at your serene hearths, lisping comfortable prayers evening and morning, and counting your pretty Protestant beads (which are flat, and of gold, instead of round, and of ebony, as the monks' ones were), and so mutter continually to yourselves, “Peace, peace,” when there is No peace ; but only captivity and death, for you, as well as for those you leave unsaved ;—and yours darker than theirs.

I cannot utter to you what I would in this matter ; we all see too dimly, as yet, what our great world-duties are, to allow any of us to try to outline their enlarging shadows. But think over what I *have* said, and as you return to your quiet homes to-night, reflect that their peace was not won for you by your own hands ; but by theirs who long ago jeopardded their lives for you, their children ; and remember that neither this inherited peace, nor any other, can be kept, but through the same jeopardy. No peace was ever won from Fate by subterfuge or agreement ; no peace is ever in store for any of us, but that which we shall win by victory over shame or sin ;—victory over the sin that oppresses, as well as over that which corrupts. For many a year to come, the sword of every righteous nation must be whetted to save or subdue ; nor will it be by patience of others' suffering, but by the offering of your own, that you ever will draw nearer to the time when the great change shall pass upon the iron of the earth ;—when men shall beat their swords into ploughshares, and their spears into pruning-hooks ; neither shall they learn war any more.

APPENDICES.

APPENDIX I.

RIGHT AND WRONG.

READERS who are using my *Elements of Drawing* may be surprised by my saying here that Tintoret may lead them wrong ; while in the *Elements* he is one of the six men named as being “always right.”

I bring the apparent inconsistency forward at the beginning of this Appendix, because the illustration of it will be farther useful in showing the real nature of the self-contradiction which is often alleged against me by careless readers.

It is not only possible, but a frequent condition of human action, to *do* right and *be* right—yet so as to mislead other people if they rashly imitate the thing done. For there are many rights which are not absolutely, but relatively right—right only for *that* person to do under those circumstances,—not for *this* person to do under other circumstances.

Thus it stands between Titian and Tintoret. Titian is always absolutely Right. You may imitate him with entire security that you are doing the best thing that can possibly be done for the purpose in hand. Tintoret is always relatively Right—relatively to his own aims and peculiar powers. But you must quite understand Tintoret before you can be sure what his aim was, and why he was then right in doing what would not be right always. If, however, you take the pains thus to understand him, he becomes entirely instructive and exemplary, just as Titian is ; and therefore I have placed him among those are “always right,” and you can only study him rightly with that reverence for him.

Then the artists who are named as "admitting question of right and wrong," are those who from some mischance of circumstance or short-coming in their education, do not always do right, even with relation to their own aims and powers.

Take for example the quality of imperfection in drawing form. There are many pictures of Tintoret in which the trees are drawn with a few curved flourishes of the brush instead of leaves. That is (absolutely) wrong. If you copied the tree as a model, you would be going very wrong indeed. But it is relatively, and for Tintoret's purposes, right. In the nature of the superficial work you will find there must have been a cause for it. Somebody perhaps wanted the picture in a hurry to fill a dark corner. Tintoret good-naturedly did all he could—painted the figures tolerably—had five minutes left only for the trees, when the servant came. "Let him wait another five minutes." And this is the best foliage we can do in the time. Entirely, admirably, unsurpassably right, under the conditions. Titian would not have worked under them, but Tintoret was kinder and humbler; yet he may lead you wrong if you don't understand him. Or, perhaps, another day, somebody came in while Tintoret was at work, who tormented Tintoret. An ignoble person! Titian would have been polite to him, and gone on steadily with his trees. Tintoret cannot stand the ignobleness; it is unendurably repulsive and discomfiting to him. "The Black Plague take him—and the trees, too! Shall such a fellow see me paint!" And the trees go all to pieces. This, in you, would be mere ill-breeding and ill-temper. In Tintoret it was one of the necessary conditions of his intense sensibility; had he been capable, then, of keeping his temper, he could never have done his greatest works. Let the trees go to pieces, by all means; it is quite right they should; he is always right.

But in a background of Gainsborough you would find the trees unjustifiably gone to pieces. The carelessness of form there is definitely purposed by him;—adopted as an advisable thing; and therefore it is both absolutely and relatively wrong;—it indicates his being imperfectly educated as a painter, and not having brought out all his powers. It may

still happen that the man whose work thus partially erroneous is greater far, than others who have fewer faults. Gainsborough's and Reynolds' wrongs are more charming than almost anybody else's right. Still, they occasionally *are* wrong—but the Venetians and Velasquez,* never.

I ought, perhaps, to have added in that Manchester address (only one does not like to say things that shock people) some words of warning against painters likely to mislead the student. For indeed, though here and there something may be gained by looking at inferior men, there is always more to be gained by looking at the best; and there is not time, with all the looking of human life, to exhaust even one great painter's instruction. How then shall we dare to waste our sight and thoughts on inferior ones, even if we could do so, which we rarely can, without danger of being led astray? Nay, strictly speaking, what people call inferior painters are in general *no* painters. Artists are divided by an impassable gulf into the men who can paint, and who cannot. The men who can paint often fall short of what they should have done;—are repressed, or defeated, or otherwise rendered inferior one to another: still there is an everlasting barrier between them and the men who cannot paint—who can only in various popular ways pretend to paint. And if once you know the difference, there is always some good to be got by looking at a real painter—seldom anything but mischief to be got out of a false one; but do not suppose real painters are common. I do not speak of living men; but among those who labour no more, in this England of ours, since it first had a school, we have had only five real painters;—Reynolds, Gainsborough, Hogarth, Richard Wilson, and Turner.

The reader may, perhaps, think I have forgotten Wilkie. No. I once much overrated him as an expressional draughtsman, not having then studied the figure long enough to be able to detect superficial sentiment. But his colour I have never praised; it is entirely false and valueless. And it would be unjust to English art if I did not here express my regret

* * At least after his style was formed; early pictures, like the Adoration of the Magi in our Gallery, are of little value.

that the admiration of Constable, already harmful enough in England, is extending even into France. There was, perhaps, the making, in Constable, of a second or third-rate painter, if any careful discipline had developed in him the instincts which, though unparalleled for narrowness, were, as far as they went, true. But as it is, he is nothing more than an industrious and innocent amateur blundering his way to a superficial expression of one or two popular aspects of common nature.

And my readers may depend upon it, that all blame which I express in this sweeping way is trustworthy. I have often had to repent of over-praise of inferior men; and continually to repent of insufficient praise of great men; but of broad condemnation, never. For I do not speak it but after the most searching examination of the matter, and under stern sense of need for it: so that whenever the reader is entirely shocked by what I say, he may be assured every word is true.* It is just because it so much offends him, that it was necessary: and knowing that it must offend him, I should not have ventured to say it, without certainty of its truth. I say "certainty," for it is just as possible to be certain whether the drawing of a tree or a stone is true or false, as whether the drawing of a triangle is; and what I mean primarily by saying that a picture is in all respects worthless, is that it is in all respects False: which is not a matter of opinion at all, but a matter of ascertainable fact, such as I never assert till I *have* ascertained. And the thing so commonly said about my writings, that they are rather persuasive than just; and that though my "language" may be good, I am an unsafe guide in art criticism, is, like many other popular estimates in such matters, not merely untrue, but precisely the reverse of the truth; it is truth, like reflections in water, distorted much by the shaking receptive surface, and in every particular, upside

* He must, however, be careful to distinguish blame—however strongly expressed, of some special fault or error in a true painter,—from these general statements of inferiority or worthlessness. Thus he will find me continually laughing at Wilson's tree-painting; not because Wilson could not paint, but because he had never looked at a tree.

down. For my "language," until within the last six or seven years, was loose, obscure, and more or less feeble ; and still, though I have tried hard to mend it, the best I can do is inferior to much contemporary work. No description that I have ever given of anything is worth four lines of Tennyson ; and in serious thought, my half-pages are generally only worth about as much as a single sentence either of his, or of Carlyle's. They are, I well trust, as true and necessary ; but they are neither so concentrated nor so well put. But I am an entirely safe guide in art judgment : and that simply as the necessary result of my having given the labour of life to the determination of facts, rather than to the following of feelings or theories. Not, indeed, that my work is free from mistakes ; it admits many, and always must admit many, from its scattered range ; but, in the long run, it will be found to enter sternly and searchingly into the nature of what it deals with, and the kind of mistake it admits is never dangerous, consisting, usually, in pressing the truth too far. It is quite easy, for instance, to take an accidental irregularity in a piece of architecture, which less careful examination would never have detected at all, for an intentional irregularity ; quite possible to misinterpret an obscure passage in a picture, which a less earnest observer would never have tried to interpret. But mistakes of this kind—honest, enthusiastic mistakes—are never harmful ; because they are always made in a true direction,—falls forward on the road, not into the ditch beside it ; and they are sure to be corrected by the next comer. But the blunt and dead mistakes made by too many other writers on art—the mistakes of sheer inattention, and want of sympathy—are mortal. The entire purpose of a great thinker may be difficult to fathom, and we may be over and over again more or less mistaken in guessing at his meaning ; but the real, profound, nay, quite bottomless, and unredeemable mistake, is the fool's thought—that he had *no* meaning.

I do not refer, in saying this, to any of my statements respecting subjects which it has been my main work to study : as far as I am aware, I have never yet misinterpreted any picture of Turner's, though often remaining blind to the half

of what he had intended: neither have I as yet found anything to correct in my statements respecting Venetian architecture; * but in casual references to what has been quickly seen, it is impossible to guard wholly against error, without losing much valuable observation, true in ninety-nine cases out of a hundred, and harmless even when erroneous.

APPENDIX II.

REYNOLDS' DISAPPOINTMENT.

It is very fortunate that in the fragment of Mason's MSS., published lately by Mr. Cotton in his "Sir Joshua Reynolds' Notes," † record is preserved of Sir Joshua's feelings respecting the paintings in the window of New College, which might otherwise have been supposed to give his full sanction to this mode of painting on glass. Nothing can possibly be more curious, to my mind, than the great painter's expectations; or his having at all entertained the idea that the qualities of colour which are peculiar to opaque bodies could be obtained in a transparent medium; but so it is: and with the simplicity and humbleness of an entirely great man he hopes that Mr. Jervas on glass is to excel Sir Joshua on canvas. Happily, Mason tells us the result.

"With the copy Jervas made of this picture he was grievously disappointed. 'I had frequently,' he said to me, 'pleased myself by reflecting, after I had produced what I thought a brilliant effect of light and shadow on my canvas, how greatly that effect would be heightened by the transparency which the painting on glass would be sure to produce. It turned out quite the reverse.'"

* The subtle portions of the Byzantine Palaces, given in precise measurements in the second volume of the "Stones of Venice," were alleged by architects to be accidental irregularities. They will be found, by every one who will take the pains to examine them, most assuredly and indisputably intentional,—and not only so, but one of the principal subjects of the designer's care.

† Smith, Soho Square, 1859.

APPENDIX III.

CLASSICAL ARCHITECTURE.

THIS passage in the lecture was illustrated by an enlargement of the woodcut, Fig. 1; but I did not choose to disfigure the middle of this book with it. It is copied from the 49th plate of the third edition of the *Encyclopædia Britannica* (Edinburgh, 1797), and represents an English farmhouse arranged

FIG. 1.

on classical principles. If the reader cares to consult the work itself, he will find in the same plate another composition of similar propriety, and dignified by the addition of a pediment, beneath the shadow of which "a private gentleman who has a small family may find conveniency."

APPENDIX IV.

SUBTLETY OF HAND.

I HAD intended in one or other of these lectures to have spoken at some length of the quality of refinement in Colour, but found the subject would lead me too far. A few words

are, however, necessary in order to explain some expressions in the text.

“Refinement in colour” is indeed a tautological expression, for colour, in the true sense of the word, does not exist until it *is* refined. Dirt exists,—stains exist,—and pigments exist, easily enough in all places; and are laid on easily enough by all hands; but colour exists only where there is tenderness, and can be laid on only by a hand which has strong life in it. The law concerning colour is very strange, very noble, in some sense almost awful. In every given touch laid on canvas, if one grain of the colour is inoperative, and does not take its full part in producing the hue, the hue will be imperfect. The grain of colour which does not work is dead. It infects all about it with its death. It must be got quit of, or the touch is spoiled. We acknowledge this instinctively in our use of the phrases “dead colour,” “killed colour,” “foul colour.” Those words are, in some sort, literally true. If more colour is put on than is necessary, a heavy touch when a light one would have been enough, the quantity of colour that was not wanted, and is overlaid by the rest, is as dead, and it pollutes the rest. There will be no good in the touch.

The art of painting, properly so called, consists in laying on the least possible colour that will produce the required result, and this measurement, in all the ultimate, that is to say, the principal, operations of colouring, is so delicate that not one human hand in a million has the required lightness. The final touch of any painter properly so named, of Correggio—Titian—Turner—or Reynolds—would be always quite invisible to any one watching the progress of the work, the films of hue being laid thinner than the depths of the grooves in mother-of-pearl. The work may be swift, apparently careless, nay, to the painter himself almost unconscious. Great painters are so organized that they do their best work without effort; but analyze the touches afterwards, and you will find the structure and depth of the colour laid mathematically demonstrable to be of literally infinite fineness, the last touches passing away at their edges by untraceable gradation. The very essence of

a master's work may thus be removed by a picture-cleaner in ten minutes.

Observe, however, this thinness exists only in portions of the ultimate touches, for which the preparation may often have been made with solid colours, commonly, and literally, called "dead colouring," but even that is always subtle if a master lays it—subtle at least in drawing, if simple in hue; and farther, observe that the refinement of work consists not in laying absolutely *little* colour, but in always laying precisely the right quantity. To lay on little needs indeed the rare lightness of hand; but to lay much,—yet not one atom *too* much, and obtain subtlety, not by withholding strength, but by precision of pause,—that is the master's final sign-manual—power, knowledge, and tenderness all united. A great deal of colour may often be wanted; perhaps quite a mass of it, such as shall project from the canvas; but the real painter lays this mass of its required thickness and shape with as much precision as if it were a bud of a flower which he had to touch into blossom; one of Turner's loaded fragments of white cloud is modelled and gradated in an instant, as if it alone were the subject of the picture, when the same quantity of colour, under another hand, would be a lifeless lump.

The following extract from a letter in the *Literary Gazette* of 13th November, 1858, which I was obliged to write to defend a questioned expression respecting Turner's subtlety of hand from a charge of hyperbole, contains some interesting and conclusive evidence on the point, though it refers to pencil and chalk drawing only:—

"I must ask you to allow me yet leave to reply to the objections you make to two statements in my catalogue, as those objections would otherwise diminish its usefulness. I have asserted that, in a given drawing (named as one of the chief in the series), Turner's pencil did not move over the thousandth of an inch without meaning; and you charge this expression with extravagant hyperbole. On the contrary, it is much within the truth, being merely a mathematically accurate description of fairly good execution in either drawing or engraving. It is only necessary to measure a piece of any ordinary good work to

ascertain this. Take, for instance, Finden's engraving at the 180th page of Rogers' poems ; in which the face of the figure, from the chin to the top of the brow, occupies just a quarter of an inch, and the space between the upper lip and chin as nearly as possible one-seventeenth of an inch. The whole mouth occupies one-third of this space, say one-fiftieth of an inch, and within that space both the lips and the much more difficult inner corner of the mouth are perfectly drawn and rounded, with quite successful and sufficiently subtle expression. Any artist will assure you that in order to draw a mouth as well as this, there must be more than twenty gradations of shade in the touches ; that is to say, in this case, gradations changing, with meaning, within less than the thousandth of an inch.

“ But this is mere child's play compared to the refinement of a first-rate mechanical work—much more of brush or pencil drawing by a master's hand. In order at once to furnish you with authoritative evidence on this point, I wrote to Mr. Kingsley, tutor of Sidney-Sussex College, a friend to whom I always have recourse when I want to be precisely right in any matter ; for his great knowledge both of mathematics and of natural science is joined, not only with singular powers of delicate experimental manipulation, but with a keen sensitiveness to beauty in art. His answer, in its final statement respecting Turner's work, is amazing even to me, and will, I should think, be more so to your readers. Observe the successions of measured and tested refinement : here is No. 1 :—

“ ‘ The finest mechanical work that I know, which is not optical, is that done by Nobert in the way of ruling lines. I have a series ruled by him on glass, giving actual scales from $\cdot 000024$ and $\cdot 000016$ of an inch, perfectly correct to these places of decimals, and he has executed others as fine as $\cdot 000012$, though I do not know how far he could repeat these last with accuracy.’

“ This is No. 1, of precision. Mr. Kingsley proceeds to No. 2 :—

“ ‘ But this is rude work compared to the accuracy necessary for the construction of the object-glass of a microscope such as Rosse turns out.’

“I am sorry to omit the explanation which follows of the ten lenses composing such a glass, ‘each of which must be exact in radius and in surface, and all have their axes coincident :’ but it would not be intelligible without the figure by which it is illustrated ; so I pass to Mr. Kingsley’s No. 3 :—

“‘I am tolerably familiar,’ he proceeds, ‘with the actual grinding and polishing of lenses and specula, and have produced by my own hand some by no means bad optical work, and I have copied no small amount of Turner’s work, and *I still look with awe at the combined delicacy and precision of his hand ; IT BEATS OPTICAL WORK OUT OF SIGHT.* In optical work, as in refined drawing, the hand goes beyond the eye, and one has to depend upon the feel ; and when one has once learned what a delicate affair touch is, one gets a horror of all coarse work, and is ready to forgive any amount of feebleness, sooner than that boldness which is akin to impudence. In optics the distinction is easily seen when the work is put to trial ; but here too, as in drawing, it requires an educated eye to tell the difference when the work is only moderately bad ; but with “bold” work, nothing can be seen but distortion and fog : and I heartily wish the same result would follow the same kind of handling in drawing ; but here, the boldness cheats the unlearned by looking like the precision of the true man. It is very strange how much better our ears are than our eyes in this country : if an ignorant man were to be “bold” with a violin, he would not get many admirers, though his boldness was far below that of ninety-nine out of a hundred drawings one sees.’

“The words which I have put in italics in the above extract are those which were surprising to me. I knew that Turner’s was as refined as any optical work, but had no idea of its going beyond it. Mr. Kingsley’s word ‘awe’ occurring just before, is, however, as I have often felt, precisely the right one. When once we begin at all to understand the handling of any truly great executor, such as that of any of the three great Venetians, of Correggio, or Turner, the awe of it is something greater than can be felt from the most stupendous natural scenery. For the creation of such a system as a high human intelligence, endowed with its ineffably perfect instruments of

eye and hand, is a far more appalling manifestation of Infinite Power, than the making either of seas or mountains.

“After this testimony to the completion of Turner’s work, I need not at length defend myself from the charge of hyperbole in the statement that, ‘as far as I know, the galleries of Europe may be challenged to produce one sketch* that shall equal the chalk study No. 45, or the feeblest of the memoranda in the 71st and following frames;’ which memoranda, however, it should have been observed, are stated at the 44th page to be in some respects ‘the grandest work in grey that he did in his life.’ For I believe that, as manipulators, none but the four men whom I have just named (the three Venetians and Correggio) were equal to Turner; and, as far as I know, none of those four ever put their full strength into sketches. But whether they did or not, my statement in the catalogue is limited by my own knowledge: and, as far as I can trust that knowledge, it is not an enthusiastic statement, but an entirely calm and considered one. It may be a mistake but it is not a hyperbole.”

APPENDIX V.

I CAN only give, to illustrate this balcony, fac-similes of rough memoranda made on a single leaf of my note-book, with a tired hand; but it may be useful to young students to see them, in order that they may know the difference between notes made to get at the gist and heart of a thing, and notes made merely to look neat. Only it must be observed that the best characters of free drawing are always lost even in the most careful fac-simile; and I should not show even these slight notes in woodcut imitation, unless the reader had it in his power, by a

* A sketch, observe,—not a finished drawing. Sketches are only proper subjects of comparison with each other when they contain about the same quantity of work: the test of their merit is the quantity of truth told with a given number of touches. The assertion in the Catalogue which this letter was written to defend, was made respecting the sketch of Rome, No. 101.

glance at the 21st or 35th plates in *Modern Painters* (and yet better, by trying to copy a piece of either of them), to ascertain how far I can draw or not. I refer to these plates, because, though I distinctly stated in the preface that they, together with the 12th, 20th, 34th, and 37th, were executed on the steel by my own hand, (the use of the dry point in the foregrounds of the 12th and 21st plates being moreover wholly different from the common processes of etching) I find it constantly assumed that they were engraved for me—as if direct lying in such matters were a thing of quite common usage.

Fig. 2 is the centre-piece of the balcony, but a leaf-spray is

FIG. 2.

omitted on the right-hand side, having been too much buried among the real leaves to be drawn.

Fig. 3 shows the intended general effect of its masses, the five-leaved and six-leaved flowers being clearly distinguishable at any distance.

FIG. 3.

Fig. 4 is its profile, rather carefully drawn at the top, to show the tulip and turkscap lily leaves. Underneath there is a plate of iron beaten into broad thin leaves, which gives the

centre of the balcony a gradual sweep outwards, like the side of a ship of war. The central profile is of the greatest im-

FIG. 4.

portance in ironwork, as the flow of it affects the curves of the whole design, not merely in surface, as in marble carving, but in their intersections, when the side is seen through the front. The lighter leaves, *b b*, are real bindweed.

Fig. 5 shows two of the teeth of the border, illustrating their irregularity of form, which takes place quite to the extent indicated.

Fig. 6 is the border at the side of the balcony, showing the most interesting circumstance in the treatment of the whole, namely, the enlargement and retraction of the teeth of the cornice, as it approaches the wall. This treatment of the

FIG. 5.

FIG. 6.

whole cornice as a kind of wreath round the balcony, having its leaves flung loose at the back, and set close at the front, as a girl would throw a wreath of leaves round her hair, is precisely the most finished indication of a good workman's mind to be found in the whole thing.

Fig. 7 shows the outline of the retracted leaves accurately.

FIG. 7.

It was noted in the text that the whole of this ironwork had been coloured. The difficulty of colouring ironwork rightly, and the necessity of doing it in some way or other, have been the principal reasons for my never having entered heartily into this subject; for all the ironwork I have ever seen look beautiful was rusty, and rusty iron will not answer modern purposes. Nevertheless it may be painted, but it needs some one to do it who knows what painting means, and few of us do—certainly none, as yet, of our restorers of decoration or writers on colour.

It is a marvellous thing to me that book after book should appear on this last subject, without apparently the slightest consciousness on the part of the writers that the first necessity of beauty in colour is gradation, as the first necessity of beauty in line is curvature,—or that the second necessity in colour is mystery or subtlety, as the second necessity in line is softness. Colour ungradated is wholly valueless; colour unmysterious is wholly barbarous. Unless it loses itself and melts away towards other colours, as a true line loses itself and melts away towards other lines, colour has no proper existence, in the noble sense of the word. What a cube, or tetrahedron, is to organic form, ungradated and unconfused colour is to organic colour; and a person who attempts to arrange colour harmonies without gradation of tint is in precisely the same category, as an artist who should try to compose a beautiful picture out of an accumulation of cubes and parallelepipeds.

The value of hue in all illuminations on painted glass of fine periods depends primarily on the expedients used to make the colours palpitate and fluctuate; *inequality* of brilliancy being the *condition* of brilliancy, just as inequality of accent is the condition of power and loveliness in sound. The skill with which the thirteenth century illuminators in books, and the Indians in shawls and carpets, use the minutest atoms of colour to gradate other colors, and confuse the eye, is the first secret in their gift of splendour: associated, however, with so many other artifices which are quite instinctive and unteachable, that it is of little use to dwell upon them. Delicacy of organization in the designer given, you will soon have all, and without it, nothing. However, not to close my book with desponding words, let me set down, as many of us like such things, five Laws to which there is no exception whatever, and which, if they can enable no one to produce good colour, are at least, as far as they reach, accurately condemnatory of bad colour.

1. ALL GOOD COLOUR IS GRADATED. A blush rose (or, better still, a blush itself), is the type of rightness in arrangement of pure hue.

2. ALL HARMONIES OF COLOUR DEPEND FOR THEIR VITALITY ON THE ACTION AND HELPFUL OPERATION OF EVERY PARTICLE OF COLOUR THEY CONTAIN.

3. THE FINAL PARTICLES OF COLOUR NECESSARY TO THE COMPLETENESS OF A COLOUR HARMONY ARE ALWAYS INFINITELY SMALL ; either laid by immeasurably subtle touches of the pencil, or produced by portions of the colouring substance, however distributed, which are so absolutely small as to become at the intended distance infinitely so to the eye.

4. NO COLOUR HARMONY IS OF HIGH ORDER UNLESS IT INVOLVES INDESCRIBABLE TINTS. It is the best possible sign of a colour when nobody who sees it knows what to call it, or how to give an idea of it to any one else. Even among simple hues the most valuable are those which cannot be defined ; the most precious purples will look brown beside pure purple, and purple beside pure brown ; and the most precious greens will be called blue if seen beside pure green, and green if seen beside pure blue.

5. THE FINER THE EYE FOR COLOUR, THE LESS IT WILL REQUIRE TO GRATIFY IT INTENSELY. But that little must be supremely good and pure, as the finest notes of a great singer, which are so near to silence. And a great colourist will make even the absence of colour lovely, as the fading of the perfect voice makes silence sacred.

LOVE'S MEINIE

LECTURES ON GREEK AND ENGLISH BIRDS

GIVEN BEFORE THE UNIVERSITY OF OXFORD

ADVICE.

I PUBLISH these lectures at present roughly, in the form in which they were delivered,—(necessarily more brief and broken than that which may be permitted when time is not limited,)—because I know that some of their hearers wished to obtain them for immediate reference. Ultimately, I hope, they will be completed in an illustrated volume, containing at least six lectures, on the Robin, the Swallow, the Chough, the Lark, the Swan, and the Sea-gull. But months pass by me now, like days; and my work remains only in design. I think it better, therefore, to let the lectures appear separately, with provisional wood-cuts, afterwards to be bettered, or replaced by more finished engravings. The illustrated volume, if ever finished, will cost a guinea; but these separate lectures a shilling, or, if long, one shilling and sixpence each. The guinea's worth will, perhaps, be the cheaper book in the end; but I shall be glad if some of my hearers feel interest enough in the subject to prevent their waiting for it.

The modern vulgarization of the word “advertisement” renders, I think, the use of ‘advice’ as above, in the sense of the French ‘avis’ (passing into our old English verb ‘advise’) on the whole, preferable.

BRANTWOOD,
June, 1873.

[Faint, illegible text, likely bleed-through from the reverse side of the page]

ROMANCE OF THE ROSE.

LECTURE I.

THE ROBIN.

1. AMONG the more splendid pictures in the Exhibition of the Old Masters, this year, you cannot but remember the Vandyke portraits of the two sons of the Duke of Lennox. I think you cannot but remember it, because it would be difficult to find, even among the works of Vandyke, a more striking representation of the youth of our English noblesse; nor one in which the painter had more exerted himself, or with better success, in rendering the decorous pride and natural grace of honourable aristocracy.

Vandyke is, however, inferior to Titian and Velasquez, in that his effort to show this noblesse of air and persons may always be detected; also the aristocracy of Vandyke's day were already so far fearful of their own position as to feel anxiety that it should be immediately recognized. And the effect of the painter's conscious deference, and of the equally conscious pride of the boys, as they stood to be painted, has been somewhat to shorten the power of the one, and to abase the dignity of the other. And thus, in the midst of my admiration of the youths' beautiful faces, and natural quality of majesty, set off by all splendours of dress and courtesies of art, I could not forbear questioning with myself what the true value was, in the scales of creation, of these fair human beings who set so high a value on themselves; and,—as if the only answer,

—the words kept repeating themselves in my ear, “Ye are of more value than many sparrows.” *

2. Passeres, *στρουθοι*,—the things that open their wings, and are not otherwise noticeable ; small birds of the land and wood ; the food of the serpent, of man, or of the stronger creatures of their own kind,—that even these, though among the simplest and obscurest of beings, have yet price in the eyes of their Maker, and that the death of one of them cannot take place but by His permission, has long been the subject of declamation in our pulpits, and the ground of much sentiment in nursery education. But the declamation is so aimless, and the sentiment so hollow, that, practically, the chief interest of the leisure of mankind has been found in the destruction of the creatures which they professed to believe even the Most High would not see perish without pity ; and, in recent days, it is fast becoming the only definition of aristocracy, that the principal business of its life is the killing of sparrows.

Sparrows, or pigeons, or partridges, what does it matter ? “Centum mille perdrices plumbo confecit ;” * that is, indeed, too often the sum of the life of an English lord ; much questionable now, if *indeed* of more value than that of many sparrows.

3. Is it not a strange fact, that, interested in nothing so much for the last two hundred years, as in his horses, he yet left it to the farmers of Scotland to relieve draught horses from the bearing-rein ; † is it not one equally strange that, master of the forests of England for a thousand years, and of its libraries for three hundred, he left the natural history of birds to be written by a card-printer's lad of Newcastle ? Written, and not written, for indeed we have no natural history of birds written yet. It cannot be written but by a scholar and a gentleman ; and no English gentleman in recent times has ever thought of birds except as flying targets, or flavoured dishes. The only piece of natural history worth the name in the English language, that I know of, is in the

* The epitaph on Count Zschdarm, in “Sartor Resartus.”

† Sir Arthur Helps. “Animals and their Masters,” p. 67.

few lines of Milton on the Creation. The only example of a proper manner of contribution to natural history is in White's Letters from Selborne. You know I have always spoken of Bewick as pre-eminently a vulgar or boorish person, though of splendid honour and genius; his vulgarity shows in nothing so much as in the poverty of the details he has collected, with the best intentions, and the shrewdest sense, for English ornithology. His imagination is not cultivated enough to enable him to choose, or arrange.

4. Nor can much more be said for the observations of modern science. It is vulgar in a far worse way, by its arrogance and materialism. In general, the scientific natural history of a bird consists of four articles,—first, the name and estate of the gentleman whose gamekeeper shot the last that was seen in England; secondly, two or three stories of doubtful origin, printed in every book on the subject of birds for the last fifty years; thirdly, an account of the feathers, from the comb to the rump, with enumeration of the colours which are never more to be seen on the living bird by English eyes; and, lastly, a discussion of the reasons why none of the twelve names which former naturalists have given to the bird are of any further use, and why the present author has given it a thirteenth, which is to be universally, and to the end of time, accepted.

5. You may fancy this is caricature; but the abyss of confusion produced by modern science in nomenclature, and the utter void of the abyss when you plunge into it after any one useful fact, surpass all caricature. I have in my hand thirteen plates of thirteen species of eagles; eagles all, or hawks all, or falcons all—whichever name you choose for the great race of the hook-headed birds of prey—some so like that you can't tell the one from the other, at the distance at which I show them to you, all absolutely alike in their eagle or falcon character, having, every one, the falk for its beak, and every one, flesh for its prey. Do you suppose the unhappy student is to be allowed to call them all eagles, or all falcons, to begin with, as would be the first condition of a wise nomenclature, establishing resemblance by specific name, before marking

variation by individual name? No such luck. I hold you up the plates of the thirteen birds one by one, and read you their names off the back:—

The first	is an Aquila.
The second,	a Haliaetus.
The third,	a Milvus.
The fourth,	a Pandion.
The fifth,	an Astur.
The sixth,	a Falco.
The seventh,	a Pernis.
The eighth,	a Circus.
The ninth,	a Buteo.
The tenth,	an Archibuteo.
The eleventh,	an Accipiter.
The twelfth,	an Erythropus.
And the thirteenth,	a Tinnunculus.

There's a nice little lesson to entertain a parish schoolboy with, beginning his natural history of birds!

6. There are not so many varieties of robin as of hawk, but the scientific classifiers are not to be beaten. If they cannot find a number of similar birds to give different names to, they will give two names to the same one. Here are two pictures of your own redbreast, out of the two best modern works on ornithology. In one, it is called "*Motacilla rubecula*;" in the other, "*Rubecula familiaris*."

7. It is indeed one of the most serious, as one of the most absurd, weaknesses, of modern naturalists to imagine that *any* presently invented nomenclature can stand, even were it adopted by the consent of nations, instead of the conceit of individuals. It will take fifty years' digestion before the recently ascertained elements of natural science can permit the arrangement of species in any permanently (even over a limited period) nameable order; nor then, unless a great man is born to perceive and exhibit such order. In the meantime, the simplest and most descriptive nomenclature is the best. Every one of these birds, for instance, might be called falco in Latin, hawk in English, some word being added to distinguish the genus, which should describe its principal aspect

or habit. *Falco montium*, Mountain Hawk; *Falco silvarum*, Wood Hawk; *Falco procellarum*, Sea Hawk; and the like. Then, one descriptive epithet would mark species. *Falco montium*, aureus, Golden Eagle; *Falco silvarum*, apivorus, Honey Buzzard; and so on; and the naturalists of Vienna, Paris, and London should confirm the names of known creatures, in conclave, once every half century, and let them so stand for the next fifty years.

8. In the meantime, you yourselves, or, to speak more generally, the young rising scholars of England,—all of you who care for life as well as literature, and for spirit,—even the poor souls of birds,—as well as lettering of their classes in books,—you, with all care, should cherish the old Saxon-English and Norman-French names of birds, and ascertain them with the most affectionate research—never despising even the rudest or most provincial forms: all of them will, some day or other, give you clue to historical points of interest. Take, for example, the common English name of this low-flying falcon, the most tameable and affectionate of his tribe, and therefore, I suppose, fastest vanishing from field and wood, the buzzard. The name comes from the Latin “buteo,” still retained by the ornithologists; but, in its original form, valueless, to you. But when you get it comfortably corrupted into Provençal “Busac,” (whence gradually the French busard, and our buzzard,) you get from it the delightful compound “busacador,” “adorer of buzzards”—meaning, generally, a sporting person; and then you have Dante’s Bertrand de Born, the first troubadour of war, bearing witness to you how the love of mere hunting and falconry was already, in his day, degrading the military classes, and, so far from being a necessary adjunct of the noble disposition of lover or soldier, was, even to contempt, showing itself separate from both.

“ Le ric home, cassador,
 M’enneion, e’l buzacador.
 Parlan de volada, d’austor,
 Ne jamais d’armas, ni d’amor.”

The rich man, the chaser,
Tires me to death; and the adorer of buzzards.
They talk of covey and hawk,
And never of arms, nor of love.

“Cassador,” of course, afterwards becomes “chasseur,” and “austor” “vautour.” But after you have read this, and familiarized your ear with the old word, how differently Milton’s phrase will ring to you,—“Those who thought no better of the Living God than of a buzzard idol,”—and how literal it becomes, when we think of the actual difference between a member of Parliament in Milton’s time, and the Busacador of to-day;—and all this freshness and value in the reading, observe, come of your keeping the word which great men have used for the bird, instead of letting the anatomists blunder out a new one from their Latin dictionaries.

9. There are not so many nameable varieties, I just now said, of robin as of falcon; but this is somewhat inaccurately stated. Those thirteen birds represented a very large proportion of the entire group of the birds of prey, which in my sevenfold classification I recommended you to call universally, “hawks.” The robin is only one of the far greater multitude of small birds which live almost indiscriminately on grain or insects, and which I recommended you to call generally “sparrows;” but of the robin itself, there are two important European varieties—one red-breasted, and the other blue-breasted.

10. You probably, some of you, never heard of the blue-breast; very few, certainly, have seen one alive, and, if alive, certainly not wild in England.

Here is a picture of it, daintily done,* and you can see the pretty blue shield on its breast, perhaps, at this distance. Vain shield, if ever the fair little thing is wretched enough to set foot on English ground!—I find the last that was seen was shot at Margate so long ago as 1842,—and there seems to be no official record of any visit before that, since Mr. Thomas Embleton shot one on Newcastle town moor in 1816. But this rarity of visit to us is strange; other birds have no such

* Mr. Gould’s, in his “Birds of Great Britain.”

clear objection to being shot, and really seem to come to England expressly for the purpose. And yet this blue-bird—(one can't say "blue robin"—I think we shall have to call him "bluet," like the cornflower)—stays in Sweden, where it sings so sweetly that it is called "a hundred tongues."

11. That, then, is the utmost which the lords of land, and masters of science, do for us in their watch upon our feathered suppliants. One kills them, the other writes classifying epitaphs.

We have next to ask what the poets, painters, and monks have done.

The poets—among whom I affectionately and reverently class the sweet singers of the nursery, mothers and nurses—have done much; very nearly all that I care for your thinking of. The painters and monks, the one being so greatly under the influence of the other, we may for the present class together; and may almost sum their contributions to ornithology in saying that they have plucked the wings from birds, to make angels of men, and the claws from birds, to make devils of men.

If you were to take away from religious art these two great helps of its—I must say, on the whole, very feeble—imagination; if you were to take from it, I say, the power of putting wings on shoulders, and claws on fingers and toes, how wonderfully the sphere of its angelic and diabolic characters would be contracted! Reduced only to the sources of expression in face or movements, you might still find in good early sculpture very sufficient devils; but the best angels would resolve themselves, I think, into little more than, and not often into so much as, the likenesses of pretty women, with that grave and (I do not say it ironically) majestic expression which they put on, when, being very fond of their husbands and children, they seriously think either the one or the other have misbehaved themselves.

12. And it is not a little discouraging for me, and may well make you doubtful of my right judgment in this endeavour to lead you into closer attention to the bird, with its wings and claws still in its own possession;—it is discouraging, I say, to

observe that the beginning of such more faithful and accurate observation in former art, is exactly coeval with the commencement of its decline. The feverish and ungraceful natural history of Paul, called, "of the birds," Paolo degli Uccelli, produced, indeed, no harmful result on the minds of his contemporaries; they watched in him, with only contemptuous admiration, the fantasy of zoological instinct which filled his house with painted dogs, cats, and birds, because he was too poor to fill it with real ones. Their judgment of this morbidly naturalistic art was conclusively expressed by the sentence of Donatello, when going one morning into the Old Market, to buy fruit, and finding the animal painter uncovering a picture, which had cost him months of care, (curiously symbolic in its subject, the infidelity of St. Thomas, of the investigatory fingering of the natural historian,) "Paul, my friend," said Donatello, "thou art uncovering the picture just when thou shouldst be shutting it up."

13. No harm, therefore, I repeat, but, on the contrary, some wholesome stimulus to the fancy of men like Luca and Donatello themselves, came of the grotesque and impertinent zoology of Uccello.

But the fatallest institutor of proud modern anatomical and scientific art, and of all that has polluted the dignity, and darkened the charity, of the greater ages, was Antonio Pollajuolo of Florence. Antonio (that is to say) the Poulterer—so named from the trade of his grandfather, and with just so much of his grandfather's trade left in his own disposition, that being set by Lorenzo Ghiberti to complete one of the ornamental festoons of the gates of the Florentine Baptistery, there, (says Vasari) "Antonio produced a quail, which may still be seen, and is so beautiful, nay, so perfect, that it wants nothing but the power of flight."

14. Here, the morbid tendency was as attractive as it was subtle. Ghiberti himself fell under the influence of it; allowed the borders of his gates, with their fluttering birds and bossy fruits, to dispute the spectators' favour with the religious subjects they enclosed; and, from that day forward, minuteness and muscularity were, with curious harmony of

evil, delighted in together ; and the lancet and the microscope, in the hands of fools, were supposed to be complete substitutes for imagination in the souls of wise men : so that even the best artists are gradually compelled, or beguiled, into compliance with the curiosity of their day ; and Francia, in the city of Bologna, is held to be a “kind of god, more particularly” (again I quote Vasari) “after he had painted a set of caparisons for the Duke of Urbino, on which he depicted a great forest all on fire, and whence there rushes forth an immense number of every kind of animal, with several human figures. This terrific, yet truly beautiful representation, was all the more highly esteemed for the time that had been expended on it in the plumage of the birds, and other minutiae in the delineation of the different animals, and in the diversity of the branches and leaves of the various trees seen therein ;” and thenceforward the catastrophe is direct, to the ornithological museums which Breughel painted for gardens of Eden, and to the still life and dead game of Dutch celebrities.

15. And yet I am going to invite you to-day to examine, down to almost microscopic detail, the aspect of a small bird, and to invite you to do this, as a most expedient and sure step in your study of the greatest art.

But the difference in our motive of examination will entirely alter the result. To paint birds that we may show how minutely we can paint, is among the most contemptible occupations of art. To paint them, that we may show how beautiful they are, is not indeed one of its highest, but quite one of its pleasantest and most useful ; it is a skill within the reach of every student of average capacity, and which, so far as acquired, will assuredly both make their hearts kinder, and their lives happier.

Without further preamble, I will ask you to look to-day, more carefully than usual, at your well-known favourite, and to think about him with some precision.

16. And first, Where does he come from ? I stated that my lectures were to be on English and Greek birds ; but we are apt to fancy the robin all our own. How exclusively, do you suppose, he really belongs to us ? You would think this was

the first point to be settled in any book about him. I have hunted all my books through, and can't tell you how much he is our own, or how far he is a traveller.

And, indeed, are not all our ideas obscure about migration itself? You are broadly told that a bird travels, and how wonderful it is that it finds its way; but you are scarcely ever told, or led to think, what it really travels for—whether for food, for warmth, or for seclusion—and how the travelling is connected with its fixed home. Birds have not their town and country houses,—their villas in Italy, and shooting boxes in Scotland. The country in which they build their nests is their proper home,—the country, that is to say, in which they pass the spring and summer. Then they go south in the winter, for food and warmth; but in what lines, and by what stages? The general definition of a migrant in this hemisphere is a bird that goes north to build its nest, and south for the winter; but, then, the one essential point to know about it is the breadth and latitude of the zone it properly inhabits,—that is to say, in which it builds its nest; next, its habit of life, and extent and line of southing in the winter; and, finally, its manner of travelling.

17. Now, here is this entirely familiar bird, the robin. Quite the first thing that strikes me about it, looking at it as a painter, is the small effect it seems to have had on the minds of the southern nations. I trace nothing of it definitely, either in the art or literature of Greece or Italy. I find, even, no definite name for it; you don't know if Lesbia's "passer" had a red breast, or a blue, or a brown. And yet Mr. Gould says it is abundant in all parts of Europe, in all the islands of the Mediterranean, and in Madeira and the Azores. And then he says—(now notice the puzzle of this),—"In many parts of the Continent it is a migrant, and, contrary to what obtains with us, is there treated as a vagrant, for there is scarcely a country across the water in which it is not shot down and eaten."

"In many parts of the Continent it is a migrant." In what parts—how far—in what manner?

18. In none of the old natural history books can I find any account of the robin as a traveller, but there is, for once, some

sufficient reason for their reticence. He has a curious fancy in his manner of travelling. Of all birds, you would think he was likely to do it in the cheerfulest way, and he does it in the saddest. Do you chance to have read, in the Life of Charles Dickens, how fond he was of taking long walks in the night and alone? The robin, en voyage, is the Charles Dickens of birds. He always travels in the night, and alone; rests, in the day, wherever day chances to find him; sings a little, and pretends he hasn't been anywhere. He goes as far, in the winter, as the north-west of Africa; and in Lombardy, arrives from the south early in March; but does not stay long, going on into the Alps, where he prefers wooded and wild districts. So, at least, says my Lombard informant.

I do not find him named in the list of Cretan birds; but even if often seen, his dim red breast was little likely to make much impression on the Greeks, who knew the flamingo, and had made it, under the name of Phoenix or Phœnicopterus, the centre of their myths of scarlet birds. They broadly embraced the general aspect of the smaller and more obscure species, under the term ξουθος, which, as I understand their use of it, exactly implies the indescribable silky brown, the groundwork of all other colour in so many small birds, which is indistinct among green leaves, and absolutely identifies itself with dead ones, or with mossy stems.

19. I think I show it you more accurately in the robin's back than I could in any other bird; its mode of transition into more brilliant colour is, in him, elementarily simple; and although there is nothing, or rather because there is nothing, in his plumage, of interest like that of tropical birds, or even of our own game-birds, I think it will be desirable for you to learn first from the breast of the robin what a feather is. Once knowing that, thoroughly, we can further learn from the swallow what a wing is; from the chough what a beak is; and from the falcon what a claw is.

I must take care, however, in neither of these last two particulars, to do injustice to our little English friend here; and before we come to his feathers, must ask you to look at his bill and his feet.

20. I do not think it is distinctly enough felt by us that the beak of a bird is not only its mouth, but its hand, or rather its two hands. For, as its arms and hands are turned into wings, all it has to depend upon, in economical and practical life, is its beak. The beak, therefore, is at once its sword, its carpenter's tool-box, and its dressing-case; partly also its musical instrument; all this besides its function of seizing and preparing the food, in which functions alone it has to be a trap, carving-knife, and teeth, all in one.

21. It is this need of the beak's being a mechanical tool which chiefly regulates the form of a bird's face as opposed to a four-footed animal's. If the question of food were the only one, we might wonder why there were not more four-footed creatures living on seeds than there are; or why those that do—field-mice and the like—have not beaks instead of teeth. But the fact is that a bird's beak is by no means a perfect eating or food-seizing instrument. A squirrel is far more dexterous with a nut than a cockatoo; and a dog manages a bone incomparably better than an eagle. But the beak has to do so much more! Pruning feathers, building nests, and the incessant discipline in military arts, are all to be thought of, as much as feeding.

Soldiership, especially, is a much more imperious necessity among birds than quadrupeds. Neither lions nor wolves habitually use claws or teeth in contest with their own species; but birds, for their partners, their nests, their hunting-grounds, and their personal dignity, are nearly always in contention; their courage is unequalled by that of any other race of animals capable of comprehending danger; and their pertinacity and endurance have, in all ages, made them an example to the brave, and an amusement to the base, among mankind.

22. Nevertheless, since as sword, as trowel, or as pocket-comb, the beak of the bird has to be pointed, the collection of seeds may be conveniently entrusted to this otherwise penetrative instrument, and such food as can only be obtained by probing crevices, splitting open fissures, or neatly and minutely picking things up, is allotted, pre-eminently, to the bird species.

The food of the robin, as you know, is very miscellaneous. Linnæus says of the Swedish one, that it is "*delectatus euonymi baccis*,"—"delighted with dogwood berries,"—the dogwood growing abundantly in Sweden, as once in Forfarshire, where it grew, though only a bush usually in the south, with trunks a foot or eighteen inches in diameter, and the tree thirty feet high. But the Swedish robin's taste for its berries is to be noted by you, because, first, the dogwood berry is commonly said to be so bitter that it is not eaten by birds (Loudon, "*Arboretum*," ii., 497, 1.) ; and, secondly, because it is a pretty coincidence that this most familiar of household birds should feed fondly from the tree which gives the housewife her spindle,—the proper name of the dogwood in English, French, and German being alike "*Spindle-tree*." It feeds, however, with us, certainly, most on worms and insects. I am not sure how far the following account of its mode of dressing its dinners may depend on : I take it from an old book on Natural History, but find it, more or less, confirmed by others : It takes a worm by one extremity in its beak, and beats it on the ground till the inner part comes away. Then seizing it in a similar manner by the other end, it entirely cleanses the outer part, which alone it eats."

One's first impression is that this must be a singularly unpleasant operation for the worm, however fastidiously delicate and exemplary in the robin. But I suppose the real meaning is, that as a worm lives by passing earth through its body, the robin merely compels it to quit this—not ill-gotten, indeed, but now quite unnecessary—wealth. We human creatures, who have lived the lives of worms, collecting dust, are served by Death in exactly the same manner.

23. You will find that the robin's beak, then, is a very prettily representative one of general bird power. As a weapon, it is very formidable indeed ; he can kill an adversary of his own kind with one blow of it in the throat ; and is so pugnacious, "*valde pugnax*," says Linnæus, "*ut non una arbor duos capiat erithacos*,"—"no single tree can hold two cockrobins ;" and for precision of seizure, the little flat hook at the end of the upper mandible is one of the most delicately

formed points of forceps which you can find among the grain eaters. But I pass to one of his more special perfections.

24. He is very notable in the exquisite silence and precision of his movements, as opposed to birds who either creak in flying, or waddle in walking. "Always quiet," says Gould, "for the silkiness of his plumage renders his movements noiseless, and the rustling of his wings is never heard, any more than his tread on earth, over which he bounds with amazing sprightliness." You know how much importance I have always given, among the fine arts, to good dancing. If you think of it, you will find one of the robin's very chief ingratiatory faculties is his dainty and delicate movement,—his footing it feately here and there. Whatever prettiness there may be in his red breast, at his brightest he can always be outshone by a brickbat. But if he is rationally proud of anything about him, I should think a robin must be proud of his legs. Hundreds of birds have longer and more imposing ones—but for real neatness, finish, and precision of action, commend me to his fine little ankles, and fine little feet; this long stilted process, as you know, corresponding to our ankle-bone. Commend me, I say, to the robin for use of his ankles—he is, of all birds, the pre-eminent and characteristic Hopper; none other so light, so pert, or so swift.

25. We must not, however, give too much credit to his legs in this matter. A robin's hop is half a flight; he hops, very essentially, with wings and tail, as well as with his feet, and the exquisitely rapid opening and quivering of the tail-feathers certainly give half the force to his leap. It is in this action that he is put among the motacillæ, or wagtails; but the ornithologists have no real business to put him among them. The swing of the long tail-feathers in the true wagtail is entirely consequent on its motion, not impulsive of it—the tremulous shake is *after* alighting. But the robin leaps with wing, tail, and foot, all in time, and all helping each other. Leaps, I say; and you cheek at the word; and ought to cheek: you look at a bird hopping, and the motion is so much a matter of course, you never think how it is done. But do you think

you would find it easy to hop like a robin if you had two—all but wooden—legs, like this ?

26. I have looked wholly in vain through all my books on birds, to find some account of the muscles it uses in hopping, and of the part of the toes with which the spring is given. I must leave you to find out that for yourselves ; it is a little bit of anatomy which I think it highly desirable for you to know, but which it is not my business to teach you. Only observe, this is the point to be made out. You leap yourselves with the toe and ball of the foot ; but, in that power of leaping, you lose the faculty of grasp ; on the contrary, with your hands, you grasp as a bird with its feet. But you cannot hop on your hands. A cat, a leopard, and a monkey, leap or grasp with equal ease ; but the action of their paws in leaping is, I imagine, from the fleshy ball of the foot ; while in the bird, characteristically *γαμψώνυξ*, this fleshy ball is reduced to a boss or series of bosses, and the nails are elongated into sickles or horns ; nor does the springing power seem to depend on the development of the bosses. They are far more developed in an eagle than a robin ; but you know how unpardonably and preposterously awkward an eagle is when he hops. When they are most of all developed, the bird walks, runs, and digs well, but leaps badly.

27. I have no time to speak of the various forms of the ankle itself, or of the scales of armour, more apparent than real, by which the foot and ankle are protected. The use of this lecture is not either to describe or to exhibit these varieties to you, but so to awaken your attention to the real points of character, that, when you have a bird's foot to draw, you may do so with intelligence and pleasure, knowing whether you want to express force, grasp, or firm ground pressure, or dexterity and tact in motion. And as the actions of the foot and the hand in man are made by every great painter perfectly expressive of the character of mind, so the expressions of rapacity, cruelty, or force of seizure, in the harpy, the gryphon, and the hooked and clawed evil spirits of early religious art, can only be felt by extreme attention to the original form.

28. And now I return to our main question, for the robin's breast to answer, "What is a feather?" You know something about it already; that it is composed of a quill, with its lateral filaments, terminating generally, more or less, in a point; that these extremities of the quills, lying over each other like the tiles of a house, allow the wind and rain to pass over them with the least possible resistance, and form a protection alike from the heat and the cold; which, in structure much resembling the scale-armour assumed by man for very different objects, is, in fact, intermediate, exactly, between the fur of beasts and the scales of fishes; having the minute division of the one, and the armour-like symmetry and succession of the other.

29. Not merely symmetry, observe, but extreme flatness. Feathers are smoothed down, as a field of corn by wind with rain; only the swathes laid in beautiful order. They are fur, so structurally placed as to imply, and submit to, the perpetually swift forward motion. In fact, I have no doubt the Darwinian theory on the subject is that the feathers of birds once stuck up all erect, like the bristles of a brush, and have only been blown flat by continual flying.

Nay, we might even sufficiently represent the general manner of conclusion in the Darwinian system by the statement that if you fasten a hair-brush to a mill-wheel, with the handle forward, so as to develop itself into a neck by moving always in the same direction, and within continual hearing of a steam-whistle, after a certain number of revolutions the hair-brush will fall in love with the whistle; they will marry, lay an egg, and the produce will be a nightingale.

30. Whether, however, a hog's bristle can turn into a feather or not, it is vital that you should know the present difference between them.

The scientific people will tell you that a feather is composed of three parts—the down, the lamina, and the shaft.

But the common-sense method of stating the matter is that a feather is composed of two parts, a shaft with lateral filaments. For the greater part of the shaft's length, these filaments are strong and nearly straight, forming, by their attach-

ment, a finely warped sail, like that of a windmill. But towards the root of the feather they suddenly become weak, and confusedly flexible, and form the close down which immediately protects the bird's body.

To show you the typical arrangement of these parts, I choose, as I have said, the robin; because, both in his power of flying, and in his colour, he is a moderate and balanced bird;—not turned into nothing but wings, like a swallow, or nothing but neck and tail, like a peacock. And first for his flying power. There is one of the long feathers of robin's wing, and here (Fig. 1) the analysis of its form.

[FIG. 1.—Twice the size of reality.]

31. First, in pure outline (A), seen from above, it is very nearly a long oval, but with this peculiarity, that it has, as it were, projecting shoulders at *a 1* and *a 2*. I merely desire you to observe this, in passing, because one usually thinks of the contour as sweeping unbroken from the root to the point. I have not time to-day to enter on any discussion of the reason for it, which will appear when we examine the placing of the wing-feathers for their stroke.

Now, I hope you are getting accustomed to the general method in which I give you the analysis of all forms—leaf, or feather, or shell, or limb. First, the plan; then the profile; then the cross-section.

I take next, the profile of my feather (B, Fig. 1), and find

that it is twisted as the sail of a windmill is, but more distinctly, so that you can always see the upper surface of the feather at its root, and the under at its end. Every primary wing-feather, in the fine flyers, is thus twisted; and is best described as a sail striking with the power of a scymitar, but with the flat instead of the edge.

32. Further, you remember that on the edges of the broad side of feathers you find always a series of undulations, irregularly sequent, and lapping over each other like waves on sand. You might at first imagine that this appearance was owing to a slight ruffling or disorder of the filaments; but it

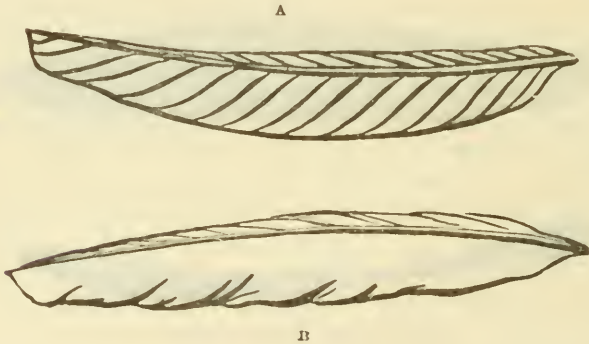

FIG. 2.

is entirely normal, and, I doubt not, so constructed, in order to ensure a redundance of material in the plume, so that no accident or pressure from wind may leave a gap anywhere. How this redundance is obtained you will see in a moment by bending any feather the wrong way. Bend, for instance, this plume, B, Fig. 2, into the reversed curve, A, Fig. 2; then all the filaments of the plume become perfectly even, and there are no waves at the edge. But let the plume return into its proper form, B, and the tissue being now contracted into a smaller space, the edge waves are formed in it instantly.

Hitherto, I have been speaking only of the filaments ar-

ranged for the strength and continuity of the energetic plume ; they are entirely different when they are set together for decoration instead of force. After the feather of the robin's wing let us examine one from his breast.

33. I said, just now, he might be at once outshone by a brickbat. Indeed, the day before yesterday, sleeping at Lichfield, and seeing, the first thing when I woke in the morning, (for I never put down the blinds of my bedroom windows,) the not uncommon sight in an English country town of an entire house-front of very neat, and very flat, and very red bricks, with very exactly squared square windows in it ; and not feeling myself in anywise gratified or improved by the spectacle, I was thinking how in this, as in all other good, the too much destroyed all. The breadth of a robin's breast in brick-red is delicious, but a whole house-front of brick-red as vivid, is alarming. And yet one cannot generalize even that trite moral with any safety—for infinite breadth of green is delightful, however green ; and of sea or sky, however blue.

You must note, however, that the robin's charm is greatly helped by the pretty space of grey plumage which separates the red from the brown back, and sets it off to its best advantage. There is no great brilliancy in it, even so relieved ; only the finish of it is exquisite.

34. If you separate a single feather, you will find it more like a transparent hollow shell than a feather (so delicately rounded the surface of it),—grey at the root, where the down is,—tinged, and only tinged, with red at the part that overlaps and is visible ; so that, when three or four more feathers have overlapped it again, all together, with their joined red, are just enough to give the colour determined upon, each of them contributing a tinge. There are about thirty of these glowing filaments on each side, (the whole being no larger across than a well-grown currant,) and each of these is itself another exquisite feather, with central quill and lateral webs, whose filaments are not to be counted.

The extremity of these breast plumes parts slightly into two, as you see in the peacock's, and many other such decora-

tive ones. The transition from the entirely leaf-like shape of the active plume, with its oblique point, to the more or less symmetrical dualism of the decorative plume, corresponds with the change from the pointed green leaf to the dual, or heart-shaped, petal of many flowers. I shall return to this part of our subject, having given you, I believe, enough of detail for the present.

35. I have said nothing to-day of the mythology of the bird, though I told you that would always be, for us, the most important part of its natural history. But I am obliged, sometimes, to take what we immediately want, rather than what, ultimately, we shall need chiefly. In the second place, you probably, most of you, know more of the mythology of the robin than I do, for the stories about it are all northern, and I know scarcely any myths but the Italian and Greek. You will find under the name "Robin," in Miss Yonge's exhaustive and admirable "History of Christian Names," the various titles of honour and endearment connected with him, and with the general idea of redness,—from the bishop called "Bright Red Fame," who founded the first great Christian church on the Rhine, (I am afraid of your thinking I mean a pun, in connection with robins, if I tell you the locality of it,) down through the Hoods, and Roys, and Grays, to Robin Goodfellow, and Spenser's "Hobbinol," and our modern "Hob," joining on to the "goblin," which comes from the old Greek *Κόβαλος*. But I cannot let you go without asking you to compare the English and French feeling about small birds, in Chaucer's time, with our own on the same subject. I say English and French, because the original French of the Romance of the Rose shows more affection for birds than even Chaucer's translation, passionate as he is, always, in love for any one of his little winged brothers or sisters. Look, however, either in the French or English, at the description of the coming of the God of Love, leading his carol-dance, in the garden of the Rose.

His dress is embroidered with figures of flowers and of beasts; but about him fly the *living* birds. The French is:

Il estoit tout couvert d'oisiaux
 De rossignols et de papegaux
 De calendre, et de mesangel.
 Il sembloit que ce fut une angle
 Qui fuz tout droit venuz du ciel.

36. There are several points of philology in this transitional French, and in Chaucer's translation, which it is well worth your patience to observe. The monkish Latin "angelus," you see, is passing through the very unpoetical form "angle," into "ange;" but, in order to get a rhyme with it in that angular form, the French troubadour expands the bird's name, "mes-ange," quite arbitrarily, into "mesangel." Then Chaucer, not liking the "mes" at the beginning of the word, changes that unscrupulously into "arch;" and gathers in, though too shortly, a lovely bit from another place about the nightingales flying so close round Love's head that they strike some of the leaves off his crown of roses; so that the English runs thus:

But nightingales, a full great rout
 That flien over his head about,
 The leaves felden as they flien
 And he was all with birds wrien,
 With popinjay, with nightingale,
 With chelaundre, and with wodewale,
 With finch, with lark, and with archangel.
 He seemed as he were an angell,
 That down were comen from Heaven clear.

Now, when I first read this bit of Chaucer, without referring to the original, I was greatly delighted to find that there was a bird in his time called an archangel, and set to work, with brightly hopeful industry, to find out what it was. I was a little discomfited by finding that in old botany the word only meant "dead-nettle," but was still sanguine about my bird, till I found the French form descend, as you have seen, into a mesangel, and finally into mesange, which is a provincialism from *μειον*, and means, the smallest of birds—or, specially here, —a titmouse. I have seldom had a less expected or more ignominious fall from the clouds.

37. The other birds, named here and in the previous de-

scription of the garden, are introduced, as far as I can judge, nearly at random, and with no precision of imagination like that of Aristophanes; but with a sweet childish delight in crowding as many birds as possible into the smallest space. The popinjay is always prominent; and I want some of you to help me (for I have not time at present for the chase) in hunting the parrot down on his first appearance in Europe. Just at this particular time he contested favour even with the falcon; and I think it a piece of good fortune that I chanced to draw for you, thinking only of its brilliant colour, the popinjay, which Carpaccio allows to be present on the grave occasion of St. George's baptizing the princess and her father.

38. And, indeed, as soon as the Christian poets begin to speak of the singing of the birds, they show themselves in quite a different mood from any that ever occurs to a Greek. Aristophanes, with infinitely more skill, describes, and partly imitates, the singing of the nightingale; but simply as beautiful sound. It "fills the thickets with honey;" and if in the often-quoted—just because it is *not* characteristic of Greek literature—passage of the Coloneus, a deeper sentiment is shown, that feeling is dependent on association of the bird-voices with deeply pathetic circumstances. But this troubadour finds his heart in heaven by the power of the singing only:—

Trop parfoisaient bean service
 Ciz oiselles que je vous devise.
 Il chantaient un chant ytel
 Com fussent angle esperitel.

We want a moment more of word-chasing to enjoy this. "Oiseau," as you know, comes from "avis;" but it had at this time got "oisel" for its singular number, of which the terminating "sel" confused itself with the "selle," from "ancilla" in domissella and demoiselle; and the feminine form "oiselle" thus snatched for itself some of the delightfulness belonging to the title of a young lady. Then note that "esperitel" does not here mean merely spiritual, (because all angels are spiritual,) but an "angle esperitel" is an angel of the air. So

that, in English, we could only express the meaning in some such fashion as this :—

They perfected all their service of Love,
 These maiden birds that I tell you of,
 They sang such a song, so finished-fair,
 As if they were angels, born of the air.

39. Such were the fancies, then, and the scenes, in which Englishmen took delight in Chaucer's time. England was then a simple country ; we boasted, for the best kind of riches, our birds and trees, and our wives and children. We have now grown to be a rich one ; and our first pleasure is in shooting our birds ; but it has become too expensive for us to keep our trees. Lord Derby, whose crest is the eagle and child—you will find the northern name for it, the bird and bantling, made classical by Scott—is the first to propose that wood-birds should have no more nests. We must cut down all our trees, he says, that we may effectively use the steam-plough ; and the effect of the steam-plough, I find by a recent article in the "Cornhill Magazine," is that an English labourer must not any more have a nest, nor bantlings, neither ; but may only expect to get on prosperously in life, if he be perfectly skilful, sober, and honest, and dispenses, at least until he is forty-five, with the "luxury of marriage."

40. Gentlemen, you may perhaps have heard me blamed for making no effort here to teach in the artizans' schools. But I can only say that, since the future life of the English labourer or artizan (summing the benefits to him of recent philosophy and economy) is to be passed in a country without angels and without birds, without prayers and without songs, without trees and without flowers, in a state of exemplary sobriety, and (extending the Catholic celibacy of the clergy into celibacy of the laity) in a state of dispensation with the luxury of marriage, I do not believe he will derive either profit or entertainment from lectures on the Fine Arts.

LECTURE II.

THE SWALLOW.

41. WE are to-day to take note of the form of a creature which gives us a singular example of the unity of what artists call beauty, with the fineness of mechanical structure, often mistaken for it. You cannot but have noticed how little, during the years of my past professorship, I have introduced any questions as to the nature of beauty. I avoided them, partly because they are treated of at length in my books ; and partly because they are, in the last degree, unpractical. We are born to like or dislike certain aspects of things ; nor could I, by any arguments, alter the defined tastes which you received at your birth, and which the surrounding circumstances of life have enforced, without any possibility of your voluntary resistance to them. And the result of those surrounding circumstances, to-day, is that most English youths would have more pleasure in looking at a locomotive than at a swallow ; and that many English philosophers would suppose the pleasure so received to be through a new sense of beauty. But the meaning of the word " beauty " in the fine arts, and in classical literature, is properly restricted to those very qualities in which the locomotion of a swallow differs from that of an engine.

42. Not only from that of an engine ; but also from that of animals in whose members the mechanism is so complex as to give them a resemblance to engines. The dart of the common house-fly, for instance, in full strength, is a more wonderful movement than that of a swallow. The mechanism of it is not only more minute, but the swiftness of the action so much greater, that the vibration of the wing is invisible. But though a schoolboy might prefer the locomotive to the swallow, he would not carry his admiration of finely mechanical velocity into unqualified sympathy with the workmanship of the God of Ekron ; and would generally suppose that flies

were made only to be food for the more graceful fly-catcher,—whose finer grace you will discover, upon reflection, to be owing to the very moderation and simplicity of its structure, and to the subduing of that infinitude of joints, claws, tissues, veins, and fibres which inconceivably vibrate in the microscopic* creature's motion, to a quite intelligible and simple balance of rounded body upon edged plume, maintained not without visible, and sometimes fatigued, exertion, and raising the lower creature into fellowship with the volition and the virtue of humanity.

43. With the virtue, I say, in an exceedingly qualified sense; meaning rather the strength and art displayed in overcoming difficulties, than any distinct morality of disposition. The bird has kindly and homely qualities; but its principal "virtue," for us, is its being an incarnate voracity, and that it moves as a consuming and cleansing power. You sometimes hear it said of a humane person that he would not kill a fly: from 700 to 1000 flies a day are a moderate allowance for a baby swallow.

44. Perhaps, as I say this, it may occur to some of you to think, for the first time, of the reason of the bird's name. For it is very interesting, as a piece of language study, to consider the different power on our minds,—nay the different sweetness to the ear,—which, from association, these same two syllables receive, when we read them as a noun, or as a verb. Also, the word is a curious instance of the traps which are continually open for rash etymologists. At first, nothing would appear more natural than that the name should have been given to the bird from its reckless function of devouring. But if you look to your Johnson, you will find, to your better satisfaction, that the name means "bird of porticos," or porches, from the Gothic "swale;" "subdivale,"—so that it goes back in thought as far as Virgil's, "Et nunc porticibus vacuis, nunc humida circum, stagna sonat." Notice, in passing, how a simile of Virgil's, or any other great master's, will probably tell in two or more ways at once. Juturna is com-

* I call it so because the members and action of it cannot be seen with the unaided eye.

pared to the swallow, not merely as winding and turning swiftly in her chariot, but as being a water-nymph by birth,—“*Stagnis quae, fluminibusque sonoris, praesidet.*” How many different creatures in one the swallow is by birth, as a Virgilian simile is many thoughts in one, it would take many more lectures than one to show you clearly; but I will indicate them with such rough sketch as is possible.

45. It belongs, as most of you know, to a family of birds called *Fissi-rostres*, or literally, split-beaks. Split heads would be a better term, for it is the enormous width of mouth and power of gaping which the epithet is meant to express. A dull sermon, for instance, makes half the congregation “*fissi-rostres.*” The bird, however, is most vigilant when its mouth is widest, for it opens as a net to catch whatever comes in its way,—hence the French, giving the whole family the more literal name, “Gobble-fly”—*Gobe-mouche*, extend the term to the open-mouthed and too acceptant appearance of a simoleon.

46. Partly in order to provide for this width of mouth, but more for the advantage in flight, the head of the swallow is rounded into a bullet shape, and sunk down on the shoulders, with no neck whatever between, so as to give nearly the aspect of a conical rifle bullet to the entire front of the body; and, indeed, the bird moves more like a bullet than an arrow—dependent on a certain impetus of weight rather than on sharp penetration of the air. I say dependent on, but I have not yet been able to trace distinct relation between the shapes of birds and their powers of flight. I suppose the form of the body is first determined by the general habits and food, and that nature can make any form she chooses volatile; only one point I think is always notable, that a complete master of the art of flight must be short-necked, so that he turns altogether, if he turns at all. You don't expect a swallow to look round a corner before he goes round it; he must take his chance. The main point is, that he may be able to stop himself, and turn, in a moment.

47. The stopping, on any terms, is difficult enough to understand: nor less so, the original gaining of the pacc. We

always think of flight as if the main difficulty of it were only in keeping up in the air;—but the buoyancy is conceivable enough, the far more wonderful matter is the getting along. You find it hard work to row yourself at anything like speed, though your impulse-stroke is given in a heavy element, and your return-stroke in a light one. But both in birds and fishes, the impelling stroke and its return are in the same element; and if, for the bird, that medium yields easily to its impulse, it secedes as easily from the blow that gives it. And if you think what an effort you make to leap six feet, with the earth for a fulcrum, the dart either of a trout or a swallow, with no fulcrum but the water and air they penetrate, will seem to you, I think, greatly marvellous. Yet of the mode in which it is accomplished you will as yet find no undisputed account in any book on natural history, and scarcely, as far as I know, definite notice even of the rate of flight. What do you suppose it is? We are apt to think of the migration of a swallow, as we should ourselves of a serious journey. How long, do you think, it would take him, if he flew uninterruptedly, to get from here to Africa?

48. Michelet gives the rate of his flight (at full speed, of course,) as eighty leagues an hour. I find no more sound authority; but do not doubt his approximate accuracy;* still how curious and how provoking it is that neither White of Selborne, Bewick, Yarrell, nor Gould, says a word about this, one should have thought the most interesting, power of the bird.†

Taking Michelet's estimate—eighty French leagues, roughly two hundred and fifty miles, an hour—we have a thousand miles in four hours. That is to say, leaving Devonshire after an early breakfast, he could be in Africa to lunch.

* I wrote this some time ago, and the endeavour I have since made to verify statements on points of natural history which I had taken on trust have given me reason to doubt everybody's accuracy. The ordinary flight of the swallow does not, assuredly, even in the dashes, reach anything like this speed.

† Incidentally suggestive sentences occur in the history of Selborne, but its author never comes to the point, in this case.

49. He could, I say, if his flight were constant ; but though there is much inconsistency in the accounts, the sum of testimony seems definite that the swallow is among the most fatiguable of birds. "When the weather is hazy," (I quote Yarrell) "they will alight on fishing-boats a league or two from land, so tired that when any one tries to catch them, they can scarcely fly from one end of the boat to the other.

I have no time to read to you the interesting evidence on this point given by Yarrell, but only that of the brother of White of Selborne, at Gibraltar. "My brother has always found," he himself writes, "that some of his birds, and particularly the swallow kind, are very sparing of their pains in crossing the Mediterranean : for when arrived at Gibraltar, they do not 'set forth their airy caravan, high over seas,' but scout and hurry along in little detached parties of six or seven in a company ; and sweeping low, just over the surface of the land and water, direct their course to the opposite continent at the narrowest passage they can find."

50. You will observe, however, that it remains an open question whether this fear of the sea may not be, in the swallow, like ours of the desert. The commissariat department is a serious one for birds that eat a thousand flies a day when just out of the egg ; and it is possible that the weariness of swallows at sea may depend much more on fasting than flying. Captain (or Admiral?) Sir Charles Wager says that "one spring-time, as he came into soundings in the English Channel, a great flock of swallows came and settled on all his rigging ; every rope was covered ; they hung on one another like a swarm of bees ; even the decks were filled with them. They seemed almost famished and spent, and were only feathers and bone ; but, being recruited with a night's rest, took their flight in the morning."

51. Now I detain you on this point somewhat, because it is intimately connected with a more important one. I told you we should learn from the swallow what a wing was. Few other birds approach him in the beauty of it, or apparent power. And yet, after all this care taken about it, he gets tired ; and instead of flying, as we should do in his place, all

over the world, and tasting the flavor of the midges in every marsh which the infinitude of human folly has left to breed gnats instead of growing corn,—he is of all birds, characteristically, except when he absolutely can't help it, the stayer at home ; and contentedly lodges himself and his family in an old chimney, when he might be flying all over the world.

At least you would think, if he built in an English chimney this year, he would build in a French one next. But no. Michelet prettily says of him, "He is the bird of return." If you will only treat him kindly, year after year, he comes back to the same niche, and to the same hearth, for his nest.

To the same niche ; and builds himself an opaque walled house within that. Think of this a little, as if you heard of it for the first time.

52. Suppose you had never seen a swallow ; but that its general habit of life had been described to you, and you had been asked, how you thought such a bird would build its nest. A creature, observe, whose life is to be passed in the air ; whose beak and throat are shaped with the fineness of a net for the catching of gnats ; and whose feet, in the most perfect of the species, are so feeble that it is called the Footless Swallow, and cannot stand a moment on the ground with comfort. Of all land birds, the one that has least to do with the earth ; of all, the least disposed, and the least able, to stop to pick anything up. What will it build with ? Gossamer, we should say,—thistledown,—anything it can catch floating, like flies.

But it builds with stiff clay.

53. And observe its chosen place for building also. You would think, by its play in the air, that not only of all birds, but of all creatures, it most delighted in space and freedom. You would fancy its notion of the place for a nest would be the openest field it could find ; that anything like confinement would be an agony to it ; that it would almost expire of horror at the sight of a black hole.

And its favourite home is down a chimney.

54. Not for your hearth's sake, nor for your company's. Do not think it. The bird will love you if you treat it kindly ; is as frank and friendly as bird can be ; but it does not, more

than others, seek your society. It comes to your house because in no wild wood, nor rough rock, can it find a cavity close enough to please it. It comes for the blessedness of imprisonment, and the solemnity of an unbroken and constant shadow, in the tower, or under the eaves.

Do you suppose that this is part of its necessary economy, and that a swallow could not catch flies unless it lived in a hole?

Not so. This instinct is part of its brotherhood with another race of creatures. It is given to complete a mesh in the reticulation of the orders of life.

55. I have already given you several reasons for my wish that you should retain, in classifying birds, the now rejected order of *Picæ*. I am going to read you a passage from Humboldt, which shows you what difficulties one may get into for want of it.

You will find in the second volume of his personal narrative, an account of the cave of Caripe in New Andalusia, which is inhabited by entirely nocturnal birds, having the gaping mouths of the goat-sucker and the swallow, and yet feeding on fruit.

Unless, which Mr. Humboldt does not tell us, they sit under the trees outside, in the night time, and hold their mouths open, for the berries to drop into, there is not the smallest occasion for their having wide mouths, like swallows. Still less is there any need, since they are fruit eaters, for their living in a cavern 1,500 feet out of daylight. They have only, in consequence, the trouble of carrying in the seeds to feed their young, and the floor of the cave is thus covered, by the seeds they let fall, with a growth of unfortunate pale plants, which have never seen day. Nay, they are not even content with the darkness of their cave; but build their nests in the funnels with which the roof of the grotto is pierced like a sieve; live actually in the chimney, not of a house, but of an Egyptian sepulchre! The colour of this bird, of so remarkable taste in lodging, Humboldt tells us, is "of dark bluish-grey, mixed with streaks and specks of black. Large white spots, which have the form of a heart, and which are bordered

with black, mark the head, the wings, and the tail. The spread of the wings, which are composed of seventeen or eighteen quill feathers, is three feet and a half. Suppressing, with Mr. Cuvier, the order of Picae, we must refer this extraordinary bird to the *Sparrows*."

56. We can only suppose that it must be, to our popular sparrows, what the swallow of the cinnamon country is to our subordinate swallow. Do you recollect the cinnamon swallows of Herodotus, who build their mud nests in the faces of the cliffs where Dionusos was brought up, and where nobody can get near them; and how the cinnamon merchants fetch them joints of meat, which the unadvised birds, flying up to their nests with, instead of cinnamon,—nest and all come down together,—the original of Sindbad's valley-of-diamond story?

57. Well, Humboldt is reduced, by necessities of recent classification, to call a bird three feet and a half across the wings, a sparrow. I have no right to laugh at him, for I am just going, myself, to call the cheerfullest and brightest of birds of the air, an owl. All these architectural and sepulchral habits, these Egyptian manners of the sand-martin, digging caves in the sand, and border-trooper's habits of the chimney swallow, living in round towers instead of open air, belong to them as connected with the tribe of the falcons through the owls! and not only so, but with the mammalia through the bats! A swallow is an emancipated owl, and a glorified bat; but it never forgets its fellowship with night.

58. Its *ancient* fellowship, I had nearly written; so natural is it to think of these similarly-minded creatures, when the feelings that both show are evidently useless to one of them, as if the inferior had changed into the higher. The doctrine of development seems at first to explain all so pleasantly, that the scream of consent with which it has been accepted by men of science, and the shriller vociferation of the public's gregarious applause, scarcely permit you the power of antagonist reflection. I must justify to-day, in graver tone than usual, the terms in which I have hitherto spoken,—it may have been thought with less than the due respect to my audience,—of the popular theory.

59. Supposing that the octohedrons of galena, of gold, and of oxide of iron, were endowed with powers of reproduction, and perished at appointed dates of dissolution or solution, you would without any doubt have heard it by this time asserted that the octohedric form, which was common to all, indicated their descent from a common progenitor; and it would have been ingeniously explained to you how the angular offspring of this eight-sided ancestor had developed themselves, by force of circumstances, into their distinct metallic perfections; how the galena had become grey and brittle under prolonged subterranean heat, and the gold yellow and ductile, as it was rolled among the pebbles of amber-coloured streams.

60. By the denial to these structures of any individually reproductive energy, you are forced to accept the inexplicable (and why expect it to be otherwise than inexplicable?) fact, of the formation of a series of bodies having very similar aspects, qualities, and chemical relations to other substances, which yet have no connection whatever with each other, and are governed, in their relation with their native rocks, by entirely arbitrary laws. It has been the pride of modern chemistry to extricate herself from the vanity of the alchemist, and to admit, with resignation, the independent, though apparently fraternal, natures, of silver, of lead, of platinum,—aluminium,—potassium. Hence, a rational philosophy would deduce the probability that when the arborescence of dead crystallization rose into the radiation of the living tree, and sentient plume, the splendour of nature in her more exalted power would not be restricted to a less variety of design; and the beautiful caprice in which she gave to the silver its frost, and to the opal its fire, would not be subdued under the slow influences of accident and time, when she wreathed the swan with snow, and bathed the dove in iridescence. That the infinitely more exalted powers of life must exercise more intimate influence over matter than the reckless forces of cohesion;—and that the loves and hatreds of the now conscious creatures would modify their forms into parallel beauty and degradation, we might have anticipated by reason, and we

ought long since to have known by observation. But this law of its spirit over the substance of the creature involves, necessarily, the indistinctness of its type, and the existence of inferior and of higher conditions, which whole æras of heroism and affection—whole æras of misery and misconduct, confirm into glory, or confuse into shame. Collecting the causes of changed form, in lower creatures, by distress, or by adaptation,—by the disturbance or intensifying of the parental strength, and the native fortune—the wonder is, not that species should sometimes be confused, but that the greater number of them remain so splendidly, so manifestly, so eternally distinct; and that the vile industries and vicious curiosities of modern science, while they have robbed the fields of England of a thousand living creatures, have not created in them one.

61. But even in the paltry knowledge we have obtained, what unanimity have we?—what security? Suppose any man of ordinary sense, knowing the value of time, and the relative importance of subjects of thought, and that the whole scientific world was agog concerning the origin of species, desired to know first of all—what was meant by a species.

He would naturally look for the definition of species first among the higher animals, and expect it to be best defined in those which were best known. And being referred for satisfaction to the 226th page of the first volume of Mr. Darwin's "Descent of Man," he would find this passage:—

"Man has been studied more carefully than any other organic being, and yet there is the greatest possible diversity among capable judges, whether he should be classed as a single species or race, or as two (Virey), as three (Jacquinot), as four (Kant), five (Blumenbaeh), six (Buffon), seven (Hunter), eight (Agassiz), eleven (Pickering), fifteen (Bory St. Vincent), sixteen (Desmoulins), twenty-two (Morton), sixty (Crawford), or as sixty-three according to Burke."

And in the meantime, while your men of science are thus vacillating, in the definition of the species of the only animal they have the opportunity of studying inside and out, between one and sixty-three; and disputing about the origin, in past

ages, of what they cannot define in the present one ; and deciphering the filthy heraldries which record the relation of humanity to the ascidian and the crocodile, you have ceased utterly to distinguish between the two species of man, evermore separate by infinite separation : of whom the one, capable of loyalty and of love, can at least conceive spiritual natures which have no taint from their own, and leave behind them, diffused among thousands on earth, the happiness they never hoped, for themselves, in the skies ; and the other, capable only of avarice, hatred, and shame, who in their lives are the companions of the swine, and leave in death nothing but food for the worm and the vulture.

62. Now I have first traced for you the relations of the creature we are examining to those beneath it and above, to the bat and to the falcon. But you will find that it has still others to entirely another world, As you watch it glance and skim over the surface of the waters, has it never struck you what relation it bears to the creatures that glance and glide *under* their surface? Fly-catchers, some of them, also,—fly-catchers in the same manner, with wide mouth ; while in motion the bird almost exactly combines the dart of the trout with the dash of the dolphin, to the rounded forehead and projecting muzzle of which its own bullet head and bill exactly correspond. In its plunge, if you watch it bathing, you may see it dip its breast just as much under the water as a porpoise shows its back above. You can only rightly describe the bird by the resemblances, and images of what it seems to have changed from,—then adding the fantastic and beautiful contrast of the unimaginable change. It is an owl that has been trained by the Graces. It is a bat that loves the morning light. It is the aerial reflection of a dolphin. It is the tender domestication of a trout.

63. And yet be assured, as it cannot have been all these creatures, so it has never, in truth, been any of them. The transformations believed in by the mythologists are at least spiritually true ; you cannot too carefully trace or too accurately consider them. But the transformations believed in by the anatomist are as yet proved true in no single instance,

and in no substance, spiritual or material ; and I cannot too often, or too earnestly, urge you not to waste your time in guessing what animals may once have been, while you remain in nearly total ignorance of what they are.

64. Do you even know distinctly from each other,—(for that is the real naturalist's business ; instead of confounding them with each other),—do you know distinctly the five great species of this familiar bird?—the swallow, the house-martin, the sand-martin, the swift, and the Alpine swift?—or can you so much as answer the first question which would suggest itself to any careful observer of the form of its most familiar species,—yet which I do not find proposed, far less answered, in any scientific book,—namely, why a swallow has a swallow-tail ?

It is true that the tail feathers in many birds appear to be entirely,—even cumbrously, decorative ; as in the peacock, and birds of paradise. But I am confident that it is not so in the swallow, and that the forked tail, so defined in form and strong in plume, has indeed important functions in guiding the flight ; yet notice how surrounded one is on all sides with pitfalls for the theorists. The forked tail reminds you at once of a fish's ; and yet, the action of the two creatures is wholly contrary. A fish lashes himself forward with his tail, and steers with his fins ; a swallow lashes himself forward with his fins, and steers with his tail ; partly, not necessarily, because in the most dashing of the swallows, the swift, the fork of the tail is the least developed. And I never watch the bird for a moment without finding myself in some fresh puzzle out of which there is no clue in the scientific books. I want to know, for instance, how the bird turns. What does it do with one wing, what with the other ? Fancy the pace that has to be stopped ; the force of bridle-hand put out in an instant. Fancy how the wings must bend with the strain ; what need there must be for the perfect aid and work of every feather in them. There is a problem for you, students of mechanics,—How does a swallow turn ?

You shall see, at all events, to begin with, to-day, how it gets along.

65. I say you shall see ; but indeed you have often seen, and felt,—at least with your hands, if not with your shoulders,—when you chanced to be holding the sheet of a sail.

I have said that I never got into scrapes by blaming people wrongly ; but I often do by praising them wrongly. I never praised, without qualification, but one scientific book in my life (that I remember)—this of Dr. Pettigrew's on the Wing ;*—and now I must qualify my praise considerably, discovering, when I examined the book farther, that the good doctor had described the motion of a bird as resembling that of a kite, without ever inquiring what, in a bird, represented that somewhat important part of a kite, the string. You will, however, find the book full of important observations, and illustrated by valuable drawings. But the point in question

* “On the Physiology of Wings.” Transactions of the Royal Society of Edinburgh. Vol. xxvi., Part ii. I cannot sufficiently express either my wonder or regret at the petulance in which men of science are continually tempted into immature publicity, by their rivalry with each other. Page after page of this book, which, slowly digested and taken counsel upon, might have been a noble contribution to natural history, is occupied with dispute utterly useless to the reader, on the question of the priority of the author, by some months, to a French savant, in the statement of a principle which neither has yet proved ; while page after page is rendered worse than useless to the reader by the author's passionate endeavour to contradict the ideas of unquestionably previous investigators. The problem of flight was, to all serious purpose, solved by Borelli in 1680, and the following passage is very notable as an example of the way in which the endeavour to obscure the light of former ages too fatally dims and distorts that by which modern men of science walk, themselves. “Borelli, and all who have written since his time, are unanimous in affirming that the horizontal transference of the body of the bird is due to the perpendicular vibration of the wings, and to the yielding of the posterior or flexible margins of the wings in an upward direction, as the wings descend. I” (Dr. Pettigrew) “am, however, disposed to attribute it to the fact (1st), that *the wings*, both when elevated and depressed, *leap forwards* in curves, those curves uniting to form a continuous waved track ; (2nd), to the *tendency which the body of the bird has to swing forwards*, in a more or less horizontal direction, *when once set in motion* ; (3rd), to the construction of the wings ; they are elastic helices or screws, which twist and untwist while they vibrate, and tend to bear upwards and onwards any weight suspended from them ; (4th), to the *reaction of the air on the under surfaces* of the wings ; (5th),

you must settle for yourselves, and you easily may. Some of you, perhaps, knew, in your time, better than the doctor, how a kite stopped ; but I do not doubt that a great many of you also know, now, what is much more to the purpose, how a ship gets along. I will take the simplest, the most natural, the most beautiful of sails,—the lateen sail of the Mediterranean.

66. I draw it rudely in outline, as it would be set for a side-wind on the boat you probably know best,—the boat of burden on the Lake of Geneva (Fig. 3), not confusing the drawing by adding the mast, which, you know, rakes a little, carrying the yard across it. (a). Then, with your permission, I will load my boat thus, with a few casks of Vevay vintage—and, to keep them cool, we will put an awning over

to the ever-varying power with which the wings are urged, this being greatest at the beginning of the down-stroke, and least at the end of the up one ; (6th), to the contraction of the voluntary muscles and elastic ligaments, and to the effect produced by the various inclined surfaces formed by the wings during their oscillations ; (7th), to the weight of the bird—weight itself, when acting upon wings, becoming a propelling power, and so contributing to horizontal motion."

I will collect these seven reasons for the forward motion, in the gist of them, which I have marked by italics, that the reader may better judge of their collective value. The bird is carried forward, according to Dr. Pettigrew—

1. Because its wings leap forward.
2. Because its body has a tendency to swing forward.
3. Because the wings are screws so constructed as to screw upwards and onwards any body suspended from them.
4. Because the air reacts on the under surfaces of the wings.
5. Because the wings are urged with ever-varying power.
6. Because the voluntary muscles contract.
7. Because the bird is heavy.

What must be the general conditions of modern science, when it is possible for a man of great experimental knowledge and practical ingenuity, to publish nonsense such as this, becoming, to all intents and purposes, insane, in the passion of his endeavour to overthrow the statements of his rival ? Had he merely taken patience to consult any elementary scholar in dynamics, he would have been enabled to understand his own machines, and develop, with credit to himself, what had been rightly judged or noticed by others.

them, so (*b*). Next, as we are classical scholars, instead of this rustic stem of the boat, meant only to run easily on a flat shore, we will give it an Attic $\epsilon\mu\beta\omicron\lambda\omicron\nu$ (*c*). (We have no business, indeed, yet, to put an $\epsilon\mu\beta\omicron\lambda\omicron\nu$ on a boat of burden, but I hope some day to see all our ships of war loaded with bread and wine, instead of artillery.) Then I shade the entire form (*c*); and, lastly, reflect it in the water (*d*)—and you have seen something like that before, besides a boat, haven't you?

FIG. 3.

There is the gist of the whole business for you, put in very small space; with these only differences: in a boat, the air strikes the sail; in a bird, the sail strikes the air: in a boat, the force is lateral, and in a bird downwards; and it has its sail on both sides. I shall leave you to follow out the mechanical problem for yourselves, as far as the mere resolu-

tion of force is concerned. My business, as a painter, is only with the exquisite organic weapon that deals with it.

67. Of which you are now to note farther, that a bird is required to manage his wing so as to obtain two results with one blow:—he has to keep himself up, as well as to get along.

But observe, he only requires to keep himself up *because* he has to get along. The buoyancy might have been given at once, if nature had wanted *that* only; she might have blown the feathers up with the hot air of the breath, till the bird rose in air like a cork in water. But it has to be, not a buoyant cork, but a buoyant *bullet*. And therefore that it may have momentum for pace, it must have weight to carry; and to carry that weight, the wings must deliver their blow with effective vertical, as well as oblique, force.

Here, again, you may take the matter in brief sum. Whatever is the ship's loss is the bird's gain; whatever tendency the ship has to leeway, is all given to the bird's support, so that every atom * of force in the blow is of service.

68. Therefore you have to construct your organic weapon, so that this absolutely and perfectly economized force may be distributed as the bird chooses at any moment. That, if it wants to rise, it may be able to strike vertically more than obliquely;—if the order is, go a-head, that it may put the oblique screw on. If it wants to stop in an instant, that it may be able to throw its wings up full to the wind; if it wants to hover, that it may be able to lay itself quietly on the wind with its wings and tail, or, in calm air, to regulate their vibration and expansion into tranquillity of gliding, or of pausing power. Given the various proportions of weight and wing; the conditions of possible increase of muscular force and quill-strength in proportion to size; and the different objects and circumstances of flight,—you have a series of exquisitely complex problems, and exquisitely perfect solutions, which the life of the youngest among you cannot be long

* I don't know what word to use for an infinitesimal degree or divided portion of force: one can't properly speak of a force being cut into pieces; but I can think of no other word than atom.

enough to read through so much as once, and of which the future infinitudes of human life, however granted or extended, never will be fatigued in admiration.

69. I take the rude outline of sail in Fig. 3, and now considering it as a jib of one of our own sailing vessels, slightly exaggerate the loops at the edge, and draw curved lines from

FIG. 4.

them to the opposite point, Fig. 4; and I have a reptilian or dragon's wing, which would, with some ramification of the supporting ribs, become a bat's or moth's; that is to say, an extension of membrane between the ribs (as in an umbrella), which will catch the wind, and flutter upon it, like a leaf; but cannot strike it to any purpose. The flying squirrel drifts like a falling leaf; the bat flits like a black rag torn at the edge. To give power, we must have plumes that can strike, as with the flat of a sword-blade; and to give *perfect* power, these must be laid over each other, so that each may support the one below it. I use the word below advisedly: we have to strike

down. The lowest feather is the one that first meets the adverse force. It is the one to be supported.

Now for the manner of the support. You must all know well the look of the machicolated parapets in mediæval castles. You know they are carried on rows of small projecting buttresses constructed so that, though the uppermost stone, far-projecting, would break easily under any shock, it is supported by the next below, and so on, down to the wall. Now in this figure I am obliged to separate the feathers by white spaces, to show you them distinctly. In reality they are set as close to each other as can be, but putting them as close as I can, you get *a* or *b*, Fig. 5, for the rough section of the wing, thick towards the bird's head, and curved like a sickle, so that in striking down it catches the air, like a reaping-hook, and in rising up, it throws off the air like a pent-house.

70. The stroke would therefore be vigorous, and the re

covery almost effortless, were even the direction of both actually vertical. But they are vertical only with relation to the bird's body. In space they follow the forward flight, in a softly curved line ; the downward stroke being as effective as the bird chooses, the recovery scarcely encounters resistance in the softly gliding ascent. Thus, in Fig. 5, (I can only explain this to readers a little versed in the elements of mechanics,) if *B* is the locus of the centre of gravity of the bird, moving in slow flight in the direction of the arrow, *w* is the locus of the leading feather of its wing, and *a* and *b*, roughly, the successive positions of the wing in the down-stroke and recovery.

FIG. 5.

71. I say the down-stroke is as effective as the bird chooses ; that is to say, it can be given with exactly the quantity of impulse, and exactly the quantity of supporting power, required at the moment. Thus, when the bird wants to fly slowly, the wings are fluttered fast, giving vertical blows ; if it wants to pause absolutely in still air, (this large birds cannot do, not being able to move their wings fast enough,) the velocity becomes vibration, as in the humming-bird : but if there is wind, any of the larger birds can lay themselves on it like a kite, their own weight answering the purpose of the string, while they keep the wings and tail in an inclined plane, giving them as much gliding ascent as counteracts the fall. They nearly all, however, use some slightly gliding force at the same time ; a single stroke of the wing, with forward intent, seeming enough to enable them to glide on for half a minute or more without stirring a plume. A circling eagle floats an inconceivable time without visible stroke : (fancy the pretty action of the inner wing, *backing* air instead of water, which gives exactly the

breadth of circle he chooses). But for exhibition of the complete art of flight, a swallow on rough water is the master of masters. A seagull, with all its splendid power, generally has its work cut out for it, and is visibly fighting; but the swallow plays with wind and wave as a girl plays with her fan, and

there are no words to say how many things it does with its wings in any ten seconds, and does consummately. The mystery of its dart remains always inexplicable to me; no eye can trace the bending of bow that sends that living arrow.

But the main structure of the noble weapon we may with little pains understand.

72. In the sections *a* and *b* of Fig. 5, I have only represented the quills of the outer part of the wing. The relation of these, and of the inner quills, to the bird's body may be very simply shown.

Fig. 6 is a rude sketch, typically representing the wing of any bird, but actually founded chiefly on the seagull's.

FIG. 6.

It is broadly composed of two fans, A and B. The outmost fan, A, is carried by the bird's hand; of which I rudely sketch the contour of the bones at *a*. The innermost fan, B, is carried by the bird's fore-arm, from wrist to elbow, *b*.

The strong humerus, *c*, corresponding to our arm from

shoulder to elbow, has command of the whole instrument. No feathers are attached to this bone ; but covering and protecting ones are set in the skin of it, completely filling, when the active wing is open, the space between it and the body. But the plumes of the two great fans, A and B, are set into the bones ; in Fig. 8, farther on, are shown the projecting knobs on the main arm bone, set for the reception of the quills, which make it look like the club of Hercules. The connection of the still more powerful quills of the outer fan with the bones of the hand is quite beyond all my poor anatomical perceptions, and, happily for me, also beyond needs of artistic investigation.

FIG. 7.

73. The feathers of the fan A are called the primaries. Those of the fan B, secondaries. Effective actions of flight, whether for support or forward motion, are, I believe, all executed with the primaries, every one of which may be briefly described as the strongest scymitar that can be made of quill substance ; flexible within limits, and elastic at its edges—carried by an elastic central shaft—twisted like a windmill sail—striking with the flat, and recovering with the edge.

The secondary feathers are more rounded at the ends, and frequently notched ; their curvature is reversed to that of the primaries ; they are arranged, when expanded, somewhat in the shape of a shallow cup, with the hollow of it downwards, holding the air therefore, and aiding in all the pause and buoyancy of flight, but little in the activity of it. Essentially they are the brooding and covering feathers of the wing ; ex-

quisitely beautiful—as far as I have yet seen, *most* beautiful—in the bird whose brooding is of most use to us ; and which has become the image of all tenderness. “How often would I have gathered thy children . . . and ye would not.”

74. Over these two chief masses of the plume are set others which partly complete their power, partly adorn and protect

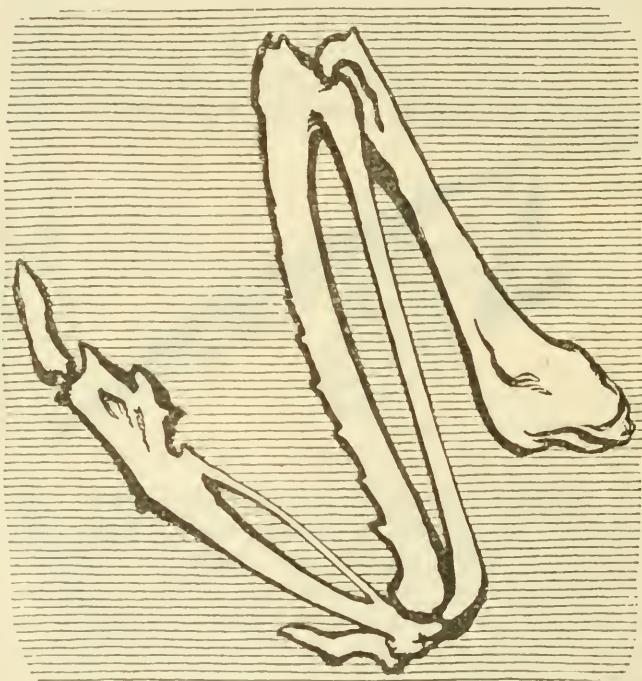

FIG. 8.

them ; but of these I can take no notice at present. All that I want you to understand is the action of the two main masses, as the wing is opened and closed.

Fig. 7 roughly represents the upper surface of the main feathers of the wing closed. The secondaries are folded over the primaries ; and the primaries shut up close, with their

outer edges parallel, or nearly so. Fig. 8 roughly shows the outline of the bones, in this position, of one of the larger pigeons.*

75. Then Fig. 9 is (always sketched in the roughest way) the outer, Fig. 10 the inner, surface of a seagull's wing in this position. Next, Fig. 11 shows the tops of the four lowest feathers in Fig. 9, in mere outline; A separate (pulled off, so that they can be set side by side), B shut up close in the folded wing, c opened in the spread wing.

FIG. 9.

76. And now, if you will yourselves watch a few birds in flight, or opening and closing their wings to prune them, you will soon know as much as is needful for our art purposes; and, which is far more desirable, feel how very little we know, to any purpose, of even the familiar creatures that are our companions.

Even what we have seen to-day † is more than appears to

* I find even this mere outline of anatomical structure so interferes with the temper in which I wish my readers to think, that I shall withdraw it in my complete edition.

† Large and somewhat carefully painted diagrams were shown at the lecture, which I cannot engrave but for my complete edition.

have been noticed by the most careful painters of the great schools ; and you will continually fancy that I am inconsistent with myself in pressing you to learn, better than they, the anatomy of birds, while I violently and constantly urge you to refuse the knowledge of the anatomy of men. But you will find, as my system develops itself, that it is absolutely consistent throughout. I don't mean, by telling you not to study human anatomy, that you are not to know how many fingers and toes you have, nor how you can grasp and walk

FIG. 10.

with them ; and, similarly, when you look at a bird, I wish you to know how many claws and wing-feathers it has, and how it grips and flies with them. Of the bones, in either, I shall show you little ; and of the muscles, nothing but what can be seen in the living creature, nor, often, even so much.

77. And accordingly, when I now show you this sketch of my favourite Holbein, and tell you that it is entirely disgraceful he should not know what a wing was, better,—I don't mean that it is disgraceful he should not know the anatomy of it, but that he should never have looked at it to see how the feathers lie.

Now Holbein paints men gloriously, but never looks at birds ; Gibbons, the woodcutter, carves birds, but can't men ; —of the two faults the last is the worst ; but the right is in

FIG. 11.

looking at the whole of nature in due comparison, and with universal candour and tenderness.

78. At the whole of nature, I say, not at *super-nature*—at

what you suppose to be above the visible nature about you. If you are not inclined to look at the wings of birds, which God has given you to handle and to see, much less are you to contemplate, or draw imaginations of, the wings of angels, which you can't see. Know your own world first—not denying any other, but being quite sure that the place in which you are now put is the place with which you are now concerned; and that it will be wiser in you to think the gods themselves may appear in the form of a dove, or a swallow, than that, by false theft from the form of dove or swallow, you can represent the aspect of gods.

79. One sweet instance of such simple conception, in the end of the *Odyssey*, must surely recur to your minds in connection with our subject of to-day, but you may not have noticed the recurrent manner in which Homer insists on the thought. When Ulysses first bends and strings his bow, the vibration of the chord is shrill, “like the note of a swallow.” A poor and unwarlike simile, it seems! But in the next book, when Ulysses stands with his bow lifted, and Telemachus has brought the lances, and laid them at his feet, and Athena comes to his side to encourage him,—do you recollect the gist of her speech? “You fought,” she says, “nine years for the sake of Helen, and for another’s house:—now, returned, after all those wanderings, and under your own roof, for it, and its treasures, will you not fight, then?” And she herself flies up to the house-roof, and thence, *in the form of the swallow*, guides the arrows of vengeance for the violation of the sanctities of home.

80. To-day, then, I believe verily for the first time, I have been able to put before you some means of guidance to understand the beauty of the bird which lives with you in your own houses, and which purifies for you, from its insect pestilence, the air that you breathe. Thus the sweet domestic thing has done, for men, at least these four thousand years. She has been their companion, not of the home merely, but of the hearth, and the threshold; companion only endeared by departure, and showing better her loving-kindness by her faithful return. Type sometimes of the stranger, she has softened

us to hospitality ; type always of the suppliant, she has enchanted us to mercy ; and in her feeble presence, the cowardice, or the wrath, of sacrilege has changed into the fidelities of sanctuary. Herald of our summer, she glances through our days of gladness ; numberer of our years, she would teach us to apply our hearts to wisdom ;—and yet, so little have we regarded her, that this very day, scarcely able to gather from all I can find told of her enough to explain so much as the unfolding of her wings, I can tell you nothing of her life—nothing of her journeying : I cannot learn how she builds, nor how she chooses the place of her wandering, nor how she traces the path of her return. Remaining thus blind and careless to the true ministries of the humble creature whom God has really sent to serve us, we in our pride, thinking ourselves surrounded by the pursuivants of the sky, can yet only invest them with majesty by giving them the calm of the bird's motion, and shade of the bird's plume :—and after all, it is well for us, if, when even for God's best mercies, and in His temples marble-built, we think that, “with angels and arch-angels, and all the company of Heaven, we laud and magnify His glorious name”—well for us, if our attempt be not only an insult, and His ears open rather to the inarticulate and unintended praise, of “the Swallow, twittering from her straw-built shed.”

THE RELATION BETWEEN
MICHAEL ANGELO
AND
TINTORET

SEVENTH OF THE COURSE OF LECTURES ON SCULPTURE,
DELIVERED AT OXFORD, 1870-71.

I HAVE printed this Lecture separately, that strangers visiting the Galleries may be able to use it for reference to the drawings. But they must observe that its business is only to point out what is to be blamed in Michael Angelo, and that it assumes the facts of his power to be generally known. Mr. Tyrwhitt's statement of these, in his "Lectures on Christian Art," will put the reader into possession of all that may justly be alleged in honour of him.

Corpus Christi College, 1st May, 1872.

THE RELATION
BETWEEN
MICHAEL ANGELO AND TINTORET.

*The Seventh of the Course of Lectures on Sculpture
delivered at Oxford, 1870-71.*

IN preceding lectures on sculpture I have included references to the art of painting, so far as it proposes to itself the same object as sculpture, (idealization of form) ; and I have chosen for the subject of our closing inquiry, the works of the two masters who accomplished or implied the unity of these arts. Tintoret entirely conceives his figures as solid statues : sees them in his mind on every side ; detaches each from the other by imagined air and light ; and foreshortens, interposes, or involves them, as if they were pieces of clay in his hand. On the contrary, Michael Angelo conceives his sculpture partly as if it were painted ; and using (as I told you formerly) his pen like a chisel, uses also his chisel like a pencil ; is sometimes as picturesque as Rembrandt, and sometimes as soft as Correggio.

It is of him chiefly that I shall speak to-day ; both because it is part of my duty to the strangers here present to indicate for them some of the points of interest in the drawings forming part of the University collections ; but still more, because I must not allow the second year of my professorship to close, without some statement of the mode in which those collections may be useful or dangerous to my pupils. They seem at present little likely to be either ; for since I entered on my

duties, no student has ever asked me a single question respecting these drawings, or, so far as I could see, taken the slightest interest in them.

There are several causes for this which might be obviated—there is one which cannot be. The collection, as exhibited at present, includes a number of copies which mimic in variously injurious ways the characters of Michael Angelo's own work ; and the series, except as material for reference, can be of no practical service until these are withdrawn, and placed by themselves. It includes, besides, a number of original drawings which are indeed of value to any laborious student of Michael Angelo's life and temper ; but which owe the greater part of this interest to their being executed in times of sickness or indolence, when the master, however strong, was failing in his purpose, and, however diligent, tired of his work. It will be enough to name, as an example of this class, the sheet of studies for the Medici tombs, No. 45, in which the lowest figure is, strictly speaking, neither a study nor a working drawing, but has either been scrawled in the feverish languor of exhaustion, which cannot escape its subject of thought ; or, at best, in idly experimental addition of part to part, beginning with the head, and fitting muscle after muscle, and bone after bone to it, thinking of their place only, not their proportion, till the head is only about one twentieth part of the height of the body : finally, something between a face and a mask is blotted in the upper left-hand corner of the paper, indicative, in the weakness and frightfulness of it, simply of mental disorder from overwork ; and there are several others of this kind, among even the better drawings of the collection, which ought never to be exhibited to the general public.

It would be easy, however, to separate these, with the acknowledged copies, from the rest ; and, doing the same with the drawings of Raphael, among which a larger number are of true value, to form a connected series of deep interest to artists, in illustration of the incipient and experimental methods of design practised by each master.

I say, to artists. Incipient methods of design are not, and

ought not to be, subjects of earnest inquiry to other people : and although the re-arrangement of the drawings would materially increase the chance of their gaining due attention, there is a final and fatal reason for the want of interest in them displayed by the younger students ;—namely, that these designs have nothing whatever to do with present life, with its passions, or with its religion. What their historic value is, and relation to the life of the past, I will endeavour, so far as time admits, to explain to-day.

The course of Art divides itself hitherto, among all nations of the world that have practised it successfully, into three great periods.

The first, that in which their conscience is undeveloped, and their condition of life in many respects savage ; but, nevertheless, in harmony with whatever conscience they possess. The most powerful tribes, in this stage of their intellect, usually live by rapine, and under the influence of vivid, but contracted, religious imagination. The early predatory activity of the Normans, and the confused minglings of religious subjects with scenes of hunting, war, and vile grotesque, in their first art, will sufficiently exemplify this state of a people ; having, observe, their conscience undeveloped, but keeping their conduct in satisfied harmony with it.

The second stage is that of the formation of conscience by the discovery of the true laws of social order and personal virtue, coupled with sincere effort to live by such laws as they are discovered.

All the Arts advance steadily during this stage of national growth, and are lovely, even in their deficiencies, as the buds of flowers are lovely by their vital force, swift change, and continent beauty.

The third stage is that in which the conscience is entirely formed, and the nation, finding it painful to live in obedience to the precepts it has discovered, looks about to discover, also, a compromise for obedience to them. In this condition of mind its first endeavour is nearly always to make its religion pompous, and please the gods by giving them gifts and entertainments, in which it may piously and pleasurably share

itself ; so that a magnificent display of the powers of art it has gained by sincerity, takes place for a few years, and is then followed by their extinction, rapid and complete exactly in the degree in which the nation resigns itself to hypocrisy.

The works of Raphael, Michael Angelo, and Tintoret, belong to this period of compromise in the career of the greatest nation of the world ; and are the most splendid efforts yet made by human creatures to maintain the dignity of states with beautiful colours, and defend the doctrines of theology with anatomical designs.

Farther, and as an universal principle, we have to remember that the Arts express not only the moral temper, but the scholarship, of their age ; and we have thus to study them under the influence, at the same moment of, it may be, declining probity, and advancing science.

Now in this the Arts of Northern and Southern Europe stand exactly opposed. The Northern temper never accepts the Catholic faith with force such as it reached in Italy. Our sincerest thirteenth century sculpture is cold and formal compared with that of the Pisani ; nor can any Northern poet be set for an instant beside Dante, as an exponent of Catholic faith : on the contrary, the Northern temper accepts the scholarship of the Reformation with absolute sincerity, while the Italians seek refuge from it in the partly scientific and completely lascivious enthusiasms of literature and painting, renewed under classical influence. We therefore, in the north, produce our Shakespeare and Holbein ; they their Petrarch and Raphael. And it is nearly impossible for you to study Shakespeare or Holbein too much, or Petrarch and Raphael too little.

I do not say this, observe, in opposition to the Catholic faith, or to any other faith, but only to the attempts to support whatsoever the faith may be, by ornament or eloquence, instead of action. Every man who honestly accepts, and acts upon, the knowledge granted to him by the circumstances of his time, has the faith which God intends him to have ;—assuredly a good one, whatever the terms or form of it—every man who dishonestly refuses, or interestedly disobeys the

knowledge open to him, holds a faith which God does not mean him to hold, and therefore a bad one, however beautiful or traditionally respectable.

Do not, therefore, I entreat you, think that I speak with any purpose of defending one system of theology against another; least of all, reformed against Catholic theology. There probably never was a system of religion so destructive to the loveliest arts and the loveliest virtues of men, as the modern Protestantism, which consists in an assured belief in the Divine forgiveness of all your sins, and the Divine correctness of all your opinions. But in their first searching and sincere activities, the doctrines of the Reformation produced the most instructive art, and the grandest literature, yet given to the world; while Italy, in her interested resistance to those doctrines, polluted and exhausted the arts she already possessed. Her iridescence of dying statesmanship—her magnificence of hollow piety, were represented in the arts of Venice and Florence by two mighty men on either side—Titian and Tintoret,—Michael Angelo and Raphael. Of the calm and brave statesmanship, the modest and faithful religion, which had been her strength, I am content to name one chief representative artist at Venice, John Bellini.

Let me now map out for you roughly, the chronological relations of these five men. It is impossible to remember the minor years, in dates; I will give you them broadly in decades, and you can add what finesse afterwards you like.

Recollect, first, the great year 1480. Twice four's eight—you can't mistake it. In that year Michael Angelo was five years old; Titian, three years old; Raphael, within three years of being born.

So see how easily it comes. Michael Angelo five years old—and you divide six between Titian and Raphael,—three on each side of your standard year, 1480.

Then add to 1480, forty years—an easy number to recollect, surely; and you get the exact year of Raphael's death, 1520.

In that forty years all the new effort, and deadly catastrophe took place. 1480 to 1520.

Now, you have only to fasten to those forty years, the life

of Bellini, who represents the best art before them, and of Tintoret, who represents the best art after them.

I cannot fit you these on with a quite comfortable exactness, but with very slight inexactness I can fit them firmly.

John Bellini was ninety years old when he died. He lived fifty years before the great forty of change, and he saw the forty, and died. Then Tintoret is born; lives eighty* years after the forty, and closes, in dying, the sixteenth century, and the great arts of the world.

Those are the dates, roughly; now for the facts connected with them.

John Bellini precedes the change, meets, and resists it victoriously to his death. Nothing of flaw or failure is ever to be discerned in him.

Then Raphael, Michael Angelo, and Titian, together, bring about the deadly change, playing into each other's hands—Michael Angelo being the chief captain in evil; Titian, in natural force.

Then Tintoret, himself alone nearly as strong as all the three, stands up for a last fight, for Venice, and the old time. He all but wins it at first; but the three together are too strong for him. Michael Angelo strikes him down; and the arts are ended. "*Il disegno di Michel Agnolo.*" That fatal motto was his death-warrant.

And now, having massed out my subject, I can clearly sketch for you the changes that took place from Bellini, through Michael Angelo, to Tintoret.

The art of Bellini is centrally represented by two pictures at Venice: one, the Madonna in the Sacristy of the Frari, with two saints beside her, and two angels at her feet; the second, the Madonna with four Saints, over the second altar of San Zaccaria.

In the first of these, the figures are under life size, and it represents the most perfect kind of picture for rooms; in

* If you like to have it with perfect exactitude, recollect that Bellini died at true ninety,—Tintoret at eighty-two; that Bellini's death was four years before Raphael's and that Tintoret was born four years before Bellini's death.

which, since it is intended to be seen close to the spectator, every right kind of finish possible to the hand may be wisely lavished ; yet which is not a miniature, nor in any wise petty, or ignoble.

In the second, the figures are of life size, or a little more, and it represents the class of great pictures in which the boldest execution is used, but all brought to entire completion. These two, having every quality in balance, are as far as my present knowledge extends, and as far as I can trust my judgment, the two best pictures in the world.

Observe respecting them—

First, they are both wrought in entirely consistent and permanent material. The gold in them is represented by painting, not laid on with real gold. And the painting is so secure, that four hundred years have produced on it, so far as I can see, no harmful change whatsoever, of any kind.

Secondly, the figures in both are in perfect peace. No action takes place except that the little angels are playing on musical instruments, but with uninterrupted and effortless gesture, as in a dream. A choir of singing angels by La Robbia or Donatello would be intent on their music, or eagerly rapturous in it, as in temporary exertion : in the little choirs of cherubs by Luini in the Adoration of the Sheperds, in the Cathedral of Como, we even feel by their dutiful anxiety that there might be danger of a false note if they were less attentive. But Bellini's angels, even the youngest, sing as calmly as the Fates weave.

Let me at once point out to you that this calmness is the attribute of the entirely highest class of art : the introduction of strong or violently emotional incident is at once a confession of inferiority.

Those are the two first attributes of the best art. Faultless workmanship, and perfect serenity ; a continuous, not momentary, action,—or entire inaction. You are to be interested in the living creatures ; not in what is happening to them.

Then the third attribute of the best art is that it compels you to think of the spirit of the creature, and therefore of its face, more than of its body.

And the fourth is that in the face, you shall be led to see only beauty or joy ;—never vileness, vice, or pain.

Those are the four essentials of the greatest art. I repeat them, they are easily learned.

1. Faultless and permanent workmanship.
2. Serenity in state or action.
3. The Face principal, not the body.
4. And the Face free from either vice or pain.

It is not possible, of course, always literally to observe the second condition, that there shall be quiet action or none ; but Bellini's treatment of violence in action you may see exemplified in a notable way in his *St. Peter Martyr*. The soldier is indeed striking the sword down into his breast ; but in the face of the Saint is only resignation, and faintness of death, not pain—that of the executioner is impassive ; and, while a painter of the later schools would have covered breast and sword with blood, Bellini allows no stain of it ; but pleases himself by the most elaborate and exquisite painting of a soft crimson feather in the executioner's helmet.

Now the changes brought about by Michael Angelo—and permitted, or persisted in calamitously, by Tintoret—are in the four points these :

1st. Bad workmanship.

The greater part of all that these two men did is hastily and incompletely done ; and all that they did on a large scale in colour is in the best qualities of it perished.

2nd. Violence of transitional action.

The figures flying,—falling,—striking, or biting. Scenes of Judgment,—battle,—martyrdom,—massacre ; anything that is in the acme of instantaneous interest and violent gesture. They cannot any more trust their public to care for anything but that.

3rd. Physical instead of mental interest. The body, and its anatomy, made the entire subject of interest : the face, shadowed, as in the *Duke Lorenzo*,* unfinished, as in the *Twilight*,

* Julian, rather. See Mr. Tyrwhitt's notice of the lately discovered error, in his *Lectures on Christian Art*.

or entirely foreshortened, backshortened, and despised, among labyrinths of limbs, and mountains of sides and shoulders.

4th. Evil chosen rather than good. On the face itself, instead of joy or virtue, at the best, sadness, probably pride, often sensuality, and always, by preference, vice or agony as the subject of thought. In the Last Judgment of Michael Angelo, and the Last Judgment of Tintoret, it is the wrath of the Dies Iræ, not its justice, in which they delight ; and their only passionate thought of the coming of Christ in the clouds, is that all kindreds of the earth shall wail because of him.

Those are the four great changes wrought by Michael Angelo. I repeat them :

Ill work for good.

Tumult for Peace.

The Flesh of Man for his Spirit.

And the Curse of God for His Blessing.

Hitherto, I have massed, necessarily, but most unjustly, Michael Angelo and Tintoret together, because of their common relation to the art of others. I shall now proceed to distinguish the qualities of their own. And first as to the general temper of the two men.

Nearly every existing work by Michael Angelo is an attempt to execute something beyond his power, coupled with a fevered desire that his power may be acknowledged. He is always matching himself either against the Greeks whom he cannot rival, or against rivals whom he cannot forget. He is proud, yet not proud enough to be at peace ; melancholy, yet not deeply enough to be raised above petty pain ; and strong beyond all his companion workmen, yet never strong enough to command his temper, or limit his aims.

Tintoret, on the contrary, works in the consciousness of supreme strength, which cannot be wounded by neglect, and is only to be thwarted by time and space. He knows precisely all that art can accomplish under given conditions ; determines absolutely how much of what can be done, he will himself for the moment choose to do ; and fulfils his purpose with as much ease as if, through his human body, were working the great forces of nature. Not that he is ever satisfied

with what he has done, as vulgar and feeble artists are satisfied. He falls short of his ideal, more than any other man; but not more than is necessary; and is content to fall short of it to that degree, as he is content that his figures, however well painted, do not move nor speak. He is also entirely unconcerned respecting the satisfaction of the public. He neither cares to display his strength to them, nor convey his ideas to them; when he finishes his work, it is because he is in the humour to do so; and the sketch which a meaner painter would have left incomplete to show how cleverly it was begun, Tintoret simply leaves because he has done as much of it as he likes.

Both Raphael and Michael Angelo are thus, in the most vital of all points, separate from the great Venetian. They are always in dramatic attitudes, and always appealing to the public for praise. They are the leading athletes in the gymnasium of the arts; and the crowd of the circus cannot take its eyes away from them, while the Venetian walks or rests with the simplicity of a wild animal; is scarcely noticed in his occasionally swifter motion; when he springs, it is to please himself; and so calmly, that no one thinks of estimating the distance covered.

I do not praise him wholly in this. I praise him only for the well-founded pride, infinitely nobler than Michael Angelo's. You do not hear of Tintoret's putting any one into hell because they had found fault with his work. Tintoret would as soon have thought of putting a dog into hell for laying his paws on it. But he is to be blamed in this—that he thinks as little of the pleasure of the public, as of their opinion. A great painter's business is to do what the public ask of him, in the way that shall be helpful and instructive to them. His relation to them is exactly that of a tutor to a child; he is not to defer to their judgment, but he is carefully to form it;—not to consult their pleasure for his own sake, but to consult it much for theirs. It was scarcely, however, possible that this should be the case between Tintoret and his Venetians; he could not paint for the people, and in some respects he was happily protected by his subordination to the senate. Raphael

and Michael Angelo lived in a world of court intrigue, in which it was impossible to escape petty irritation, or refuse themselves the pleasure of mean victory. But Tintoret and Titian, even at the height of their reputation, practically lived as craftsmen in their workshops, and sent in samples of their wares, not to be praised or cavilled at, but to be either taken or refused.

I can clearly and adequately set before you these relations between the great painters of Venice and her senate—relations which, in monetary matters, are entirely right and exemplary for all time—by reading to you two decrees of the Senate itself, and one petition to it. The first document shall be the decree of the Senate for giving help to John Bellini, in finishing the compartments of the great Council Chamber; granting him three assistants—one of them Victor Carpaccio.

The decree, first referring to some other business, closes in these terms:*

“There having moreover offered his services to this effect our most faithful citizen, Zuan Bellin, according to his agreement employing his skill and all speed and diligence for the completion of this work of the three pictures aforesaid, provided he be assisted by the under written painters.

“Be it therefore put to the ballot, that besides the aforesaid Zuan Bellin in person, who will assume the superintendence of this work, there be added Master Victor Scarpaza, with a monthly salary of five ducats; Master Victor, son of the late Mathio, at four ducats per month; and the painter, Hieronymo, at two ducats per month; they rendering speedy and diligent assistance to the aforesaid Zuan Bellin for the painting of the pictures aforesaid, so that they be completed well and carefully as speedily as possible. The salaries of the which three master painters aforesaid, with the costs of colours and other necessaries, to be defrayed by our Salt office with the monies of the great chest.

“It being expressly declared that said pensioned painters be tied and bound to work constantly and daily, so that said

* From the invaluable series of documents relating to Titian and his times, extricated by Mr. Rawdon Brown from the archives of Venice, and arranged and translated by him.

three pictures may be completed as expeditiously as possible ; the artists aforesaid being pensioned at the good pleasure of this Council.

This decree is the more interesting to us now, because it is the precedent to which Titian himself refers, when he first offers his services to the Senate.

The petition which I am about to read to you, was read to the Council of Ten, on the last day of May, 1513, and the original draft of it is yet preserved in the Venice archives.

“ ‘Most Illustrious Council of Ten.

“ ‘Most Serene Prince and most Excellent Lords.

“ ‘I, Titian of Serviete de Cadore, having from my boyhood upwards set myself to learn the art of painting, not so much from cupidity of gain as for the sake of endeavouring to acquire some little fame, and of being ranked amongst those who now profess the said art.

“ ‘And altho heretofore, and likewise at this present, I have been earnestly requested by the Pope and other potentates to go and serve them, nevertheless, being anxious as your Serenity’s most faithful subject, for such I am, to leave some memorial in this famous city ; my determination is, should the Signory approve, *to undertake, so long as I live, to come and paint in the Grand Council with my whole soul and ability ;* commencing, provided your Serenity think of it, with the battle-piece on the side towards the “Piazza,” that being the most difficult ; nor down to this time has any one chosen to assume so hard a task.

“ ‘I, most excellent Lords, should be better pleased to receive as recompense for the work to be done by me, such acknowledgments as may be deemed sufficient, and much less ; but because, as already stated by me, I care solely for my honour, and mere livelihood, should your Serenity approve, you will vouchsafe to grant me for my life, the next brokers-patent in the German factory,* by whatever means it may be-

* Fondaco de Tedeschi. I saw the last wrecks of Giorgione’s frescoes on the outside of it in 1845.

come vacant ; notwithstanding other expectancies ; with the terms, conditions, obligations, and exemptions, as in the case of Messer Zuan Bellini ; besides two youths whom I purpose bringing with me as assistants ; they to be paid by the Salt office ; as likewise the colours and all other requisites, as conceded a few months ago by the aforesaid most Illustrious Council to the said Messer Zuan ; for I promise to do such work and with so much speed and excellency as shall satisfy your Lordships to whom I humbly recommend myself.' ”

“ This proposal,” Mr. Brown tells us, “ in accordance with the petitions presented by Gentil Bellini and Alvise Vivarini, was immediately put to the ballot,” and carried thus—the decision of the Grand Council, in favour of Titian, being, observe, by no means unanimous :—

“ Ayes.....	10
“ Noes.....	6
“ Neutrals.....	0”

Immediately follows on the acceptance of Titian’s services, this practical order :

“ We, Chiefs of the most Illustrious Council of Ten, tell and inform you Lords Proveditors for the State ; videlicet the one who is cashier of the Great Chest, and his successors, that for the execution of what has been decreed above in the most Illustrious Council aforesaid, you do have prepared all necessaries for the above written Titian according to his petition and demand, and as observed with regard to Juan Bellini, that he may paint ut supra ; paying from month to month the two youths whom said Titian shall present to you at the rate of four ducats each per month, as urged by him because of their skill and sufficiency in said art of painting, tho’ we do not mean the payment of their salary to commence until they begin work ; and thus will you do. Given on the 8th of June, 1513.”

That is the way, then, great workmen wish to be paid, and that is the way wise men pay them for their work. The perfect simplicity of such patronage leaves the painter free to do precisely what he thinks best : and a good painter always produces his best, with such license.

And now I shall take the four conditions of change in succession, and examine the distinctions between the two masters in their acceptance of, or resistance to, them.

I. The change of good and permanent workmanship for bad and insecure workmanship.

You have often heard quoted the saying of Michael Angelo, that oil-painting was only fit for women and children.

He said so, simply because he had neither the skill to lay a single touch of good oil-painting, nor the patience to overcome even its elementary difficulties.

And it is one of my reasons for the choice of subject in this concluding lecture on Sculpture, that I may, with direct reference to this much quoted saying of Michael Angelo, make the positive statement to you, that oil-painting is the Art of arts;* that it is sculpture, drawing, and music, all in one, involving the technical dexterities of those three several arts; that is to say—the decision and strength of the stroke of the chisel;—the balanced distribution of appliance of that force necessary for gradation in light and shade;—and the passionate felicity of rightly multiplied actions, all unerring, which on an instrument produce right sound, and on canvas, living colour. There is no other human skill so great or so wonderful as the skill of fine oil-painting; and there is no other art whose results are so absolutely permanent. Music is gone as soon as produced—marble discolours,—fresco fades,—glass darkens or decomposes—painting alone, well guarded, is practically everlasting.

Of this splendid art Michael Angelo understood nothing; he understood even fresco, imperfectly. Tintoret understood both perfectly; but he—when no one would pay for his colours, (and sometimes nobody would even give him space of wall to paint on)—used cheap blue for ultramarine; and he worked so rapidly, and on such huge spaces of canvas, that between damp and dry, his colours must go, for the most

* I beg that this statement may be observed with attention. It is of great importance, as in opposition to the views usually held respecting the grave schools of painting.

part; but any complete oil-painting of his stands as well as one of Bellini's own: while Michael Angelo's fresco is defaced already in every part of it, and Lionardo's oil-painting is all either gone black, or gone to nothing.

II. Introduction of dramatic interest for the sake of excitement. I have already, in the *Stones of Venice*, illustrated Tintoret's dramatic power at so great length, that I will not, to-day, make any farther statement to justify my assertion that it is as much beyond Michael Angelo's as Shakspeare's is beyond Milton's—and somewhat with the same kind of difference in manner. Neither can I speak to-day, time not permitting me, of the abuse of their dramatic power by Venetian or Florentine; one thing only I beg you to note, that with full half of his strength, Tintoret remains faithful to the serenity of the past; and the examples I have given you from his work in S. 50,* are, one, of the most splendid drama, and the other of the quietest portraiture, ever attained by the arts of the middle ages.

Note also this respecting his picture of the Judgment, that, in spite of all the violence and wildness of the imagined scene, Tintoret has not given, so far as I remember, the spectacle of any one soul under infliction of actual pain. In all previous representations of the Last Judgment there had at least been one division of the picture set apart for the representation of torment; and even the gentle Angelico shrinks from no orthodox detail in this respect: but Tintoret, too vivid and true in imagination to be able to endure the common thoughts of hell, represents indeed the wicked in ruin, but not in agony. They are swept down by flood and whirlwind—the place of them shall know them no more, but not one is seen in more than the natural pain of swift and irrevocable death.

III. I pass to the third condition; the priority of flesh to spirit, and of the body to the face.

* The upper photograph in S. 50 is, however, not taken from the great Paradise, which is in too dark a position to be photographed, but from a study of it existing in a private gallery, and every way inferior. I have vainly tried to photograph portions of the picture itself.

In this alone, of the four innovations, Michael Angelo and Tintoret have the Greeks with them ;—in this, alone, have they any right to be called classical. The Greeks gave them no excuse for bad workmanship ; none for temporary passion ; none for the preference of pain. Only in the honour done to the body may be alleged for them the authority of the ancients.

You remember, I hope, how often in my preceding lectures I had to insist on the fact that Greek sculpture was essentially *ἀπρόσωπος* ;—independent, not only of the expression, but even of the beauty of the face. Nay, independent of its being so much as seen. The greater number of the finest pieces of it which remain for us to judge by, have had the heads broken away ;—we do not seriously miss them either from the Three Fates, the Ilissus, or the Torso of the Vatican. The face of the Theseus is so far destroyed by time that you can form little conception of its former aspect. But it is otherwise in Christian sculpture. Strike the head off even the rudest statue in the porch of Chartres and you will greatly miss it—the harm would be still worse to Donatello's St. George :—and if you take the heads from a statue of Mino, or a painting of Angelico—very little but drapery will be left ;—drapery made redundant in quantity and rigid in fold, that it may conceal the forms, and give a proud or ascetic reserve to the actions, of the bodily frame. Bellini and his school, indeed, rejected at once the false theory, and the easy mannerism, of such religious design ; and painted the body without fear or reserve, as, in its subordination, honourable and lovely. But the inner heart and fire of it are by them always first thought of, and no action is given to it merely to show its beauty. Whereas the great culminating masters, and chiefly of these, Tintoret, Correggio, and Michael Angelo, delight in the body for its own sake, and cast it into every conceivable attitude, often in violation of all natural probability, that they may exhibit the action of its skeleton, and the contours of its flesh. The movement of a hand with Cima or Bellini expresses mental emotion only ; but the clustering and twining of the fingers of Correggio's St. Catherine is enjoyed by the painter just in the same way as he would enjoy the twining of the

branches of a graceful plant, and he compels them into intricacies which have little or no relation to St. Catherine's mind. In the two drawings of Correggio, (S. 13 and 14,) it is the rounding of limbs and softness of foot resting on clouds which are principally thought of in the form of the Madonna; and the countenance of St. John is foreshortened into a section, that full prominence may be given to the muscles of his arms and breast.

So in Tintoret's drawing of the Graces (S. 22), he has entirely neglected the individual character of the Goddesses, and been content to indicate it merely by attributes of dice or flower, so only that he may sufficiently display varieties of contour in thigh and shoulder.

Thus far then, the Greeks, Correggio, Michael Angelo, Raphael, in his latter design, and Tintoret, in his scenic design, (as opposed to portraiture) are at one. But the Greeks, Correggio, and Tintoret, are also together in this farther point; that they all draw the body for true delight in it, and with knowledge of it living; while Michael Angelo and Raphael draw the body for vanity, and from knowledge of it dead.

The Venus of Melos,—Correggio's Venus, (with Mercury teaching Cupid to read),—and Tintoret's Graces, have the forms which their designers truly *liked* to see in women. They may have been wrong or right in liking those forms, but they carved and painted them for their pleasure, not for vanity.

But the form of Michael Angelo's Night is not one which he delighted to see in women. He gave it her, because he thought it was fine, and that he would be admired for reaching so lofty an ideal.*

Again. The Greeks, Correggio, and Tintoret, learn the body from the living body, and delight in its breath, colour, and motion.†

* He had, indeed, other and more solemn thoughts of the Night than Correggio; and these he tried to express by distorting form, and making her partly Medusa-like. In this lecture, as above stated, I am only dwelling on points hitherto unnoticed of dangerous evil in the too much admired master.

† Tintoret dissected, and used clay models, in the true academical manner, and produced academical results thereby, but all his fine work is done from life, like that of the Greeks.

Raphael and Michael Angelo learned it essentially from the corpse, and had no delight in it whatever, but great pride in showing that they knew all its mechanism; they therefore sacrifice its colours, and insist on its muscles, and surrender the breath and fire of it, for what is—not merely casual,—but osseous, knowing that for one person who can recognize the loveliness of a look, or the purity of a colour, there are a hundred who can calculate the length of a bone.

The boy with the doves, in Raphael's cartoon of the Beautiful Gate of the Temple, is not a child running, but a surgical diagram of a child in a running posture.

Farther, when the Greeks, Correggio, and Tintoret, draw the body active, it is because they rejoice in its force, and when they draw it inactive, it is because they rejoice in its repose. But Michael Angelo and Raphael invent for it ingenious mechanical motion, because they think it uninteresting when it is quiet, and cannot, in their pictures, endure any person's being simple-minded enough to stand upon both his legs at once, nor venture to imagine any one's being clear enough in his language to make himself intelligible without pointing.

In all these conditions, the Greek and Venetian treatment of the body is faithful, modest, and natural; but Michael Angelo's dishonest, insolent, and artificial.

But between him and Tintoret there is a separation deeper than all these, when we examine their treatment of the face. Michael Angelo's vanity of surgical science rendered it impossible for him ever to treat the body as well as the Greeks treated it; but it left him wholly at liberty to treat the face as ill; and he did: and in some respects very curiously worse.

The Greeks had, in all their work, one type of face for beautiful and honourable persons; and another, much contrary to it, for dishonourable ones; and they were continually setting these in opposition. Their type of beauty lay chiefly in the undisturbed peace and simplicity of all contours; in full roundness of chin; in perfect formation of the lips, showing neither pride nor care; and, most of all, in a straight and firm line from the brow to the end of the nose.

The Greek type of dishonourable persons, especially satyrs, fauns, and sensual powers, consisted in irregular excrecence and decrement of features, especially in flatness of the upper part of the nose, and projection of the end of it into a blunt knob.

By the most grotesque fatality, as if the personal bodily injury he had himself received had passed with a sickly echo into his mind also, Michael Angelo is always dwelling on this satyric form of countenance;—sometimes violently caricatures it, but never can help drawing it; and all the best profiles in this collection at Oxford have what Mr. Robinson calls a “nez retroussé;” but what is, in reality, the nose of the Greek Bacchic mask, treated as a dignified feature.

For the sake of readers who cannot examine the drawings themselves, and lest I should be thought to have exaggerated in any wise the statement of this character, I quote Mr. Robinson's description of the head, No. 9—a celebrated and entirely authentic drawing,—(on which, I regret to say, my own pencil comment in passing is merely “brutal lower lip, and broken nose:”)—

“This admirable study was probably made from nature, additional character and more powerful expression having been given to it by a slight exaggeration of details, bordering on caricature (observe the protruding lower lip, ‘nez retroussé,’ and overhanging forehead). The head, in profile, turned to the right, is proudly planted on a massive neck and shoulders, and the short tufted hair stands up erect. The expression is that of fierce, insolent self-confidence and malevolence; it is engraved in facsimile in Ottley's ‘Italian School of Design,’ and it is described in that work p. 33, as ‘Finely expressive of scornfulness and pride, and evidently a study from nature.’

“Michel Angelo has made use of the same ferocious-looking model on other occasions—see an instance in the well-known ‘Head of Satan’ engraved in Woodburn's Lawrence Gallery (No. 16), and now in the Malcolm Collection.

“The study on the reverse of the leaf is more slightly executed; it represents a man of powerful frame, carrying a hog or boar in his arms before him, the upper part of his body thrown back to balance the weight, his head hidden by that of the animal, which rests on the man's right shoulder.

“The power displayed in every line and touch of these drawings is inimitable—the head was in truth one of the ‘*teste divine*,’ and the hand which executed it the ‘*mano terribile*,’ so enthusiastically alluded to by Vasari.”

Passing, for the moment, by No. 10, a “young woman of majestic character, marked by a certain expression of brooding melancholy,” and “wearing on her head a fantastic cap or turban;”—by No. 11, a bearded man, “wearing a conical Phrygian cap, his mouth wide open,” and his expression “obstreperously animated;”—and by No. 12, “a middle-aged or old man, with a snub nose, high forehead, and thin, scrubby hair,” we will go on to the fairer examples of Divine heads in No. 32.

“This splendid sheet of studies is probably one of the ‘*carte stupendissime di teste divine*,’ which Vasari says (*Vita*, p. 272) Michel Angelo executed, as presents or lessons for his artistic friends. Not improbably it is actually one of those made for his friend Tommaso dei Cavalieri, who, when young, was desirous of learning to draw.”

But it is one of the chief misfortunes affecting Michael Angelo’s reputation, that his ostentatious display of strength and science has a natural attraction for comparatively weak and pedantic persons. And this sheet of Vasari’s “*teste divine*” contains, in fact, not a single drawing of high quality—only one of moderate agreeableness, and two caricatured heads, one of a satyr with hair like the fur of animals, and one of a monstrous and sensual face, such as could only have occurred to the sculptor in a fatigued dream, and which in my own notes I have classed with the vile face in No. 45.

Returning, however, to the divine heads above it, I wish you to note “the most conspicuous and important of all,” a study for one of the Genii behind the Sibylla Libyca. This Genius, like the young woman of a majestic character, and the man with his mouth open, wears a cap, or turban; opposite to him in the sheet, is a female in profile, “wearing a hood of massive drapery.” And, when once your attention is di-

rected to this point, you will perhaps be surprised to find how many of Michael Angelo's figures, intended to be sublime, have their heads bandaged. If you have been a student of Michael Angelo chiefly, you may easily have vitiated your taste to the extent of thinking that this is a dignified costume ; but if you study Greek work, instead, you will find that nothing is more important in the system of it than a finished disposition of the hair ; and as soon as you acquaint yourself with the execution of carved marbles generally, you will perceive these massy fillets to be merely a cheap means of getting over a difficulty too great for Michael Angelo's patience, and too exigent for his invention. They are not sublime arrangements, but economies of labour, and reliefs from the necessity of design ; and if you had proposed to the sculptor of the Venus of Melos, or of the Jupiter of Olympia, to bind the ambrosial locks up in towels, you would most likely have been instantly bound, yourself ; and sent to the nearest temple of Æsculapius.

I need not, surely, tell you,—I need only remind,—how in all these points, the Venetians and Correggio reverse Michael Angelo's evil, and vanquish him in good ; how they refuse caricature, rejoice in beauty, and thirst for opportunity of toil. The waves of hair in a single figure of Tintoret's (the Mary Magdalen of the Paradise) contain more intellectual design in themselves alone than all the folds of unseemly linen in the Sistine chapel put together.

In the fourth and last place, as Tintoret does not sacrifice, except as he is forced by the exigencies of display, the face for the body, so also he does not sacrifice happiness for pain. The chief reason why we all know the "Last Judgment" of Michael Angelo, and not the "Paradise" of Tintoret, is the same love of sensation which makes us read the *Inferno* of Dante, and not his *Paradise* ; and the choice, believe me, is our fault, not his ; some farther evil influence is due to the fact that Michael Angelo has invested all his figures with picturesque and palpable elements of effect, while Tintoret has only made them lovely in themselves and has been content that they should deserve, not demand, your attention.

You are accustomed to think the figures of Michael Angelo sublime—because they are dark, and colossal, and involved, and mysterious—because in a word, they look sometimes like shadows, and sometimes like mountains, and sometimes like spectres, but never like human beings. Believe me, yet once more, in what I told you long since—man can invent nothing nobler than humanity. He cannot raise his form into anything better than God made it, by giving it either the flight of birds or strength of beasts, by enveloping it in mist, or heaping it into multitude. Your pilgrim must look like a pilgrim in a straw hat, or you will not make him into one with cockle and nimbus; an angel must look like an angel on the ground, as well as in the air; and the much-denounced pre-Raphaelite faith that a saint cannot look saintly unless he has thin legs, is not more absurd than Michael Angelo's, that a Sibyl cannot look Sibylline unless she has thick ones.

All that shadowing, storming, and coiling of his, when you look into it, is mere stage decoration, and that of a vulgar kind. Light is, in reality, more awful than darkness—modesty more majestic than strength; and there is truer sublimity in the sweet joy of a child, or the sweet virtue of a maiden, than in the strength of Antæus, or thunder clouds of *Ætna*.

Now, though in nearly all his greater pictures, Tintoret is entirely carried away by his sympathy with Michael Angelo, and conquers him in his own field;—outflies him in motion, outnumbered him in multitude, outwits him in fancy, and outflames him in rage,—he can be just as gentle as he is strong: and that *Paradise*, though it is the largest picture in the world, without any question, is also the thoughtfullest, and most precious.

The Thoughtfullest!—it would be saying but little, as far as Michael Angelo is concerned.

For consider of it yourselves. You have heard, from your youth up, (and all educated persons have heard for three centuries), of this Last Judgment of his, as the most sublime picture in existence.

The subject of it is one which should certainly be interesting to you, in one of two ways.

If you never expect to be judged for any of your own doings, and the tradition of the coming of Christ is to you as an idle tale—still, think what a wonderful tale it would be, were it well told. You are at liberty, disbelieving it, to range the fields—Elysian and Tartarean, of all imagination. You may play with it, since it is false; and what a play would it not be, well written? Do you think the tragedy, or the miracle play, or the infinitely Divina Commedia of the Judgment of the astonished living who were dead;—the undeceiving of the sight of every human soul, understanding in an instant all the shallow, and depth of past life and future,—face to face with both,—and with God:—this apocalypse to all intellect, and completion to all passion, this minute and individual drama of the perfected history of separate spirits, and of their finally accomplished affections!—think you, I say, all this was well told by mere heaps of dark bodies curled and convulsed in space, and fall as of a crowd from a scaffolding, in writhed concretions of muscular pain?

But take it the other way. Suppose you believe, be it never so dimly or feebly, in some kind of Judgment that is to be;—that you admit even the faint contingency of retribution, and can imagine, with vivacity enough to fear, that in this life, at all events, if not in another—there may be for you a Visitation of God, and a questioning—What hast thou done? The picture, if it is a good one, should have a deeper interest, surely on *this* postulate? Thrilling enough, as a mere imagination of what is never to be—now, as a conjecture of what *is* to be, held the best that in eighteen centuries of Christianity has for men's eyes been made;—Think of it so!

And then, tell me, whether you yourselves, or any one you have known, did ever at any time receive from this picture any, the smallest vital thought, warning, quickening, or help? It may have appalled, or impressed you for a time, as a thunder-cloud might: but has it ever taught you anything—chastised in you anything—confirmed a purpose—fortified a resistance—purified a passion? I know that for you, it has done none of these things; and I know also that, for others, it has done very different things. In every vain and proud

designer who has since lived, that dark carnality of Michael Angelo's has fostered insolent science, and fleshly imagination. Daubers and blockheads think themselves painters, and are received by the public as such, if they know how to foreshorten bones and decipher entrails; and men with capacity of art either shrink away (the best of them always do) into petty felicities and innocencies of genre painting—landscapes, cattle, family breakfasts, village schoolings, and the like; or else, if they have the full sensuous art-faculty that would have made true painters of them, being taught, from their youth up, to look for and learn the body instead of the spirit, have learned it, and taught it to such purpose, that at this hour, when I speak to you, the rooms of the Royal Academy of England, receiving also what of best can be sent there by the masters of France, contain *not one* picture honourable to the arts of their age; and contain many which are shameful in their record of its manners.

Of that, hereafter. I will close to-day by giving you some brief account of the scheme of Tintoret's Paradise, in justification of my assertion that it is the thoughtfullest as well as mightiest picture in the world.

In the highest centre is Christ, leaning on the globe of the earth, which is of dark crystal. Christ is crowned with a glory as of the sun, and all the picture is lighted by that glory, descending through circle beneath circle of cloud, and of flying or throned spirits.

The Madonna, beneath Christ, and at some interval from Him, kneels to Him. She is crowned with the Seven stars, and kneels on a cloud of angels, whose wings change into ruby fire, where they are near her.

The three great Archangels meeting from three sides, fly towards Christ. Michael delivers up his scales and sword. He is followed by the Thrones and Principalities of the Earth; so inscribed—Throni—Principatus. The Spirits of the Thrones bear scales in their hands; and of the Principalities, shining globes: beneath the wings of the last of these are the four great teachers and lawgivers, St. Ambrose, St. Jerome, St. Gregory, St. Augustine, and behind St. August-

fine stands his mother, watching him, her chief joy in Paradise.

Under the Thrones, are set the Apostles, St. Paul separated a little from the rest, and put lowest, yet principal; under St. Paul, is St. Christopher, bearing a massive globe, with a cross upon it: but to mark him as the Christ-bearer, since here in Paradise he cannot have the child on his shoulders, Tintoret has thrown on the globe a flashing stellar reflection of the sun round the head of Christ.

All this side of the picture is kept in glowing colour,—the four Doctors of the church have golden mitres and mantles; except the Cardinal, St. Jerome, who is in burning scarlet, his naked breast glowing, warm with noble life,—the darker red of his robe relieved against a white glory.

Opposite to Michael, Gabriel flies toward the Madonna, having in his hand the Annunciation lily, large, and triple-blossomed. Above him, and above Michael, equally, extends a cloud of white angels, inscribed "Serafini;" but the group following Gabriel, and corresponding to the Throni following Michael, is inscribed "Cherubini." Under these are the great prophets, and singers and foretellers of the happiness or of the sorrow of time. David, and Solomon, and Isaiah, and Amos of the herdsmen. David has a colossal golden psaltery laid horizontally across his knees;—two angels behind him dictate to him as he sings, looking up towards Christ; but one strong angel sweeps down to Solomon from among the cherubs, and opens a book, resting it on the head of Solomon, who looks down earnestly, unconscious of it;—to the left of David, separate from the group of prophets, as Paul from the apostles, is Moses, dark-robed;—in the full light, withdrawn far behind him, Abraham, embracing Isaac with his left arm, and near him, pale St. Agnes. In front, nearer, dark and colossal, stands the glorious figure of Santa Giustina of Padua; then a little subordinate to her, St. Catherine, and, far on the left, and high, St. Barbara leaning on her tower. In front, nearer, flies Raphael; and under him is the four-square group of the Evangelists. Beneath them, on the left, Noah; on the right, Adam and Eve, both floating unsupported by cloud or angel.

Noah buoyed by the Ark, which he holds above him, and it is *this* into which Solomon gazes down, so earnestly. Eve's face is, perhaps, the most beautiful ever painted by Tintoret—full in light, but dark-eyed. Adam floats beside her; his figure fading into a winged gloom, edged in the outline of fig-leaves. Far down, under these, central in the lowest part of the picture, rises the Angel of the Sea, praying for Venice; for Tintoret conceives his Paradise as existing now, not as in the future. I at first mistook this soft Angel of the Sea for the Magdalen, for he is sustained by other three angels on either side, as the Magdalen is, in designs of earlier time, because of the verse, "There is joy in the presence of the angels over one sinner that repenteth." But the Magdalen is on the right, behind St. Monica; and on the same side, but lowest of all, Rachel, among the angels of her children, gathered now again to her for ever.

I have no hesitation in asserting this picture to be by far the most precious work of art of any kind whatsoever, now existing in the world; and it is, I believe, on the eve of final destruction; for it is said that the angle of the great council-chamber is soon to be rebuilt; and that process will involve the destruction of the picture by removal, and, far more, by repainting. I had thought of making some effort to save it by an appeal in London to persons generally interested in the arts; but the recent desolation of Paris has familiarized us with destruction, and I have no doubt the answer to me would be, that Venice must take care of her own. But remember, at least, that I have borne witness to you to-day of the treasures that we forget, while we amuse ourselves with the poor toys, and the petty, or vile, arts, of our own time.

The years of that time have perhaps come, when we are to be taught to look no more to the dreams of painters, either for knowledge of Judgment, or of Paradise. The anger of Heaven will not longer, I think, be mocked for our amusement; and perhaps its love may not always be despised by our pride. Believe me, all the arts, and all the treasures of men, are fulfilled and preserved to them only, so far as they have chosen first, with their hearts, not the curse of God, but

His blessing. Our Earth is now encumbered with ruin, our Heaven is clouded by Death. May we not wisely judge ourselves in some things now, instead of amusing ourselves with the painting of judgments to come?

THE ANCIENT SHORES OF ARNO.

VAL D'ARNO

TEN LECTURES

ON

THE TUSCAN ART DIRECTLY ANTECEDENT TO THE FLOREN-
TINE YEAR OF VICTORIES

GIVEN BEFORE THE UNIVERSITY OF OXFORD IN MICHAELMAS
TERM, 1873

VAL D'ARNO.

LECTURE I.

NICHOLAS THE PISAN.

1. ON this day, of this month, the 20th of October, six hundred and twenty-three years ago, the merchants and tradesmen of Florence met before the church of Santa Croce; marched through the city to the palace of their Podesta; deposed their Podesta; set over themselves, in his place, a knight belonging to an inferior city; called him "Captain of the People;" appointed under him a Signory of twelve Ancients chosen from among themselves; hung a bell for him on the tower of the Lion, that he might ring it at need, and gave him the flag of Florence to bear, half white, and half red.

The first blow struck upon the bell in that tower of the Lion began the tolling for the passing away of the feudal system, and began the joy-peal, or carillon, for whatever deserves joy, in that of our modern liberties, whether of action or of trade.

2. Within the space of our Oxford term from that day, namely, on the 13th of December in the same year, 1250, died, at Ferentino, in Apulia, the second Frederiek, Emperor of Germany; the second also of the two great lights which in his lifetime, according to Dante's astronomy, ruled the world,—whose light being quenched, "the land which was once the residence of courtesy and valour, became the haunt

of all men who are ashamed to be near the good, or to speak to them."

"In sul paese ch'adice e po riga
 solea valore e cortesia trovar si
 prima che federigo havessi briga,
 or puo sicuramente indi passarsi
 per qualunque lasciassi per vergogna
 di ragionar co buoni, e appressarsi."

Purg., Cant. 16.

3. The "Paese che Adice e Po riga" is of course Lombardy; and might have been enough distinguished by the name of its principal river. But Dante has an especial reason for naming the Adige. It is always by the valley of the Adige that the power of the German Cæsars descends on Italy; and that battlemented bridge, which doubtless many of you remember, thrown over the Adige at Verona, was so built that the German riders might have secure and constant access to the city. In which city they had their first stronghold in Italy, aided therein by the great family of the Montecchi, Montacutes, Mont-aigu-s, or Montagues; lords, so called, of the mountain peaks; in feud with the family of the Cappelletti,—hatted, or, more properly, scarlet-hatted, persons. And this accident of nomenclature, assisted by your present familiar knowledge of the real contests of the sharp mountains with the flat caps, or petasoi, of cloud, (locally giving Mont Pilate its title, "Pileatus,") may in many points curiously illustrate for you that contest of Frederick the Second with Innocent the Fourth, which in the good of it and the evil alike, represents to all time the war of the solid, rational, and earthly authority of the King, and State, with the more or less spectral, hooded, imaginative, and nubiform authority of the Pope, and Church.

4. It will be desirable also that you clearly learn the material relations, governing spiritual ones,—as of the Alps to their clouds, so of the plains to their rivers. And of these rivers, chiefly note the relation to each other, first, of the Adige and Po; then of the Arno and Tiber. For the Adige,

representing among the rivers and fountains of waters the channel of Imperial, as the Tiber of the Papal power, and the strength of the Coronet being founded on the white peaks that look down upon Hapsburg and Hohenzollern, as that of the Scarlet Cap in the marsh of the Campagna, "*quo tenuis in sicco aqua destituisset*," the study of the policies and arts of the cities founded in the two great valleys of Lombardy and Tuscany, so far as they were affected by their bias to the Emperor, or the Church, will arrange itself in your minds at once in a symmetry as clear as it will be, in our future work, secure and suggestive.

5. "*Tenuis, in sicco.*" How literally the words apply, as to the native streams, so to the early states or establishings of the great cities of the world. And you will find that the policy of the Coronet, with its tower-building; the policy of the Hood, with its dome-building; and the policy of the bare brow, with its cot-building,—the three main associations of human energy to which we owe the architecture of our earth, (in contradistinction to the dens and caves of it,)—are curiously and eternally governed by mental laws, corresponding to the physical ones which are ordained for the rocks, the clouds, and the streams.

The tower, which many of you so well remember the daily sight of, in your youth, above the "winding shore" of Thames,—the tower upon the hill of London; the dome which still rises above its foul and terrestrial clouds; and the walls of this city itself, which has been "*alma*," nourishing in gentleness, to the youth of England, because defended from external hostility by the difficultly fordable streams of its plain, may perhaps, in a few years more, be swept away as heaps of useless stone; but the rocks, and clouds, and rivers of our country will yet, one day, restore to it the glory of law, of religion, and of life.

6. I am about to ask you to read the hieroglyphs upon the architecture of a dead nation, in character greatly resembling our own,—in laws and in commerce greatly influencing our own;—in arts, still, from her grave, tutress of the present world. I know that it will be expected of me to explain the

merits of her arts, without reference to the wisdom of her laws; and to describe the results of both, without investigating the feelings which regulated either. I cannot do this; but I will at once end these necessarily vague, and perhaps premature, generalizations; and only ask you to study some portions of the life and work of two men, father and son, citizens of the city in which the energies of this great people were at first concentrated; and to deduce from that study the conclusions, or follow out the inquiries, which it may naturally suggest.

7. It is the modern fashion to despise Vasari. He is indeed despicable, whether as historian or critic,—not least in his admiration of Michael Angelo; nevertheless, he records the traditions and opinions of his day; and these you must accurately know, before you can wisely correct. I will take leave, therefore, to begin to-day with a sentence from Vasari, which many of you have often heard quoted, but of which, perhaps, few have enough observed the value.

“Niccola Pisano finding himself under certain Greek sculptors who were carving the figures and other intaglio ornaments of the cathedral of Pisa, and of the temple of St. John, and there being, among many spoils of marbles, brought by the Pisan fleet,* some ancient tombs, there was one among the others most fair, on which was sculptured the hunting of Meleager.” †

Get the meaning and contents of this passage well into your minds. In the gist of it, it is true, and very notable.

8. You are in mid thirteenth century; 1200–1300. The Greek nation has been dead in heart upwards of a thousand years; its religion dead, for six hundred. But through the wreck of its faith, and death in its heart, the skill of its hands, and the cunning of its design, instinctively linger. In

* “Armata.” The proper word for a land army is “esercito.”

† Vol. i., p. 60, of Mrs. Foster’s English translation, to which I shall always refer, in order that English students may compare the context if they wish. But the pieces of English which I give are my own direct translation, varying, it will be found, often, from Mrs. Foster’s, in minute, but not unimportant, particulars.

the centuries of Christian power, the Christians are still unable to build but under Greek masters, and by pillage of Greek shrines; and their best workman is only an apprentice to the 'Græculi esurientes' who are carving the temple of St. John.

9. Think of it. Here has the New Testament been declared for 1200 years. No spirit of wisdom, as yet, has been given to its workmen, except that which has descended from the Mars Hill on which St. Paul stood contemptuous in pity. No Bezaleel arises, to build new tabernacles, unless he has been taught by Daedalus.

10. It is necessary, therefore, for you first to know precisely the manner of these Greek masters in their decayed power; the manner which Vasari calls, only a sentence before, "That old Greek manner, blundering, disproportioned," —Goffa, e sproporzionata.

"Goffa," the very word which Michael Angelo uses of Perugino. Behold, the Christians despising the Dunce Greeks, as the Infidel modernists despise the Dunce Christians.*

11. I sketched for you, when I was last at Pisa, a few arches of the apse of the duomo, and a small portion of the sculpture of the font of the Temple of St. John. I have placed them in your rudimentary series, as examples of "quella vecchia maniera Greca, goffa e sproporzionata." My own judgment respecting them is,—and it is a judgment founded on knowledge which you may, if you choose, share with me, after working with me,—that no architecture on this grand scale, so delicately skilful in execution, or so daintily disposed in proportion, exists elsewhere in the world.

12. Is Vasari entirely wrong then?

No, only half wrong, but very fatally half wrong. There are Greeks, and Greeks.

This head with the inlaid dark iris in its eyes, from the font of St. John, is as pure as the sculpture of early Greece, a hundred years before Phidias; and it is so delicate, that having drawn with equal care this and the best work of the Lombardi

* Compare "Ariadne Florentina," § 46.

at Venice (in the church of the Miracoli), I found this to possess the more subtle qualities of design. And yet, in the cloisters of St. John Lateran at Rome, you have Greek work, if not contemporary with this at Pisa, yet occupying a parallel place in the history of architecture, which is abortive, and monstrous beyond the power of any words to describe. Vasari knew no difference between these two kinds of Greek work. Nor do your modern architects. To discern the difference between the sculpture of the font of Pisa, and the spandrils of the Lateran cloister, requires thorough training of the hand in the finest methods of draughtsmanship; and, secondly, trained habit of reading the mythology and ethics of design. I simply assure you of the fact at present; and if you work, you may have sight and sense of it.

13. There are Greeks, and Greeks, then, in the twelfth century, differing as much from each other as vice, in all ages, must differ from virtue. But in Vasari's sight they are alike; in ours, they must be so, as far as regards our present purpose. As men of a school, they are to be summed under the general name of 'Byzantines;' their work all alike showing specific characters of attenuate, rigid, and in many respects offensively unbeautiful, design, to which Vasari's epithets of "*goffa, e sproporzionata*" are naturally applied by all persons trained only in modern principles. Under masters, then, of this Byzantine race, Niccola is working at Pisa.

14. Among the spoils brought by her fleets from Greece, is a sarcophagus, with Meleager's hunt on it, wrought "*con bellissima maniera,*" says Vasari.

You may see that sarcophagus—any of you who go to Pisa;—touch it, for it is on a level with your hand; study it, as Niccola studied it, to your mind's content. Within ten yards of it, stand equally accessible pieces of Niccola's own work and of his son's. Within fifty yards of it, stands the Byzantine font of the chapel of St. John. Spend but the good hours of a single day quietly by these three pieces of marble, and you may learn more than in general any of you bring home from an entire tour in Italy. But how many of you ever yet went into that temple of St. John, knowing what to look for; or

spent as much time in the Campo Santo of Pisa, as you do in Mr. Ryman's shop on a rainy day?

15. The sarcophagus is not, however, (with Vasari's pardon) in 'bellissima maniera' by any means. But it is in the classical Greek manner instead of the Byzantine Greek manner. You have to learn the difference between these.

Now I have explained to you sufficiently, in "Aratra Pentelici," what the classical Greek manner is. The manner and matter of it being easily summed—as those of natural and unaffected life;—nude life when nudity is right and pure; not otherwise. To Niccola, the difference between this natural Greek school, and the Byzantine, was as the difference between the bull of Thurium and of Delhi, (see Plate 19 of "Aratra Pentelici").

Instantly he followed the natural fact, and became the Father of Sculpture to Italy.

16. Are we, then, also to be strong by following the natural fact?

Yes, assuredly. That is the beginning and end of all my teaching to you. But the noble natural fact, not the ignoble. You are to study men; not lice nor entozoa. And you are to study the souls of men in their bodies, not their bodies only. Mulready's drawings from the nude are more degraded and bestial than the worst grotesques of the Byzantine or even the Indian image makers. And your modern mob of English and American tourists, following a lamplighter through the Vatican to have pink light thrown for them on the Apollo Belvedere, are farther from capacity of understanding Greek art, than the parish charity boy, making a ghost out of a turnip, with a candle inside.

17. Niccola followed the facts, then. He is the Master of Naturalism in Italy. And I have drawn for you his lioness and cubs, to fix that in your minds. And beside it, I put the Lion of St. Mark's, that you may see exactly the kind of change he made. The Lion of St. Mark's (all but his wings, which have been made and fastened on in the fifteenth century), is in the central Byzantine manner; a fine decorative piece of work, descending in true genealogy from the Lion of Nemea.

and the crested skin of him that clothes the head of the Hercules of Camarina. It has all the richness of Greek Daedal work,—nay, it has fire and life beyond much Greek Daedal work; but in so far as it is non-natural, symbolic, decorative, and not like an actual lion, it would be felt by Niccola Pisano to be imperfect. And instead of this decorative evangelical preacher of a lion, with staring eyes, and its paw on a gospel, he carves you a quite brutal and maternal lioness, with affectionate eyes, and paw set on her cub.

18. Fix that in your minds, then. Niccola Pisano is the Master of Naturalism in Italy,—therefore elsewhere; of Naturalism, and all that follows. Generally of truth, common-sense, simplicity, vitality,—and of all these, with consummate power. A man to be enquired about, is not he? and will it not make a difference to you whether you look, when you travel in Italy, in his rough early marbles for this fountain of life, or only glance at them because your Murray's Guide tells you,—and think them “odd old things”?

19. We must look for a moment more at one odd old thing—the sarcophagus which was his tutor. Upon it is carved the hunting of Meleager; and it was made, or by tradition received as, the tomb of the mother of the Countess Matilda. I must not let you pass by it without noticing two curious coincidences in these particulars. First, in the Greek subject which is given Niccola to read.

The boar, remember, is Diana's enemy. It is sent upon the fields of Calydon in punishment of the refusal of the Calydonians to sacrifice to her. ‘You have refused *me*,’ she said; ‘you will not have Artemis Laphria, Forager Diana, to range in your fields. You shall have the Forager Swine, instead.’

Meleager and Atalanta are Diana's servants,—servants of all order, purity, due sequence of season, and time. The orbed architecture of Tuscany, with its sculptures of the succession of the labouring months, as compared with the rude vaults and monstrous imaginations of the past, was again the victory of Meleager.

20. Secondly, take what value there is in the tradition that this sarcophagus was made the tomb of the mother of the

PLATE I.—THE PISAN LATONA.
Angle of Panel of the Adoration, in Niccola's Pulpit

Countess Matilda. If you look to the fourteenth chapter of the third volume of "Modern Painters," you will find the mythic character of the Countess Matilda, as Dante employed it, explained at some length. She is the representative of Natural Science as opposed to Theological.

21. Chance coincidences merely, these ; but full of teaching for us, looking back upon the past. To Niccola, the piece of marble was, primarily, and perhaps exclusively, an example of free chiselling, and humanity of treatment. What else it was to him,—what the spirits of Atalanta and Matilda could bestow on him, depended on what he was himself. Of which Vasari tells you nothing. Not whether he was gentleman or clown—rich or poor—soldier or sailor. Was he never, then, in those fleets that brought the marbles back from the ravaged Isles of Greece? was he at first only a labourer's boy among the scaffoldings of the Pisan apse,—his apron loaded with dust—and no man praising him for his speech? Rough he was, assuredly ; probably poor ; fierce and energetic, beyond even the strain of Pisa,—just and kind, beyond the custom of his age, knowing the Judgment and Love of God : and a workman, with all his soul and strength, all his days.

22. You hear the fame of him as of a sculptor only. It is right that you should ; for every great architect must be a sculptor, and be renowned, as such, more than by his building. But Niccola Pisano had even more influence on Italy as a builder than as a carver.

For Italy, at this moment, wanted builders more than carvers ; and a change was passing through her life, of which external edifice was a necessary sign. I complained of you just now that you never looked at the Byzantine font in the temple of St. John. The sacristan generally will not let you. He takes you to a particular spot on the floor, and sings a musical chord. The chord returns in prolonged echo from the chapel roof, as if the building were all one sonorous marble bell.

Which indeed it is ; and travellers are always greatly amused at being allowed to ring this bell ; but it never occurs to them to ask how it came to be ringable :—how that tintinnabulate

roof differs from the dome of the Pantheon, expands into the dome of Florence, or declines into the whispering gallery of St. Paul's.

23. When you have had full satisfaction of the tintinnabulate roof, you are led by the sacristan and Murray to Niccola Pisano's pulpit ; which, if you have spare time to examine it, you find to have six sides, to be decorated with tablets of sculpture, like the sides of the sarcophagus, and to be sustained on seven pillars, three of which are themselves carried on the backs of as many animals.

All this arrangement had been contrived before Niccola's time, and executed again and again. But behold ! between the capitals of the pillars and the sculptured tablets there are interposed five cusped arches, the hollow beneath the pulpit showing dark through their foils. You have seen such cusped arches before, you think ?

Yes, gentlemen, *you* have ; but the Pisans had *not*. And that intermediate layer of the pulpit means—the change, in a word, for all Europe, from the Parthenon to Amiens Cathedral. For Italy it means the rise of her Gothic dynasty ; it mean the duomo of Milan instead of the temple of Paestum.

24. I say the duomo of Milan, only to put the change well before your eyes, because you all know that building so well. The duomo of Milan is of entirely bad and barbarous Gothic, but the passion of pinnacle and fret is in it, visibly to you, more than in other buildings. It will therefore serve to show best what fulness of change this pulpit of Niccola Pisano signifies.

In *it* there is no passion of pinnacle nor of fret. You see the edges of it, instead of being bossed, or knopped, or crocketed, are mouldings of severest line. No vaulting, no clustered shafts, no traceries, no fantasies, no perpendicular flights of aspiration. Steady pillars, each of one polished block ; useful capitals, one trefoiled arch between them ; your panel above it ; thereon your story of the founder of Christianity. The whole standing upon beasts, they being indeed the foundation of us, (which Niccola knew far better than Mr. Darwin) ; Eagle to carry your Gospel message—Dove you think it ought to be ?

PLATE II.—NICCOLA PISANO'S PULPIT.

Eagle, says Niccola, and not as symbol of St. John Evangelist only, but behold! with prey between its claws. For the Gospel, it is Niccola's opinion, is not altogether a message that you may do whatever you like, and go straight to heaven. Finally, a slab of marble, cut hollow a little to bear your book; space enough for you to speak from at ease,—and here is your first architecture of Gothic Christianity!

25. Indignant thunder of dissent from German doctors,—clamour from French savants. 'What! and our Treves, and our Strasburg, and our Poitiers, and our Chartres! And you call *this* thing the first architecture of Christianity!' Yes, my French and German friends, very fine the buildings you have mentioned are; and I am bold to say I love them far better than you do, for you will run a railroad through any of them any day that you can turn a penny by it. I thank you also, Germans, in the name of our Lady of Strasburg, for your bullets and fire; and I thank you, Frenchmen, in the name of our Lady of Rouen, for your new haberdashers' shops in the Gothic town;—meanwhile have patience with me a little, and let me go on.

26. No passion of fretwork, or pinnacle whatever, I said, is in this Pisan pulpit. The trefoiled arch itself, pleasant as it is, seems forced a little; out of perfect harmony with the rest (see Plate II.). Unnatural, perhaps, to Niccola?

Altogether unnatural to him, it is; such a thing never would have come into his head, unless some one had shown it him. Once got into his head, he puts it to good use; perhaps even he will let this somebody else put pinnacles and crockets into his head, or at least, into his son's, in a little while. Pinnacles,—crockets,—it may be, even traceries. The ground-tier of the baptistery is round-arched, and has no pinnacles; but look at its first story. The clerestory of the Duomo of Pisa has no traceries, but look at the cloister of its Campo Santo.

27. I pause at the words;—for they introduce a new group of thoughts, which presently we must trace farther.

The Holy Field;—field of burial. The "cave of Machpelah which is before Mamre," of the Pisans. "There they buried

Abraham, and Sarah his wife ; there they buried Isaac, and Rebekah his wife ; and there I buried Leah.”

How do you think such a field becomes holy,—how separated, as the resting-place of loving kindred, from that other field of blood, bought to bury *strangers* in ?

When you have finally succeeded, by your gospel of mammon, in making all the men of your own nation not only strangers to each other, but enemies ; and when your every churchyard becomes therefore a field of the stranger, the kneeling hamlet will vainly drink the chalice of God in the midst of them. The field will be unholy. No cloisters of noble history can ever be built round such an one.

28. But the very earth of this at Pisa was holy, as you know. That “armata” of the Tuscan city brought home not only marble and ivory, for treasure ; but earth,—a fleet’s burden,—from the place where there was healing of soul’s leprosy : and their field became a place of holy tombs, prepared for its office with earth from the land made holy by one tomb ; which all the knighthood of Christendom had been pouring out its life to win.

29. I told you just now that this sculpture of Niccola’s was the beginning of Christian architecture. How do you judge that Christian architecture in the deepest meaning of it to differ from all other ?

All other noble architecture is for the glory of living gods and men ; but this is for the glory of death, in God and man. Cathedral, cloister, or tomb,—shrine for the body of Christ, or for the bodies of the saints. All alike signifying death to this world ;—life, other than of this world.

Observe, I am not saying how far this feeling, be it faith, or be it imagination, is true or false ;—I only desire you to note that the power of all Christian work begins in the niche of the catacomb and depth of the sarcophagus, and is to the end definable as architecture of the tomb.

30. Not altogether, and under every condition, sanctioned in doing such honour to the dead by the Master of it. Not every grave is by His command to be worshipped. Graves there may be—too little guarded, yet dishonourable ;—“ *ye*

are as graves that appear not, and the men that walk over them are not aware of them." And graves too much guarded, yet dishonourable, "which indeed appear beautiful outwardly, but are within full of all uncleanness." Or graves, themselves honourable, yet which it may be, in us, a crime to adorn. "For they indeed killed them, and ye build their sepulchres."

Questions, these, collateral; or to be examined in due time; for the present it is enough for us to know that all Christian architecture, as such, has been hitherto essentially of tombs.

It has been thought, gentlemen, that there is a fine Gothic revival in your streets of Oxford, because you have a Gothic door to your County Bank:

Remember, at all events, it was other kind of buried treasure, and bearing other interest, which Niccola Pisano's Gothic was set to guard.

LECTURE II.

JOHN THE PISAN.

31. I CLOSED my last lecture with the statement, on which I desired to give you time for reflection, that Christian architecture was, in its chief energy, the adornment of tombs,—having the passionate function of doing honour to the dead.

But there is an ethic, or simply didactic and instructive architecture, the decoration of which you will find to be normally representative of the virtues which are common alike to Christian and Greek. And there is a natural tendency to adopt such decoration, and the modes of design fitted for it, in civil buildings.*

32. *Civil*, or *civic*, I say, as opposed to military. But again observe, there are two kinds of military building. One, the robber's castle, or stronghold, out of which he issues to pillage; the other, the honest man's castle, or stronghold, into

* "These several rooms were indicated by symbol and device: Victory for the soldier, Hope for the exile, the Muses for the poets, Mercury for the artists, Paradise for the preacher."—(Sagacius Gazata, of the Palace of Can Grande. I translate only Sismondi's quotation.)

which he retreats from pillage. They are much like each other in external forms;—but Injustice, or Unrighteousness, sits in the gate of the one, veiled with forest branches, (see Giotto's painting of him); and Justice or Righteousness *enters* by the gate of the other, over strewn forest branches. Now, for example of this second kind of military architecture, look at Carlyle's account of Henry the Fowler,* and of his building military towns, or burgs, to protect his peasantry. In such function you have the first and proper idea of a walled town,—a place into which the pacific country people can retire for safety, as the Athenians in the Spartan war. Your fortress of this kind is a religious and civil fortress, or burg, defended by burgers, trained to defensive war. Keep always this idea of the proper nature of a fortified city:—Its walls mean protection,—its gates hospitality and triumph. In the language familiar to you, spoken of the chief of cities: "Its walls are to be Salvation, and its gates to be Praise." And recollect always the inscription over the north gate of Siena: "Cor magis tibi Sena pandit."—"More than her gates, Siena opens her heart to you."

33. When next you enter London by any of the great lines, I should like you to consider, as you approach the city, what the feelings of the heart of London are likely to be on your approach, and at what part of the railroad station an inscription, explaining such state of her heart, might be most fitly inscribed. Or you would still better understand the difference between ancient and modern principles of architecture by taking a cab to the Elephant and Castle, and thence walking to London Bridge by what is in fact the great southern entrance of London. The only gate receiving you is, however, the arch thrown over the road to carry the South-Eastern Railway itself; and the only exhibition either of Salvation or Praise is in the cheap clothes' shops on each side; and especially in one colossal haberdasher's shop, over which you may see the British flag waving (in imitation of Windsor Castle) when the master of the shop is at home.

34. Next to protection from external hostility, the two ne-

* "Frederick," vol. i.

cessities in a city are of food and water supply ;—the latter essentially constant. You can store food and forage, but water must flow freely. Hence the Fountain and the Mercato become the centres of civil architecture.

Premising thus much, I will ask you to look once more at this cloister of the Campo Santo of Pisa.

35. On first entering the place, its quiet, its solemnity, the perspective of its aisles, and the conspicuous grace and precision of its traceries, combine to give you the sensation of having entered a true Gothic cloister. And if you walk round it hastily, and, glancing only at a fresco or two, and the confused tombs erected against them, return to the uncloistered sunlight of the piazza, you may quite easily carry away with you, and ever afterwards retain, the notion that the Campo Santo of Pisa is the same kind of thing as the cloister of Westminster Abbey.

36. I will beg you to look at the building, thus photographed, more attentively. The “long-drawn aisle” is here, indeed,—but where is the “fretted vault”?

A timber roof, simple as that of a country barn, and of which only the horizontal beams catch the eye, connects an entirely plain outside wall with an interior one, pierced by round-headed openings ; in which are inserted pieces of complex tracery, as foreign in conception to the rest of the work as if the Pisan armata had gone up the Rhine instead of to Crete, pillaged South Germany, and cut these pieces of tracery out of the windows of some church in an advanced stage of fantastic design at Nuremberg or Frankfort.

37. If you begin to question, hereupon, who was the Italian robber, whether of marble or thought, and look to your Vasari, you find the building attributed to John the Pisan ;*—and you suppose the son to have been so pleased by his father’s adoption of Gothic forms that he must needs borrow them, in this manner, ready made, from the Germans, and thrust them into his round arches, or wherever else they would go.

*The present traceries are of fifteenth century work, founded on Giovanni’s design.

We will look at something more of his work, however, before drawing such conclusion.

38. In the centres of the great squares of Siena and Perugia, rose, obedient to engineers' art, two perennial fountains. Without engineers' art, the glens which cleave the sand-rock of Siena flow with living water; and still, if there be a hell for the forger in Italy, he remembers therein the sweet grotto and green wave of Fonte Branda. But on the very summit of the two hills, crested by their great civic fortresses, and in the centres of their circuit of walls, rose the two guided wells; each in basin of goodly marble, sculptured—at Perugia, by John of Pisa, at Siena, by James of Quercia.

39. It is one of the bitterest regrets of my life (and I have many which some men would find difficult to bear,) that I never saw, except when I was a youth, and then with sealed eyes, Jacopo della Quercia's fountain.* The Sieneſe, a little while ſince, tore it down, and put up a model of it by a modern carver. In like manner, perhaps, you will ſome day knock the Elgin marbles to pieces, and commission an Academician to put up new ones,—the Sieneſe doing worſe than that (as if the Athenians were *themselves* to break their Phidias' work).

But the fountain of John of Pisa, though much injured, and glued together with asphalt, is still in its place.

40. I will now read to you what Vasari first ſays of him, and it. (I. 67.) “Nicholas had, among other ſons, one called John, who, becauſe he always followed his father, and, under his diſcipline, intended (bent himſelf to, with a will,) ſculpture and architecture, in a few years became not only equal to his father, but in ſome things ſuperior to him; wherefore Nicholas, being now old, retired himſelf into Piſa, and living quietly there, left the government of every thing to his ſon. Accordingly, when Pope Urban IV. died in Perugia, ſending was made for John, who, going there, made the tomb of that Pope of marble, the which, together with that of Pope Martin IV., was afterwards thrown down, when the Perugians en-

* I obſerve that Charles Dickens had the fortune denied to me. “The market-place, or great Piazza, is a large ſquare, with a great broken-nosed fountain in it.” (“Pictures from Italy.”)

PLATE III.—THE FOUNTAIN OF PERUGIA.

larged their vescovado; so that only a few relics are seen sprinkled about the church. And the Perugians, having at the same time brought from the mountain of Pacciano, two miles distant from the city, through canals of lead, a most abundant water, by means of the invention and industry of a friar of the order of St. Silvester, it was given to John the Pisan to make all the ornaments of this fountain, as well of bronze as of marble. On which he set hand to it, and made there three orders of vases, two of marble and one of bronze. The first is put upon twelve degrees of twelve-faced steps; the second is upon some columns which put it upon a level with the first one;—(that is, in the middle of it,) “and the third, which is of bronze, rests upon three figures which have in the middle of them some griffins, of bronze too, which pour water out on every side.”

41. Many things we have to note in this passage, but first I will show you the best picture I can of the thing itself.

The best I can; the thing itself being half destroyed, and what remains so beautiful that no one can now quite rightly draw it; but Mr. Arthur Severn, (the son of Keats's Mr. Severn,) was with me, looking reverently at those remains, last summer, and has made, with help from the sun, this sketch for you (Plate III.); entirely true and effective as far as his time allowed.

Half destroyed, or more, I said it was,—Time doing grievous work on it, and men worse. You heard Vasari saying of it, that it stood on twelve degrees of twelve-faced steps. These—worn, doubtless, into little more than a rugged slope—have been replaced by the moderns with four circular steps, and an iron railing;* the bas-reliefs have been carried off from the panels of the second vase, and its fair marble lips choked with asphalt:—of what remains, you have here a rough but true image.

In which you see there is not a trace of Gothic feeling or design of any sort. No crockets, no pinnacles, no foils, no vaultings, no grotesques in sculpture. Panels between pillars,

* In Mr. Severn's sketch, the form of the original foundation is approximately restored.

panels carried on pillars, sculptures in those panels like the Metopes of the Parthenon ; a Greek vase in the middle, and griffins in the middle of that. Here is your font, not at all of Saint John, but of profane and civil-engineering John. This is *his* manner of baptism of the town of Perugia.

42. Thus early, it seems, the antagonism of profane Greek to ecclesiastical Gothic declares itself. It seems as if in Perugia, as in London, you had the fountains in Trafalgar Square against Queen Elinor's Cross ; or the viaduct and railway station contending with the Gothic chapel, which the master of the large manufactory close by has erected, because he thinks pinnacles and crockets have a pious influence ; and will prevent his workmen from asking for shorter hours, or more wages.

43. It *seems* only ; the antagonism is quite of another kind, —or, rather, of many other kinds. But note at once how complete it is—how utterly this Greek fountain of Perugia, and the round arches of Pisa, are opposed to the school of design which gave the trefoils to Niccola's pulpit, and the traceries to Giovanni's Campo Santo.

The antagonism, I say, is of another kind than ours ; but deep and wide ; and to explain it, I must pass for a time to apparently irrelevant topics.

You were surprised, I hope, (if you were attentive enough to catch the points in what I just now read from Vasari,) at my venturing to bring before you, just after I had been using violent language against the Sieneſe for breaking up the work of Quercia, that incidental sentence giving account of the much more disrespectful destruction, by the Perugians, of the tombs of Pope Urban IV., and Martin IV.

Sending was made for John, you see, first, when Pope Urban IV. died in Perugia—whose tomb was to be carved by John ; the Greek fountain being a secondary business. But the tomb was so well destroyed, afterwards, that only a few relics remained scattered here and there.

The tomb, I have not the least doubt, was Gothic ;—and the breaking of it to pieces was not in order to restore it afterwards, that a living architect might get the job of restoration. Here is a stone out of one of Giovanni Pisano's loveliest Gothic

buildings, which I myself saw with my own eyes dashed out, that a modern builder might be paid for putting in another. But Pope Urban's tomb was not destroyed to such end. There was no qualm of the belly, driving the hammer,—qualm of the conscience probably; at all events, a deeper or loftier antagonism than one on points of taste, or economy.

44. You observed that I described this Greek profane manner of design as properly belonging to *civil* buildings, as opposed not only to ecclesiastical buildings, but to military ones. Justice, or Righteousness, and Veracity, are the characters of Greek art. These *may* be opposed to religion, when religion becomes fantastic; but they *must* be opposed to war, when war becomes unjust. And if, perchance, fantastic religion and unjust war happen to go hand in hand, your Greek artist is likely to use his hammer against them spitefully enough.

45. His hammer, or his Greek fire. Hear now this example of the engineering ingenuities of our Pisan papa, in his younger days.

“The Florentines having begun, in Niccola's time, to throw down many towers, which had been built in a barbarous manner through the whole city; either that the people might be less hurt, by their means, in the fights that often took place between the Guelphs and Ghibellines, or else that there might be greater security for the State, it appeared to them that it would be very difficult to ruin the Tower of the Death-watch, which was in the place of St. John, because it had its walls built with such a grip in them that the stones could not be stirred with the pickaxe, and also because it was of the loftiest; whereupon Nicholas, causing the tower to be cut, at the foot of it, all the length of one of its sides; and closing up the cut, as he made it, with short (wooden) under-props, about a yard long, and setting fire to them, when the props were burned, the tower fell, and broke itself nearly all to pieces: which was held a thing so ingenious and so useful for such affairs, that it has since passed into a custom, so that when it is needful, in this easiest manner, any edifice may be thrown down.”

46. 'When it is needful.' Yes; but when is that? If instead of the towers of the Death-watch in the city, one could ruin the towers of the Death-watch of evil pride and evil treasure in men's hearts, there would be need enough for such work both in Florence and London. But the walls of those spiritual towers have still stronger 'grip' in them, and are fireproof with a vengeance.

"Le mure me parean che ferro fosse,
 . . . e el mi dixè, il fuoco eterno
 Chentro laffoca, le dimostra rosse."

But the towers in Florence, shattered to fragments by this ingenious engineer, and the tombs in Perugia, which his son will carve, only that they also may be so well destroyed that only a few relics remain, scattered up and down the church,—are these, also, only the iron towers, and the red-hot tombs, of the city of Dis?

Let us see.

47. In order to understand the relation of the tradesmen and working men, including eminently the artist, to the general life of the thirteenth century, I must lay before you the clearest elementary charts I can of the course which the fates of Italy were now appointing for her.

My first chart must be geographical. I want you to have a clearly dissected and closely fitted notion of the natural boundaries of her states, and their relations to surrounding ones.

Lay hold first, firmly, of your conception of the valleys of the Po and the Arno, running counter to each other—opening east and opening west,—Venice at the end of the one, Pisa at the end of the other.

48. These two valleys—the hearts of Lombardy and Etruria—virtually contain the life of Italy. They are entirely different in character: Lombardy, essentially luxurious and worldly, at this time rude in art, but active; Etruria, religious, intensely imaginative, and inheriting refined forms of art from before the days of Porsenna.

49. South of these, in mid-Italy, you have Romagna,—the

valley of the Tiber. In that valley, decayed Rome, with her lust of empire inextinguishable ;—no inheritance of imaginative art, nor power of it ; dragging her own ruins hourly into more fantastic ruin, and defiling her faith hourly with more fantastic guilt.

South of Romagna, you have the kingdoms of Calabria and Sicily,—Magna Graecia, and Syracuse, in decay ;—strange spiritual fire from the Saracenic east still lighting the volcanic land, itself laid all in ashes.

50. Conceive Italy then always in these four masses : Lombardy, Etruria, Romagna, Calabria.

Now she has three great external powers to deal with : the western, France—the northern, Germany—the eastern, Arabia. On her right the Frank ; on her left the Saracen ; above her, the Teuton. And roughly, the French are a religious chivalry ; the Germans a profane chivalry ; the Saracens an infidel chivalry. What is best of each is benefiting Italy ; what is worst, afflicting her. And in the time we are occupied with, all are afflicting her.

What Charlemagne, Barbarossa, or Saladin did to teach her, you can trace only by carefullest thought. But in this thirteenth century all these three powers are adverse to her, as to each other. Map the methods of their adversity thus :—

51. Germany, (profane chivalry,) is vitally adverse to the Popes ; endeavouring to establish imperial and knightly power against theirs. It is fiercely, but frankly, covetous of Italian territory, seizes all it can of Lombardy and Calabria, and with any help procurable either from robber Christians or robber Saracens, strives, in an awkward manner, and by open force, to make itself master of Rome, and all Italy.

52. France, all surge and foam of pious chivalry, lifts herself in fitful rage of devotion, of avarice, and of pride. She is the natural ally of the church ; makes her own monks the proudest of the Popes ; raises Avignon into another Rome ; prays and pillages insatiably ; pipes pastoral songs of innocence, and invents grotesque variations of crime ; gives grace to the rudeness of England, and venom to the cunning of Italy. She is a chimera among nations, and one knows not whether

to admire most the valour of Guiscard, the virtue of St. Louis or the villany of his brother.

53. The Eastern powers—Greek, Israelite, Saracen—are at once the enemies of the Western, their prey, and their tutors.

They bring them methods of ornament and of merchandise, and stimulate in them the worst conditions of pugnacity, bigotry, and rapine. That is the broad geographical and political relation of races. Next, you must consider the conditions of their time.

54. I told you, in my second lecture on Engraving, that before the twelfth century the nations were too savage to be Christian, and after the fifteenth too carnal to be Christian.

The delicacy of sensation and refinements of imagination necessary to understand Christianity belong to the mid period when men risen from a life of brutal hardship are not yet fallen to one of brutal luxury. You can neither comprehend the character of Christ while you are chopping flints for tools, and gnawing raw bones for food; nor when you have ceased to do anything with either tools or hands, and dine on gilded capons. In Dante's lines, beginning

“ I saw Bellincion Berti walk abroad
In leathern girdle, with a clasp of bone,”

you have the expression of his sense of the increasing luxury of the age, already sapping its faith. But when Bellincion Berti walked abroad in skins not yet made into leather, and with the bones of his dinner in a heap at his door, instead of being cut into girdle clasps, he was just as far from capacity of being a Christian.

55. The following passage, from Carlyle's “Chartism,” expresses better than any one else has done, or is likely to do it, the nature of this Christian era, (extending from the twelfth to the sixteenth century,) in England,—the like being entirely true of it elsewhere:—

“In those past silent centuries, among those silent classes, much had been going on. Not only had red deer in the New and other forests been got preserved and shot; and treacher-

ies* of Simon de Montfort, wars of Red and White Roses, battles of Crecy, battles of Bosworth, and many other battles, been got transacted and adjusted; but England wholly, not without sore toil and aching bones to the millions of sires and the millions of sons of eighteen generations, had been got drained and tilled, covered with yellow harvests, beautiful and rich in possessions. The mud-wooden Caesters and Chesters had become steepled, tile-roofed, compact towns. Sheffield had taken to the manufacture of Sheffield whittles. Worstead could from wool spin yarn, and knit or weave the same into stockings or breeches for men. England had property valuable to the auctioneer; but the accumulate manufacturing, commercial, economic skill which lay impalpably warehoused in English hands and heads, what auctioneer could estimate?

“Hardly an Englishman to be met with but could do something; some cunninger thing than break his fellow-creature’s head with battle-axes. The seven incorporated trades, with their million guild-brethren, with their hammers, their shuttles, and tools, what an army,—fit to conquer that land of England, as we say, and hold it conquered! Nay, strangest of all, the English people had acquired the faculty and habit of thinking,—even of believing; individual conscience had unfolded itself among them;—Conscience, and Intelligence its handmaid.† Ideas of innumerable kinds were circulating among these men; witness one Shakspeare, a wool-comber, poacher or whatever else, at Stratford, in Warwickshire, who happened to write books!—the finest human figure, as I apprehend, that Nature has hitherto seen fit to make of our widely Teutonic clay. Saxon, Norman, Celt, or Sarinat, I find no human soul so beautiful, these fifteen hundred known years;—our supreme modern European man.

* Perhaps not altogether so, any more than Oliver’s! dear papa Carlyle. We may have to read *him* also, otherwise than the British populace have yet read, some day.

† Observe Carlyle’s order of sequence. Perceptive Reason is the Handmaid of Conscience, not Conscience hers. If you resolve to do right, you will soon do wisely; but resolve only to do wisely, and you will never do right.

Him England had contrived to realize: were there not ideas?

“Ideas poetic and also Puritanic, that had to seek utterance in the notablest way! England had got her Shakspeare, but was now about to get her Milton and Oliver Cromwell. This, too, we will call a new expansion, hard as it might be to articulate and adjust; this, that a man could actually have a conscience for his own behoof, and not for his priest's only; that his priest, be he who he might, would henceforth have to take that fact along with him.”

56. You observe, in this passage, account is given you of two things—(A) of the development of a powerful class of tradesmen and artists; and, (B) of the development of an individual conscience.

In the savage times you had simply the hunter, digger, and robber; now you have also the manufacturer and salesman. The ideas of ingenuity with the hand, of fairness in exchange, have occurred to us. We can do something now with our fingers, as well as with our fists; and if we want our neighbours' goods, we will not simply carry them off, as of old, but offer him some of ours in exchange.

57. Again; whereas before we were content to let our priests do for us all they could, by gesticulating, dressing, sacrificing, or beating of drums and blowing of trumpets; and also direct our steps in the way of life, without any doubt on our part of their own perfect acquaintance with it,—we have now got to do something for ourselves—to think something for ourselves; and thus have arrived in straits of conscience which, so long as we endeavour to steer through them honestly, will be to us indeed a quite secure way of life, and of all living wisdom.

58. Now the centre of this new freedom of thought is in Germany; and the power of it is shown first, as I told you in my opening lecture, in the great struggle of Frederick II. with Rome. And German freedom of thought had certainly made some progress, when it had managed to reduce the Pope to disguise himself as a soldier, ride out of Rome by moonlight, and gallop his thirty-four miles to the seaside be-

PLATE IV.—NORMAN IMAGERY.

fore summer dawn. Here, clearly, is quite a new state of things for the Holy Father of Christendom to consider, during such wholesome horse-exercise.

59. Again ; the refinements of new art are represented by France—centrally by St. Louis with his Sainte Chapelle. Happily, I am able to lay on your table to-day—having placed it three years ago in your educational series—a leaf of a Psalter, executed for St. Louis himself. He and his artists are scarcely out of their savage life yet, and have no notion of adorning the Psalms better than by pictures of long-necked cranes, long-eared rabbits, long-tailed lions, and red and white goblins putting their tongues out.* But in refinement of touch, in beauty of colour, in the human faculties of order and grace, they are long since, evidently, past the flint and bone stage,—refined enough, now,—subtle enough, now, to learn anything that is pretty and fine, whether in theology or any other matter.

60. Lastly, the new principle of Exchange is represented by Lombardy and Venice, to such purpose that your Merchant and Jew of Venice, and your Lombard of Lombard Street, retain some considerable influence on your minds, even to this day.

And in the exact midst of all such transition, behold, Etruria with her Pisans—her Florentines,—receiving, resisting, and reigning over all : pillaging the Saracens of their marbles—binding the French bishops in silver chains ;—shattering the towers of German tyranny into small pieces,—building with strange jewellery the belfry tower for newly-conceived Christianity ;—and, in sacred picture, and sacred song, reaching the height, among nations, most passionate, and most pure.

I must close my lecture without indulging myself yet, by addition of detail ; requesting you, before we next meet, to fix these general outlines in your minds, so that, without disturbing their distinctness, I may trace in the sequel the relations of Italian Art to these political and religious powers ;

* I cannot go to the expense of engraving this most subtle example ; but Plate IV. shows the average conditions of temper and imagination in religious ornamental work of the time.

and determine with what force of passionate sympathy, or fidelity of resigned obedience, the Pisan artists, father and son, executed the indignation of Florence and fulfilled the piety of Orvieto.

LECTURE III.

SHIELD AND APRON.

61. I LAID before you, in my last lecture, first lines of the chart of Italian history in the thirteenth century, which I hope gradually to fill with colour, and enrich, to such degree as may be sufficient for all comfortable use. But I indicated, as the more special subject of our immediate study, the nascent power of liberal thought, and liberal art, over dead tradition and rude workmanship.

To-day I must ask you to examine in greater detail the exact relation of this liberal art to the illiberal elements which surrounded it.

62. You do not often hear me use that word "Liberal" in any favourable sense. I do so now, because I use it also in a very narrow and exact sense. I mean that the thirteenth century is, in Italy's year of life, her 17th of March. In the light of it, she assumes her toga virilis; and it is sacred to her god Liber.

63. To her god *Liber*,—observe: not Dionusos, still less Bacchus, but her own ancient and simple deity. And if you have read with some care the statement I gave you, with Carlyle's help, of the moment and manner of her change from savageness to dexterity, and from rudeness to refinement of life, you will hear, familiar as the lines are to you, the invocation in the first Georgic with a new sense of its meaning:—

"Vos, O clarissima mundi
Lumina, labentem cœlo que ducitis annum,
Liber, et alma Ceres; vestro si munere tellus
Chaoniam pingui glandem mutavit arista,
Poculaqu' inventis Acheloia miscuit uvis,
Munera vestra cano."

These gifts, innocent, rich, full of life, exquisitely beautiful in order and grace of growth, I have thought best to symbolize to you, in the series of types of the power of the Greek gods, placed in your educational series, by the blossom of the wild strawberry ; which in rising from its trine cluster of trine leaves,—itself as beautiful as a white rose, and always single on its stalk, like an ear of corn, yet with a succeeding blossom at its side, and bearing a fruit which is as distinctly a group of seeds as an ear of corn itself, and yet is the pleasantest to taste of all the pleasant things prepared by nature for the food of men,*—may accurately symbolize, and help you to remember, the conditions of this liberal and delightful, yet entirely modest and orderly, art, and thought.

64. You will find in the fourth of my inaugural lectures, at the 98th paragraph, this statement,—much denied by modern artists and authors, but nevertheless quite unexceptionally true,—that the entire vitality of art depends upon its having for object either to *state a true thing*, or *adorn a serviceable one*. The two functions of art in Italy, in this entirely liberal and virescent phase of it,—virgin art, we may call it, retaining the most literal sense of the words *virga* and *virgo*,—are to manifest the doctrines of a religion which now, for the first time, men had soul enough to understand ; and to adorn edifices or dress, with which the completed politeness of daily life might be invested, its convenience completed, and its decorous and honourable pride satisfied.

65. That pride was, among the men who gave its character to the century, in honourableness of private conduct, and useful magnificence of public art. Not of private or domestic art : observe this very particularly.

“Such was the simplicity of private manners,”—(I am now quoting Sismondi, but with the fullest ratification that my knowledge enables me to give,)—“and the economy of the richest citizens, that if a city enjoyed repose only for a few years, it doubled its revenues, and found itself, in a sort, en-

* I am sorry to pack my sentences together in this confused way. But I have much to say ; and cannot always stop to polish or adjust it as I used to do.

cumbered with its riches. The Pisans knew neither of the luxury of the table, nor that of furniture, nor that of a number of servants; yet they were sovereigns of the whole of Sardinia, Corsica, and Elba, had colonies at St. Jean d'Acre and Constantinople, and their merchants in those cities carried on the most extended commerce with the Saracens and Greeks.*

66. "And in that time," (I now give you my own translation of Giovanni Villani,) "the citizens of Florence lived sober, and on coarse meats, and at little cost; and had many customs and playfulnesses which were blunt and rude; and they dressed themselves and their wives with coarse cloth; many wore merely skins, with no lining, and *all* had only leathern buskins; † and the Florentine ladies, plain shoes and stockings with no ornaments; and the best of them were content with a close gown of coarse scarlet of Cyprus, or camlet girded with an old-fashioned clasp-girdle; and a mantle over all, lined with *vaire*, with a hood above; and that, they threw over their heads. The women of lower rank were dressed in the same manner, with coarse green Cambray cloth; fifty pounds was the ordinary bride's dowry, and a hundred or a hundred and fifty would in those times have been held brilliant, ('*isfolgorata*,' dazzling, with sense of dissipation or extravagance :) and most maidens were twenty or more before they married. Of such gross customs were then the Florentines; but of good faith, and loyal among themselves and in their state; and in their coarse life, and poverty, did more and

* Sismondi; French translation, Brussels, 1838; vol. ii., p. 275.

† I find this note for expansion on the margin of my lecture, but had no time to work it out:— This lower class should be either barefoot, or have strong shoes—wooden clogs good. Pretty Boulogne sabot with purple stockings. Waterloo Road—little girl with her hair in curlpapers, —a coral necklace round her neck—the neck bare—and her boots of thin stuff, worn out, with her toes coming through, and rags hanging from her heels,—a profoundly accurate type of English national and political life. Your hair in curlpapers—borrowing tongs from every foreign nation, to pinch you into manners. The rich ostentatiously wearing coral about the bare neck; and the poor—cold as the stones, and indecent.'

braver things than are done in our days with more refinement and riches."

67. I detain you a moment at the words "scarlet of Cyprus, or camlet."

Observe that camelot (camelet) from *καμηλωτή*, camel's skin, is a stuff made of silk and camel's hair originally, afterwards of silk and wool. At Florence, the camel's hair would always have reference to the Baptist, who, as you know, in Lippi's picture, wears the camel's skin itself, made into a Florentine dress, such as Villani has just described, "col tassello sopra," with the hood above. Do you see how important the word "Capulet" is becoming to us, in its main idea?

68. Not in private nor domestic art, therefore, I repeat to you, but in useful magnificence of public art, these citizens expressed their pride:—and that public art divided itself into two branches—civil, occupied upon ethic subjects of sculpture and painting; and religious, occupied upon scriptural or traditional histories, in treatment of which, nevertheless, the nascent power and liberality of thought were apparent, not only in continual amplification and illustration of scriptural story by the artist's own invention, but in the acceptance of profane mythology, as part of the Scripture, or tradition, given by Divine inspiration.

69. Nevertheless, for the provision of things necessary in domestic life, there developed itself, together with the group of inventive artists exercising these nobler functions, a vast body of craftsmen, and, literally, *manufacturers*, workers by hand, who associated themselves, as chance, tradition, or the accessibility of material directed, in towns which thenceforward occupied a leading position in commerce, as producers of a staple of excellent, or perhaps inimitable, quality; and the linen or cambric of Cambray, the lace of Mechlin, the wool of Worstead, and the steel of Milan, implied the tranquil and hereditary skill of multitudes, living in wealthy industry, and humble honour.

70. Among these artisans, the weaver, the ironsmith, the goldsmith, the carpenter, and the mason necessarily took the principal rank, and on their occupations the more refined arts

were wholesomely based, so that the five businesses may be more completely expressed thus :—

The weaver and embroiderer,
 The ironsmith and armourer,
 The goldsmith and jeweller,
 The carpenter and engineer,
 The stonecutter and painter.

You have only once to turn over the leaves of Lionardo's sketch book, in the Ambrosian Library, to see how carpentry is connected with engineering,—the architect was always a stonecutter, and the stonecutter not often practically separate, as yet, from the painter, and never so in general conception of function. You recollect, at a much later period, Kent's description of Cornwall's steward :

“KENT. You cowardly rascal!—nature disclaims in thee, a tailor made thee !

CORNWALL. Thou art a strange fellow—a tailor make a man ?

KENT. Ay, sir ; a stonecutter, or a painter, could not have made him so ill ; though they had been but two hours at the trade.”

71. You may consider then this group of artizans with the merchants, as now forming in each town an important Tiers Etat, or Third State of the people, occupied in service, first, of the ecclesiastics, who in monastic bodies inhabited the cloisters round each church ; and, secondly, of the knights, who, with their retainers, occupied, each family their own fort, in allied defence of their appertaining streets.

72. A Third Estate, indeed ; but adverse alike to both the others, to Montague as to Capulet, when they become disturbers of the public peace ; and having a pride of its own,—hereditary still, but consisting in the inheritance of skill and knowledge rather than of blood,—which expressed the sense of such inheritance by taking its name habitually from the master rather than the sire ; and which, in its natural antagonism to dignities won only by violence, or recorded only by heraldry, you may think of generally as the race whose bearing is the Apron, instead of the shield.

73. When, however, these two, or in perfect subdivision

three, bodies of men, lived in harmony,—the knights remaining true to the State, the clergy to their faith, and the workmen to their craft,—conditions of national force were arrived at, under which all the great art of the middle ages was accomplished. The pride of the knights, the avarice of the priests, and the gradual abasement of character in the craftsman, changing him from a citizen able to wield either tools in peace or weapons in war, to a dull tradesman, forced to pay mercenary troops to defend his shop door, are the direct causes of common ruin towards the close of the sixteenth century.

74. But the deep underlying cause of the decline in national character itself, was the exhaustion of the Christian faith. None of its practical claims were avouched either by reason or experience ; and the imagination grew weary of sustaining them in despite of both. Men could not, as their powers of reflection became developed, steadily conceive that the sins of a life might be done away with, by finishing it with Mary's name on the lips ; nor could tradition of miracle for ever resist the personal discovery, made by each rude disciple by himself, that he might pray to all the saints for a twelvemonth together, and yet not get what he asked for.

75. The Reformation succeeded in proclaiming that existing Christianity was a lie ; but substituted no theory of it which could be more rationally or credibly sustained ; and ever since, the religion of educated persons throughout Europe has been dishonest or ineffectual ; it is only among the labouring peasantry that the grace of a pure Catholicism, and the patient simplicities of the Puritan, maintain their imaginative dignity, or assert their practical use.

76. The existence of the nobler arts, however, involves the harmonious life and vital faith of the three classes whom we have just distinguished ; and that condition exists, more or less disturbed, indeed, by the vices inherent in each class, yet, on the whole, energetically and productively, during the twelfth, thirteenth, fourteenth, and fifteenth centuries. But our present subject being Architecture only, I will limit your attention altogether to the state of society in the great age of

architecture, the thirteenth century. A great age in all ways ; but most notably so in the correspondence it presented, up to a just and honourable point, with the utilitarian energy of our own days.

77. The increase of wealth, the safety of industry, and the conception of more convenient furniture of life, to which we must attribute the rise of the entire artist class, were accompanied, in that century, by much enlargement in the conception of useful public works : and—not by *private* enterprise,—that idle persons might get dividends out of the public pocket,—but by *public* enterprise,—each citizen paying down at once his share of what was necessary to accomplish the benefit to the State,—great architectural and engineering efforts were made for the common service. Common, observe ; but not, in our present sense, republican. One of the most ludicrous sentences ever written in the blindness of party spirit is that of Sismondi, in which he declares, thinking of these public works only, that ‘the architecture of the thirteenth century is entirely republican.’ The architecture of the thirteenth century is, in the mass of it, simply baronial or ecclesiastical ; it is of castles, palaces, or churches ; but it is true that splendid civic works were also accomplished by the vigour of the newly risen popular power.

“The canal named Naviglio Grande, which brings the waters of the Ticino to Milan, traversing a distance of thirty miles, was undertaken in 1179, recommended in 1257, and, soon after, happily terminated ; in it still consists the wealth of a vast extent of Lombardy. At the same time the town of Milan rebuilt its walls, which were three miles round, and had sixteen marble gates, of magnificence which might have graced the capital of all Italy. The Genovese, in 1276 and 1283, built their two splendid docks, and the great wall of their quay ; and in 1295 finished the noble aqueduct which brings pure and abundant waters to their city from a great distance among their mountains. There is not a single town in Italy which at the same time did not undertake works of this kind ; and while these larger undertakings were in progress, stone bridges were built across the

rivers, the streets and piazzas were paved with large slabs of stone, and every free government recognized the duty of providing for the convenience of the citizens." *

78. The necessary consequence of this enthusiasm in useful building, was the formation of a vast body of craftsmen and architects; corresponding in importance to that which the railway, with its associated industry, has developed in modern times, but entirely different in personal character, and relation to the body politic.

Their personal character was founded on the accurate knowledge of their business in all respects; the ease and pleasure of unaffected invention; and the true sense of power to do everything better than it had ever been yet done, coupled with general contentment in life, and in its vigour and skill.

It is impossible to overrate the difference between such a condition of mind, and that of the modern artist, who either does not know his business at all, or knows it only to recognize his own inferiority to every former workman of distinction.

79. Again: the political relation of these artificers to the State was that of a caste entirely separate from the noblesse; † paid for their daily work what was just, and competing with each other to supply the best article they could for the money. And it is, again, impossible to overrate the difference between such a social condition, and that of the artists of to-day, struggling to occupy a position of equality in wealth with the noblesse,—paid irregular and monstrous prices by an entirely ignorant and selfish public; and competing with each other to supply the worst article they can for the money.

I never saw anything so impudent on the walls of any exhibition, in any country, as last year in London. It was a daub professing to be a "harmony in pink and white" (or some such nonsense;) absolute rubbish, and which had taken about a quarter of an hour to scrawl or daub—it had no pre-

* Simondi, vol. ii. chap. 10.

† The giving of knighthood to Jacopo della Quercia for his lifelong service to Siena, was not the elevation of a dexterous workman, but grace to a faithful citizen.

tence to be called painting. The price asked for it was two hundred and fifty guineas.

80. In order to complete your broad view of the elements of social power in the thirteenth century, you have now farther to understand the position of the country people, who maintained by their labour these three classes, whose action you can discern, and whose history you can read; while, of those who maintained them, there is no history, except of the annual ravage of their fields by contending cities or nobles;—and, finally, that of the higher body of merchants, whose influence was already beginning to counterpoise the prestige of noblesse in Florence, and who themselves constituted no small portion of the noblesse of Venice.

The food-producing country was for the most part still possessed by the nobles; some by the ecclesiastics; but a portion, I do not know how large, was in the hands of peasant proprietors, of whom Sismondi gives this, to my mind, completely pleasant and satisfactory, though, to his, very painful, account:—

“They took no interest in public affairs; they had assemblies of their commune at the village in which the church of their parish was situated, and to which they retreated to defend themselves in case of war; they had also magistrates of their own choice; but all their interests appeared to them enclosed in the circle of their own commonality; they did not meddle with general politics, and held it for their point of honour to remain faithful, through all revolutions, to the State of which they formed a part, obeying, without hesitation, its chiefs, whoever they were, and by whatever title they occupied their places.”

81. Of the inferior agricultural labourers, employed on the farms of the nobles and richer ecclesiastics, I find nowhere due notice, nor does any historian seriously examine their manner of life. Liable to every form of robbery and oppression, I yet regard their state as not only morally but physically happier than that of riotous soldiery, or the lower class of artizans, and as the safeguard of every civilized nation, through all its worst vicissitudes of folly and crime. Nature

has mercifully appointed that seed must be sown, and sheep folded, whatever lances break, or religions fail; and at this hour, while the streets of Florence and Verona are full of idle politicians, loud of tongue, useless of hand and treacherous of heart, there still may be seen in their market-places, standing, each by his heap of pulse or maize, the grey-haired labourers, silent, serviceable, honourable, keeping faith, untouched by change, to their country and to Heaven.*

82. It is extremely difficult to determine in what degree the feelings or intelligence of this class influenced the architectural design of the thirteenth century;—how far afield the cathedral tower was intended to give delight, and to what simplicity of rustic conception Quercia or Ghiberti appealed by the fascination of their Scripture history. You may at least conceive, at this date, a healthy animation in all men's minds, and the children of the vineyard and sheepecote crowding the city on its festa days, and receiving impulse to busier, if not nobler, education, in its splendour.†

83. The great class of the merchants is more difficult to define; but you may regard them generally as the examples of whatever modes of life might be consistent with peace and justice, in the economy of transfer, as opposed to the military license of pillage.

They represent the gradual ascendancy of foresight, prudence, and order in society, and the first ideas of advantageous national intercourse. Their body is therefore composed of the most intelligent and temperate natures of the time,—uniting themselves, not directly for the purpose of making money, but to obtain stability for equal institutions, security of property, and pacific relations with neighbouring states. Their guilds form the only representatives of true national council, unaffected, as the landed proprietors were, by merely local circumstances and accidents.

84. The strength of this order, when its own conduct was

* Compare "Sesame and Lilies," sec. 38, p. 58. (P. 86 of the small edition of 1882.)

† Of detached abbeys, see note on Education of Joan of Arc, "Sesame and Lilies," sec. 82, p. 106. (P. 158 of the small edition of 1882.)

upright, and its opposition to the military body was not in avaricious cowardice, but in the resolve to compel justice and to secure peace, can only be understood by you after an examination of the great changes in the government of Florence during the thirteenth century, which, among other minor achievements interesting to us, led to that destruction of the Tower of the Death-watch, so ingeniously accomplished by Niccola Pisano. This change, and its results, will be the subject of my next lecture. I must to-day sum, and in some farther degree make clear, the facts already laid before you.

85. We have seen that the inhabitants of every great Italian state may be divided, and that very stringently, into the five classes of knights, priests, merchants, artists, and peasants. No distinction exists between artist and artizan, except that of higher genius or better conduct; the best artist is assuredly also the best artizan; and the simplest workman uses his invention and emotion as well as his fingers. The entire body of artists is under the orders (as shopmen are under the orders of their customers), of the knights, priests, and merchants,—the knights for the most part demanding only fine goldsmiths' work, stout armour, and rude architecture; the priests commanding both the finest architecture and painting, and the richest kinds of decorative dress and jewellery,—while the merchants directed works of public use, and were the best judges of artistic skill. The competition for the Baptistery gates of Florence is before the guild of merchants; nor is their award disputed, even in thought, by any of the candidates.

86. This is surely a fact to be taken much to heart by our present communities of Liverpool and Manchester. They probably suppose, in their modesty, that lords and clergymen are the proper judges of art, and merchants can only, in the modern phrase, 'know what they like,' or follow humbly the guidance of their golden-crested or flat-capped superiors. But in the great ages of art, neither knight nor pope shows signs of true power of criticism. The artists crouch before them, or quarrel with them, according to their own tempers. To the merchants they submit silently, as to just and capable

judges. And look what men these are, who submit. Donatello, Ghiberti, Quercia, Luca! If men like these submit to the merchant, who shall rebel?

87. But the still franker, and surer, judgment of innocent pleasure was awarded them by all classes alike: and the interest of the public was the *final* rule of right,—that public being always eager to see, and earnest to learn. For the stories told by their artists formed, they fully believed, a Book of Life; and every man of real genius took up his function of illustrating the scheme of human morality and salvation, as naturally, and faithfully, as an English mother of to-day giving her children their first lessons in the Bible. In this endeavour to teach they almost unawares taught themselves; the question “How shall I represent this most clearly?” became to themselves, presently, “How was this most likely to have happened?” and habits of fresh and accurate thought thus quickly enlivened the formalities of the Greek pictorial theology; formalities themselves beneficent, because restraining by their severity and mystery the wantonness of the newer life. Foolish modern critics have seen nothing in the Byzantine school but a barbarism to be conquered and forgotten. But that school brought to the art-scholars of the thirteenth century, laws which had been serviceable to Phidias, and symbols which had been beautiful to Homer: and methods and habits of pictorial scholarship which gave a refinement of manner to the work of the simplest craftsman, and became an education to the higher artists which no discipline of literature can now bestow, developed themselves in the effort to decipher, and the impulse to re-interpret, the Eleusinian divinity of Byzantine tradition.

88. The words I have just used, “pictorial scholarship,” and “pictorial theology,” remind me how strange it must appear to you that in this sketch of the intellectual state of Italy in the thirteenth century I have taken no note of literature itself, nor of the fine art of Music with which it was associated in minstrelsy. The corruption of the meaning of the word “clerk,” from “a chosen person” to “a learned one,” partly indicates the position of literature in the war between the

golden crest and scarlet cap ; but in the higher ranks, literature and music became the grace of the noble's life, or the occupation of the monk's, without forming any separate class, or exercising any materially visible political power. Masons or butchers might establish a government,—but never troubadours : and though a good knight held his education to be imperfect unless he could write a sonnet and sing it, he did not esteem his castle to be at the mercy of the “ editor ” of a manuscript. He might indeed owe his life to the fidelity of a minstrel, or be guided in his policy by the wit of a clown ; but he was not the slave of sensual music, or vulgar literature, and never allowed his Saturday reviewer to appear at table without the cock's comb.

89. On the other hand, what was noblest in thought or saying was in those times as little attended to as it is now. I do not feel sure that, even in after times, the poem of Dante has had any political effect on Italy ; but at all events, in his life, even at Verona, where he was treated most kindly, he had not half so much influence with Can Grande as the rough Count of Castelbarco, not one of whose words was ever written, or now remains ; and whose portrait, by no means that of a man of literary genius, almost disfigures, by its plainness, the otherwise grave and perfect beauty of his tomb.

LECTURE IV.

PARTED PER PALE.

90. THE chart of Italian intellect and policy which I have endeavoured to put into form in the last three lectures, may, I hope, have given you a clear idea of the subordinate, yet partly antagonistic, position which the artist, or merchant,—whom in my present lecture I shall class together,—occupied, with respect to the noble and priest. As an honest labourer, he was opposed to the violence of pillage, and to the folly of pride : as an honest thinker, he was likely to discover any latent absurdity in the stories he had to represent in their

nearest likelihood ; and to be himself moved strongly by the true meaning of events which he was striving to make ocularly manifest. The painter terrified himself with his own fiends, and reproved or comforted himself by the lips of his own saints, far more profoundly than any verbal preacher ; and thus, whether as craftsman or inventor, was likely to be foremost in defending the laws of his city, or directing its reformation.

91. The contest of the craftsman with the pillaging soldier is typically represented by the war of the Lombard League with Frederick II. ; and that of the craftsman with the hypocritical priest, by the war of the Pisans with Gregory IX. (1241). But in the present lecture I wish only to fix your attention on the revolutions in Florence, which indicated, thus early, the already established ascendancy of the moral forces which were to put an end to open robber-soldiership ; and at least to compel the assertion of some higher principle in war, if not, as in some distant day may be possible, the cessation of war itself.

The most important of these revolutions was virtually that of which I before spoke to you, taking place in mid-thirteenth century, in the year 1250,—a very memorable one for Christendom, and the very crisis of vital change in its methods of economy, and conceptions of art.

92. Observe, first, the exact relations at that time of Christian and Profane Chivalry. St. Louis, in the winter of 1248-9, lay in the isle of Cyprus, with his crusading army. He had trusted to Providence for provisions ; and his army was starving. The profane German emperor, Frederick II., was at war with Venice, but gave a safe-conduct to the Venetian ships, which enabled them to carry food to Cyprus, and to save St. Louis and his crusaders. Frederick had been for half his life excommunicate,—and the Pope (Innocent IV.) at deadly spiritual and temporal war with him ;—spiritually, because he had brought Saracens into Apulia ; temporally, because the Pope wanted Apulia for himself. St. Louis and his mother both wrote to Innocent, praying him to be reconciled to the kind heretic who had saved the whole crusading army. But the

Pope remained implacably thundrous; and Frederick, weary of quarrel, stayed quiet in one of his Apulian castles for a year. The repose of infidelity is seldom cheerful, unless it be criminal. Frederick had much to repent of, much to regret, nothing to hope, and nothing to do. At the end of his year's quiet he was attacked by dysentery, and so made his final peace with the Pope, and heaven,—aged fifty-six.

93. Meantime St. Louis had gone on into Egypt, had got his army defeated, his brother killed, and himself carried captive. You may be interested in seeing, in the leaf of his psalter which I have laid on the table, the death of that brother set down in golden letters, between the common letters of ultramarine, on the eighth of February.

94. Providence, defied by Frederick, and trusted in by St. Louis, made such arrangements for them both; Providence not in anywise regarding the opinions of either king, but very much regarding the facts, that the one had no business in Egypt, nor the other in Apulia.

No two kings, in the history of the world, could have been happier, or more useful, than these two might have been, if they only had had the sense to stay in their own capitals, and attend to their own affairs. But they seem only to have been born to show what grievous results, under the power of discontented imagination, a Christian could achieve by faith, and a philosopher by reason.*

95. The death of Frederick II. virtually ended the soldier power in Florence; and the mercantile power assumed the authority it thenceforward held, until, in the hands of the Medici, it destroyed the city.

We will now trace the course and effects of the three revolutions which closed the reign of War, and crowned the power of Peace.

* It must not be thought that this is said in disregard of the nobleness of either of these two glorious Kings. Among the many designs of past years, one of my favorites was to write a life of Frederick II. But I hope that both his, and that of Henry II. of England, will soon be written now, by a man who loves them as well as I do, and knows them far better.

96. In the year 1248, while St. Louis was in Cyprus, I told you Frederick was at war with Venice. He was so because she stood, if not as the leader, at least as the most important ally, of the great Lombard mercantile league against the German military power.

That league consisted essentially of Venice, Milan, Bologna, and Genoa, in alliance with the Pope; the Imperial or Ghibelline towns were, Padua and Verona under Ezzelin; Mantua, Pisa, and Siena. I do not name the minor towns of north Italy which associated themselves with each party: get only the main localities of the contest well into your minds. It was all concentrated in the furious hostility of Genoa and Pisa; Genoa fighting really very piously for the Pope, as well as for herself; Pisa for her own hand, and for the Emperor as much as suited her. The mad little sea falcon never caught sight of another water-bird on the wing, but she must hawk at it; and as an ally of the Emperor, balanced Venice and Genoa with her single strength. And so it came to pass that the victory of either the Guelph or Ghibelline party depended on the final action of Florence.

97. Florence meanwhile was fighting with herself, for her own amusement. She was nominally at the head of the Guelphic League in Tuscany; but this only meant that she hated Siena and Pisa, her southern and western neighbours. She had never declared openly against the Emperor. On the contrary, she always recognized his authority, in an imaginative manner, as representing that of the Cæsars. She spent her own energy chiefly in street-fighting,—the death of Buondelmonti in 1215 having been the root of a series of quarrels among her nobles which gradually took the form of contests of honour; and were a kind of accidental tournaments, fought to the death, because they could not be exciting or dignified enough on any other condition. And thus the manner of life came to be customary, which you have accurately, with its consequences, pictured by Shakspeare. Samson bites his thumb at Abraham, and presently the streets are impassable in battle. The quarrel in the Canongate between the Leslies and Seytons, in Scott's 'Abbot,' represents the same

temper ; and marks also, what Shakspeare did not so distinctly, because it would have interfered with the domestic character of his play, the connection of these private quarrels with political divisions which paralyzed the entire body of the State.—Yet these political schisms, in the earlier days of Italy, never reached the bitterness of Scottish feud,* because they were never so sincere. Protestant and Catholic Scotsmen faithfully believed each other to be servants of the devil ; but the Guelph and Ghibelline of Florence each respected, in the other, the fidelity to the Emperor, or piety towards the Pope, which he found it convenient, for the time, to dispense with in his own person. The street fighting was therefore more general, more chivalric, more good-humoured ; a word of offence set all the noblesse of the town on fire ; every one rallied to his post ; fighting began at once in half a dozen places of recognized convenience, but ended in the evening ; and, on the following day, the leaders determined in contended truce who had fought best, buried their dead triumphantly, and better fortified any weak points, which the events of the previous day had exposed at their palace corners. Florentine dispute was apt to centre itself about the gate of St. Peter, † the tower of the cathedral, or the fortress-palace of the Uberti, (the family of Dante's Belincion Berti and of Farinata), which occupied the site of the present Palazzo Vecchio. But the streets of Siena seem to have afforded better barricade practice. They are as steep as they are narrow—extremely both ; and the projecting stones on their palace fronts, which were left, in building, to sustain, on occasion, the barricade beams across the streets, are to this day important features in their architecture.

98. Such being the general state of matters in Florence, in this year 1248, Frederick writes to the Uberti, who headed the Ghibellines, to engage them in serious effort to bring the

* Distinguish always the personal from the religious feud ; personal feud is more treacherous and violent in Italy than in Scotland ; but not the political or religious feud, unless involved with vast material interests.

† Sismondi, vol. ii., chap. ii. ; G. Villani, vi., 33.

city distinctly to the Imperial side. He was besieging Parma ; and sent his natural son, Frederick, king of Antioch, with sixteen hundred German knights, to give the Ghibellines assured preponderance in the next quarrel.

The Uberti took arms before their arrival ; rallied all their Ghibelline friends into a united body, and so attacked and carried the Guelph barricades, one by one, till their antagonists, driven together by local defeat, stood in consistency as complete as their own, by the gate of St. Peter, 'Scheraggio.' Young Frederick, with his German riders, arrived at this crisis ; the Ghibellines opening the gates to him ; the Guelphs, nevertheless, fought at their outmost barricade for four days more ; but at last, tired, withdrew from the city, in a body, on the night of Candlemas, 2nd February, 1248 ; leaving the Ghibellines and their German friends to work their pleasure,—who immediately set themselves to throw down the Guelph palaces, and destroyed six-and-thirty of them, towers and all, with the good help of Niccola Pisano,—for this is the occasion of that beautiful piece of new engineering of his.

99. It is the first interference of the Germans in Florentine affairs which belongs to the real cycle of modern history. Six hundred years later, a troop of German riders entered Florence again, to restore its Grand Duke ; and our warm-hearted and loving English poetess, looking on from Casa Guidi windows, gives the said Germans many hard words, and thinks her darling Florentines entirely innocent in the matter. But if she had had clear eyes, (*yeux de lin* * the Romance of the Rose calls them,) she would have seen that white-coated cavalry with its heavy guns to be nothing more than the rear-guard of young Frederick of Antioch ; and that Florence's own Ghibellines had opened her gates to them. Destiny little regards cost of time ; she does her justice at that telescopic distance just as easily and accurately as close at hand.

100. "Frederick of *Antioch*." Note the titular coincidence. The disciples were called Christians first in Antioch ; here we have our lieutenant of Antichrist also named from that town.

* *Lynx*.

The anti-Christian Germans got into Florence upon Sunday morning ; the Guelphs fought on till Wednesday, which was Candlemas ;—the Tower of the Death-watch was thrown down next day. It was so called because it stood on the Piazza of St John ; and all dying people in Florence called on St. John for help ; and looked, if it might be, to the top of this highest and best-built of towers. The wicked anti-Christian Ghibellines, Nicholas of Pisa helping, cut the side of it “so that the tower might fall on the Baptistery. But as it pleased God, for better reverencing of the blessed St. John, the tower, which was a hundred and eighty feet high, as it was coming down, plainly appeared to eschew the holy church, and turned aside, and fell right across the square ; at which all the Florentines marvelled, (pious or impious,) and the *people* (anti-Ghibelline) were greatly delighted.”

101. I have no doubt that this story is apocryphal, not only in its attribution of these religious scruples to the falling tower, but in its accusation of the Ghibellines as having definitely intended the destruction of the Baptistery. It is only modern reformers who feel the absolute need of enforcing their religious opinions in so practical a manner. Such a piece of sacrilege would have been revolting to Farinata ; how much more to the group of Florentines whose temper is centrally represented by Dante's, to all of whom their “*bel San Giovanni*” was dear, at least for its beauty, if not for its sanctity. And Niccola himself was too good a workman to become the instrument of the destruction of so noble a work,—not to insist on the extreme probability that he was also too good an engineer to have had his purpose, if once fixed, thwarted by any tenderness in the conscience of the collapsing tower. The tradition itself probably arose after the rage of the exiled Ghibellines had half consented to the destruction, on political grounds, of Florence itself ; but the form it took is of extreme historical value, indicating thus early at least the suspected existence of passions like those of the Cromwellian or Garibaldian soldiery in the Florentine noble ; and the distinct character of the Ghibelline party as not only anti-Papal, but profane.

102. Upon the castles, and the persons of their antagonists, however, the pride, or fear, of the Ghibellines had little mercy ; and in their day of triumph they provoked against themselves nearly every rational as well as religious person in the commonwealth. They despised too much the force of the newly-risen popular power, founded on economy, sobriety, and common sense ; and, alike by impertinence and pillage, increased the irritation of the civil body ; until, as aforesaid, on the 20th October, 1250, all the rich burgesses of Florence took arms ; met in the square before the church of Santa Croce, (“ where,” says Sismondi, “ the republic of the dead is still assembled to-day,”) thence traversed the city to the palace of the Ghibelline podesta ; forced him to resign ; named Uberto of Lucca in his place, under the title of Captain of the People ; divided themselves into twenty companies, each, in its own district of the city, having its captain* and standard ; and elected a council of twelve ancients, constituting a seniory or signoria, to deliberate on and direct public affairs.

103. What a perfectly beautiful republican movement ! thinks Sismondi, seeing, in all this, nothing but the energy of a multitude ; and entirely ignoring the peculiar capacity of this Florentine mob,—capacity of two virtues, much forgotten by modern republicanism,—order, namely ; and obedience ; together with the peculiar instinct of this Florentine multitude, which not only felt itself to need captains, but knew where to find them.

104. Hubert of Lucca—How came they, think you, to choose *him* out of a stranger city, and that a poorer one than their own ? Was there no Florentine then, of all this rich and eager crowd, who was fit to govern Florence ?

I cannot find any account of this Hubert, Bright mind, of Ducca ; Villani says simply of him, “ Fu il primo capitano di Firenze.”

They hung a bell for him in the Campanile of the Lion, and gave him the flag of Florence to bear ; and before the

* ‘Corporal,’ literally.

day was over, that 20th of October, he had given every one of the twenty companies their flags also. And the bearings of the said gonfalons were these. I will give you this heraldry as far as I can make it out from Villani ; it will be very useful to us afterwards ; I leave the Italian when I cannot translate it :—

105. A. Sesto, (sixth part of the city,) of the other side of Arno.

- Gonfalon
1. Gules ; a ladder, argent.
 2. Argent ; a scourge, sable.
 3. Azure ; (una piazza bianca con nicchi vermigli).
 4. Gules ; a dragon, vert.

B. Sesto of St. Peter Scheraggio.

1. Azure ; a chariot, or.
2. Or ; a bull, sable.
3. Argent ; a lion rampant, sable.
4. (A lively piece, "pezza gagliarda") Barry of (how many ?) pieces, argent and sable.

You may as well note at once of this kind of bearing, called 'gagliarda' by Villani, that these groups of piles, pales, bends, and bars, were called in English heraldry 'Restrial bearings,' "in respect of their strength and solid substance, which is able to abide the stresse and force of any triall they shall be put unto."* And also that, the number of bars being uncertain, I assume the bearing to be 'barry,' that is, having an even number of bars ; had it been odd, as of seven bars, it should have been blazoned, argent ; three bars, sable ; or, if so divided, sable, three bars argent.

This lively bearing was St. Pulinari's.

* Guillim, sect. ii., chap. 3.

C. Sesto of Borgo.

1. Or ; a viper, vert.
2. Argent ; a needle, (?) (agu-
glia) sable.
3. Vert ; a horse unbridled ;
draped, argent, a cross,
gules.

D. Sesto of St. Brancazio.

1. Vert ; a lion rampant, proper.
2. Argent ; a lion rampant, gules.
3. Azure ; a lion rampant, argent.

E. Sesto of the Cathedral gates.

1. Azure ; a lion (passant ?) or.
2. Or ; a dragon, vert.
3. Argent ; a lion rampant,
azure, crowned, or.

F. Sesto of St. Peter's gates.

1. Or ; two keys, gules.
2. An Italian (or more definitely
a Greek and Etruscan bear-
ing ; I do not know how to
blazon it;) concentric bands,
argent and sable. This is
one of the remains of the
Greek expressions of storm ;
hail, or the Trinacrian limbs,
being put on the giant's
shields also. It is connected
besides with the Cretan
labyrinth, and the circles of
the Inferno.
3. Parted per fesse, gules and
vai (I don't know if vai
means grey—not a proper
heraldic colour—or vaire).

106. Of course Hubert of Lucca did not determine these bearings, but took them as he found them, and appointed them for standards; * he did the same for all the country parishes, and ordered them to come into the city at need. "And in this manner the old people of Florence ordered itself; and for more strength of the people, they ordered and began to build the palace which is behind the Badia,—that is to say, the one which is of dressed stone, with the tower; for before there was no palace of the commune in Florence, but the signory abode sometimes in one part of the town, sometimes in another.

107. "And as the people had now taken state and signory on themselves, they ordered, for greater strength of the people, that all the towers of Florence—and there were many 180 feet high †—should be cut down to 75 feet, and no more; and so it was done, and with the stones of them they walled the city on the other side Arno."

108. That last sentence is a significant one. Here is the central expression of the true burgess or townsman temper,—resolute maintenance of fortified peace. These are the walls which modern republicanism throws down, to make boulevards over their ruins.

109. Such new order being taken, Florence remained quiet for—full two months. On the 13th of December, in the same year, died the Emperor Frederick II.; news of his death did not reach Florence till the 7th January, 1251. It had chanced, according to Villani, that on the actual day of his death, his Florentine vice-regent, Rinieri of Montemerlo, was killed by a piece of the vaulting ‡ of his room falling on him as he slept. And when the people heard of the Emperor's death, "which was most useful and needful for Holy Church, and for our commune," they took the fall of the roof on his lieutenant as an omen of the extinction of Imperial authority, and resolved to bring home all their Guelphic exiles, and that the

* We will examine afterwards the heraldry of the trades, chap. xi., Villani.

† 120 braccia.

‡ "Una volta ch' era sopra la camera."

Ghibellines should be forced to make peace with them. Which was done, and the peace really lasted for full six months; when, a quarrel chancing with Ghibelline Pistoja, the Florentines, under a Milanese podesta, fought their first properly communal and commercial battle, with great slaughter of Pistojesse. Naturally enough, but very unwisely, the Florentine Ghibellines declined to take part in this battle; whereupon the people, returning flushed with victory, drove them all out, and established pure Guelph government in Florence, changing at the same time the flag of the city from gules, a lily argent, to argent, a lily gules; but the most ancient bearing of all, simply parted per pale, argent and gules, remained always on their carroccio of battle,—“Non si muto mai.”

110. “Non si muto mai.” Villani did not know how true his words were. That old shield of Florence, parted per pale, argent and gules, (or our own Saxon Oswald's, parted per pale, or and purple,) are heraldry changeless in sign; declaring the necessary balance, in ruling men, of the Rational and Imaginative powers; pure Alp, and glowing cloud.

Church and State—Pope and Emperor—Clergy and Laity,—all these are partial, accidental—too often, criminal—oppositions; but the bodily and spiritual elements, seemingly adverse, remain in everlasting harmony,

Not less the new bearing of the shield, the red fleur-de-lys, has another meaning. It is red, not as ecclesiastical, but as free. Not of Guelph against Ghibelline, but of Labourer against Knight. No more his serf, but his minister. His duty no more ‘servitium,’ but ‘ministerium,’ ‘mestier.’ We learn the power of word after word, as of sign after sign, as we follow the traces of this nascent art. I have sketched for you this lily from the base of the tower of Giotto. You may judge by the subjects of the sculpture beside it that it was built just in this fit of commercial triumph; for all the outer bas-reliefs are of trades.

111. Draw that red lily then, and fix it in your minds as the sign of the great change in the temper of Florence, and in her laws, in mid-thirteenth century; and remember also, when you go to Florence and see that mighty tower of the

Palazzo Vecchio (noble still, in spite of the calamitous and accursed restorations which have smoothed its rugged outline, and effaced with modern vulgarisms its lovely sculpture) —terminating the shadowy perspectives of the Uffizii, or dominant over the city seen from Fésolo or Bellosguardo,—that, as the tower of Giotto is the notablest monument in the world of the Religion of Europe, so, on this tower of the Palazzo Vecchio, first shook itself to the winds the Lily standard of her liberal,—because honest,—commerce.

LECTURE V.

PAX VOBISCUM.

112. My last lecture ended with a sentence which I thought, myself, rather pretty, and quite fit for a popular newspaper, about the 'lily standard of liberal commerce.' But it might occur, and I hope did occur, to some of you, that it would have been more appropriate if the lily had changed colour the other way, from red to white, (instead of white to red,) as a sign of a pacific constitution and kindly national purpose.

113. I believe otherwise, however; and although the change itself was for the sake of change merely, you may see in it, I think, one of the historical coincidences which contain true instruction for us.

Quite one of the chiefest art-mistakes and stupidities of men has been their tendency to dress soldiers in red clothes, and monks, or pacific persons, in black, white, or grey ones. At least half of that mental bias of young people, which sustains the wickedness of war among us at this day, is owing to the prettiness of uniforms. Make all Hussars black, all Guards black, all troops of the line black; dress officers and men, alike, as you would public executioners; and the number of candidates for commissions will be greatly diminished. Habitually, on the contrary, you dress these destructive rustics and *their* officers in scarlet and gold, but give your productive rustics no costume of honour or beauty; you give

your peaceful student a costume which he tucks up to his waist, because he is ashamed of it; and dress your pious rectors, and your sisters of charity, in black, as if it were *their* trade instead of the soldier's to send people to hell, and their own destiny to arrive there.

114. But the investiture of the lily of Florence with scarlet is a symbol,—unintentional, observe, but not the less notable,—of the recovery of human sense and intelligence in this matter. The reign of war was past; this was the sign of it;—the red glow, not now of the Towers of Dis, but of the Carita, “*che appena fora dentro al fuoco nota.*” And a day is coming, be assured, when the kings of Europe will dress their peaceful troops beautifully; will clothe their peasant girls “in scarlet, with other delights,” and “put on ornaments of gold upon *their* apparel;” when the crocus and the lily will not be the only living things dressed daintily in our land, and the glory of the wisest monarchs be indeed, in that their people, like themselves, shall be, at least in some dim likeness, “arrayed like one of these.”

115. But as for the immediate behaviour of Florence herself, with her new standard, its colour was quite sufficiently significant in that old symbolism, when the first restrial bearing was drawn by dying fingers dipped in blood. The Guelphic revolution had put her into definite political opposition with her nearest, and therefore,—according to the custom and Christianity of the time,—her hatefullest, neighbours,—Pistoja, Pisa, Siena, and Volterra. What glory might not be acquired, what kind purposes answered, by making pacific mercantile states also of those benighted towns! Besides, the death of the Emperor had thrown his party everywhere into discouragement; and what was the use of a flag which flew no farther than over the new palazzo?

116. Accordingly, in the next year, the pacific Florentines began by ravaging the territory of Pistoja; then attacked the Pisans at Pontadera, and took 3000 prisoners; and finished by traversing, and eating up all that could be ate in, the country of Siena; besides beating the Sienese under the castle of Montalcino. Returning in triumph after these benev-

olent operations, they resolved to strike a new piece of money in memory of them,—the golden Florin!

117. This coin I have placed in your room of study, to be the first of the series of coins which I hope to arrange for you, not chronologically, but for the various interest, whether as regards art or history, which they should possess in your general studies. “The Florin of Florence,” (says Sismondi), “through all the monetary revolutions of all neighbouring countries, and while the bad faith of governments adulterated their coin from one end of Europe to the other, has always remained the same; it is, to-day,” (I don’t know when, exactly, he wrote this,—but it doesn’t matter), “of the same weight, and bears the same name and the same stamp, which it did when it was struck in 1252.” It was gold of the purest title (24 carats), weighed the eighth of an ounce, and carried, as you see, on one side the image of St. John Baptist, on the other the Fleur-de-lys. It is the coin which Chaucer takes for the best representation of beautiful money in the Pardoner’s Tale: this, in his judgment, is the fairest mask of Death. Villani’s relation of its moral and commercial effect at Tunis is worth translating, being in the substance of it, I doubt not, true.

118. “And these new florins beginning to scatter through the world, some of them got to Tunis, in Barbary; and the King of Tunis, who was a worthy and wise lord, was greatly pleased with them, and had them tested; and finding them of fine gold, he praised them much, and had the legend on them interpreted to him,—to wit, on one side ‘St. John Baptist,’ on the other ‘Florentia.’ So seeing they were pieces of Christian money, he sent for the Pisan merchants, who were free of his port, and much before the King (and also the Florentines traded in Tunis through Pisan agents),—[see these hot little Pisans, how they are first everywhere,]—and asked of them what city it was among the Christians which made the said florins. And the Pisans answered in spite and envy, ‘They are our land Arabs.’ The King answered wisely, “It does not appear to me Arab’s money; you Pisans, what golden money have *you* got?” Then they were confused,

and knew not what to answer. So he asked if there was any Florentine among them. And there was found a merchant from the other-side-Arno, by name Peter Balducci, discreet and wise. The King asked him of the state and being of Florence, of which the Pisans made their Arabs,—who answered him wisely, showing the power and magnificence of Florence; and how Pisa, in comparison, was not, either in land or people, the half of Florence; and that they had no golden money; and that the gold of which those florins had been made was gained by the Florentines above and beyond them, by many victories. Wherefore the said Pisans were put to shame, and the King, both by reason of the florin, and for the words of our wise citizen, made the Florentines free, and appointed for them their own Fondaco, and church, in Tunis, and gave them privileges like the Pisans. And this we know for a truth from the same Peter, having been in company with him at the office of the Priors.”

119. I cannot tell you what the value of the piece was at this time: the sentence with which Sismondi concludes his account of it being only useful as an example of the total ignorance of the laws of currency in which many even of the best educated persons at the present day remain.

“Its value,” he says always the same, “answers to eleven francs forty centimes of France.”

But all that can be scientifically said of any piece of money is that it contains a given weight of a given metal. Its value in other coins, other metals, or other general produce, varies not only from day to day, but from instant to instant.

120. With this coin of Florence ought in justice to be ranked the Venetian zecchin; * but of it I can only thus give you account in another place,—for I must at once go on now to tell you the first use I find recorded, as being made by the Florentines of their new money.

They pursued in the years 1253 and 1254 their energetic promulgation of peace. They ravaged the lands of Pistoja so

* In connection with the Pisans' insulting intention by their term of Arabs, remember that the Venetian 'zecca,' (mint) came from the Arabic 'sehk,' the steel die used in coinage.

often, that the Pistoiese submitted themselves, on condition of receiving back their Guelph exiles, and admitting a Florentine garrison into Pistoja. Next they attacked Monte Reggione, the March-fortress of the Siense; and pressed it so vigorously that Siena was fain to make peace too, on condition of ceasing her alliance with the Ghibellines. Next they ravaged the territory of Volterra: the townspeople, confident in the strength of their rock fortress, came out to give battle; the Florentines beat them up the hill, and entered the town gates with the fugitives.

121. And, for note to this sentence, in my long-since-read volume of Sismondi, I find a cross-fleury at the bottom of the page, with the date 1254 underneath it; meaning that I was to remember that year as the beginning of Christian warfare. For little as you may think it, and grotesquely opposed as this ravaging of their neighbours' territories may seem to their pacific mission, this Florentine army is fighting in absolute good faith. Partly self-deceived, indeed, by their own ambition, and by their fiery natures, rejoicing in the excitement of battle, they have nevertheless, in this their "year of victories,"—so they ever afterwards called it,—no occult or malignant purpose. At least, whatever is occult or malignant is also unconscious; not now in cruel, but in kindly jealousy of their neighbours, and in a true desire to communicate and extend to them the privileges of their own new artizan government, the Trades of Florence have taken arms. They are justly proud of themselves; rightly assured of the wisdom of the change they have made; true to each other for the time, and confident in the future. No army ever fought in better cause, or with more united heart. And accordingly they meet with no check, and commit no error; from tower to tower of the field fortresses,—from gate to gate of the great cities,—they march in one continuous and daily more splendid triumph, yet in gentle and perfect discipline; and now, when they have entered Volterra with her fugitives, after stress of battle, not a drop of blood is shed, nor a single house pillaged, nor is any other condition of peace required than the exile of the Ghibelline nobles. You may remember, as a symbol of

the influence of Christianity in this result, that the Bishop of Volterra, with his clergy, came out in procession to meet them as they began to run * the streets, and obtained this mercy ; else the old habits of pillage would have prevailed.

122. And from Volterra, the Florentine army entered on the territory of Pisa ; and now with so high prestige, that the Pisans at once sent ambassadors to them with keys in their hands, in token of submission. And the Florentines made peace with them, on condition that the Pisans should let the Florentine merchandize pass in and out without tax ;—should use the same weights as Florence,—the same cloth measure,—and the same alloy of money.

123. You see that Mr. Adam Smith was not altogether the originator of the idea of free trade ; and six hundred years have passed without bringing Europe generally to the degree of mercantile intelligence, as to weights and currency, which Florence had in her year of victories.

The Pisans broke this peace two years afterwards, to help the Emperor Manfred ; whereupon the Florentines attacked them instantly again ; defeated them on the Serchio, near Lucca ; entered the Pisan territory by the Val di Serchio ; and there, cutting down a great pine tree, struck their florins on the stump of it, putting, for memory, under the feet of the St. John, a trefoil “ in guise of a little tree.” And note here the difference between artistic and mechanical coinage. The Florentines, using pure gold, and thin, can strike their coin anywhere, with only a wooden anvil, and their engraver is ready on the instant to make such change in the stamp as may record any new triumph. Consider the vigour, popularity, pleasantness of an art of coinage thus ductile to events, and easy in manipulation.

124. It is to be observed also that a thin gold coinage like that of the English angel, and these Italian zecchins, is both more convenient and prettier than the massive gold of the Greeks, often so small that it drops through the fingers, and, if of any size, inconveniently large in value.

125. It was in the following year, 1255, that the Florentines

* *Corsona la citta senza contesto niuno.*—*Villani.*

made the noblest use of their newly struck florins, so far as I know, ever recorded in any history; and a Florentine citizen made as noble refusal of them. You will find the two stories in Giovanni Villani, Book 6th, chapters 61, 62. One or two important facts are added by Sismondi, but without references. I take his statement as on the whole trustworthy, using Villani's authority wherever it reaches; one or two points I have farther to explain to you myself as I go on.

126. The first tale shows very curiously the mercenary and independent character of warfare, as it now was carried on by the great chiefs, whether Guelph or Ghibelline. The Florentines wanted to send a troop of five hundred horse to assist Orvieto, a Guelph town, isolated on its rock, and at present harrassed upon it. They gave command of this troop to the Knight Guido Guerra de' Conti Guidi, and he and his riders set out for Orvieto by the Umbrian road, through Arezzo, which was at peace with Florence, though a Ghibelline town. The Guelph party within the town asked help from the passing Florentine battalion; and Guido Guerra, without any authority for such action, used the troop of which he was in command in their favour, and drove out the Ghibellines. Sismondi does not notice what is quite one of the main points in the matter, that this troop of horse must have been mainly composed of Count Guido's own retainers, and not of Florentine citizens, who would not have cared to leave their business on such a far-off quest as this help to Orvieto. However, Arezzo is thus brought over to the Florentine interest; and any other Italian state would have been sure, while it disclaimed the Count's independent action, to keep the advantage of it. Not so Florence. She is entirely resolved, in these years of victory, to do justice to all men so far she understands it; and in this case it will give her some trouble to do it, and worse,—cost her some of her fine new florins. For her countermandate is quite powerless with Guido Guerra. He has taken Arezzo mainly with his own men, and means to stay there, thinking that the Florentines, if even they do not abet him, will take no practical steps against him. But he does not know this newly risen clan of military merchants, who quite clearly

understand what honesty means, and will put themselves out of their way to keep their faith. Florence calls out her trades instantly, and with gules, a dragon vert, and or, a bull sable, they march, themselves, angrily up the Val d'Arno, replace the adverse Ghibellines in Arezzo, and send Master Guido de' Conti Guido about his business. But the prettiest and most curious part of the whole story is their equity even to him, after he had given them all this trouble. They entirely recognize the need he is under of getting meat, somehow, for the mouths of these five hundred riders of his; also they hold him still their friend, though an unmanageable one; and admit with praise what of more or less patriotic and Guelphic principle may be at the root of his disobedience. So when he claims twelve thousand lire,—roughly, some two thousand pounds of money at present value,—from the Guelphs of Arezzo for his service, and the Guelphs, having got no good of it, owing to this Florentine interference, object to paying him, the Florentines themselves lend them the money,—and are never paid a farthing of it back.

127. There is a beautiful “investment of capital” for your modern merchant to study! No interest thought of, and little hope of ever getting back the principal. And yet you will find that there were no mercantile “panics,” in Florence in those days, nor failing bankers,* nor “clearings out of this establishment—any reasonable offer accepted.”

128. But the second story, of a private Florentine citizen, is better still.

In that campaign against Pisa in which the florins were struck on the root of pine, the conditions of peace had been ratified by the surrender to Florence of the Pisan fortress of Mutrona, which commanded a tract of seaboard below Pisa, of great importance for the Tuscan trade. The Florentines had stipulated for the right not only of holding, but of destroying it, if they chose; and in their Council of Ancients, after long debate, it was determined to raze it, the cost of its

* Some account of the state of modern British business in this kind will be given, I hope, in some number of “Fors Clavigera” for this year, 1874.

garrison being troublesome, and the freedom of seaboard all that the city wanted. But the Pisans feeling the power that the fortress had against them in case of future war, and doubtful of the issue of council at Florence, sent a private negotiator to the member of the Council of Ancients who was known to have most influence, though one of the poorest of them, Aldobrandino Ottobuoni; and offered him four thousand golden florins if he would get the vote passed to raze Mutrona. The vote *had* passed the evening before. Aldobrandino dismissed the Pisan ambassador in silence, returned instantly into the council, and without saying anything of the offer that had been made to him, got them to reconsider their vote, and showed them such reason for keeping Mutrona in its strength, that the vote for its destruction was rescinded. "And note thou, oh reader," says Villani, "the virtue of such a citizen, who, not being rich in substance, had yet such continence and loyalty for his state."

129. You might, perhaps, once, have thought me detaining you needlessly with these historical details, little bearing, it is commonly supposed, on the subject of art. But you are, I trust, now in some degree persuaded that no art, Florentine or any other, can be understood without knowing these sculptures and mouldings of the national soul. You remember I first begun this large digression when it became a question with us why some of Giovanni Pisano's sepulchral work had been destroyed at Perugia. And now we shall get our first gleam of light on the matter, finding similar operations carried on in Florence. For a little while after this speech in the Council of Ancients, Aldobrandino died, and the people, at public cost, built him a tomb of marble, "higher than any other" in the church of Santa Reparata, engraving on it these verses, which I leave you to construe, for I cannot:—

Fons est supremus Aldobrandino amoenus.
Ottoboni natus, a bono civita datus.

Only I suppose the pretty word 'amoenus' may be taken as marking the delightfulness and sweetness of character which had won all men's love, more, even, than their gratitude.

130. It failed of its effect, however, on the Tuscan aristocratic mind. For, when, after the battle of the Arbia, the Ghibellines had again their own way in Florence, though Ottobuoni had been then dead three years, they beat down his tomb, pulled the dead body out of it, dragged it—by such tenure as it might still possess—through the city, and threw the fragments of it into ditches. It is a memorable parallel to the treatment of the body of Cromwell by our own Cavaliers; and indeed it seems to me one of the highest forms of laudatory epitaph upon a man, that his body should be thus torn from its rest. For he can hardly have spent his life better than in drawing on himself the kind of enmity which can so be gratified; and for the most loving of lawgivers, as of princes, the most enviable and honourable epitaph has always been

“*οἰδὲ πολῖται αὐτοῦ ἐμίσουν αὐτὸν.*”

131. Not but that pacific Florence, in her pride of victory, was beginning to show unamiableness of temper also, on her so equitable side. It is perhaps worth noticing, for the sake of the name of Correggio, that in 1257, when Matthew Correggio, of Parma, was the Podesta of Florence, the Florentines determined to destroy the castle and walls of Poggibonzi, suspected of Ghibelline tendency, though the Poggibonzi people came with “*coregge in collo*,” leathern straps round their necks, to ask that their cattle might be spared. And the heartburnings between the two parties went on, smouldering hotter and hotter, till July, 1258, when the people having discovered secret dealings between the Uberti and the Emperor Manfred, and the Uberti refusing to obey citation to the popular tribunals, the trades ran to arms, attacked the Uberti palace, killed a number of their people, took prisoner, Uberto of the Uberti, Hubert of the Huberts, or Bright-mind of the Bright-minds, with ‘*Mangia degl’ Infangati*, (‘Gobbler* of the dirty ones’ this knight’s name

* At least, the compound ‘*Mangia-pane*,’ ‘munch-bread,’ stands still for a good-for-nothing fellow.

sounds like,)—and after they had confessed their guilt, beheaded them in St. Michael's corn-market; and all the rest of the Uberti and Ghibelline families were driven out of Florence, and their palaces pulled down, and the walls towards Siena built with the stones of them; and two months afterwards, the people suspecting the Abbot of Vallombrosa of treating with the Ghibellines, took him, and tortured him; and he confessing under torture, “at the cry of the people, they beheaded him in the square of St. Apollinare.” For which unexpected piece of clangorous impiety the Florentines were excommunicated, besides drawing upon themselves the steady enmity of Pavia, the Abbot's native town; “and indeed people say the Abbot was innocent, though he belonged to a great Ghibelline house. And for this sin, and for many others done by the wicked people, many wise persons say that God, for Divine judgment, permitted upon the said people the revenge and slaughter of Monteaperti.”

132. The sentence which I have last read introduces, as you must at once have felt, a new condition of things. Generally, I have spoken of the Ghibellines as infidel, or impious; and for the most part they represent, indeed, the resistance of kingly to priestly power. But, in this action of Florence, we have the rise of another force against the Church, in the end to be much more fatal to it, that of popular intelligence and popular passion. I must for the present, however, return to our immediate business; and ask you to take note of the effect, on actually existing Florentine architecture, of the political movements of the ten years we have been studying.

133. In the revolution of Candlemas, 1248, the successful Ghibellines throw down thirty-six of the Guelph palaces.

And in the revolution of July, 1258, the successful Guelphs throw down *all* the Ghibelline palaces.

Meantime the trades, as against the Knights Castellans, have thrown down the tops of all the towers above seventy-five feet high.

And we shall presently have a proposal, after the battle of the Arbia, to throw down Florence altogether.

134 You think at first that this is remarkably like the course

of republican reformations in the present day? But there is a wide difference. In the first place, the palaces and towers are not thrown down in mere spite or desire of ruin, but after quite definite experience of their danger to the State, and positive dejection of boiling lead and wooden logs from their machicolations upon the heads below. In the second place, nothing is thrown down without complete certainty on the part of the overthrowers that they are able, and willing, to build as good or better things instead; which, if any like conviction exist in the minds of modern republicans, is a wofully ill-founded one: and lastly, these abolitions of private wealth were coincident with a widely spreading disposition to undertake, as I have above noticed, works of public utility, *from which no dividends were to be received by any of the shareholders*; and for the execution of which *the builders received no commission on the cost*, but payment at the rate of so much a day, carefully adjusted to the exertion of real power and intelligence.

135. We must not, therefore, without qualification blame, though we may profoundly regret, the destructive passions of the thirteenth century. The architecture of the palaces thus destroyed in Florence contained examples of the most beautiful round-arched work that had been developed by the Norman schools; and was in some cases adorned with a barbaric splendour, and fitted into a majesty of strength which, so far as I can conjecture the effect of it from the few now existing traces, must have presented some of the most impressive aspects of street edifice ever existent among civil societies.

136. It may be a temporary relief for you from the confusion of following the giddy successions of Florentine temper, if I interrupt, in this place, my history of the city by some inquiry into technical points relating to the architecture of these destroyed palaces. Their style is familiar to us, indeed, in a building of which it is difficult to believe the early date,—the leaning tower of Pisa. The lower stories of it are of the twelfth century, and the open arcades of the cathedrals of Pisa and Lucca, as well as the lighter construction of the spire of St. Niccol, at Pisa, (though this was built in continuation of

the older style by Niccola himself,) all represent to you, though in enriched condition, the general manner of building in palaces of the Norman period in Val d'Arno. That of the Tosinghi, above the old market in Florence, is especially mentioned by Villani, as more than a hundred feet in height, entirely built with little pillars, (*colonnelli*.) of marble. On their splendid masonry was founded the exquisiteness of that which immediately succeeded them, of which the date is fixed by definite examples both in Verona and Florence, and which still exists in noble masses in the retired streets and courts of either city; too soon superseded, in the great thoroughfares, by the effeminate and monotonous luxury of Venetian renaissance, or by the heaps of quarried stone which rise into the ruggedness of their native cliffs, in the Pitti and Strozzi palaces.

LECTURE VI.

MARBLE COUCHANT.

137. I told you in my last lecture that the exquisiteness of Florentine thirteenth century masonry was founded on the strength and splendour of that which preceded it.

I use the word 'founded' in a literal as well as figurative sense. While the merchants, in their year of victories, threw down the walls of the war-towers, they as eagerly and diligently set their best craftsmen to lift higher the walls of their churches. For the most part, the Early Norman or Basilican forms were too low to please them in their present enthusiasm. Their pride, as well as their piety, desired that these stones of their temples might be goodly; and all kinds of junctions, insertions, refittings, and elevations were undertaken; which, the genius of the people being always for mosaic, are so perfectly executed, and mix up twelfth and thirteenth century work in such intricate harlequinade, that it is enough to drive a poor antiquary wild.

138. I have here in my hand, however, a photograph of a

small church, which shows you the change at a glance, and attests it in a notable manner.

You know Hubert of Lucca was the first captain of the Florentine people, and the march in which they struck their florin on the pine trunk was through Lucca, on Pisa.

Now here is a little church in Lucca, of which the lower half of the façade is of the twelfth century, and the top, built by the Florentines, in the thirteenth, and sealed for their own by two fleur-de-lys, let into its masonry. The most important difference, marking the date, is in the sculpture of the heads which carry the archivolts. But the most palpable difference is in the Cyclopean simplicity of irregular bedding in the lower story; and the delicate bands of alternate serpentine and marble, which follow the horizontal or couchant placing of the stones above.

139. Those of you who, interested in English Gothic, have visited Tuscany, are, I think, always offended at first, if not in permanence, by these horizontal stripes of her marble walls. Twenty-two years ago I quoted, in vol. i. of the "Stones of Venice," Professor Willis's statement that "a practice more destructive of architectural grandeur could hardly be conceived;" and I defended my favourite buildings against that judgement, first by actual comparison in the plate opposite the page, of a piece of them with an example of our modern grandeur; secondly, (vol. i., chap. v.,) by a comparison of their aspect with that of the building of the grandest piece of wall in the Alps,—that Matterhorn in which you all have now learned to take some gymnastic interest; and thirdly, (vol. i., chap. xxvi.,) by reference to the use of barred colours, with delight, by Giotto and all subsequent colourists.

140. But it did not then occur to me to ask, much as I always disliked the English Perpendicular, what would have been the effect on the spectator's mind, had the buildings been striped vertically instead of horizontally; nor did I then know, or in the least imagine, how much *practical* need there was for reference from the structure of the edifice to that of the cliff; and how much the permanence, as well as propriety, of structure depended on the stones being *couchant* in the

wall, as they had been in the quarry : to which subject I wish to-day to direct your attention.

141. You will find stated with as much clearness as I am able, in the first and fifth lectures in "Aratra Pentelici," the principles of architectural design to which, in all my future teaching, I shall have constantly to appeal; namely, that architecture consists distinctively in the adaptation of form to resist force ;—that, practically, it may be always thought of as doing this by the ingenious adjustment of various pieces of solid material ; that the perception of this ingenious adjustment, or structure, is to be always joined with our admiration of the superadded ornament ; and that all delightful ornament is the honouring of such useful structures ; but that the beauty of the ornament itself is independent of the structure, and arrived at by powers of mind of a very different class from those which are necessary to give skill in architecture proper.

142. During the course of this last summer I have been myself very directly interested in some of the quite elementary processes of true architecture. I have been building a little pier into Coniston Lake, and various walls and terraces in a steeply sloping garden, all which had to be constructed of such rough stones as lay nearest. Under the dextrous hands of a neighbour farmer's son, the pier projected, and the walls rose, as if enchanted ; every stone taking its proper place, and the loose dyke holding itself as firmly upright as if the gripping cement of the Florentine towers had fastened it. My own better acquaintance with the laws of gravity and of statics did not enable me, myself, to build six inches of dyke that would stand ; and all the decoration possible under the circumstances consisted in turning the lichened sides of the stones outwards. And yet the noblest conditions of building in the world are nothing more than the gradual adornment, by play of the imagination, of materials first arranged by this natural instinct of adjustment. You must not lose sight of the instinct of building, but you must not think the play of the imagination depends upon it. Intelligent laying of stones is always delightful ; but the fancy must not be limited to its contemplation.

PLATE V.—DOOR OF THE BAPTISTERY. PISA.

143. In the more elaborate architecture of my neighbourhood, I have taken pleasure these many years ; one of the first papers I ever wrote on architecture was a study of the Westmoreland cottage ;—properly, observe, the cottage of Westmere-land, of the land of western lakes. Its principal feature is the projecting porch at its door, formed by two rough slabs of Coniston slate, set in a blunt gable ; supported, if far projecting, by two larger masses for uprights. A disciple of Mr. Pugin would delightedly observe that the porch of St. Zeno at Verona was nothing more than the decoration of this construction ; but you do not suppose that the first idea of putting two stones together to keep off rain was all on which the sculptor of St. Zeno wished to depend for your entertainment.

144. Perhaps you may most clearly understand the real connection between structure and decoration by considering all architecture as a kind of book, which must be properly bound indeed, and in which the illumination of the pages has distinct reference in all its forms to the breadth of the margins and length of the sentences ; but is itself free to follow its own quite separate and higher objects of design.

145. Thus, for instance, in the architecture which Niccola was occupied upon, when a boy, under his Byzantine master. Here is the door of the Baptistery at Pisa, again by Mr. Severn delightfully enlarged for us from a photograph.* The general idea of it is a square-headed opening in a solid wall, faced by an arch carried on shafts. And the ornament does indeed follow this construction so that the eye catches it with ease,—but under what arbitrary conditions ! In the square door, certainly the side-posts of it are as important members as the lintel they carry ; but the lintel is carved elaborately, and the side-posts left blank. Of the facing arch and shaft, it would be similarly difficult to say whether the sustaining vertical, or sustained curve, were the more important member of the construction ; but the decorator now reverses the distribution of his care, adorns the vertical member with passionate elaboration.

* Plate 5 is from the photograph itself ; the enlarged drawing showed the arrangement of parts more clearly, but necessarily omitted detail which it is better here to retain.

tion, and runs a narrow band, of comparatively uninteresting work, round the arch. Between this outer shaft and inner door is a square pilaster, of which the architect carves one side, and lets the other alone. It is followed by a smaller shaft and arch, in which he reverses his treatment of the outer order by cutting the shaft delicately and the arch deeply. Again, whereas in what is called the decorated construction of English Gothic, the pillars would have been left plain and the spandrils deep cut,—here, are we to call it decoration of the construction, when the pillars are carved and the spandrils left plain? Or when, finally, either these spandril spaces on each side of the arch, or the corresponding slopes of the gable, are loaded with recumbent figures by the sculptors of the renaissance, are we to call, for instance, Michael Angelo's Dawn and Twilight, only the decorations of the sloping plinths of a tomb, or trace to a geometrical propriety the subsequent rule in Italy that no window could be properly complete for living people to look out of, without having two stone people sitting on the corners of it above? I have heard of charming young ladies occasionally, at very crowded balls, sitting on the stairs,—would you call them, in that case, only decorations of the construction of the staircase?

146. You will find, on consideration, the ultimate fact to be that to which I have just referred you;—my statement in "Aratra," that the idea of a construction originally useful is retained in good architecture, through all the amusement of its ornamentation; as the idea of the proper function of any piece of dress ought to be retained through its changes in form or embroidery. A good spire or porch retains the first idea of a roof usefully covering a space, as a Norman high cap or elongated Quaker's bonnet retains the original idea of a simple covering for the head; and any extravagance of subsequent fancy may be permitted, so long as the notion of use is not altogether lost. A girl begins by wearing a plain round hat to shade her from the sun; she ties it down over her ears on a windy day; presently she decorates the edge of it, so bent, with flowers in front, or the riband that ties it with a bouquet at the side, and it becomes a bonnet. This decorated con-

struction may be discreetly changed, by endless fashion, so long as it does not become a clearly useless riband round the middle of the head, or a clearly useless saucer on the top of it.

147. Again, a Norman peasant may throw up the top of her cap into a peak, or a Bernese one put gauze wings at the side of it, and still be dressed with propriety, so long as her hair is modestly confined, and her ears healthily protected, by the matronly safeguard of the real construction. She ceases to be decorously dressed only when the material becomes too flimsy to answer such essential purpose, and the flaunting pendants or ribands can only answer the ends of coquetry or ostentation. Similarly, an architect may deepen or enlarge, in fantastic exaggeration, his original Westmoreland gable into Rouen porch, and his original square roof into Coventry spire; but he must not put within his splendid porch, a little door where two persons cannot together get in, nor cut his spire away into hollow filigree, and mere ornamental perviousness to wind and rain.

148. Returning to our door at Pisa, we shall find these general questions as to the distribution of ornament much confused with others as to its time and style. We are at once, for instance, brought to a pause as to the degree in which the ornamentation was once carried out in the doors themselves. Their surfaces were, however, I doubt not, once recipients of the most elaborate ornament, as in the Baptistery of Florence; and in later bronze, by John of Bologna, in the door of the Pisan cathedral opposite this one. And when we examine the sculpture and placing of the lintel, which at first appeared the most completely Greek piece of construction of the whole, we find it so far advanced in many Gothic characters, that I once thought it a later interpolation cutting the inner pilasters underneath their capitals, while the three statues set on it are certainly, by several tens of years, later still.

149. How much ten years did at this time, one is apt to forget; and how irregularly the slower minds of the older men would surrender themselves, sadly, or awkwardly, to the

vivacities of their pupils. The only wonder is that it should be usually so easy to assign conjectural dates within twenty or thirty years; but, at Pisa, the currents of tradition and invention run with such cross eddies, that I often find myself utterly at fault. In this lintel, for instance, there are two pieces separated by a narrower one, on which there has been an inscription, of which in my enlarged plate you may trace, though, I fear, not decipher, the few letters that remain. The uppermost of these stones is nearly pure in its Byzantine style; the lower, already semi-Gothic. Both are exquisite of their kind, and we will examine them closely; but first note these points about the stones of them. We are discussing work at latest of the thirteenth century. Our loss of the inscription is evidently owing to the action of the iron rivets which have been causelessly used at the two horizontal joints. There was nothing whatever in the construction to make these essential, and, but for this error, the entire piece of work, as delicate as an ivory tablet, would be as intelligible to-day as when it was laid in its place.*

150. *Lintel*. I pause upon this word, for it is an important one. And I must devote the rest of this lecture to consideration merely of what follows from the difference between laying a stone and setting it up, whether we regard sculpture or construction. The subject is so wide, I scarcely know how to approach it. Perhaps it will be the pleasantest way to begin if I read you a letter from one of yourselves to me. A very favourite pupil, who travels third class always, for sake of better company, wrote to me the other day: "One of my fellow-travellers, who was a builder, or else a master mason, told me that the way in which red sandstone buildings last depends entirely on the way in which the stone is laid. It must lie as it does in the quarry; but he said that very few workmen could always tell the difference between the joints of planes of cleavage and the—something else which I couldn't catch,—by which he meant, I suppose planes of stratification. He said too that some people, though they were very particu-

* Plates 6 and 7 give, in greater clearness, the sculpture of this lintel, for notes on which see Appendix.

PLATE VI.—THE STORY OF ST. JOHN. ADVENT.

PLATE VII.—THE STORY OF ST. JOHN. DEPARTURE.

lar about having the stone laid well, allowed blocks to stand in the rain the wrong way up, and that they never recovered one wetting. The stone of the same quarry varies much, and he said that moss will grow immediately on good stone, but not on bad. How curious,—nature helping the best workman !” Thus far my favourite pupil.

151. ‘Moss will grow on the best stone.’ The first thing your modern restorer would do is to scrape it off; and with it, whatever knitted surface, half moss root, protects the interior stone. Have you ever considered the infinite functions of protection to mountain form exercised by the mosses and lichens? It will perhaps be refreshing to you after our work among the Pisan marbles and legends, if we have a lecture or two on moss. Meantime I need not tell you that it would not be a satisfactory natural arrangement if moss grew on marble, and that all fine workmanship in marble implies equal exquisiteness of surface and edge.

152. You will observe also that the importance of laying the stone in the building as it lay in its bed was from the first recognised by all good northern architects, to such extent that to lay stones ‘en delit,’ or in a position out of their bedding, is a recognized architectural term in France, where all structural building takes its rise; and in that form of ‘delit’ the word gets most curiously involved with the Latin *delictum* and *deliquium*. It would occupy the time of a whole lecture if I entered into the confused relations of the words derived from *lectus*, *liquidus*, *delinquo*, *diliquo*, and *deliquesco*; and of the still more confused, but beautifully confused, (and enriched by confusion,) forms of idea, whether respecting morality or marble, arising out of the meanings of these words: the notions of a bed gathered or strewn for the rest, whether of rocks or men; of the various states of solidity and liquidity connected with strength, or with repose; and of the duty of staying quiet in a place, or under a law, and the mischief of leaving it, being all fastened in the minds of early builders, and of the generations of men for whom they built, by the unescapable bearing of geological laws on their life; by the ease or difficulty of splitting rocks, by the variable

consistency of the fragments split, by the innumerable questions occurring practically as to bedding and cleavage in every kind of stone, from tufo to granite, and by the unseemly, or beautiful, destructive, or protective, effects of decomposition.* The same processes of time which cause your Oxford oolite to flake away like the leaves of a mouldering book, only warm with a glow of perpetually deepening gold the marbles of Athens and Verona; and the same laws of chemical change which reduce the granites of Dartmoor to porcelain clay, bind the sands of Coventry into stones which can be built up half-way to the sky.

153. But now, as to the matter immediately before us, observe what a double question arises about laying stones as they lie in the quarry. First, how *do* they lie in the quarry? Secondly, how can we lay them so in every part of our building?

A. How do they lie in the quarry? Level, perhaps, at Stonesfield and Coventry; but at an angle of 45° at Carrara; and for aught I know, of 90° in Paros or Pentelicus. Also, the *bedding* is of prime importance at Coventry, but the *cleavage* at Coniston.†

B. And then, even if we know what the quarry bedding is, how are we to keep it always in our building? You may lay the stones of a wall carefully level, but how will you lay those of an arch? You think these, perhaps, trivial, or merely curious questions. So far from it, the fact that while the bedding in Normandy is level, that at Carrara is steep, and that the

* This passage cannot but seem to the reader loose and fantastic. I have elaborate notes, and many an unwritten thought, on these matters, but no time or strength to develop them. The passage is not fantastic, but the rapid index of what I know to be true in all the named particulars. But compare, for mere rough illustration of what I mean, the moral ideas relating to the stone of Jacob's pillow, or the tradition of it, with those to which French Flamboyant Gothic owes its character.

† There are at least four definite cleavages at Coniston, besides joints. One of these cleavages furnishes the Coniston slate of commerce; another forms the ranges of Wetherlam and Yewdale crag; a third cuts these ranges to pieces, striking from north-west to south-east; and a fourth into other pieces, from north-east to south-west.

forces which raised the beds of Carrara crystallized them also, so that the cleavage which is all-important in the stones of my garden wall is of none in the duomo of Pisa,—simply determined the possibility of the existence of Pisan sculpture at all, and regulated the whole life and genius of Nicholas the Pisan and of Christian art. And, again, the fact that you can put stones in true bedding in a wall, but cannot in an arch, determines the structural transition from classical to Gothic architecture.

154. The *structural* transition, observe ; only a part, and that not altogether a coincident part, of the *moral* transition. Read carefully, if you have time, the articles 'Pierre' and 'Meneau' in M. Violet le Duc's Dictionary of Architecture, and you will know everything that is of importance in the changes dependent on the mere qualities of *matter*. I must, however, try to set in your view also the relative acting qualities of *mind*.

You will find that M. Violet le Duc traces all the forms of Gothic tracery to the geometrical and practically serviceable development of the stone 'chassis,' chasing, or frame, for the glass. For instance, he attributes the use of the cusp or 'redent' in its more complex forms, to the necessity, or convenience, of diminishing the space of glass which the tracery grasps ; and he attributes the reductions of the mouldings in the tracery bar under portions of one section, to the greater facility thus obtained by the architect in directing his workmen. The plan of a window once given, and the moulding-section,—all is said, thinks M. Violet le Duc. Very convenient indeed, for modern architects who have commission on the cost. But certainly not necessary, and perhaps even *inconvenient*, to Niccola Pisano, who is himself his workman, and cuts his own traceries, with his apron loaded with dust.

155. Again, the *redent*—the 'tooth within tooth' of a French tracery—may be necessary, to bite its glass. But the cusp, cuspis, spiny or spearlike point of a thirteenth century illumination, is not in the least necessary to transfix the parchment. Yet do you suppose that the structural convenience of the redent entirely effaces from the mind of the designer the

æsthetic characters which he seeks in the cusp? If you could for an instant imagine this, you would be undeceived by a glance either at the early redents of Amiens, fringing hollow vaults, or the late redents of Rouen, acting as crockets on the *outer edges* of pediments.

156. Again: if you think of the tracery in its *bars*, you call the cusp a redent; but if you think of it in the *openings*, you call the apertures of it foils. Do you suppose that the thirteenth century builder thought only of the strength of the bars of his enclosure, and never of the beauty of the form he enclosed? You will find in my chapter on the Aperture, in the "Stones of Venice," full development of the æsthetic laws relating to both these forms, while you may see, in Professor Willis's 'Architecture of the Middle Ages,' a beautiful analysis of the development of tracery from the juxtaposition of aperture; and in the article 'Meneau,' just quoted of M. Violet le Duc, an equally beautiful analysis of its development from the masonry of the chassis. You may at first think that Professor Willis's analysis is inconsistent with M. Violet le Duc's. But they are no more inconsistent than the accounts of the growth of a human being would be, if given by two anatomists, of whom one had examined only the skeleton, and the other only the respiratory system; and who, therefore, supposed—the first, that the animal had been made only to leap, and the other only to sing. I don't mean that either of the writers I name are absolutely thus narrow in their own views, but that, so far as inconsistency appears to exist between them, it is of that partial kind only.

157. And for the understanding of our Pisan traceries we must introduce a third element of similarly distinctive nature. We must, to press our simile a little farther, examine the growth of the animal as if it had been made neither to leap, nor to sing, but only to think. We must observe the transitional states of its nerve power; that is to say, in our window tracery we must consider not merely how its ribs are built, (or how it *stands*,) nor merely how its openings are shaped, or how it *breathes*; but also what its openings are made to light, or its shafts to receive, of picture or image.

As the limbs of the building, it may be much ; as the lungs of the building, more. As the *eyes** of the building, what ?

158. Thus you probably have a distinct idea—those of you at least who are interested in architecture—of the shape of the windows in Westminster Abbey, in the Cathedral of Chartres, or in the Duomo of Milan. Can any of you, I should like to know, make a guess at the shape of the windows in the Sistine Chapel, the Stanze of the Vatican, the Scuola di San Rocco, or the lower church of Assisi? The soul or anima of the first three buildings is in their windows ; but of the last three, in their walls.

All these points I may for the present leave you to think over for yourselves, except one, to which I must ask yet for a few moments your further attention.

159. The trefoils to which I have called your attention in Niccola's pulpit are as absolutely without structural office in the circles as in the panels of the font beside it. But the circles are drawn with evident delight in the lovely circular line, while the trefoil is struck out by Niccola so roughly that there is not a true compass curve or section in any part of it.

Roughly, I say. Do you suppose I ought to have said carelessly? So far from it, that if one sharper line or more geometric curve had been given, it would have caught the eye too strongly, and drawn away the attention from the sculpture. But imagine the feeling with which a French master workman would first see these clumsy intersections of curves. It would be exactly the sensation with which a practical botanical draughtsman would look at a foliage background of Sir Joshua Reynolds.

But Sir Joshua's sketched leaves would indeed imply some unworkmanlike haste. We must not yet assume the Pisan master to have allowed himself in any such. His mouldings may be hastily cut, for they are, as I have just said, unnecessary to his structure, and disadvantageous to his decoration ;

* I am ashamed to italicize so many words ; but these passages, written for oral delivery, can only be understood if read with oral emphasis. This is the first series of lectures which I have printed as they were to be spoken ; and it is a great mistake.

but he is not likely to be careless about arrangements necessary for strength. His mouldings may be cut hastily, but do you think his *joints* will be?

160. What subject of extended inquiry have we in this word, ranging from the cementless clefts between the couchant stones of the walls of the kings of Rome, whose iron rivets you had but the other day placed in your hands by their discoverer, through the grip of the stones of the Tower of the Death-watch, to the subtle joints in the marble armour of the Florentine Baptistery!

Our own work must certainly be left with a rough surface at this place, and we will fit the edges of it to our next piece of study as closely as we may.

LECTURE VII.

MARBLE RAMPANT.

161. I CLOSED my last lecture at the question respecting Nicholas's masonry. His mouldings may be careless, but do you think his joints will be?

I must remind you now of the expression as to the building of the communal palace—"of *dressed* stones"*—as opposed to the Tower of the Death-watch, in which the grip of cement had been so good. Virtually, you will find that the schools of structural architecture are those which use cement to bind

* "*Pietre conce.*" The portion of the bas-reliefs of Orvieto, given in the opposite plate, will show the importance of the jointing. Observe the way in which the piece of stone with the three principal figures is dovetailed above the extended band, and again in the rise above the joint of the next stone on the right, the sculpture of the wings being carried across the junction. I have chosen this piece on purpose, because the loss of the broken fragment, probably broken by violence, and the only serious injury which the sculptures have received, serves to show the perfection of the uninjured surface, as compared with northern sculpture of the same date. I have thought it well to show at the same time the modern German engraving of the subject, respecting which see Appendix.

PLATE VIII.—“THE CHARGE TO ADAM.” GIOVANNI PISANO.

their materials together, and in which, therefore, balance of *weight* becomes a continual and inevitable question. But the schools of sculptural architecture are those in which stones are fitted without cement,—in which, therefore, the question of *fitting* or adjustment is continual and inevitable, but the sustainable weight practically unlimited.

162. You may consider the Tower of the Death-watch as having been knit together like the mass of a Roman brick wall.

But the dressed stone work of the thirteenth century is the hereditary completion of such block-laying, as the Parthenon in marble ; or, in tufo, as that which was shown you so lately in the walls of Romulus ; and the decoration of that system of couchant stone is by the finished grace of mosaic or sculpture.

163. It was also pointed out to you by Mr. Parker that there were two forms of Cyclopean architecture ; one of level blocks, the other of polygonal,—contemporary, but in localities affording different material of stone.

I have placed in this frame examples of the Cyclopean horizontal, and the Cyclopean polygonal, architecture of the thirteenth century. And as Hubert of Lucca was the master of the new buildings at Florence, I have chosen the Cyclopean horizontal from his native city of Lucca ; and as our Nicholas and John brought their new Gothic style into practice at Orvieto, I have chosen the Cyclopean polygonal from their adopted city of Orvieto.

Both these examples of architecture are early thirteenth century work, the beginnings of its new and Christian style, but beginnings with which Nicholas and John had nothing to do ; they were part of the national work going on round them.

164. And this example from Lucca is of a very important class indeed. It is from above the east entrance gate of Lucca, which bears the cross above it, as the doors of a Christian city should. Such a city is, or ought to be, a place of peace, as much as any monastery.

This custom of placing the cross above the gate is Byzan-

tine-Christian ; and here are parallel instances of its treatment from Assisi. The lamb with the cross is given in the more elaborate arch of Verona.

165. But farther. The mosaic of this cross is so exquisitely fitted that no injury has been received by it to this day from wind or weather. And the horizontal dressed stones are laid so daintily that not an edge of them has stirred ; and, both to draw your attention to their beautiful fitting, and as a substitute for cement, the architect cuts his uppermost block so as to dovetail into the course below.

Dovetail, I say deliberately. This is stone carpentry, in which the carpenter despises glue. I don't say he won't use glue, and glue of the best, but he feels it to be a nasty thing, and that it spoils his wood or marble. None, at least, he determines shall be seen outside, and his laying of stones shall be so solid and so adjusted that, take all the cement away, his wall shall yet stand.

Stonehenge, the Parthenon, the walls of the Kings, this gate of Lucca, this window of Orvieto, and this tomb at Verona, are all built on the Cyclopean principle. They will stand without cement, and no cement shall be seen outside. Mr. Burgess and I actually tried the experiment on this tomb. Mr. Burgess modelled every stone of it in clay, put them together, and it stood.

166. Now there are two most notable characteristics about this Cyclopean architecture to which I beg your close attention.

The first : that as the laying of stones is so beautiful, their joints become a subject of admiration, and great part of the architectural ornamentation is in the beauty of lines of separation, drawn as finely as possible. Thus the separating lines of the bricks at Siena, of this gate at Lucca, of the vault at Verona, of this window at Orvieto, and of the contemporary refectory at Furness Abbey, are a main source of the pleasure you have in the building. Nay, they are not merely engravers' lines, but, in finest practice, they are mathematical lines — length without breadth. Here in my hand is a little shaft of Florentine mosaic executed at the present day. The sepa-

rations between the stones are, in dimension, mathematical lines. And the two sides of the thirteenth century porch of St. Anastasia at Verona are built in this manner,—so exquisitely, that for some time, my mind not having been set at it, I passed them by as painted!

167. That is the first character of the Florentine Cyclopean. But secondly; as the joints are so firm, and as the building must never stir or settle after it is built, the sculptor may trust his work to two stones set side by side, or one above another, and carve continuously over the whole surface, disregarding the joints, if he so chooses.

Of the degree of precision with which Nicholas of Pisa and his son adjusted their stones, you may judge by this rough sketch of a piece of St. Mary's of the Thorn, in which the design is of panels enclosing very delicately sculptured heads; and one would naturally suppose that the enclosing panels would be made of jointed pieces, and the heads carved separately and inserted. But the Pisans would have considered that unsafe masonry,—liable to the accident of the heads being dropped out, or taken away. John of Pisa did indeed use such masonry, of necessity, in his fountain; and the bas-reliefs *have* been taken away. But here one great block of marble forms part of two panels, and the mouldings and head are both carved in the solid, the joint running just behind the neck.

168. Such masonry is, indeed, supposing there were no fear of thieves, gratuitously precise in a case of this kind, in which the ornamentation is in separate masses, and might be separately carved. But when the ornamentation is current, and flows or climbs along the stone in the manner of waves or plants, the concealment of the joints of the pieces of marble becomes altogether essential. And here we enter upon a most curious group of associated characters in Gothic as opposed to Greek architecture.

169. If you have been able to read the article to which I referred you, 'Meneau,' in M. Violet le Duc's dictionary, you know that one great condition of the perfect Gothic structure is that the stones shall be 'en de-lit,' set up on end. The ornament then, which on the reposing or couchant stone was

current only, on the erected stone begins to climb also, and becomes, in the most heraldic sense of the term, rampant.

In the heraldic sense, I say, as distinguished from the still wider original sense of advancing with a stealthy, creeping, or clinging motion, as a serpent on the ground, and a cat, or a vine, up a tree-stem. And there is one of these reptile, creeping, or rampant things, which is the first whose action was translated into marble, and otherwise is of boundless importance in the arts and labours of man.

170. You recollect Kingsley's expression,—now hackneyed, because admired for its precision,—the 'crawling foam,' of waves advancing on sand. Tennyson has somewhere also used, with equal truth, the epithet 'climbing' of the spray of breakers against vertical rock.* In either instance, the sea action is literally 'rampant'; and the course of a great breaker, whether in its first proud likeness to a rearing horse, or in the humble and subdued gaining of the outmost verge of its foam on the sand, or the intermediate spiral whorl which gathers into a lustrous precision, like that of a polished shell, the grasping force of a giant, you have the most vivid sight and embodiment of literally rampant energy; which the Greeks expressed in their symbolic Poseidon, Scylla, and sea-horse, by the head and crest of the man, dog, or horse, with the body of the serpent; and of which you will find the slower image, in vegetation, rendered both by the spiral tendrils of grasping or climbing plants, and the perennial gaining of the foam or the lichen upon barren shores of stone.

171. If you will look to the thirtieth chapter of vol. i. in the new edition of the "Stones of Venice," which, by the gift of its publishers, I am enabled to lay on your table to be placed in your library, you will find one of my first and most eager statements of the necessity of inequality or change in form, made against the common misunderstanding of Greek symmetry, and illustrated by a woodcut of the spiral ornament on the treasury of Atreus at Mycenae. All that is said in that chapter respecting nature and the ideal, I now beg most ear-

* Perhaps I am thinking of Lowell, not Tennyson; I have not time to look.

nestly to recommend and ratify to you ; but although, even at that time, I knew more of Greek art than my antagonists, my broken reading has given me no conception of the range of its symbolic power, nor of the function of that more or less formal spiral line, as expressive, not only of the waves of the sea, but of the zones of the whirlpool, the return of the tempest, and the involution of the labyrinth. And although my readers say that I wrote then better than I write now, I cannot refer you to the passage without asking you to pardon in it what I now hold to be the petulance and vulgarity of expression, disgracing the importance of the truth it contains. A little while ago, without displeasure, you permitted me to delay you by the account of a dispute on a matter of taste between my father and me, in which he was quietly and unavailingly right. It seems to me scarcely a day, since, with boyish conceit, I resisted his wise entreaties that I would re-word this clause ; and especially take out of it the description of a sea-wave as "laying a great white tablecloth of foam" all the way to the shore. Now, after an interval of twenty years, I refer you to the passage, repentant and humble as far as regards its style, which people sometimes praised, but with absolute re-assertion of the truth and value of its contents, which people always denied. As natural form is varied, so must beautiful ornament be varied. You are not an artist by reproving nature into deathful sameness, but by animating your copy of her into vital variation. But I thought at that time that only Goths were rightly changeful. I never thought Greeks were. Their reserved variation escaped me, or I thought it accidental. Here, however, is a coin of the finest Greek workmanship, which shows you their mind in this matter unmistakably. Here are the waves of the Adriatic round a knight of Tarentum, and there is no doubt of their variableness.

172. This pattern of sea-wave, or river whirlpool, entirely sacred in the Greek mind, and the *βόστρυχος* or similarly curling wave in flowing hair, are the two main sources of the spiral form in lambent or rampant decoration. Of such lambent ornament, the most important piece is the crocket, of which I rapidly set before you the origin.

173. Here is a drawing of the gable of the bishop's throne in the upper church at Assisi, of the exact period when the mosaic workers of the thirteenth century at Rome adopted rudely the masonry of the north. Briefly, this is a Greek temple pediment, in which, doubtful of their power to carve figures beautiful enough, they cut a trefoiled hold for ornament, and bordered the edges with harlequinade of mosaic. They then call to their help the Greek sea-waves, and let the surf of the Ægean climb along the slopes, and toss itself at the top into a fleur-de-lys. Every wave is varied in outline and proportionate distance, though cut with a precision of curve like that of the sea itself. From this root we are able—but it must be in a lecture on crockets only—to trace the succeeding changes through the curl of Richard II's hair, and the crisp leaves of the forests of Picardy, to the knobbed extravagances of expiring Gothic. But I must to-day let you compare one piece of perfect Gothic work with the perfect Greek.

174. There is no question in my own mind, and, I believe, none in that of any other long-practised student of mediæval art, that in pure structural Gothic the church of St. Urbain at Troyes is without rival in Europe. Here is a rude sketch of its use of the crocket in the spandrils of its external tracery, and here are the waves of the Greek sea round the son of Poseidon. Seventeen hundred years are between them, but the same mind is in both. I wonder how many times seventeen hundred years Mr. Darwin will ask, to retrace the Greek designer of this into his primitive ape; or how many times six hundred years of such improvements as *we* have made on the church of St. Urbain, will be needed in order to enable our descendants to regard the designers of that, as only primitive apes.

175. I return for a moment to my gable at Assisi. You see that the crest of the waves at the top form a rude likeness of a fleur-de-lys. There is, however, in this form no real intention of imitating a flower, any more than in the meeting of the tails of these two Etruscan griffins. The notable circumstance in this piece of Gothic is its advanced form of crocket,

and its prominent foliation, with nothing in the least approaching to floral ornament.

176. And now, observe this very curious fact in the personal character of two contemporary artists. See the use of my manually graspable flag. Here is John of Pisa,—here Giotto. They are contemporary for twenty years ;—but these are the prime of Giotto's life, and the last of John's life : virtually, Giotto is the later workman by full twenty years.

But Giotto always uses severe geometrical mouldings, and disdains all luxuriance of leafage to set off interior sculpture.

John of Pisa not only adopts Gothic tracery, but first allows himself enthusiastic use of rampant vegetation ;—and here in the façade of Orvieto, you have not only perfect Gothic in the sentiment of Scripture history, but such luxurious ivy ornamentation as you cannot afterwards match for two hundred years. Nay, you can scarcely match it then—for grace of line, only in the richest flamboyant of France.

177. Now this fact would set you, if you looked at art from its æsthetic side only, at once to find out what German artists had taught Giovanni Pisano. There *were* Germans teaching him,—some teaching him many things ; and the intense conceit of the modern German artist imagines them to have taught him all things.

But he learnt his luxuriance, and Giotto his severity, in another school. The quality in both is Greek ; and altogether moral. The grace and the redundance of Giovanni are the first strong manifestation of those characters in the Italian mind which culminate in the Madonnas of Luini and the arabesques of Raphael. The severity of Giotto belongs to him, on the contrary, not only as one of the strongest practical men who ever lived on this solid earth, but as the purest and firmest reformer of the discipline of the Christian Church, of whose writings any remains exist.

178. Of whose writings, I say ; and you look up, as doubtful that he has left any. Hieroglyphics, then, let me say instead ; or, more accurately still, hierographics. St. Francis, in what he wrote and said, taught much that was false. But Giotto, his true disciple, nothing but what was true. And

where *he* uses an arabesque of foliage, depend upon it it will be to purpose—not redundant. I return for the time to our soft and luxuriant John of Pisa.

179. Soft, but with no unmanly softness; luxuriant, but with no unmannered luxury. To him you owe as to their first sire in art, the grace of Ghiberti, the tenderness of Raphael, the awe of Michael Angelo. Second-rate qualities in all the three, but precious in their kind, and learned, as you shall see, essentially from this man. Second-rate he also, but with most notable gifts of this inferior kind. He is the Canova of the thirteenth century; but the Canova of the thirteenth, remember, was necessarily a very different person from the Canova of the eighteenth.

The Canova of the eighteenth century mimicked Greek grace for the delight of modern revolutionary sensualists. The Canova of the thirteenth century brought living Gothic truth into the living faith of his own time.

Greek truth, and Gothic 'liberty,'—in that noble sense of the word, derived from the Latin 'liber,' of which I have already spoken, and which in my next lecture I will endeavour completely to develope. Meanwhile let me show you, as far as I can, the architecture itself about which these subtle questions arise.

180. Here are five frames, containing the best representations I can get for you of the façade of the cathedral of Orvieto. I must remind you, before I let you look at them, of the reason why that cathedral was built; for I have at last got to the end of the parenthesis which began in my second lecture, on the occasion of our hearing that John of Pisa was sent for to Perugia, to carve the tomb of Pope Urban IV.; and we must now know who this Pope was.

181. He was a Frenchman, born at that Troyes, in Champagne, which I gave you as the centre of French architectural skill, and Royalist character. He was born in the lowest class of the people, rose like Wolsey; became Bishop of Verdun; then, Patriarch of Jerusalem; returned in the year 1261, from his Patriarchate, to solicit the aid of the then Pope, Alexander IV., against the Saracen. I do not know on

what day he arrived in Rome ; but on the 25th of May, Alexander died, and the Cardinals, after three months' disputing, elected the suppliant Patriarch to be Pope himself.

182. A man with all the fire of France in him, all the faith, and all the insolence ; incapable of doubting a single article of his creed, or relaxing one tittle of his authority ; destitute alike of reason and of pity ; and absolutely merciless either to an infidel, or an enemy. The young Prince Manfred, bastard son of Frederick II., now representing the main power of the German empire, was both ; and against him the Pope brought into Italy a religious French knight, of character absolutely like his own, Charles of Anjou.

183. The young Manfred, now about twenty years old, was as good a soldier as he was a bad Christian ; and there was no safety for Urban at Rome. The Pope seated himself on a worthy throne for a thirteenth-century St. Peter. Fancy the rock of Edinburgh Castle, as steep on all sides as it is to the west ; and as long as the Old Town ; and you have the rock of Orvieto.

184. Here, enthroned against the gates of hell, in unassailable fortitude, and unfaltering faith, sat Urban ; the righteousness of his cause presently to be avouched by miracle, notablest among those of the Roman Church. Twelve miles east of his rock, beyond the range of low Apennine, shone the quiet lake, the Loch Leven of Italy, from whose island the daughter of Theodoric needed not to escape—Fate seeking her there ; and in a little chapel on its shore a Bohemian priest, infected with Northern infidelity, was brought back to his allegiance by seeing the blood drop from the wafer in his hand. And the Catholic Church recorded this heavenly testimony to her chief mystery, in the Festa of the Corpus Domini, and the Fabric of Orvieto.

185. And sending was made for John, and for all good labourers in marble ; but Urban never saw a stone of the great cathedral laid. His citation of Manfred to appear in his presence to answer for his heresy, was fixed against the posts of the doors of the old Duomo. But Urban had dug the foundation of the pile to purpose, and when he died at Perugia,

still breathed, from his grave, calamity to Manfred, and made from it glory to the Church. He had secured the election of a French successor; from the rock of Orvieto the spirit of Urban led the French chivalry, when Charles of Anjou saw the day of battle come, so long desired. Manfred's Saracens, with their arrows, broke his first line; the Pope's legate blessed the second, and gave them absolution of all their sins, for their service to the Church. They charged for Orvieto with their old cry of 'Mont-Joie, Chevaliers!' and before night, while Urban lay sleeping in his carved tomb at Perugia, the body of Manfred lay only recognizable by those who loved him, naked among the slain.

186. Time wore on and on. The Suabian power ceased in Italy; between white and red there was now no more contest;—the matron of the Church, scarlet-robed, reigned, ruthless, on her seven hills. Time wore on; and, a hundred years later, now no more the power of the kings, but the power of the people,—rose against her. St. Michael, from the corn market,—Or San Michele,—the commercial strength of Florence, on a question of free trade in corn. And note, for a little bye piece of botany, that in Val d'Arno lilies grow among the corn instead of poppies. The purple gladiolus glows through all its green fields in early spring.

187. A question of free trade in corn, then, arose between Florence and Rome. The Pope's legate in Bologna stopped the supply of polenta, the Florentines depending on that to eat with their own oil. Very wicked, you think, of the Pope's legate, acting thus against quasi-Protestant Florence? Yes; just as wicked as the—not quasi-Protestants—but intensely positive Protestants, of Zurich, who tried to convert the Catholic forest-cantons by refusing them salt. Christendom has been greatly troubled about bread and salt: the then Protestant Pope, Zuinglius, was killed at the battle of Keppel, and the Catholic cantons therefore remain Catholic to this day; while the consequences of this piece of protectionist economy at Bologna are equally interesting and direct.

188. The legate of Bologna, not content with stopping the supplies of maize to Florence, sent our own John Hawkwood,

on the 24th June, 1375, to burn all the maize the Florentines had got growing; and the abbot of Montemaggiore sent a troop of Perugian religious gentlemen-riders to ravage similarly the territory of Siena. Whereupon, at Florence, the Gonfalonier of Justice, Aloesio Aldobrandini, rose in the Council of Ancients and proposed, as an enterprise worthy of Florentine generosity, the freedom of all the peoples who groaned under the tyranny of the Church. And Florence, Siena, Pisa, Lucca, and Arezzo,—all the great cities of Etruria, the root of religion in Italy,—joined against the tyranny of religion. Strangely, this Etrurian league is not now to restore Tarquin to Rome, but to drive the Roman Tarquin into exile. The story of Lucretia had been repeated in Perugia; but the Umbrian Lucretia had died, not by suicide, but by falling on the pavement from the window through which she tried to escape. And the Umbrian Sextus was the Abbot of Montemaggiore's nephew.

189. Florence raised her fleur-de-lys standard: and, in ten days, eighty cities of Romagna were free, out of the number of whose names I will read you only these—Urbino, Foligno, Spoleto, Narni, Camerino, Toscanella, Perugia, ORVIETO.

And while the wind and the rain still beat the body of Manfred, by the shores of the Rio Verde, the body of Pope Urban was torn from its tomb, and not one stone of the carved work thereof left upon another.

190. I will only ask you to-day to notice farther that the Captain of Florence, in this war, was a 'Conrad of Suabia,' and that she gave him, beside her own flag, one with only the word 'Libertas' inscribed on it.

I told you that the first stroke of the bell on the Tower of the Lion began the carillon for European civil and religious liberty. But perhaps, even in the fourteenth century, Florence did not understand, by that word, altogether the same policy which is now preached in France, Italy, and England.

What she did understand by it, we will try to ascertain in the course of next lecture.

LECTURE VIII

FRANCHISE.

191. In my first lecture of this course, you remember that I showed you the Lion of St. Mark's with Niccola Pisano's, calling the one an evangelical-preacher lion, and the other a real, and naturally affectionate, lioness.

And the one I showed you as Byzantine, the other as Gothic.

So that I thus called the Greek art pious, and the Gothic profane.

Whereas in nearly all our ordinary modes of thought, and in all my own general references to either art, we assume Greek or classic work to be profane, and Gothic, pious, or religious.

192. Very short reflection, if steady and clear, will both show you how confused our ideas are usually on this subject, and how definite they may within certain limits become.

First of all, don't confuse piety with Christianity. There are pious Greeks and impious Greeks; pious Turks and impious Turks; pious Christians and impious Christians; pious modern infidels and impious modern infidels. In case you do not quite know what piety really means, we will try to know better in next lecture; for the present, understand that I mean distinctly to call Greek art, in the true sense of the word, pious, and Gothic, as opposed to it, profane.

193. But when I oppose these two words, Gothic and Greek, don't run away with the notion that I necessarily mean to oppose *Christian* and Greek. You must not confuse Gothic blood in a man's veins, with Christian feeling in a man's breast. There are unconverted and converted Goths; unconverted and converted Greeks. The Greek and Gothic temper is equally opposed, where the name of Christ has never been uttered by either, or when every other name is equally detested by both.

I want you to-day to examine with me that essential differ-

ence between Greek and Gothic temper, irrespective of creed, to which I have referred in my preface to the last edition of the "Stones of Venice," saying that the Byzantines gave law to Norman license. And I must therefore ask your patience while I clear your minds from some too prevalent errors as to the meaning of those two words, law and license.

194. There is perhaps no more curious proof of the disorder which impatient and impertinent science is introducing into classical thought and language, than the title chosen by the Duke of Argyll for his interesting study of Natural History—'The Reign of Law.' Law cannot reign. If a natural law, it admits no disobedience, and has nothing to put right. If a human one, it can compel no obedience, and has no power to prevent wrong. A king only can reign ;—a person, that is to say, who, conscious of natural law, enforces human law so far as it is just.

195. Kinghood is equally necessary in Greek dynasty, and in Gothic. Theseus is every inch a king, as well as Edward III. But the laws which they have to enforce on their own and their companions' humanity are opposed to each other as much as their dispositions are.

The function of a Greek king was to enforce labour.

That of a Gothic king, to restrain rage.

The laws of Greece determine the wise methods of labour ; and the laws of France determine the wise restraints of passion.

For the sins of Greece are in Indolence, and its pleasures ; and the sins of France are in fury, and its pleasures.

196. You are now again surprised, probably, at hearing me oppose France typically to Greece. More strictly, I might oppose only a part of France,—Normandy. But it is better to say, France,* as embracing the seat of the established Norman power in the Island of our Lady ; and the province in which it was crowned,—Champagne.

France is everlastingly, by birth, name, and nature, the country of the Franks, or free persons ; and the first source of

* "Normandie, la franche," —" France, la solue ;" (chanson de Roland). One of my good pupils referred me to this ancient and glorious French song.

European frankness, or franchise. The Latin for franchise is *libertas*. But the modern or Cockney-English word *liberty*,—Mr. John Stuart Mill's,—is not the equivalent of *libertas*; and the modern or Cockney-French word *liberté*.—M. Victor Hugo's,—is not the equivalent of franchise.

197. The Latin for franchise, I have said, is *libertas*; the Greek is *ἐλευθερία*. In the thoughts of all three nations, the idea is precisely the same, and the word used for the idea by each nation therefore accurately translates the word of the other: *ἐλευθερία*—*libertas*—franchise—reciprocally translate each other. Leonidas is characteristically *ελεύθερος* among Greeks; Publicola, characteristically *liber*, among Romans; Edward III. and the Black Prince, characteristically frank among French. And that common idea, which the words express, as all the careful scholars among you will know, is, with all the three nations, mainly of deliverance from the slavery of passion. To be *ελεύθερος*, *liber*, or *franc*, is first to have learned how to rule our own passions; and then, certain that our own conduct is right, to persist in that conduct against all resistance, whether of counter-opinion, counter pain, or counter-pleasure. To be defiant alike of the mob's thought, of the adversary's threat, and the harlot's temptation,—this is in the meaning of every great nation to be free; and the one condition upon which that freedom can be obtained is pronounced to you in a single verse of the 119th Psalm, "I will walk at liberty, for I seek Thy precepts."

198. Thy precepts:—Law, observe, being dominant over the Gothic as over the Greek king, but a quite different law. Edward III. feeling no anger against the Sieur de Ribault, and crowning him with his own pearl chaplet, is obeying the law of love, *restraining* anger; but Theseus, slaying the Minotaur, is obeying the law of justice, and *enforcing* anger.

The one is acting under the law of the charity, *χάρις*, or grace of God; the other under the law of His judgment. The two together fulfil His *κρίσις* and *ἀγάπη*.

199. Therefore the Greek dynasties are finally expressed in the kinghoods of Minos, Rhadamanthus, and Aeacus, who

judge infallibly, and divide arithmetically. But the dynasty of the Gothic king is in equity and compassion, and his arithmetic is in largesse,

“ Whose moste joy was, I wis,
When that she gave, and said, Have this.”

So that, to put it in shortest terms of all, Greek law is of Stasy, and Gothic of Ec-stasy ; there is no limit to the freedom of the Gothic hand or heart, and the children are most in the delight and the glory of liberty when they most seek their Father's precepts.

200. The two lines I have just quoted are, as you probably remember, from Chaucer's translation of the French Romance of the Rose, out of which I before quoted to you the description of the virtue of *Debonnairété*. Now that *Debonnairété* of the Painted Chamber of Westminster is the typical figure used by the French sculptors and painters for 'franchise,' frankness, or Frenchness ; but in the Painted Chamber, *Debonnairété*, high breeding, 'out of goodnestedness,' or gentleness, is used, as an English king's English, of the Norman franchise. Here, then, is our own royalty,—let us call it Englishness, the grace of our proper kingdom ;—and here is French royalty, the grace of French kingdom—Frenchness, rudely but sufficiently drawn by M. Didron from the porch of Chartres. She has the crown of fleur-de-lys, and William the Norman's shield.

201. Now this grace of high birth, the grace of his or her Most Gracious Majesty, has her name at Chartres written beside her, in Latin. Had it been in Greek, it would have been *ελευθερία*. Being in Latin, what do you think it must be necessarily ?—Of course, *Libertas*. Now M. Didron is quite the best writer on art that I know,—full of sense and intelligence ; but of course, as a modern Frenchman,—one of a nation for whom the Latin and Gothic ideas of *libertas* have entirely vanished,—he is not on his guard against the trap here laid for him. He looks at the word *libertas* through his spectacles ;—can't understand, being a thoroughly good anti-

quary,* how such a virtue, or privilege, could honestly be carved with approval in the twelfth century;—rubs his spectacles; rubs the inscription, to make sure of its every letter; stamps it, to make surer still;—and at last, though in a greatly bewildered state of mind, remains convinced that here is a sculpture of ‘La Liberte’ in the twelfth century. “C’est bien la liberte!” “On lit parfaitement libertas.”

202. Not so, my good M. Didron!—a very different personage, this; of whom more, presently, though the letters of her name are indeed so plainly, ‘Libertas, at non liberalitas,’ liberalitas being the Latin for largesse, not for franchise.

This, then, is the opposition between the Greek and Gothic dynasties, in their passionate or vital nature; in the *animal* and *inbred* part of them;—Classic and romantic, Static and extatic. But now, what opposition is there between their divine natures? Between Theseus and Edward III., as warriors, we now know the difference; but between Theseus and Edward III., as theologians; as dreaming and discerning creatures, as didactic kings,—engraving letters with the point of the sword, instead of thrusting men through with it,—changing the club into the ferula, and becoming schoolmasters as well as kings; what is, thus, the difference between them?

Theologians I called them. Philologists would be a better word,—lovers of the *Λογος*, or Word, by which the heavens and earth were made. What *logos*, *about* this Logos, have they learned, or can they teach?

203. I showed you, in my first lecture, the Byzantine Greek lion, as descended by true unblemished line from the Nemean Greek; but with this difference: Heracles kills the beast, and makes a helmet and cloak of his skin; the Greek St. Mark converts the beast, and makes an evangelist of him.

Is not that a greater difference, think you, than one of mere decadence?

This ‘maniera goffa e sproporzionata’ of Vasari is not, then, merely the wasting away of former leonine strength into thin

* Historical antiquary; not art-antiquary I must limitedly say, however. He has made a grotesque mess of his account of the Ducal Palace of Venice, through his ignorance of the technical characters of sculpture

rigidities of death? There is another change going on at the same time,—body perhaps subjecting itself to spirit.

I will not tease you with farther questions. The facts are simple enough. Theseus and Heracles have their religion, sincere and sufficient,—a religion of lion-killers, minotaur-killers, very curious and rude; Eleusinian mystery mingled in it, inscrutable to us now,—partly always so, even to them.

204. Well; the Greek nation, in process of time, loses its manliness,—becomes Graeculus instead of Greek. But though effeminate and feeble, it inherits all the subtlety of its art, all the cunning of its mystery; and it is converted to a more spiritual religion. Nor is it altogether degraded, even by the diminution of its animal energy. Certain spiritual phenomena are possible to the weak, which are hidden from the strong;—nay, the monk may, in his order of being, possess strength denied to the warrior. Is it altogether, think you, by blundering, or by disproportion in intellect or in body, that Theseus becomes St. Athanase? For that is the kind of change which takes place, from the days of the great King of Athens, to those of the great Bishop of Alexandria, in the thought and theology, or, summarily, in the spirit of the Greek.

Now we have learned indeed the difference between the Gothic knight and the Greek knight; but what will be the difference between the Gothic saint and Greek saint?

Franchise of body against constancy of body.

Franchise of thought, then, against constancy of thought.

Edward III. against Theseus.

And the Frank of Assisi against St. Athanase.

205. Utter franchise, utter gentleness in theological thought.

Instead of, 'This is the faith, which except a man believe faithfully, he cannot be saved,' 'This is the love, which if a bird or an insect keep faithfully, *it* shall be saved.'

Gentlemen, you have at present arrived at a phase of natural science in which, rejecting alike the theology of the Byzantine, and the affection of the Frank, you can only contemplate a bird as flying under the reign of law, and a cricket as singing under the compulsion of caloric.

I do not know whether you yet feel that the position of your boat on the river also depends entirely on the reign of law, or whether, as your churches and concert-rooms are privileged in the possession of organs blown by steam, you are learning yourselves to sing by gas, and expect the *Dies Irae* to be announced by a steam-trumpet. But I can very positively assure you that, in my poor domain of imitative art, not all the mechanical or gaseous forces of the world, nor all the laws of the universe, will enable you either to see a colour, or draw a line, without that singular force anciently called the soul, which it was the function of the Greek to discipline in the duty of the servants of God, and of the Goth to lead into the liberty of His children.

206. But in one respect I wish you were more conscious of the existence of law than you appear to be. The difference which I have pointed out to you as existing between these great nations, exists also between two orders of intelligence among men, of which the one is usually called Classic, the other Romantic. Without entering into any of the fine distinctions between these two sects, this broad one is to be observed as constant: that the writers and painters of the Classic school set down nothing but what is known to be true, and set it down in the perfectest manner possible in their way, and are thenceforward authorities from whom there is no appeal. Romantic writers and painters, on the contrary, express themselves under the impulse of passions which may indeed lead them to the discovery of new truths, or to the more delightful arrangement or presentment of things already known: but their work, however brilliant or lovely, remains imperfect, and without authority. It is not possible, of course, to separate these two orders of men trenchantly: a classic writer may sometimes, whatever his care, admit an error, and a romantic one may reach perfection through enthusiasm. But, practically, you may separate the two for your study and your education; and, during your youth, the business of us your masters is to enforce on you the reading, for school work, only of classical books: and to see that your minds are both informed of the indisputable facts they contain, and ac-

customed to act with the infallible accuracy of which they set the example.

207. I have not time to make the calculation, but I suppose that the daily literature by which we now are principally nourished, is so large in issue that though St. John's "even the world itself could not contain the books which should be written" may be still hyperbole, it is nevertheless literally true that the world might be *wrapped* in the books which are written; and that the sheets of paper covered with type on any given subject, interesting to the modern mind, (say the prospects of the Claimant,) issued in the form of English morning papers during a single year, would be enough literally to pack the world in.

208. Now I will read you fifty-two lines of a classical author, which, once well read and understood, contain more truth than has been told you all this year by this whole globe's compass of print.

Fifty-two lines, of which you will recognize some as hackneyed, and see little to admire in others. But it is not possible to put the statements they contain into better English, nor to invalidate one syllable of the statements they contain.*

209. Even those, and there may be many here, who would dispute the truth of the passage, will admit its exquisite distinctness and construction. If it be untrue, that is merely because I have not been taught by my modern education to recognize a classical author; but whatever my mistakes, or yours, may be, there *are* certain truths long known to all rational men, and indisputable. You may add to them, but you cannot diminish them. And it is the business of a University to determine what books of this kind exist, and to enforce the understanding of them.

210. The classical and romantic arts which we have now under examination therefore consist,—the first, in that which represented, under whatever symbols, truths respecting the history of men, which it is proper that all should know; while the second owes its interest to passionate impulse or

* 'The Deserted Village,' line 251 to 302

incident. This distinction holds in all ages, but the distinction between the franchise of Northern, and the constancy of Byzantine, art, depends partly on the unsystematic play of emotion in the one, and the appointed sequence of known fact or determined judgment in the other.

You will find in the beginning of M. Didron's book, already quoted, an admirable analysis of what may be called the classic sequence of Christian theology, as written in the sculpture of the Cathedral of Chartres. You will find in the treatment of the façade of Orvieto the beginning of the development of passionate romance,—the one being grave sermon writing; the other, cheerful romance or novel writing: so that the one requires you to think, the other only to feel or perceive; the one is always a parable with a meaning, the other only a story with an impression.

211. And here I get at a result concerning Greek art, which is very sweeping and wide indeed. That it is all parable, but Gothic, as distinct from it, literal. So absolutely does this hold, that it reaches down to our modern school of landscape. You know I have always told you Turner belonged to the Greek school. Precisely as the stream of blood coming from under the throne of judgment in the Byzantine mosaic of Torcello is a sign of condemnation, his scarlet clouds are used by Turner as a sign of death; and just as on an Egyptian tomb the genius of death lays the sun down behind the horizon, so in his *Cephalus and Procris*, the last rays of the sun withdraw from the forest as the nymph expires.

And yet, observe, both the classic and romantic teaching may be equally earnest, only different in manner. But from classic art, unless you understand it, you may get nothing; from romantic art, even if you don't understand it, you get at least delight.

212. I cannot show the difference more completely or fortunately than by comparing Sir Walter Scott's type of *libertas*, with the franchise of Chartres Cathedral, or *Debonnairété* of the Painted Chamber.

At Chartres, and Westminster, the high birth is shown by the crown; the strong bright life by the flowing hair; the

fortitude by the conqueror's shield ; and the truth by the bright openness of the face :

“She was not brown, nor dull of hue,
But white as snow, fallen newe.”

All these are symbols, which, if you cannot read, the image is to you only an uninteresting stiff figure. But Sir Walter's Franchise, Diana Vernon, interests you at once in personal aspect and character. She is no symbol to you ; but if you acquaint yourself with her perfectly, you find her utter frankness, governed by a superb self-command ; her spotless truth, refined by tenderness ; her fiery enthusiasm, subdued by dignity ; and her fearless liberty, incapable of doing wrong, joining to fulfil to you, in sight and presence, what the Greek could only teach by signs.

213. I have before noticed—though I am not sure that you have yet believed my statement of it—the significance of Sir Walter's as of Shakspeare's names ; Diana ‘Vernon, semper viret,’ gives you the conditions of purity and youthful strength or spring which imply the highest state of libertas. By corruption of the idea of purity, you get the modern heroines of London Journal—or perhaps we may more fitly call it ‘Cockney-daily’—literature. You have one of them in perfection, for instance, in Mr. Charles Reade's ‘Griffith Gaunt’—“Lithe, and vigorous, and one with her great white gelding ;” and liable to be entirely changed in her mind about the destinies of her life by a quarter of an hour's conversation with a gentleman unexpectedly handsome ; the hero also being a person who looks at people whom he dislikes, with eyes “like a dog's in the dark ;” and both hero and heroine having souls and intellects also precisely corresponding to those of a dog's in the dark, which is indeed the essential picture of the practical English national mind at this moment,—happy if it remains doggish,—Circe not usually being content with changing people into dogs only. For the Diana Vernon of the Greek is Artemis Laphria, who is friendly to the dog ; not to the swine. Do you see, by the way, how perfectly the image is carried out by Sir Walter in putting his Diana on the border

country? "Yonder blue hill is in Scotland," she says to her cousin,—not in the least thinking less of him for having been concerned, it may be, in one of Rob Roy's forays. And so gradually you get the idea of Norman franchise carried out in the free-rider or free-booter; not safe from degradation on that side also; but by no means of swinish temper, or foraging, as at present the British speculative public, only with the snout.

214. Finally, in the most soft and domestic form of virtue, you have Wordsworth's ideal:

" Her household motions light and free,
And steps of virgin liberty."

The distinction between these northern types of feminine virtue, and the figures of Alcestis, Antigone, or Iphigenia, lies deep in the spirit of the art of either country, and is carried out into its most unimportant details. We shall find in the central art of Florence at once the thoughtfulness of Greece and the gladness of England, associated under images of monastic severity peculiar to herself.

And what Diana Vernon is to a French ballerine dancing the Cæcan, the 'libertas' of Chartres and Westminster is to the 'liberty' of M. Victor Hugo and Mr. John Stuart Mill.

LECTURE IX.

THE TYRRENE SEA.

215. We may now return to the points of necessary history, having our ideas fixed within accurate limits as to the meaning of the word Liberty; and as to the relation of the passions which separated the Guelph and Ghibelline to those of our own days.

The Lombard or Guelph league consisted, after the accession of Florence, essentially of the three great cities—Milan, Bologna, and Florence; the Imperial or Ghibelline league, of Verona, Pisa, and Siena. Venice and Genoa, both nominally Guelph, are in furious contention always for sea empire

while Pisa and Genoa are in contention, not so much for empire, as honour. Whether the trade of the East was to go up the Adriatic, or round by the Gulf of Genoa, was essentially a mercantile question ; but whether, of the two ports in sight of each other, Pisa or Genoa was to be the Queen of the Tyrrhene Sea, was no less distinctly a personal one than which of two rival beauties shall preside at a tournament.

216. This personal rivalry, so far as it was separated from their commercial interests, was indeed mortal, but not malignant. The quarrel was to be decided to the death, but decided with honour ; and each city had four observers permittedly resident in the other, to give account of all that was done there in naval invention and armament.

217. Observe, also, in the year 1251, when we quitted our history, we left Florence not only Guelph, as against the Imperial power, (that is to say, the body of her knights who favoured the Pope and Italians, in dominion over those who favoured Manfred and the Germans), but we left her also definitely with her apron thrown over her shield ; and the tradesmen and craftsmen in authority over the knight, whether German or Italian, Papal or Imperial.

That is in 1251. Now in these last two lectures I must try to mark the gist of the history of the next thirty years. The Thirty Years' War, this, of the middle ages, infinitely important to all ages ; first observe, between Guelph and Ghibelline, ending in the humiliation of the Ghibelline ; and, secondly, between Shield and Apron, or, if you like better, between Spear and Hammer, ending in the breaking of the Spear.

218. The first decision of battle, I say, is that between Guelph and Ghibelline, headed by two men of precisely opposite characters, Charles of Anjou and Manfred of Suabia. That I may be able to define the opposition of their characters intelligibly, I must first ask your attention to some points of general scholarship.

I said in my last lecture that, in this one, it would be needful for us to consider what piety was, if we happened not to know ; or worse than that, it may be, not instinctively to feel

Such want of feeling is indeed not likely in you, being English-bred; yet as it is the modern cant to consider all such sentiment as useless, or even shameful, we shall be in several ways advantaged by some examination of its nature. Of all classical writers, Horace is the one with whom English gentlemen have on the average most sympathy; and I believe, therefore, we shall most simply and easily get at our point by examining the piety of Horace.

219. You are perhaps, for the moment, surprised, whatever might have been admitted of Æneas, to hear Horace spoken of as a pious person. But of course when your attention is turned to the matter you will recollect many lines in which the word 'pietas' occurs, of which you have only hitherto failed to allow the force because you supposed Horace did not mean what he said.

220. But Horace always and altogether means what he says. It is just because—whatever his faults may have been—he was not a hypocrite, that English gentlemen are so fond of him. "Here is a frank fellow, anyhow," they say, "and a witty one." Wise men know that he is also wise. True men know that he is also true. But pious men, for want of attention, do not always know that he is pious.

One great obstacle to your understanding of him is your having been forced to construct Latin verses, with introduction of the word 'Jupiter' always, at need, when you were at a loss for a dactyl. You always feel as if Horace only used it also when *he* wanted a dactyl.

221. Get quit of that notion wholly. All immortal writers speak out of their hearts. Horace spoke out of the abundance of his heart, and tells you precisely what he is, as frankly as Montaigne. Note then, first, how modest he is: "Ne parva Tyrrenum per aequor, vela darem;—Operosa parvus, carmina fingo." Trust him in such words; he absolutely means them; knows thoroughly that he cannot sail the Tyrrhene Sea,—knows that he cannot float on the winds of Matinum,—can only murmur in the sunny hollows of it among the heath. But note, secondly, his pride: "Exegi monumentum ære perennius." He is not the least afraid to say that. He did it;

knew he had done it ; said he had done it ; and feared no charge of arrogance.

222. Note thirdly, then, his piety, and accept his assured speech of it : “ *Dis pietas mea, et Musa, cordi est.*” He is perfectly certain of that also ; serenely tells you so ; and you had better believe him. Well for you, if you *can* believe him : for to believe him, you must understand him first ; and I can tell you, you won’t arrive at that understanding by looking out the word ‘ *pietas* ’ in your White-and-Riddle. If you do, you will find those tiresome contractions, *Etym. Dub.*, stop your inquiry very briefly, as you go back ; if you go forward, through the Italian *pieta*, you will arrive presently in another group of ideas, and end in *miser cordia*, mercy, and pity. You must not depend on the form of the word ; you must find out what it stands for in Horace’s mind, and in Virgil’s. More than race to the Roman ; more than power to the statesman ; yet helpless beside the grave,—“ *Non, Torquate, genus, non te facundia, non te, Restitvet pietas.*”

Nay, also what it stands for as an attribute, not only of men, but of gods ; nor of those only as merciful, but also as avenging. Against Æneas himself, Dido invokes the waves of the Tyrrhene Sea, “ *si quid pia numina possunt.*” Be assured there is no getting at the matter by dictionary or context. To know what love means, you must love ; to know what piety means, you must be pious.

223. Perhaps you dislike the word, now, from its vulgar use. You may have another if you choose, a metaphorical one,—close enough it seems to Christianity, and yet still absolutely distinct from it,—*χριστός*. Suppose, as you watch the white bloom of the olives of Val d’Arno and Val di Nievole, which modern piety and economy suppose were grown by God only to supply you with fine Lucca oil, you were to consider, instead, what answer you could make to the Socratic question, *πότεν ἄν τις τὸντο τὸ χρίσμα λάβοι.**

224. I spoke to you first of Horace’s modesty. All piety begins in modesty. You must feel that you are a very little creature, and that you had better do as you are bid. You

* *Xen. Conviv.*, ii.

will then begin to think what you are bid to do, and who bids it. And you will find, unless you are very unhappy indeed, that there is always a quite clear notion of right and wrong in your minds, which you can either obey or disobey, at your pleasure. Obey it simply and resolutely; it will become clearer to you every day: and in obedience to it, you will find a sense of being in harmony with nature, and at peace with God, and all His creatures. You will not understand how the peace comes, nor even in what it consists. It is the peace that passes understanding;—it is just as visionary and imaginative as love is, and just as real, and just as necessary to the life of man. It is the only source of true cheerfulness, and of true common sense; and whether you believe the Bible, or don't,—or believe the Koran, or don't— or believe the Vedas, or don't—it will enable you to believe in God, and please Him, and be such a part of the *εὐδοκία* of the universe as your nature fits you to be, in His sight, faithful in awe to the powers that are above you, and gracious in regard to the creatures that are around.

225. I will take leave on this head to read one more piece of Carlyle, bearing much on present matters. “I hope also they will attack earnestly, and at length extinguish and eradicate, this idle habit of ‘accounting for the moral sense,’ as they phrase it. A most singular problem;—instead of bending every thought to have more, and ever more, of ‘moral sense,’ and therewith to irradiate your own poor soul, and all its work, into something of divineness, as the one thing needful to you in this world! A very futile problem that other, my friends; futile, idle, and far worse; leading to what moral ruin, you little dream of! The moral sense, thank God, is a thing you never will ‘account for;’ that, if you could think of it, is the perennial miracle of man; in all times, visibly connecting poor transitory man, here on this bewildered earth, with his Maker who is eternal in the heavens. By no greatest happiness principle, greatest nobleness principle, or any principle whatever, will you make that in the least clearer than it already is;—forbear, I say, or you may darken it away from you altogether! ‘Two things,’ says

the memorable Kant, deepest and most logical of metaphysical thinkers, 'two things strike me dumb: the infinite starry heavens; and the sense of right and wrong in man.' Visible infinities, both; say nothing of them; don't try to 'account for them;' for you can say nothing wise."

226. Very briefly, I must touch one or two further relative conditions in this natural history of the soul. I have asked you to take the metaphorical, but distinct, word 'χρῖσμα,' rather than the direct but obscure one 'piety'; mainly because the Master of your religion chose the metaphorical epithet for the perpetual one of His own life and person.

But if you will spend a thoughtful hour or two in reading the scripture, which pious Greeks read, not indeed on daintily printed paper, but on daintily painted clay,—if you will examine, that is to say, the scriptures of the Athenian religion, on their Pan-Athenaic vases, in their faithful days, you will find that the gift of the literal χρῖσμα, or anointing oil, to the victor in the kingly and visible contest of life, is signed always with the image of that spirit or goddess of the air who was the source of their invisible life. And let me, before quitting this part of my subject, give you one piece of what you will find useful counsel. If ever from the right apothecary, or *μυροπώλης*, you get any of that χρῖσμα,—don't be careful, when you set it by, of looking for dead dragons or dead dogs in it. But look out for the dead flies.

227. Again; remember, I only quote St. Paul as I quote Xenophon to you; but I expect you to get some good from both. As I want you to think what Xenophon means by 'μαντεία,' so I want you to consider also what St. Paul means by 'προφητεία.' He tells you to prove all things,—to hold fast what is good, and not to despise 'prophesyings.'

228 Now it is quite literally probable, that this world, having now for some five hundred years absolutely refused to do as it is plainly bid by every prophet that ever spoke in any nation, and having reduced itself therefore to Saul's condition, when he was answered neither by Urim nor by prophets, may be now, while you sit there, receiving necromantic answers from the witch of Endor. But with that possibility

you have no concern. There is a prophetic power in your own hearts, known to the Greeks, known to the Jews, known to the Apostles, and knowable by you. If it is now silent to you, do not despise it by tranquillity under that privation ; if it speaks to you, do not despise it by disobedience.

229. Now in this broad definition of Pietas, as reverence to sentimental law, you will find I am supported by all classical authority and use of this word. For the particular meaning of which I am next about to use the word Religion, there is no such general authority, nor can there be, for any limited or accurate meaning of it. The best authors use the word in various senses ; and you must interpret each writer by his own context. I have myself continually used the term vaguely. I shall endeavour, henceforward, to use it under limitations which, willing always to accept, I shall only transgress by carelessness, or compliance with some particular use of the word by others. The power in the word, then, which I wish you now to notice, is in its employment with respect to doctrinal divisions. You do not say that one man is of one piety, and another of another ; but you do, that one man is of one religion, and another of another.

230. The religion of any man is thus properly to be interpreted, as the feeling which binds him, irrationally, to the fulfilment of duties, or acceptance of beliefs, peculiar to a certain company of which he forms a member, as distinct from the rest of the world. 'Which binds him *irrationally*,' I say ; —by a feeling, at all events, apart from reason, and often superior to it ; such as that which brings back the bee to its hive, and the bird to her nest.

A man's religion is the form of mental rest, or dwelling-place, which, partly, his fathers have gained or built for him, and partly, by due reverence to former custom, he has built for himself ; consisting of whatever imperfect knowledge may have been granted, up to that time, in the land of his birth, of the Divine character, presence, and dealings ; modified by the circumstances of surrounding life.

It may be, that sudden accession of new knowledge may compel him to cast his former idols to the moles and to the

bats. But it must be some very miraculous interposition indeed which can justify him in quitting the religion of his forefathers ; and, assuredly, it must be an unwise interposition which provokes him to insult it.

231. On the other hand, the value of religious ceremonial, and the virtue of religious truth, consist in the meek fulfilment of the one as the fond habit of a family ; and the meek acceptance of the other, as the narrow knowledge of a child. And both are destroyed at once, and the ceremonial or doctrinal prejudice becomes only an occasion of sin, if they make us either wise in our own conceit, or violent in our methods of proselytism. Of those who will compass sea and land to make one proselyte, it is too generally true that they are themselves the children of hell, and make their proselytes twofold more so.

232. And now I am able to state to you, in terms so accurately defined that you cannot misunderstand them, that we are about to study the results in Italy of the victory of an impious Christian over a pious Infidel, in a contest which, if indeed principalities of evil spirit are ever permitted to rule over the darkness of this world, was assuredly by them wholly provoked, and by them finally decided. The war was not actually ended until the battle of Tagliacozzo, fought in August, 1268 ; but you need not recollect that irregular date, or remember it only as three years after the great battle of Welcome, Benevento, which was the decisive one. Recollect, therefore, securely :

1250. The First Trades Revolt in Florence.

1260. Battle of the Arbia.

1265. Battle of Welcome.

Then between the battle of Welcome and of Tagliacozzo, (which you might almost English in the real meaning of it as the battle of Hart's Death : 'cozzo' is a butt or thrust with the horn, and you may well think of the young Conradin as a wild hart or stag of the hills)—between those two battles, in 1266, comes the second and central revolt of the trades in Florence, of which I have to speak in next lecture.

233. The two German princes who perished in these two

battles—Manfred of Tarentum, and his nephew and ward Conradin—are the natural son, and the legitimate grandson of Frederick II. : they are also the last assertors of the infidel German power in south Italy against the Church ; and in alliance with the Saracens ; such alliance having been maintained faithfully ever since Frederick II.'s triumphal entry into Jerusalem, and coronation as its king. Not only a great number of Manfred's forts were commanded by Saracen governors, but he had them also appointed over civil tribunals. My own impression is that he found the Saracens more just and trustworthy than the Christians ; but it is proper to remember the allegations of the Church against the whole Suabian family ; namely, that Manfred had smothered his father Frederick under cushions at Ferentino ; and that, of Frederick's sons, Conrad had poisoned Henry, and Manfred had poisoned Conrad. You will, however, I believe, find the Prince Manfred one of the purest representatives of northern chivalry. Against his nephew, educated in all knightly accomplishment by his mother, Elizabeth of Bavaria, nothing could be alleged by his enemies, even when resolved on his death, but the splendour of his spirit and the brightness of his youth.

234. Of the character of their enemy, Charles of Anjou, there will remain on your minds, after careful examination of his conduct, only the doubt whether I am justified in speaking of him as Christian against Infidel. But you will cease to doubt this when you have entirely entered into the conditions of this nascent Christianity of the thirteenth century. You will find that while men who desire to be virtuous receive it as the mother of virtues, men who desire to be criminal receive it as the forgiver of crimes ; and that therefore, between Ghibelline or Infidel cruelty, and Guelfic or Christian cruelty, there is always this difference,—that the Infidel cruelty is done in hot blood, and the Christian's in cold. I hope (in future lectures on the architecture of Pisa) to illustrate to you the opposition between the Ghibelline Conti, counts, and the Guelfic Visconti, viscounts or “against counts,” which issues, for one thing, in that, by all men blamed as too deliberate, death of the Count Ugolino della Gherardesca. The

Count Ugolino was a traitor, who entirely deserved death ; but another Count of Pisa, entirely faithful to the Ghibelline cause, was put to death by Charles of Anjou, not only in cold blood, but with resolute infliction of Ugolino's utmost grief ; —not in the dungeon, but in the full light of day—his son being first put to death before his eyes. And among the pieces of heraldry most significant in the middle ages, the asp on the shield of the Guelphic viscounts is to be much remembered by you as a sign of this merciless cruelty of mistaken religion ; mistaken, but not in the least hypocritical. It has perfect confidence in itself, and can answer with serenity for all its deeds. The serenity of heart never appears in the guilty Infidels ; they die in despair or gloom, greatly satisfactory to adverse religious minds.

235. The French Pope, then, Urban of Troyes, had sent for Charles of Anjou ; who would not have answered his call, even with all the strength of Anjou and Provence, had not Seylla of the Tyrrhene Sea been on his side. Pisa, with eighty galleys (the Sicilian fleet added to her own), watched and defended the coasts of Rome. An irresistible storm drove her fleet to shelter ; and Charles, in a single ship, reached the mouth of the Tiber, and found lodgings at Rome in the convent of St. Paul. His wife meanwhile spent her dowry in increasing his land army, and led it across the Alps. How he had got his wife, and her dowry, we must hear in Villani's words, as nearly as I can give their force in English, only, instead of the English word pilgrim, I shall use the Italian 'romeo,' for the sake both of all English Juliets, and that you may better understand the close of the sixth canto of the Paradise.

236. "Now the Count Raymond Berenger had for his inheritance all Provence on this side Rhone ; and he was a wise and courteous signor, and of noble state, and virtuous ; and in his time they did honourable things ; and to his court came by custom all the gentlemen of Provence, and France, and Catalonia, for his courtesy and noble state ; and there they made many cobbled verses, and Provençal songs of great sentences."

237. I must stop to tell you that 'cobbled' or 'coupled' verses mean rhymes, as opposed to the dull method of Latin verse ; for we have now got an ear for jingle, and know that dove rhymes to love. Also, "songs of great sentences" mean didactic songs, containing much in little, (like the new didactic Christian painting,) of which an example (though of a later time) will give you a better idea than any description.

"Vraye foy de necessité,
 Non tant seulement d'équité,
 Nous fait de Dieu sept choses croire :
 C'est sa doucee nativité,
 Son baptesme d'humilité,
 Et sa mort, digne de mémoire :
 Son descens en la chartre noire,
 Et sa résurrection, voire ;
 S'ascencion d'auctorité,
 La venné judicatoire,
 On ly bons seront mis en gloire,
 Et ly mals en adversité."

238. "And while they were making these cobbled verses and harmonious creeds, there came a romeo to court, returning from the shrine of St. James." I must stop again just to say that he ought to have been called a pellegrino, not a romeo, for the three kinds of wanderers are,—Palmer, one who goes to the Holy Land ; Pilgrim, one who goes to Spain ; and Romeo, one who goes to Rome. Probably this romeo had been to both. "He stopped at Count Raymond's court, and was so wise and worthy (*valoroso*), and so won the Count's grace, that he made him his master and guide in all things. Who also, maintaining himself in honest and religious customs of life, in a little time, by his industry and good sense, doubled the Count's revenues three times over, maintaining always a great and honoured court. Now the Count had four daughters, and no son ; and by the sense and provision of the good romeo—(I can do no better than translate 'procaccio' provision, but it is only a makeshift for the word derived from *procax*, meaning the general talent of prudent impudence, in

getting forward ; 'forwardness,' has a good deal of the true sense, only diluted ;)—well, by the sense and—progressive faculty, shall we say ?—of the good pilgrim, he first married the eldest daughter, by means of money, to the good King Louis of France, saying to the Count, 'Let me alone,—Lasciami-fare—and never mind the expense, for if you marry the first one well, I'll marry you all the others cheaper, for her relationship.'

239. "And so it fell out, sure enough ; for incontinently the King of England (Henry III.) because he was the King of France's relation, took the next daughter, Eleanor, for very little money indeed ; next, his natural brother, elect King of the Romans, took the third ; and, the youngest still remaining unmarried,—says the good romeo, 'Now for this one, I will you to have a strong man for son-in-law, who shall be thy heir ;'—and so he brought it to pass. For finding Charles, Count of Anjou, brother of the King Louis, he said to Raymond, 'Give her now to him, for his fate is to be the best man in the world,'—prophesying of him. And so it was done. And after all this it came to pass, by envy which ruins all good, that the barons of Provence became jealous of the good romeo, and accused him to the Count of having ill-guided his goods, and made Raymond demand account of them. Then the good romeo said, 'Count, I have served thee long, and have put thee 'from little state into mighty, and for this, by false counsel of thy people, thou art little grateful. I came into thy court a poor romeo ; I have lived honestly on thy means ; now, make to be given to me my little mule and my staff and my wallet, as I came, and I will make thee quit of all my service.' The Count would not he should go ; but for nothing would he stay ; and so he came, and so he departed, that no one ever knew whence he had come, nor whither he went. It was the thought of many that he was indeed a sacred spirit."

240. This pilgrim, you are to notice, is put by Dante in the orb of justice, as a just servant ; the Emperor Justinian being the image of a just ruler. Justinian's law-making turned out well for England ; but the good romeo's match-making ended

ill for it ; and for Rome, and Naples also. For Beatrice of Provence resolved to be a queen like her three sisters, and was the prompting spirit of Charles's expedition to Italy. She was crowned with him, Queen of Apulia and Sicily, on the day of the Epiphany, 1265 ; she and her husband bringing gifts that day of magical power enough ; and Charles, as soon as the feast of coronation was over, set out to give battle to Manfred and his Saracens. "And this Charles," says Villani, "was wise, and of sane counsel ; and of prowess in arms, and fierce, and much feared and redoubted by all the kings in the world ;—magnanimous and of high purposes ; fearless in the carrying forth of every great enterprise ; firm in every adversity ; a verifier of his every word ; speaking little,—doing much ; and scarcely ever laughed, and then but a little ; sincere, and without flaw, as a religious and catholic person ; stern in justice, and fierce in look ; tall and nervous in person, olive coloured, and with a large nose, and well he appeared a royal majesty more than other men. Much he watched, and little he slept ; and used to say that so much time as one slept, one lost ; generous to his men-at-arms, but covetous to acquire land, signory, and coin, come how it would, to furnish his enterprises and wars : in courtiers, servants of pleasure, or jocular persons, he delighted never."

241. To this newly crowned and resolute king, riding south from Rome, Manfred, from his vale of Nocera under Mount St. Angelo, sends to offer conditions of peace. Jehu the son of Nimshi is not swifter of answer to Ahaziah's messenger than the fiery Christian king, in his 'What hast thou to do with peace?' Charles answers the messengers with his own lips : "Tell the Sultan of Nocera, this day I will put him in hell, or he shall put me in paradise."

242. Do not think it the speech of a hypocrite. Charles was as fully prepared for death that day as ever Scotch Covenanters fighting for his Holy League ; and as sure that death would find him, if it found, only to glorify and bless. Balfour of Burley against Claverhouse is not more convinced in heart that he draws the sword of the Lord and of Gideon. But all the knightly pride of Claverhouse himself is knit to-

gether, in Charles, with fearless faith, and religious wrath. "This Saracen scum, led by a bastard German,—traitor to his creed, usurper among his race,—dares it look me, a Christian knight, a prince of the house of France, in the eyes? Tell the Sultan of Nocera, to-day I put him in hell, or he puts me in paradise."

They are not passionate words neither; any more than hypocritical ones. They are measured, resolute, and the fewest possible. He never wasted words, nor showed his mind, but when he meant it should be known.

243. The messenger returned, thus answered; and the French king rode on with his host. Manfred met him in the plain of Grandella, before Benevento. I have translated the name of the fortress 'Welcome.' It was altered, as you may remember, from Maleventum, for better omen; perhaps, originally, only *μαλοεις*—a rock full of wild goats?—associating it thus with the meaning of Tagliacozzo.

244. Charles divided his army into four companies. The captain of his own was our English Guy de Montfort, on whom rested the power and the fate of his grandfather, the pursuer of the Waldensian shepherds among the rocks of the wild goats. The last, and it is said the goodliest, troop was of the exiled Guelphs of Florence, under Guido Guerra, whose name you already know. "These," said Manfred, as he watched them ride into their ranks, "cannot lose to-day." He meant that if he himself was the victor, he would restore these exiles to their city. The event of the battle was decided by the treachery of the Count of Caserta, Manfred's brother-in-law. At the end of the day only a few knights remained with him, whom he led in the last charge. As he helmed himself, the crest fell from his helmet. "Hoc est signum Dei," he said,—so accepting what he saw to be the purpose of the Ruler of all things; not claiming God as his friend, not asking anything of Him, as if His purpose could be changed; not fearing Him as an enemy; but accepting simply His sign that the appointed day of death was come. He rode into the battle armed like a nameless soldier, and lay unknown among the dead.

245. And in him died all southern Italy. Never, after that day's treachery, did her nobles rise, or her people prosper.

Of the finding of the body of Manfred, and its casting forth, accursed, you may read, if you will, the story in Dante. I trace for you to-day rapidly only the acts of Charles after this victory, and its consummation, three years later, by the defeat of Conradin.

The town of Benevento had offered no resistance to Charles, but he gave it up to pillage, and massacred its inhabitants. The slaughter, indiscriminate, continued for eight days; the women and children were slain with the men, being of Saracen blood. Manfred's wife, Sybil of Epirus, his children, and all his barons, died, or were put to death, in the prisons of Provence. With the young Conrad, all the faithful Ghibelline knights of Pisa were put to death. The son of Frederick of Antioch, who drove the Guelphs from Florence, had his eyes torn out, and was hanged, he being the last child of the house of Suabia. Twenty-four of the barons of Calabria were executed at Gallipoli, and at Rome. Charles cut off the feet of those who had fought for Conrad; then—fearful lest they should be pitied—shut them into a house of wood, and burned them. His lieutenant in Sicily, William of the Standard, besieged the town of Augusta, which defended itself with some fortitude, but was betrayed, and all its inhabitants, (who must have been more than three thousand, for there were a thousand able to bear arms,) massacred in cold blood; the last of them searched for in their hiding-places, when the streets were empty, dragged to the sea-shore, then beheaded, and their bodies thrown into the sea. Throughout Calabria the Christian judges of Charles thus forgave his enemies. And the Mohammedan power and heresy ended in Italy, and she became secure in her Catholic creed.

246. Not altogether secure under French dominion. After fourteen years of misery, Sicily sang her angry vespers, and a Calabrian admiral burnt the fleet of Charles before his eyes, where Scylla rules her barking Salamis. But the French king died in prayerful peace, receiving the sacrament with these words of perfectly honest faith, as he reviewed his past

life : “Lord God, as I truly believe that you are my Saviour, so I pray you to have mercy on my soul ; and as I truly made the conquest of Sicily more to serve the Holy Church than for my own covetousness, so I pray you to pardon my sins.”

247. You are to note the two clauses of this prayer. He prays absolute mercy, on account of his faith in Christ ; but remission of purgatory, in proportion to the quantity of good work he has done, or meant to do, as against evil. You are so much wiser in these days, you think, not believing in purgatory ; and so much more benevolent,—not massacring women and children. But we must not be too proud of not believing in purgatory, unless we are quite sure of our real desire to be purified : and as to our not massacring children, it is true that an English gentleman will not now himself willingly put a knife into the throat either of a child or a lamb ; but he will kill any quantity of children by disease in order to increase his rents, as unconcernedly as he will eat any quantity of mutton. And as to absolute massacre, I do not suppose a child feels so much pain in being killed as a full-grown man, and its life is of less value to it. No pain either of body or thought through which you could put an infant, would be comparable to that of a good son, or a faithful lover, dying slowly of a painful wound at a distance from a family dependent upon him, or a mistress devoted to him. But the victories of Charles, and the massacres, taken in sum, would not give a muster-roll of more than twenty thousand dead ; men, women, and children counted all together. On the plains of France, since I first began to speak to you on the subject of the arts of peace, at least five hundred thousand men, in the prime of life, have been massacred by the folly of one Christian emperor, the insolence of another, and the mingling of mean rapacity with meaner vanity, which Christian nations now call ‘patriotism.’

248. But that the Crusaders, (whether led by St. Louis or by his brother,) who habitually lived by robbery, and might be swiftly enraged to murder, were still too savage to conceive the spirit or the character of this Christ whose cross they wear, I have again and again alleged to you ; not, I im-

agine, without question from many who have been accustomed to look to these earlier ages as authoritative in doctrine, if not in example. We alike err in supposing them more spiritual or more dark, than our own. They had not yet attained to the knowledge which we have despised, nor dispersed from their faith the shadows with which we have again overclouded ours.

Their passions, tumultuous and merciless as the Tyrrhene Sea, raged indeed with the danger, but also with the uses, of naturally appointed storm; while ours, pacific in corruption, languish in vague marenna of misguided pools; and are pestilential most surely as they retire.

LECTURE X.

FLEUR DE LYS.

249. THROUGH all the tempestuous winter which during the period of history we have been reviewing, weakened, in their war with the opposed rocks of religious or knightly pride, the waves of the Tuscan Sea, there has been slow increase of the Favonian power which is to bring fruitfulness to the rock, peace to the wave. The new element which is introduced in the thirteenth century, and perfects for a little time the work of Christianity, at least in some few chosen souls, is the law of Order and Charity, of intellectual and moral virtue, which it now became the function of every great artist to teach, and of every true citizen to maintain.

250. I have placed on your table one of the earliest existing engravings by a Florentine hand, representing the conception which the national mind formed of this spirit of order and tranquillity, "Cosmico," or the Equity of Kosmos, not by senseless attraction, but by spiritual thought and law. He stands pointing with his left hand to the earth, set only with tufts of grass; in his right hand he holds the ordered system of the universe—heaven and earth in one orb;—the heaven made cosmic by the courses of its stars; the earth cosmic by

PLATE IX.—THE CHARGE TO ADAM. MODERN ITALIAN.

the seats of authority and fellowship,—castles on the hills and cities in the plain.

251. The tufts of grass under the feet of this figure will appear to you, at first, grotesquely formal. But they are only the simplest expression, in such herbage, of the subjection of all vegetative force to this law of order, equity, or symmetry, which, made by the Greek the principal method of his current vegetative sculpture, subdues it, in the hand of Cora or Trip- tolemus, into the merely triple sceptre, or animates it, in Florence, to the likeness of the Fleur-de-lys.

252. I have already stated to you that if any definite flower is meant by these triple groups of leaves, which take their authoritatively typical form in the crowns of the Cretan and Lacinian Hera, it is not the violet, but the purple iris; or sometimes, as in Pindar's description of the birth of Iamus, the yellow water-flag, which you know so well in spring, by the banks of your Oxford streams.* But, in general, it means simply the springing of beautiful and orderly vegetation in fields upon which the dew falls pure. It is the expression, therefore, of peace on the redeemed and cultivated earth, and of the pleasure of heaven in the uncareful happiness of men clothed without labour, and fed without fear.

253. In the passage, so often read by us, which announces the advent of Christianity as the dawn of peace on earth, we habitually neglect great part of the promise, owing to the false translation of the second clause of the sentence. I cannot understand how it should be still needful to point out to you here in Oxford that neither the Greek words “*ἐν ἀνθρώποις εὐδοκία,*” nor those of the vulgate, “in terra pax hominibus

* In the catalogues of the collection of drawings in this room, and in my “Queen of the Air” you will find all that I would ask you to notice about the various names and kinds of the flower, and their symbolic use.—Note only, with respect to our present purpose, that while the true white lily is placed in the hands of the Angel of the Annunciation even by Florentine artists, in their general design, the fleur-de-lys is given to him by Giovanni Pisano on the façade of Orvieto; and that the flower in the crown-circlets of European kings answers, as I stated to you in my lecture on the Corona, to the Narcissus fillet of early Greece; the crown of abundance and rejoicing.

bonæ voluntatis," in the slightest degree justify our English words, "goodwill to men."

Of God's goodwill to men, and to all creatures, for ever, there needed no proclamation by angels. But that men should be able to please *Him*,—that their wills should be made holy, and they should not only possess peace in themselves, but be able to give joy to their God, in the sense in which He afterwards is pleased with His own baptized Son ;—this was a new thing for Angels to declare, and for shepherds to believe.

254. And the error was made yet more fatal by its repetition in a passage of parallel importance,—the thanksgiving, namely, offered by Christ, that His Father, while He had hidden what it was best to know, not from the wise and prudent, but from some among the wise and prudent, and had revealed it unto babes ; not 'for so it seemed good' in His sight, but 'that there might be well pleasing in His sight,'—namely, that the wise and simple might equally live in the necessary knowledge, and enjoyed presence, of God. And if, having accurately read these vital passages, you then as carefully consider the tenour of the two songs of human joy in the birth of Christ, the Magnificat, and the *Nunc dimittis*, you will find the theme of both to be, not the newness of blessing, but the equity— which disappoints the cruelty and humbles the strength of men ; which scatters the proud in the imagination of their hearts ; which fills the hungry with good things ; and is not only the glory of Israel, but the light of the Gentiles.

255. As I have been writing these paragraphs, I have been checking myself almost at every word,—wondering, Will they be restless on their seats at this, and thinking all the while that they did not come here to be lectured on Divinity ? You may have been a little impatient,—how could it well be otherwise ? Had I been explaining points of anatomy, and showing you how you bent your necks and straightened your legs, you would have thought me quite in my proper function ; because then, when you went with a party of connoisseurs through the Vatican, you could point out to them the insertion of the clavicle in the Apollo Belvidere ; and in the Sistine Chapel the perfectly accurate delineation of the tibia in the legs of Christ.

Doubtless ; but you know I am lecturing at present on the goffi, and not on Michael Angelo ; and the goffi are very careless about clavicles and shin-bones ; so that if, after being lectured on anatomy, you went into the Campo Santo of Pisa, you would simply find nothing to look at, except three tolerably well-drawn skeletons. But if after being lectured on theology, you go into the Campo Santo of Pisa, you will find not a little to look at, and to remember.

256. For a single instance, you know Michael Angelo is admitted to have been so far indebted to these goffi as to borrow from the one to whose study of mortality I have just referred, Orcagna, the gesture of his Christ in the Judgment. He borrowed, however, accurately speaking, the position only, not the gesture ; nor the meaning of it.* You all remember the action of Michael Angelo's Christ,—the right hand raised as if in violence of reprobation ; and the left closed across His breast, as refusing all mercy. The action is one which appeals to persons of very ordinary sensations, and is very naturally adopted by the Renaissance painter, both for its popular effect, and its capabilities for the exhibition of his surgical science. But the old painter-theologian, though indeed he showed the right hand of Christ lifted, and the left hand laid across His breast, had another meaning in the actions. The fingers of the left hand are folded, in both the figures ; but in Michael Angelo's as if putting aside an appeal ; in Orcagna's, the fingers are bent to draw back the drapery from the right side. The right hand is raised by Michael Angelo as in anger ; by Orcagna, only to show the wounded palm. And as, to the believing disciples, He showed them His hands and His side, so that they were glad,—so, to the unbelievers, at their judgment, He shows the wounds in hand and side. They shall look on Him whom they pierced.

257. And thus, as we follow our proposed examination of the arts of the Christian centuries, our understanding of their work will be absolutely limited by the degree of our sympathy with the religion which our fathers have bequeathed to us.

* I found all this in M. Didron's *Iconographie*, above quoted ; I had never noticed the difference between the two figures myself.

You cannot interpret classic marbles without knowing and loving your Pindar and Æschylus, neither can you interpret Christian pictures without knowing and loving your Isaiah and Matthew. And I shall have continually to examine texts of the one as I would verses of the other ; nor must you retract yourselves from the labour in suspicion that I desire to betray your scepticism, or undermine your positivism, because I recommend to you the accurate study of books which have hitherto been the light of the world.

258. The change, then, in the minds of their readers at this date, which rendered it possible for them to comprehend the full purport of Christianity, was in the rise of the new desire for equity and rest, amidst what had hitherto been mere lust for spoil, and joy in battle. The necessity for justice was felt in the now extending commerce ; the desire of rest in the now pleasant and fitly furnished habitation ; and the energy which formerly could only be satisfied in strife, now found enough both of provocation and antagonism in the invention of art, and the forces of nature. I have in this course of lectures endeavoured to fasten your attention on the Florentine Revolution of 1250, because its date is so easily memorable, and it involves the principles of every subsequent one, so as to lay at once the foundations of whatever greatness Florence afterwards achieved by her mercantile and civic power. But I must not close even this slight sketch of the central history of Val d'Arno without requesting you, as you find time, to associate in your minds, with this first revolution, the effects of two which followed it, being indeed necessary parts of it, in the latter half of the century.

259. Remember then that the first, in 1250, is embryonic ; and the significance of it is simply the establishment of order, and justice against violence and iniquity. It is equally against the power of knights and priests, so far as either are unjust, —not otherwise.

When Manfred fell at Benevento, his lieutenant, the Count Guido Novello, was in command of Florence. He was just, but weak ; and endeavoured to temporize with the Guelphs. His effort ought to be notable to you, because it was one of

the wisest and most far-sighted ever made in Italy ; but it failed for want of resolution, as the gentlest and best men are too apt to fail. He brought from Bologna two knights of the order—then recently established—of *joyful* brethren ; afterwards too fatally corrupted, but at this time pure in purpose. They constituted an order of chivalry which was to maintain peace, obey the Church, and succour widows and orphans ; but to be bound by no monastic vows. Of these two knights, he chose one Guelph, the other Ghibelline ; and under their balanced power Guido hoped to rank the forces of the civil, manufacturing, and trading classes, divided into twelve corporations of higher and lower arts.* But the moment this beautiful arrangement was made, all parties—Guelph, Ghibelline, and popular,—turned unanimously against Count Guido Novello. The benevolent but irresolute captain indeed gathered his men into the square of the Trinity ; but the people barricaded the streets issuing from it ; and Guido, heartless, and unwilling for civil warfare, left the city with his Germans in good order. And so ended the incursion of the infidel Tedeschi for this time. The Florentines then dismissed the merry brothers whom the Tedeschi had set over them, and besought help from Orvieto and Charles of Anjou ; who sent them Guy de Montfort and eight hundred French riders ; the blessing of whose presence thus, at their own request, was granted them on Easter Day, 1267.

On Candlemas, if you recollect, 1251, they open their gates to the Germans ; and on Easter, 1267, to the French.

260. Remember, then, this revolution, as coming between the battles of Welcome and Tagliacozzo ; and that it expresses the lower revolutionary temper of the trades, with English and French assistance. Its immediate result was the appointment of five hundred and sixty lawyers, woolcombers, and butchers, to deliberate upon all State questions,—under which happy ordinances you will do well, in your own reading, to

* The seven higher arts were, Lawyers, Physicians, Bankers, Merchants of Foreign Goods, Wool Manufacturers, Silk Manufacturers, Furriers. The five lower arts were, Retail Sellers of Cloth, Butchers, Shoemakers, Masons and Carpenters, Smiths.

leave Florence, that you may watch, for a while, darling little Pisa, all on fire for the young Conradin. She sent ten vessels across the Gulf of Genoa to fetch him ; received his cavalry in her plain of Sarzana ; and putting five thousand of her own best sailors into thirty ships, sent them to do what they could, all down the coast of Italy. Down they went ; startling Gaeta with an attack as they passed ; found Charles of Anjou's French and Sicilian fleet at Messina, fought it, beat it, and burned twenty-seven of its ships.

261. Meantime, the Florentines prospered as they might with their religious-democratic constitution,—until the death, in the odour of sanctity, of Charles of Anjou, and of that Pope Martin IV. whose tomb was destroyed with Urban's at Perugia. Martin died, as you may remember, of eating Bolsena eels,—that being his share in the miracles of the lake ; and you will do well to remember at the same time, that the price of the lake eels was three soldi a pound ; and that Niccola of Pisa worked at Siena for six soldi a day, and his son Giovanni for four.

262. And as I must in this place bid farewell, for a time, to Niccola and to his son, let me remind you of the large commission which the former received on the occasion of the battle of Tagliacozzo, and its subsequent massacres, when the victor, Charles, having to his own satisfaction exterminated the seed of infidelity, resolves, both in thanksgiving, and for the sake of the souls of the slain knights for whom some hope might yet be religiously entertained, to found an abbey on the battle-field. In which purpose he sent for Niccola to Naples, and made him build on the field of Tagliacozzo, a church and abbey of the richest ; and caused to be buried therein the infinite number of the bodies of those who died in that battle day ; ordering farther, that, by many monks, prayer should be made for their souls, night and day. In which fabric the king was so pleased with Niccola's work that he rewarded and honoured him highly.

263. Do you not begin to wonder a little more what manner of man this Nicholas was, who so obediently throws down the towers which offend the Ghibellines, and so skilfully puts up

the pinnacles which please the Guelphs? A passive power, seemingly, he ;—plastic in the hands of any one who will employ him to build, or to throw down. On what exists of evidence, demonstrably in these years here is the strongest brain of Italy, thus for six shilling a day doing what it is bid.

264. I take farewell of him then, for a little time, ratifying to you, as far as my knowledge permits, the words of my first master in Italian art, Lord Lindsay.

“In comparing the advent of Niccola Pisano to that of the sun at his rising, I am conscious of no exaggeration ; on the contrary, it is the only simile by which I can hope to give you an adequate impression of his brilliancy and power relatively to the age in which he flourished. Those sons of Erebus, the American Indians, fresh from their traditional subterranean world, and gazing for the first time on the gradual dawning of the day in the East, could not have been more dazzled, more astounded, when the sun actually appeared, than the popes and podestas, friars and freemasons must have been in the thirteenth century, when from among the Biduinos, Bonannos, and Antealmis of the twelfth, Niccola emerged in his glory, sovereign and supreme, a fount of light, diffusing warmth and radiance over Christendom. It might be too much to parallel him in actual genius with Dante and Shakspeare ; they stand alone and unapproachable, each on his distinct pinnacle of the temple of Christian song ; and yet neither of them can boast such extent and durability of influence, for whatever of highest excellence has been achieved in sculpture and painting, not in Italy only, but throughout Europe, has been in obedience to the impulse he primarily gave, and in following up the principle which he first struck out.

“His latter days were spent in repose at Pisa, but the precise year of his death is uncertain ; Vasari fixes it in 1275 ; it could not have been much later. He was buried in the Campo Santo. Of his personal character we, alas ! know nothing ; even Shakspeare is less a stranger to us. But that it was noble, simple, and consistent, and free from the petty foibles that too frequently beset genius, may be fairly pre-

sumed from the works he has left behind him, and from the eloquent silence of tradition."

265. Of the circumstances of Niccola Pisano's death, or the ceremonials practised at it, we are thus left in ignorance.

The more exemplary death of Charles of Anjou took place on the 7th of January, then, 1285; leaving the throne of Naples to a boy of twelve; and that of Sicily, to a Prince of Spain. Various discord, between French, Spanish, and Calabrese vices, thenceforward paralyzes South Italy, and Florence becomes the leading power of the Guelph faction. She had been inflamed and pacified through continual paroxysms of civil quarrel during the decline of Charles's power; but, throughout, the influence of the nobles declines, by reason of their own folly and insolence; while the people, though with no small degree of folly and insolence on their own side, keep hold of their main idea of justice. In the meantime, similar assertions of law against violence, and the nobility of useful occupation, as compared with that of idle rapine, take place in Bologna, Siena, and even at Rome, where Bologna sends her senator, Branca Leone, (short for Brancadi-Leone, Lion's Grip,) whose inflexible and rightly guarded reign of terror to all evil and thievish persons, noble or other, is one of the few passages of history during the middle ages, in which the real power of civic virtue may be seen exercised without warping by party spirit, or weakness of vanity or fear.

266. And at last, led by a noble, Giano della Bella, the people of Florence write and establish their final condemnation of noblesse living by rapine, those 'Ordinamenti della Giustizia,' which practically excluded all idle persons from government, and determined that the priors, or leaders of the State, should be priors, or leaders of its arts and productive labour; that its head 'podesta' or 'power' should be the standard-bearer of justice; and its council or parliament composed of charitable men, or good men: "boni viri," in the sense from which the French formed their noun 'bonté.'

The entire governing body was thus composed, first, of the Podestas, standard-bearer of justice; then of his military captain; then of his lictor, or executor; then of the twelve priors

of arts and liberties—properly, deliberators on the daily occupations, interests, and pleasures of the body politic ;—and, finally, of the parliament of “kind men,” whose business was to determine what kindness could be shown to other states, by way of foreign policy.

267. So perfect a type of national government has only once been reached in the history of the human race. And in spite of the seeds of evil in its own impatience, and in the gradually increasing worldliness of the mercantile body ; in spite of the hostility of the angry soldier, and the malignity of the sensual priest, this government gave to Europe the entire cycle of Christian art, properly so called, and every highest Master of labour, architectural, scriptural, or pictorial, practised in true understanding of the faith of Christ ;—Orcagna, Giotto, Brunelleschi, Lionardo, Luini as his pupil, Lippi, Luca, Angelico, Botticelli, and Michael Angelo.

268. I have named two men, in this group, whose names are more familiar to your ears than any others, Angelico and Michael Angelo ;—who yet are absent from my list of those whose works I wish you to study, being both extravagant in their enthusiasm,—the one for the nobleness of the spirit, and the other for that of the flesh. I name them now, because the gifts each had were exclusively Florentine ; in whatever they have become to the mind of Europe since, they are utterly children of the Val d’Arno.

269. You are accustomed, too carelessly, to think of Angelico as a child of the Church, rather than of Florence. He was born in 1387,—just eleven years, that is to say, after the revolt of Florence *against* the Church, and ten after the endeavour of the Church to recover her power by the massacres of Faenza and Cesena. A French and English army of pillaging riders were on the other side of the Alps,—six thousand strong ; the Pope sent for it ; Robert Cardinal of Geneva brought it into Italy. The Florentines fortified their Apennines against it ; but it took winter quarters at Cesena, where the Cardinal of Geneva massacred five thousand persons in a day, and the children and sucklings were literally dashed against the stones.

270. That was the school which the Christian Church had prepared for their brother Angelico. But Fésolo, secluding him in the shade of her mount of Olives, and Florence revealing to him the true voice of his Master, in the temple of St. Mary of the Flower, taught him his lesson of peace on earth, and permitted him his visions of rapture in heaven. And when the massacre of Cesena was found to have been in vain, and the Church was compelled to treat with the revolted cities who had united to mourn for her victories, Florence sent her a living saint, Catherine of Siena, for her political Ambassador.

271. Of Michael Angelo I need not tell you : of the others, we will read the lives, and think over them one by one ; the great fact which I have written this course of lectures to enforce upon your minds is the dependence of all the arts on the virtue of the State, and its kindly order.

The absolute mind and state of Florence, for the seventy years of her glory, from 1280 to 1350, you find quite simply and literally described in the 112th Psalm, of which I read you the descriptive verses, in the words in which they sang it, from this typically perfect manuscript of the time :—

Gloria et divitie in domo ejus, justitia ejus manet in seculum seculi.
 Exortum est in tenebris lumen rectis, misericors, et miserator, et justus.
 Jocundus homo, qui miseretur, et commodat : disponet sermones suos
 in judicio.
 Dispersit, dedit pauperibus ; justitia ejus manet in seculum seculi ;
 cornu ejus exaltabitur in gloria.

I translate simply, praying you to note as the true one, the *literal* meaning of every word :—

Glory and riches are in his house. His justice remains for ever.
 Light is risen in darkness for the straightforward people.
 He is merciful in heart, merciful in deed, and just.
 A jocund man ; who is merciful, and lends.
 He will dispose his words in judgment.
 He hath dispersed. He hath given to the poor. His justice remains
 for ever. His horn shall be exalted in glory.

272. With vacillating, but steadily prevailing effort, the Florentines maintained this life and character for full half a century.

You will please now look at my staff of the year 1300,* adding the names of Dante and Orcagna, having each their separate masterful or prophetic function.

That is Florence's contribution to the intellectual work of the world during these years of justice. Now, the promise of Christianity is given with lesson from the fleur-de-lys: Seek ye first the royalty of God, and His justice, "and all these things," material wealth, "shall be added unto you." It is a perfectly clear, perfectly literal,—never failing and never unfulfilled promise. There is no instance in the whole cycle of history of its not being accomplished,—fulfilled to the uttermost, with full measure, pressed down, and running over.

273. Now hear what Florence was, and what wealth she had got by her justice. In the year 1330, before she fell, she had within her walls a hundred and fifty thousand inhabitants, of whom all the men—(laity)—between the ages of fifteen and seventy, were ready at an instant to go out to war, under their banners, in number twenty-four thousand. The army of her entire territory was eighty thousand; and within it she counted fifteen hundred noble families, every one absolutely submissive to her gonfalier of justice. She had within her walls a hundred and ten churches, seven priories, and thirty hospitals for the sick and poor; of foreign guests, on the average, fifteen hundred, constantly. From eight to ten thousand children were taught to read in her schools. The town was surrounded by some fifty square miles of uninterrupted garden, of olive, corn, vine, lily, and rose.

And the monetary existence of England and France depended upon her wealth. Two of her bankers alone had lent Edward III. of England five millions of money (in sterling value of this present hour).

274. On the 10th of March, 1337, she was first accused, with truth, of selfish breach of treaties. On the 10th of April, all her merchants in France were imprisoned by Philip of

* Page 33 in my second lecture on Engraving.

Valois ; and presently afterwards Edward of England failed, quite in your modern style, for his five millions. These money losses would have been nothing to her ; but on the 7th of August, the captain of her army, Pietro de' Rossi of Parma, the unquestioned best knight in Italy, received a chance spear-stroke before Monselice, and died next day. He was the Bayard of Italy ; and greater than Bayard, because living in a nobler time. He never had failed in any military enterprise, nor ever stained success with cruelty or shame. Even the German troops under him loved him without bounds. To his companions he gave gifts with such largesse, that his horse and armour were all that at any time he called his own. Beautiful and pure as Sir Galahad, all that was brightest in womanhood watched and honoured him.

And thus, 8th August, 1337, he went to his own place.—To-day I trace the fall of Florence no more.

I will review the points I wish you to remember ; and briefly meet, so far as I can, the questions which I think should occur to you.

275. I have named Edward III. as our heroic type of Franchise. And yet I have but a minute ago spoken of him as 'failing' in quite your modern manner. I must correct my expression :—he had no intent of failing when he borrowed ; and did not spend his money on himself. Nevertheless, I gave him as an example of frankness ; but by no means of honesty. He is simply the boldest and royalet of Free Riders ; the campaign of Crecy is, throughout, a mere pillaging foray. And the first point I wish you to notice is the difference in the pecuniary results of living by robbery, like Edward III., or by agriculture and just commerce, like the town of Florence. That Florence can lend five millions to the King of England, and loose them with little care, is the result of her olive gardens and her honesty. Now hear the financial phenomena attending military exploits, and a life of pillage.

276. I give you them in this precise year, 1338, in which the King of England failed to the Florentines.

“He obtained from the prelates, barons, and knights of the

PLATE X.—THE NATIVITY. GIOVANNI PISANO.

shires, one half of their wool for this year—a very valuable and extraordinary grant. He seized all the tin” (above-ground, you mean Mr. Henry!) “in Cornwall and Devonshire, took possession of the lands of all priories alien, and of the money, jewels, and valuable effects of the Lombard merchants. He demanded certain quantities of bread, corn, oats, and bacon, from each county; borrowed their silver plate from many abbeys, as well as great sums of money both abroad and at home; and pawned his crown for fifty thousand florins.”*

He pawns his queen's jewels next year; and finally summons all the gentlemen of England who had forty pounds a year, to come and receive the honour of knighthood, or pay to be excused!

277. II. The failures of Edward, or of twenty Edwards, would have done Florence no harm, had she remained true to herself, and to her neighbouring states. Her merchants only fall by their own increasing avarice; and above all by the mercantile form of pillage, usury. The idea that money could beget money, though more absurd than alchemy, had yet an apparently practical and irresistibly tempting confirmation in the wealth of villains, and the success of fools. Alchemy, in its day, led to pure chemistry; and calmly yielded to the science it had fostered. But all wholesome indignation against usurers was prevented, in the Christian mind, by wicked and cruel religious hatred of the race of Christ. In the end, Shakspeare himself, in his fierce effort against the madness, suffered himself to miss his mark by making his usurer a Jew: the Franciscan institution of the Mount of Pity failed before the lust of Lombardy, and the logic of Augsburg; and, to this day, the worship of the Immaculate Virginity of Money, mother of the Omnipotence of Money, is the Protestant form of Madonna worship.

278. III. The usurer's fang, and the debtor's shame, might both have been trodden down under the feet of Italy, had her knights and her workmen remained true to each other. But the brotherhoods of Italy were not of Cain to Abel—but of Cain to Cain. Every man's sword was against his fellow.

* Henry's "History of England," book iv., chap. i.

Pisa sank before Genoa at Meloria, the Italian *Ægos-Potamos*; Genoa before Venice in the war of Chiozza, the Italian siege of Syracuse. Florence sent her Brunelleschi to divert the waves of Serchio against the walls of Lucca; Lucca her Castuccio, to hold mock tournaments before the gates of vanquished Florence. The weak modern Italian reviles or bewails the acts of foreign races, as if his destiny had depended upon these; let him at least assume the pride, and bear the grief, of remembering that, among all the virgin cities of his country, there has not been one which would not ally herself with a stranger, to effect a sister's ruin.

279. Lastly. The impartiality with which I have stated the acts, so far as known to me, and impulses, so far as discernible by me, of the contending Church and Empire, cannot but give offence, or provoke suspicion, in the minds of those among you who are accustomed to hear the cause of Religion supported by eager disciples, or attacked by confessed enemies. My confession of hostility would be open, if I were an enemy indeed; but I have never possessed the knowledge, and have long ago been cured of the pride, which makes men fervent in witness for the Church's virtue, or insolent in declamation against her errors. The will of Heaven, which grants the grace and ordains the diversities of Religion, needs no defence, and sustains no defeat, by the humours of men; and our first business in relation to it is to silence our wishes, and to calm our fears. If, in such modest and disciplined temper, you arrange your increasing knowledge of the history of mankind, you will have no final difficulty in distinguishing the operation of the Master's law from the consequences of the disobedience to it which He permits; nor will you respect the law less, because, accepting only the obedience of love, it neither hastily punishes, nor pompously rewards, with what men think reward or chastisement. Not always under the feet of Korah the earth is rent; not always at the call of Elijah the clouds gather; but the guarding mountains for ever stand round about Jerusalem; and the rain, miraculous evermore, makes green the fields for the evil and the good.

280. And if you will fix your minds only on the conditions

of human life which the Giver of it demands, "He hath shown thee, oh man, what is good, and what doth thy Lord require of thee, but to do justice, and to love mercy, and to walk humbly with thy God," you will find that such obedience is always acknowledged by temporal blessing. If, turning from the manifest miseries of cruel ambition, and manifest wanderings of insolent belief, you summon to your thoughts rather the state of unrecorded multitudes, who laboured in silence, and adored in humility, widely as the snows of Christendom brought memory of the Birth of Christ, or her spring sunshine, of His Resurrection, you may know that the promise of the Bethlehem angels has been literally fulfilled; and will pray that your English fields, joyfully as the banks of Arno, may still dedicate their pure lilies to St. Mary of the Flower.

APPENDIX.

(NOTES ON THE PLATES ILLUSTRATING THIS VOLUME.)

IN the delivery of the preceding Lectures, some account was given of the theologic design of the sculptures by Giovanni Pisano at Orvieto, which I intended to have printed separately, and in more complete form, in this Appendix. But my strength does not now admit of my fulfilling the half of my intentions, and I find myself, at present, tired, and so dead in feeling, that I have no quickness in interpretation, or skill in description of emotional work. I must content myself, therefore, for the time, with a short statement of the points which I wish the reader to observe in the Plates, and which were left unnoticed in the text.

The frontispiece is the best copy I can get, in permanent materials, of a photograph of the course of the Arno, through Pisa, before the old banks were destroyed. Two arches of the Ponte-a-Mare which was carried away in the inundation of 1870, are seen in the distance ; the church of La Spina, in its original position overhanging the river ; and the buttressed and rugged walls of the mediæval shore. Never more, any of these, to be seen in reality, by living eyes.

PLATE I.—A small portion of a photograph of Nicolo Pisano's Adoration of the Magi, on the pulpit of the Pisan Baptistery. The intensely Greek character of the heads, and the severely impetuous chiselling (learned from Late Roman rapid work), which drives the lines of the drapery nearly straight, may be seen better in a fragment of this limited measure than in the crowded massing of the entire subject. But it may be observed also that there is both a thoughtful-

ness and a tenderness in the features, whether of the Virgin or the attendant angel, which already indicate an aim beyond that of Greek art.

PLATE II.—The Pulpit of the Baptistery (of which the preceding plate represents a portion). I have only given this general view for convenience of reference. Beautiful photographs of the subject on a large scale are easily attainable.

PLATE III.—The Fountain of Perugia. Executed from a sketch by Mr. Arthur Severn. The perspective of the steps is not quite true; we both tried to get it right, but found that it would be a day or two's work, to little purpose,—and so let them go at hazard. The inlaid pattern behind is part of the older wall of the cathedral; the late door is of course inserted.

PLATE IV., LETTER E.—From Norman Bible in the British Museum; showing the moral temper which regulated common ornamentation in the twelfth century.

PLATE V.—Door of the Baptistery at Pisa. The reader must note that, although these plates are necessarily, in fineness of detail, inferior to the photographs from which they are taken, they have the inestimable advantage of permanence, and will not fade away into spectres when the book is old. I am greatly puzzled by the richness of the current ornamentation on the main pillars, as opposed to the general severity of design. I never can understand how the men who indulged in this flowing luxury of foliage were so stern in their masonry and figure-draperies.

PLATE VI.—Part of the lintel of the door represented on Plate V., enlarged. I intended, in the Lecture on Marble Couchant, to have insisted, at some length, on the decoration of the lintel and side-posts, as one of the most important phases of mystic ecclesiastical sculpture. But I find the materials furnished by Lucca, Pisa, and Florence, for such an essay are far too rich to be examined cursorily; the treatment even of this single lintel could scarcely be enough explained in the close of the Lecture. I must dwell on some points of it now.

Look back to Section 175 in "Aratra Pentelici," giving

statement of the four kinds of relief in sculpture. The uppermost of these plinths is of the kind I have called 'round relief'; you might strike it out on a coin. The lower is 'foliate relief'; it looks almost as if the figures had been cut out of one layer of marble, and laid against another behind it.

The uppermost, at the distance of my diagram, or in nature itself, would scarcely be distinguished at a careless glance from an egg-and-arrow moulding. You could not have a more simple or forcible illustration of my statement in the first chapter of "Aratra," that the essential business of sculpture is to produce a series of agreeable bosses or rounded surfaces; to which, if possible, some meaning may afterwards be attached. In the present instance, every egg becomes an angel, or evangelist, and every arrow a lily, or a wing.* The whole is in the most exquisitely finished Byzantine style.

I am not sure of being right in my interpretation of the meaning of these figures; but I think there can be little question about it. There are eleven altogether; the three central, Christ with His mother and St. Joseph; then, two evangelists, with two alternate angels, on each side. Each of these angels carries a rod, with a fleur-de-lys termination; their wings decorate the intermediate ridges (formed, in a pure Greek moulding, by the arrows); and, behind the heads of all the figures, there is now a circular recess; once filled, I doubt not, by a plate of gold. The Christ, and the Evangelists, all carry books, of which each has a mosaic, or intaglio ornament, in the shape of a cross. I could not show you a more severe or perfectly representative piece of *architectural* sculpture.

The heads of the eleven figures are as simply decorative as the ball flowers are in our English Gothic tracery; the slight irregularity produced by different gesture and character giving precisely the sort of change which a good designer wishes to see in the parts of a consecutive ornament.

* In the contemporary south door of the Duomo of Genoa, the Greek moulding is used without any such transformation.

The moulding closes at each extremity with a palm-tree, correspondent in execution with those on coins of Syracuse ; for the rest, the interest of it consists only in these slight variations of attitude by which the figures express wonder or concern at some event going on in their presence. They are looking down ; and I do not doubt, are intended to be the heavenly witnesses of the story engraved on the stone below,—The Life and Death of the Baptist.

The lower stone on which this is related, is a model of skill in Fiction, properly so called. In Fictile art, in Fictile history, it is equally exemplary. 'Feigning' or 'affecting' in the most exquisite way by fastening intensely on the principal points.

Ask yourselves what are the principal points to be insisted on, in the story of the Baptist.

He came, "preaching the Baptism of Repentance for the remission of sins." That is his Advice, or Order-preaching.

And he came, "to bear witness of the Light." "Behold the Lamb of God, which taketh away the sins of the world." That is his declaration, or revelation-preaching.

And the end of his own life is in the practice of this preaching—if you will think of it—under curious difficulties in both kinds. Difficulties in putting away sin—difficulties in obtaining sight. The first half of the stone begins with the apocalyptic preaching. Christ, represented as in youth, is set under two trees, in the wilderness. St. John is scarcely at first seen ; he is only the guide, scarcely the teacher, of the crowd of peoples, nations, and languages, whom he leads, pointing them to the Christ. Without doubt, all these figures have separate meaning. I am too ignorant to interpret it ; but observe generally, they are the thoughtful and wise of the earth, not its ruffians or rogues. This is not, by any means, a general amnesty to blackguards, and an apocalypse to brutes, which St. John is preaching. These are quite the best people he can find to call, or advise. You see many of them carry rolls of paper in their hands, as he does himself. In comparison with the books of the upper cornice, these have special meaning, as throughout Byzantine design.

“Adverte quod patriarchæ et prophetæ pinguntur cum rotulis in manibus ; quidam vero apostoli cum libris, et quidam cum rotulis. Nempe quia ante Christi adventum fides figurative ostendebatur, et quoad multa, in se implicita erat. Ad quod ostendendum patriarchæ et prophetæ pinguntur cum rotulis, per quos quasi quædam imperfecta cognitio designatur ; quia vero apostoli a Christo perfecte edocti sunt, ideo libris, per quos designatur perfecta cognitio, uti possunt.”

WILLIAM DURANDUS, quoted by Didron, p. 305.

PLATE VII.—Next to this subject of the preaching comes the Baptism : and then, the circumstances of St. John’s death. First, his declaration to Herod, “It is not lawful for thee to have thy brother’s wife :” on which he is seized and carried to prison :—next, Herod’s feast,—the consultation between daughter and mother, “What shall I ask ?”—the martyrdom, and burial by the disciples. The notable point in the treatment of all these subjects is the quiet and mystic Byzantine dwelling on thought rather than action. In a northern sculpture of this subject, the daughter of Herodias would have been assuredly dancing ; and most probably, casting a somersault. With the Byzantine, the debate in her mind is the only subject of interest, and he carves above, the evil angels, laying their hands on the heads, first of Herod and Herodias, and then of Herodias and her daughter.

PLATE VIII.—The issuing of commandment not to eat of the tree of knowledge. (Orvieto Cathedral.)

This, with Plates X. and XII., will give a sufficiently clear conception to any reader who has a knowledge of sculpture, of the principles of Giovanni Pisano’s design. I have thought it well worth while to publish opposite two of them, facsimiles of the engravings which profess to represent them in Gruner’s monograph * of the Orvieto sculptures ; for these outlines will, once for all, and better than any words, show my pupils what is the real virtue of mediæval work,—the power which we mediævalists rejoice in it for. Precisely the qualities which

* The drawings are by some Italian draughtsman, whose name it is no business of mine to notice.

are *not* in the modern drawings, are the essential virtues of the early sculpture. If you like the Gruner outlines best, you need not trouble yourself to go to Orvieto, or anywhere else in Italy. Sculpture, such as those outlines represent, can be supplied to you by the acre, to order, in any modern academician's atelier. But if you like the strange, rude, quaint, Gothic realities (for these photographs are, up to a certain point, a vision of the reality) best; then, don't study mediæval art under the direction of modern illustrators. Look at it—for however short a time, where you can find it—veritable and untouched, however mouldered or shattered. And abhor, as you would the mimicry of your best friend's manners by a fool, all restorations and improving copies. For remember, none but fools think they can restore—none, but worse fools, that they can improve.

Examine these outlines, then, with extreme care, and point by point. The things which they have refused or lost, are the things you have to love, in Giovanni Pisano.

I will merely begin the task of examination, to show you how to set about it. Take the head of the commanding Christ. Although inclined forward from the shoulders in the advancing motion of the whole body, the head itself is not stooped; but held entirely upright, the line of forehead sloping backwards. The command is given in calm authority; not in mean anxiety. But this was not expressive enough for the copyist,—“How much better *I* can show what is meant!” thinks he. So he puts the line of forehead and nose upright; projects the brow out of its straight line; and the expression then becomes,—“Now, be very careful, and mind what I say.” Perhaps you like this ‘improved’ action better? Be it so; only, it is not Giovanni Pisano's design; but the modern Italian's.

Next, take the head of Eve. It is much missed in the photograph—nearly all the finest lines lost—but enough is got to show Giovanni's mind.

It appears, he liked long-headed people, with sharp chins and straight noses. It might be very wrong of him; but that was his taste. So much so, indeed, that Adam and Eve have,

PLATE XI.—THE NATIVITY. MODERN ITALIAN.

both of them, heads not much shorter than one-sixth of their entire height.

Your modern Academy pupil, of course, cannot tolerate this monstrosity. He indulgently corrects Giovanni, and Adam and Eve have entirely orthodox one-eighth heads, by rule of schools.

But how of Eve's sharp-cut nose and pointed chin, thin lips, and look of quiet but rather surprised attention—not specially reverent, but looking keenly out from under her eyelids, like a careful servant receiving an order?

Well—those are all Giovanni's own notions;—not the least classical, nor scientific, nor even like a pretty, sentimental modern woman. Like a Florentine woman—in Giovanni's time—it may be; at all events, very certainly, what Giovanni thought proper to carve.

Now examine your modern edition. An entirely proper Greco-Roman academy plaster bust, with a proper nose, and proper mouth, and a round chin, and an expression of the most solemn reverence; always, of course, of a classical description. Very fine, perhaps. But not Giovanni.

After Eve's head, let us look at her feet. Giovanni has his own positive notions about those also. Thin and bony, to excess, the right, undercut all along, so that the profile looks as thin as the mere elongated line on an Etruscan vase; and the right showing the five toes all well separate, nearly straight, and the larger ones almost as long as fingers! the shin bone above carried up in as severe and sharp a curve as the edge of a sword.

Now examine the modern copy. Beautiful little fleshy, Venus-de'-Medici feet and toes—no undercutting to the right foot,—the left having the great-toe properly laid over the second, according to the ordinances of schools and shoes, and a well-developed academic and operatic calf and leg. Again charming, of course. But only according to Mr. Gibson or Mr. Power—not according to Giovanni.

Farther, and finally, note the delight with which Giovanni has dwelt, though without exaggeration, on the muscles of the breast and ribs in the Adam; while he has subdued all away

into virginal severity in Eve. And then note, and with conclusive admiration, how in the exact and only place where the poor modern fool's anatomical knowledge should have been shown, the wretch loses his hold of it! How he has entirely missed and effaced the grand Greek pectoral muscles of Giovanni's Adam, but has studiously added what mean fleshiness he could to the Eve; and marked with black spots the nipple and navel, where Giovanni left only the severe marble in pure light.

These instances are enough to enable you to detect the insolent changes in the design of Giovanni made by the modern Academy-student in so far as they relate to form absolute. I must farther, for a few moments, request your attention to the alterations made in the light and shade.

You may perhaps remember some of the passages. They occur frequently, both in my inaugural lectures, and in "Aratra Pentelici," in which I have pointed out the essential connection between the schools of sculpture and those of *chiaroscuro*. I have always spoken of the Greek, or essentially sculpture-loving schools, as *chiaroscurist*; always of the Gothic, or colour-loving schools, as *non-chiaroscurist*. And in one place, (I have not my books here, and cannot refer to it,) I have even defined sculpture as light-and-shade *drawing* with the chisel. Therefore, the next point you have to look to, after the absolute characters of form, is the mode in which the sculptor has placed his shadows, both to express these, and to force the eye to the points of his composition which he wants looked at. You cannot possibly see a more instructive piece of work, in these respects, than Giovanni's design of the Nativity, Plate X. So far as I yet know Christian art, this is the central type of the treatment of the subject; it has all the intensity and passion of the earliest schools, together with a grace of repose which even in Ghiberti's beautiful Nativity, founded upon it, has scarcely been increased, but rather lost in languor. The motive of the design is the frequent one among all the early masters; the Madonna lifts the covering from the cradle to show the Child to one of the servants, who starts forward adoring. All the light and shade is disposed

PLATE XII.—THE ANNUNCIATION AND VISITATION.

to fix the eye on these main actions. First, one intense deeply-cut mass of shadow, under the pointed arch, to throw out the head and lifted hand of the Virgin. A vulgar sculptor would have cut all black behind the head; Giovanni begins with full shadow; then subdues it with drapery absolutely quiet in fall; then lays his fullest possible light on the head, the hand, and the edge of the lifted veil.

He has undercut his Madonna's profile, being his main aim, too delicately for time to spare; happily the deep-cut brow is left, and the exquisitely refined line above, of the veil and hair. The rest of the work is uninjured, and the sharpest edges of light are still secure. You may note how the passionate action of the servant is given by the deep shadows under and above her arm, relieving its curves in all their length, and by the recess of shade under the cheek and chin, which lifts the face.

Now take your modern student's copy, and look how *he* has placed his lights and shades. You see, they go as nearly as possible exactly where Giovanni's *don't*. First, pure white under this Gothic arch, where Giovanni has put his fullest dark. Secondly, just where Giovanni has used his whole art of chiselling, to soften his stone away, and show the wreaths of the Madonna's hair lifting her veil behind, the accursed modern blockhead carves his shadow straight down, because he thinks that will be more in the style of Michael Angelo. Then he takes the shadows away from behind the profile, and from under the chin, and from under the arm, and puts in two grand square blocks of dark at the ends of the cradle, that you may be safe to look at that, instead of the Child. Next, he takes it all away from under the servant's arms, and lays it all behind above the calf of her leg. Then, not having wit enough to notice Giovanni's undulating surface beneath the drapery of the bed on the left, he limits it with a hard parallel-sided bar of shade, and insists on the vertical fold under the Madonna's arm, which Giovanni has purposely cut flat that it may not interfere with the arm above; finally, the modern animal has missed the only pieces of womanly form which Giovanni admitted, the rounded right arm and softly revealed

breast ; and absolutely removed, as if it were no part of the composition, the horizontal incision at the base of all—out of which the first folds of the drapery rise.

I cannot give you any better example, than this modern Academy-work, of the total ignorance of the very first meaning of the word 'Sculpture' into which the popular schools of existing art are plunged. I will not insist, now, on the uselessness, or worse, of their endeavours to represent the older art, and of the necessary futility of their judgment of it. The conclusions to which I wish to lead you on these points will be the subject of future lectures, being of too great importance for examination here. But you cannot spend your time in more profitable study than by examining and comparing, touch for touch, the treatment of light and shadow in the figures of the Christ and sequent angels, in Plates VIII. and IX., as we have partly examined those of the subject before us ; and in thus assuring yourself of the uselessness of trusting to any ordinary modern copyists, for anything more than the rudest chart or map—and even that inaccurately surveyed—of ancient design.

The last plate given in this volume contains the two lovely subjects of the Annunciation and Visitation, which, being higher from the ground, are better preserved than the groups represented in the other plates. They will be found to justify, in subtlety of chiselling, the title I gave to Giovanni, of the Canova of the thirteenth century.

I am obliged to leave without notice, at present, the branch of ivy, given in illustration of the term 'marble rampant,' at the base of Plate VIII. The foliage of Orvieto can only be rightly described in connection with the great scheme of leaf-ornamentation which ascended from the ivy of the Homeric period in the sculptures of Cyprus, to the roses of Botticelli, and laurels of Bellini and Titian.

THE
PLEASURES OF ENGLAND
LECTURES GIVEN IN OXFORD

THE PLEASURES OF ENGLAND.

LECTURE I.

THE PLEASURES OF LEARNING.

Bertha to Osburga.

IN the short review of the present state of English Art, given you last year, I left necessarily many points untouched, and others unexplained. The seventh lecture, which I did not think it necessary to read aloud, furnished you with some of the corrective statements of which, whether spoken or not, it was extremely desirable that you should estimate the balancing weight. These I propose in the present course farther to illustrate, and to arrive with you at, I hope, a just—you would not wish it to be a flattering—estimate of the conditions of our English artistic life, past and present, in order that with due allowance for them we may determine, with some security, what those of us who have faculty ought to do, and those who have sensibility, to admire.

2. In thus rightly doing and feeling, you will find summed a wider duty, and granted a greater power, than the moral philosophy at this moment current with you has ever conceived ; and a prospect opened to you besides, of such a Future for England as you may both hopefully and proudly labour for with your hands, and those of you who are spared to the ordinary term of human life, even see with your eyes, when all this tumult of vain avarice and idle pleasure, into which you have been plunged at birth, shall have passed into its appointed perdition.

3. I wish that you would read for introduction to the lectures I have this year arranged for you, that on the Future of England, which I gave to the cadets at Woolwich in the first year of my Professorship here, 1869 ; and which is now placed as the main conclusion of the "Crown of Wild Olive": and with it, very attentively, the close of my inaugural lecture given here ; for the matter, no less than the tenor of which, I was reprov'd by all my friends, as irrelevant and ill-judged ;—which, nevertheless, is of all the pieces of teaching I have ever given from this chair, the most pregnant and essential to whatever studies, whether of Art or Science, you may pursue, in this place or elsewhere, during your lives.

The opening words of that passage I will take leave to read to you again,—for they must still be the ground of whatever help I can give you, worth your acceptance.

"There is a destiny now possible to us—the highest ever set before a nation to be accepted or refused. We are still undegenerate in race: a race mingled of the best northern blood. We are not yet dissolute in temper, but still have the firmness to govern, and the grace to obey. We have been taught a religion of pure mercy, which we must either now finally betray, or learn to defend by fulfilling. And we are rich in an inheritance of honour, bequeathed to us through a thousand years of noble history, which it should be our daily thirst to increase with splendid avarice ; so that Englishmen, if it be a sin to covet honour, should be the most offending souls alive. Within the last few years we have had the laws of natural science opened to us with a rapidity which has been blinding by its brightness ; and means of transit and communication given to us, which have made but one kingdom of the habitable globe.

"One kingdom ;—but who is to be its king ? Is there to be no king in it, think you, and every man to do that which is right in his own eyes ? Or only kings of terror, and the obscene empires of Mammon and Belial ? Or will you, youths of England, make your country again a royal throne of kings ; a sceptred isle ; for all the world a source of light, a centre of peace ; mistress of Learning and of the Arts ;—faithful guar-

dian of great memories in the midst of irreverent and ephemeral visions—faithful servant of time-tried principles, under temptation from fond experiments and licentious desires ; and amidst the cruel and clamorous jealousies of the nations, worshipped in her strange valour, of goodwill towards men ? ”

The fifteen years that have passed since I spoke these words must, I think, have convinced some of my immediate hearers that the need for such an appeal was more pressing than they then imagined ;—while they have also more and more convinced me myself that the ground I took for it was secure, and that the youths and girls now entering on the duties of active life are able to accept and fulfil the hope I then held out to them.

In which assurance I ask them to-day to begin the examination with me, very earnestly, of the question laid before you in that seventh of my last year’s lectures, whether London, as it is now, be indeed the natural, and therefore the heaven-appointed outgrowth of the inhabitation, these 1800 years, of the valley of the Thames by a progressively instructed and disciplined people ; or if not, in what measure and manner the aspect and spirit of the great city may be possibly altered by your acts and thoughts.

In my introduction to the *Economist of Xenophon* I said that every fairly educated European boy or girl ought to learn the history of five cities,—Athens, Rome, Venice, Florence, and London ; that of London including, or at least compelling in parallel study, some knowledge also of the history of Paris.

A few words are enough to explain the reasons for this choice. The history of Athens, rightly told, includes all that need be known of Greek religion and arts ; that of Rome, the victory of Christianity over Paganism ; those of Venice and Florence sum the essential facts respecting the Christian arts of Painting, Sculpture, and Music ; and that of London, in her sisterhood with Paris, the development of Christian Chivalry and Philosophy, with their exponent art of Gothic architecture.

Without the presumption of forming a distinct design, I yet hoped at the time when this division of study was suggested,

with the help of my pupils, to give the outlines of their several histories during my work in Oxford. Variously disappointed and arrested, alike by difficulties of investigation and failure of strength, I may yet hope to lay down for you, beginning with your own metropolis, some of the lines of thought in following out which such a task might be most effectively accomplished.

You observe that I speak of architecture as the chief exponent of the feelings both of the French and English races. Together with it, however, most important evidence of character is given by the illumination of manuscripts, and by some forms of jewellery and metallurgy: and my purpose in this course of lectures is to illustrate by all these arts the phases of national character which it is impossible that historians should estimate, or even observe, with accuracy, unless they are cognizant of excellence in the aforesaid modes of structural and ornamental craftsmanship.

In one respect, as indicated by the title chosen for this course, I have varied the treatment of their subject from that adopted in all my former books. Hitherto, I have always endeavoured to illustrate the personal temper and skill of the artist; holding the wishes or taste of his spectators at small account, and saying of Turner you ought to like him, and of Salvator, you ought not, etc., etc., without in the least considering what the genius or instinct of the spectator might otherwise demand, or approve. But in the now attempted sketch of Christian history, I have approached every question from the people's side, and examined the nature, not of the special faculties by which the work was produced, but of the general instinct by which it was asked for, and enjoyed. Therefore I thought the proper heading for these papers should represent them as descriptive of the *Pleasures* of England, rather than of its *Arts*.

And of these pleasures, necessarily, the leading one was that of Learning, in the sense of receiving instruction;—a pleasure totally separate from that of finding out things for yourself,—and an extremely sweet and sacred pleasure, when you know how to seek it, and receive.

On which I am the more disposed, and even compelled, here to insist, because your modern ideas of Development imply that you must all turn out what you are to be, and find out what you are to know, for yourselves, by the inevitable operation of your anterior affinities and inner consciences :— whereas the old idea of education was that the baby material of you, however accidentally or inevitably born, was at least to be by external force, and ancestral knowledge, bred ; and treated by its Fathers and Tutors as a plastic vase, to be shaped or mannered as *they* chose, not as *it* chose, and filled, when its form was well finished and baked, with sweetness of sound doctrine, as with Hybla honey, or Arabian spikenard.

Without debating how far these two modes of acquiring knowledge—finding out, and being told—may severally be good, and in perfect instruction combined, I have to point out to you that, broadly, Athens, Rome, and Florence are self-taught, and internally developed ; while all the Gothic races, without any exception, but especially those of London and Paris, are afterwards taught by these ; and had, therefore, when they chose to accept it, the delight of being instructed, without trouble or doubt, as fast as they could read or imitate ; and brought forward to the point where their own northern instincts might wholesomely superimpose or graft some national ideas upon these sound instructions. Read over what I said on this subject in the third of my lectures last year, and simplify that already brief statement further, by fastening in your mind Carlyle's general symbol of the best attainments of northern religious sculpture,—"three whale-cubs combined by boiling," and reflecting that the mental history of all northern European art is the modification of that graceful type, under the orders of the Athena of Homer and Phidias.

And this being quite indisputably the broad fact of the matter, I greatly marvel that your historians never, so far as I have read, think of proposing to you the question—what you might have made of yourselves *without* the help of Homer and Phidias : what sort of beings the Saxon and the Celt, the Frank and the Dane, might have been by this time, untouched by the

spear of Pallas, unruled by the rod of Agricola, and sincerely the native growth, pure of root, and ungrafted in fruit of the clay of Isis, rock of Dovrefeldt, and sands of Elbe? Think of it, and think chiefly what form the ideas, and images, of your natural religion might probably have taken, if no Roman missionary had ever passed the Alps in charity, and no English king in pilgrimage.

I have been of late indebted more than I can express to the friend who has honoured me by the dedication of his recently published lectures on 'Older England;' and whose eager enthusiasm and far collected learning have enabled me for the first time to assign their just meaning and value to the ritual and imagery of Saxon devotion. But while every page of Mr. Hodgett's book, and, I may gratefully say also, every sentence of his teaching, has increased and justified the respect in which I have always been by my own feeling disposed to hold the mythologies founded on the love and knowledge of the natural world, I have also been led by them to conceive, far more forcibly than hitherto, the power which the story of Christianity possessed, first heard through the wreaths of that cloudy superstition, in the substitution, for its vaporescent allegory, of a positive and literal account of a real Creation, and an instantly present, omnipresent, and compassionate God.

Observe, there is no question whatever in examining this influence, how far Christianity itself is true, or the transcendental doctrines of it intelligible. Those who brought you the story of it believed it with all their souls to be true,—and the effect of it on the hearts of your ancestors was that of an unquestionable, infinitely lucid message straight from God, doing away with all difficulties, grief, and fears for those who willingly received it, nor by any, except wilfully and obstinately vile persons, to be, by any possibility, denied or refused.

And it was precisely, observe, the vivacity and joy with which the main fact of Christ's life was accepted which gave the force and wrath to the controversies instantly arising about its nature.

Those controversies vexed and shook, but never undermined, the faith they strove to purify, and the miraculous

presence, errorless precept, and loving promises of their Lord were alike undoubted, alike rejoiced in, by every nation that heard the word of Apostles. The Pelagian's assertion that immortality could be won by man's will, and the Arian's that Christ possessed no more than man's nature, never for an instant—or in any country—hindered the advance of the moral law and intellectual hope of Christianity. Far the contrary; the British heresy concerning Free Will, though it brought bishop after bishop into England to extinguish it, remained an extremely healthy and active element in the British mind down to the days of John Bunyan and the guide Great Heart, and the calmly Christian justice and simple human virtue of Theodoric were the very roots and first burgeons of the regeneration of Italy.* But of the degrees in which it was possible for any barbarous nation to receive during the first five centuries, either the spiritual power of Christianity itself, or the instruction in classic art and science which accompanied it, you cannot rightly judge, without taking the pains, and they will not, I think, be irksome, of noticing carefully, and fixing permanently in your minds, the separating characteristics of the greater races, both in those who learned and those who taught.

Of the Huns and Vandals we need not speak. They are merely forms of Punishment and Destruction. Put them out of your minds altogether, and remember only the names of the immortal nations, which abide on their native rocks, and plough their unconquered plains, at this hour.

Briefly, in the north,—Briton, Norman, Frank, Saxon, Ostrogoth, Lombard; briefly, in the south,—Tuscan, Roman, Greek, Syrian, Egyptian, Arabian.

Now of these races, the British (I avoid the word Celtic,

*Gibbon, in his 37th chapter, makes Ulphilas also an Arian, but might have forborne, with grace, his own definition of orthodoxy:—and you are to observe generally that at this time the teachers who admitted the inferiority of Christ to the Father as touching his Manhood, were often counted among Arians, but quite falsely. Christ's own words, "My Father is greater than I," end that controversy at once. Arianism consists not in asserting the subjection of the Son to the Father, but in denying the subjected Divinity.

because you would expect me to say Keltic; and I don't mean to, lest you should be wanting me next to call the patroness of music St. Kekilia), the British, including Breton, Cornish, Welsh, Irish, Scot, and Piet, are, I believe, of all the northern races, the one which has deepest love of external nature;—and the richest inherent gift of pure music and song, as such; separated from the intellectual gift which raises song into poetry. They are naturally also religious, and for some centuries after their own conversion are one of the chief evangelizing powers in Christendom. But they are neither apprehensive nor receptive;—they cannot understand the classic races, and learn scarcely anything from them; perhaps better so, if the classic races had been more careful to understand *them*.

Next, the Norman is scarcely more apprehensive than the Celt, but he is more constructive, and uses to good advantage what he learns from the Frank. His main characteristic is an energy, which never exhausts itself in vain anger, desire, or sorrow, but abides and rules, like a living rock:—where he wanders, he flows like lava, and congeals like granite.

Next, I take in this first sketch the Saxon and Frank together, both pre-eminently apprehensive, both docile exceedingly, imaginative in the highest, but in life active more than pensive, eager in desire, swift of invention, keenly sensitive to animal beauty, but with difficulty rational, and rarely, for the future, wise. Under the conclusive name of Ostrogoth, you may class whatever tribes are native to Central Germany, and develop themselves, as time goes on, into that power of the German Cæsars which still asserts itself as an empire against the license and insolence of modern republicanism,—of which races, though this general name, no description can be given in rapid terms.

And lastly, the Lombards, who, at the time we have to deal with, were sternly indocile, gloomily imaginative,—of almost Norman energy, and differing from all the other western nations chiefly in this notable particular, that while the Celt is capable of bright wit and happy play, and the Norman, Saxon,

and Frank all alike delight in caricature, the Lombards, like the Arabians, never jest.

These, briefly, are the six barbaric nations who are to be taught: and of whose native arts and faculties, before they receive any tutorship from the south, I find no well-sifted account in any history:—but thus much of them, collecting your own thoughts and knowledge, you may easily discern—they were all, with the exception of the Scots, practical workers and builders in wood; and those of them who had coasts, first rate sea-boat builders, with fine mathematical instincts and practice in that kind far developed, necessarily good sail-weaving, and sound fur-stitching, with stout iron-work of nail and rivet; rich copper and some silver work in decoration—the Celts developing peculiar gifts in linear design, but wholly incapable of drawing animals or figures;—the Saxons and Franks having enough capacity in that kind, but no thought of attempting it; the Normans and Lombards still farther remote from any such skill. More and more, it seems to me wonderful that under your British block-temple, grimly extant on its pastoral plain, or beside the first crosses engraved on the rock at Whithorn—you English and Scots do not oftener consider what you might or could have come to, left to yourselves.

Next, let us form the list of your tutor nations, in whom it generally pleases you to look at nothing but the corruptions. If we could get into the habit of thinking more of our own corruptions and more of *their* virtues, we should have a better chance of learning the true laws alike of art and destiny.

But, the safest way of all, is to assure ourselves that true knowledge of any thing or any creature is only of the good of it; that its nature and life are in that, and that what is diseased,—that is to say, unnatural and mortal,—you must cut away from it in contemplation, as you would in surgery.

Of the six tutor nations, two, the Tuscan and Arab, have no effect on early Christian England. But the Roman, Greek, Syrian, and Egyptian act together from the earliest times; you are to study the influence of Rome upon England in Agricola, Constantius, St. Benedict, and St. Gregory; of Greece

upon England in the artists of Byzantium and Ravenna ; of Syria and Egypt upon England in St. Jerome, St. Augustine, St. Chrysostom, and St. Athanase.

St. Jerome, in central Bethlehem ; St. Augustine, Carthaginian by birth, in truth a converted Tyrian ; Athanase, Egyptian, symmetric and fixed as an Egyptian aisle ; Chrysostom, golden mouth of all ; these are, indeed, every one teachers of all the western world, but St. Augustine especially of lay, as distinguished from monastic, Christianity to the Franks, and finally to us. His rule, expanded into the treatise of the City of God, is taken for guide of life and policy by Charlemagne, and becomes certainly the fountain of Evangelical Christianity, distinctively so called, (and broadly the lay Christianity of Europe, since, in the purest form of it, that is to say, the most merciful, charitable, variously applicable, kindly wise.) The greatest type of it, as far as I know, St. Martin of Tours, whose character is sketched, I think in the main rightly, in the Bible of Amiens ; and you may bind together your thoughts of its course by remembering that Alcuin, born at York, dies in the Abbey of St. Martin, at Tours ; that as St. Augustine was in his writings Charlemagne's Evangelist in faith, Alcuin was, in living presence, his master in rhetoric, logic, and astronomy, with the other physical sciences.

A hundred years later than St. Augustine, comes the rule of St. Benedict—the Monastic rule, virtually, of European Christianity, ever since—and theologically the Law of Works, as distinguished from the Law of Faith. St. Augustine and all the disciples of St. Augustine tell Christians what they should feel and think : St. Benedict and all the disciples of St. Benedict tell Christians what they should say and do.

In the briefest, but also the perfectest distinction, the disciples of St. Augustine are those who open the door to Christ—"If any man hear my voice" ; but the Benedictines those to whom Christ opens the door—"To him that knocketh it shall be opened."

Now, note broadly the course and action of this rule, as it combines with the older one. St. Augustine's, accepted heartily by Clovis, and, with various degrees of understand-

ing, by the kings and queens of the Merovingian dynasty, makes seemingly little difference in their conduct, so that their profession of it remains a scandal to Christianity to this day; and yet it lives, in the true hearts among them, down from St. Clotilde to her great grand-daughter Bertha, who in becoming Queen of Kent, builds under its chalk downs her own little chapel to St. Martin, and is the first effectively and permanently useful missionary to the Saxons, the beginner of English Erudition,—the first laid corner stone of beautiful English character.

I think henceforward you will find the memorandum of dates which I have here set down for my own guidance more simply useful than those confused by record of unimportant persons and inconsequent events, which form the indices of common history.

From the year of the Saxon invasion 449, there are exactly 400 years to the birth of Alfred, 849. You have no difficulty in remembering those cardinal years. Then, you have Four great men and great events to remember, at the close of the fifth century. Clovis, and the founding of the Frank Kingdom; Theodoric and the founding of the Gothic Kingdom; Justinian and the founding of Civil law; St. Benedict and the founding of Religious law.

Of Justinian, and his work, I am not able myself to form any opinion—and it is, I think, unnecessary for students of history to form any, until they are able to estimate clearly the benefits, and mischief, of the civil law of Europe in its present state. But to Clovis, Theodoric, and St. Benedict, without any question, we owe more than any English historian has yet ascribed,—and they are easily held in mind together, for Clovis ascended the Frank throne in the year of St. Benedict's birth, 481. Theodoric fought the battle of Verona, and founded the Ostrogothic Kingdom in Italy twelve years later, in 493, and thereupon married the sister of Clovis. That marriage is always passed in a casual sentence, as if a merely political one, and while page after page is spent in following the alternations of furious crime and fatal chance, in the contests between Fredegonde and Brunehaut, no historian ever

considers whether the great Ostrogoth who wore in the battle of Verona the dress which his mother had woven for him, was likely to have chosen a wife without love!—or how far the perfectness, justice, and temperate wisdom of every ordinance of his reign was owing to the sympathy and counsel of his Frankish queen.

You have to recollect, then, thus far, only three cardinal dates :—

449. Saxon invasion.

481. Clovis reigns and St. Benedict is born.

493. Theodoric conquers at Verona.

Then, roughly, a hundred years later, in 590, Ethelbert, the fifth from Hengist, and Bertha, the third from Clotilde, are king and queen of Kent. I cannot find the date of their marriage, but the date, 590, which you must recollect for cardinal, is that of Gregory's accession to the pontificate, and I believe Bertha was then in middle life, having persevered in her religion firmly, but inoffensively, and made herself beloved by her husband and people. She, in England, Theodolinda in Lombardy, and St. Gregory in Rome :—in their hands, virtually lay the destiny of Europe.

Then the period from Bertha to Osburga, 590 to 849—say 250 years—is passed by the Saxon people in the daily more reverent learning of the Christian faith, and daily more peaceful and skilful practice of the humane arts and duties which it invented and inculcated.

The statement given by Sir Edward Creasy of the result of these 250 years of lesson is, with one correction, the most simple and just that I can find.

“A few years before the close of the sixth century, the country was little more than a wide battle-field, where gallant but rude warriors fought with each other, or against the neighbouring Welsh or Scots ; unheeding and unheeded by the rest of Europe, or, if they attracted casual attention, regarded with dread and disgust as the fiercest of barbarians and the most untameable of pagans. In the eighth century, England was looked up to with admiration and gratitude, as superior to all the other countries of Western Europe in piety

and learning, and as the land whence the most zealous and successful saints and teachers came forth to convert and enlighten the still barbarous regions of the continent."

This statement is broadly true ; yet the correction it needs is a very important one. England,—under her first Alfred of Northumberland, and under Ina of Wessex, is indeed during these centuries the most learned, thoughtful, and progressive of European states. But she is not a missionary power. The missionaries are always to her, not from her :—for the very reason that she is learning so eagerly, she does not take to preaching. Ina founds his Saxon school at Rome not to teach Rome, nor convert the Pope, but to drink at the source of knowledge, and to receive laws from direct and unquestioned authority. The missionary power was wholly Scotch and Irish, and that power was wholly one of zeal and faith, not of learning. I will ask you, in the course of my next lecture, to regard it attentively ; to-day, I must rapidly draw to the conclusions I would leave with you.

It is more and more wonderful to me as I think of it, that no effect whatever was produced on the Saxon, nor on any other healthy race of the North, either by the luxury of Rome, or by her art, whether constructive or imitative. The Saxon builds no aqueducts—designs no roads, rounds no theatres in imitation of her,—envies none of her vile pleasures,—admires, so far as I can judge, none of her far-carried realistic art. I suppose that it needs intelligence of a more advanced kind to see the qualities of complete sculpture : and that we may think of the Northern intellect as still like that of a child, who cares to picture its own thoughts in its own way, but does not care for the thoughts of older people, or attempt to copy what it feels too difficult. This much at least is certain, that for one cause or another, everything that now at Paris or London our painters most care for and try to realize, of ancient Rome, was utterly innocuous and unattractive to the Saxon : while his mind was frankly open to the direct teaching of Greece and to the methods of bright decoration employed in the Byzantine Empire : for these alone seemed to his fancy suggestive of the glories of the brighter world

promised by Christianity. Jewellery, vessels of gold and silver, beautifully written books, and music, are the gifts of St. Gregory alike to the Saxon and Lombard; all these beautiful things being used, not for the pleasure of the present life, but as the symbols of another; while the drawings in Saxon manuscripts, in which, better than in any other remains of their life, we can read the people's character, are rapid endeavours to express for themselves, and convey to others, some likeness of the realities of sacred events in which they had been instructed. They differ from every archaic school of former design in this evident correspondence with an imagined reality. All previous archaic art whatsoever is symbolic and decorative—not realistic. The contest of Herakles with the Hydra on a Greek vase is a mere sign that such a contest took place, not a picture of it, and in drawing that sign the potter is always thinking of the effect of the engraved lines on the curves of his pot, and taking care to keep out of the way of the handle;—but a Saxon monk would scratch his idea of the Fall of the angels or the Temptation of Christ over a whole page of his manuscript in variously explanatory scenes, evidently full of inexpressible vision, and eager to explain and illustrate all that he felt or believed.

Of the progress and arrest of these gifts, I shall have to speak in my next address; but I must regretfully conclude to-day with some brief warning against the complacency which might lead you to regard them as either at that time entirely original in the Saxon race, or at the present day as signally characteristic of it. That form of complacency is exhibited in its most amiable, but, therefore, most deceptive guise, in the passage with which the late Dean of Westminster concluded his lecture at Canterbury in April, 1854, on the subject of the landing of Augustine. I will not spoil the emphasis of the passage by comment as I read, but must take leave afterwards to intimate some grounds for abatement in the fervour of its self gratulatory ecstasy.

“Let any one sit on the hill of the little church of St. Martin, and look on the view which is there spread before his eyes. Immediately below are the towers of the great abbey

of St. Augustine, where Christian learning and civilization first struck root in the Anglo-Saxon race; and within which now, after a lapse of many centuries, a new institution has arisen, intended to carry far and wide, to countries of which Gregory and Augustine never heard, the blessings which they gave to us. Carry your view on—and there rises high above all the magnificent pile of our cathedral, equal in splendour and state to any, the noblest temple or church that Augustine could have seen in ancient Rome, rising on the very ground which derives its consecration from him. And still more than the grandeur of the outward buildings that rose from the little church of Augustine and the little palace of Ethelbert have been the institutions of all kinds of which these were the earliest cradle. From Canterbury, the first English Christian city,—from Kent, the first English Christian kingdom—has by degrees arisen the whole constitution of Church and State in England which now binds together the whole British Empire. And from the Christianity here established in England has flowed, by direct consequence, first the Christianity of Germany; then, after a long interval, of North America; and lastly, we may trust, in time, of all India and all Australasia. The view from St. Martin's Church is indeed one of the most inspiring that can be found in the world; there is none to which I would more willingly take any one who doubted whether a small beginning could lead to a great and lasting good;—none which carries us more vividly back into the past, or more hopefully forward into the future."

To this Gregorian canticle in praise of the British constitution, I grieve, but am compelled, to take these following historical objections. The first missionary to Germany was Ulphilas, and what she owes to these islands she owes to Iona, not to Thanet. Our missionary offices to America as to Africa, consist I believe principally in the stealing of land, and the extermination of its proprietors by intoxication. Our rule in India has introduced there, Paisley instead of Cashmere shawls: in Australasia our Christian aid supplies, I suppose, the pious farmer with convict labour. And although, when the Dean wrote the above passage, St. Augustine's and the cathedral

were—I take it on trust from his description—the principal objects in the prospect from St. Martin’s Hill, I believe even the cheerfulest of my audience would not now think the scene one of the most inspiring in the world. For recent progress has entirely accommodated the architecture of the scene to the convenience of the missionary workers above enumerated; to the peculiar necessities of the civilization they have achieved. For the sake of which the cathedral, the monastery, the temple, and the tomb, of Bertha, contract themselves in distant or despised subservience under the colossal walls of the county gaol.

LECTURE II.

THE PLEASURES OF FAITH.

Alfred to the Confessor.

I was forced in my last lecture to pass by altogether, and to-day can only with momentary definition notice, the part taken by Scottish missionaries in the Christianizing of England and Burgundy. I would pray you therefore, in order to fill the gap which I think it better to leave distinctly, than close confusedly, to read the histories of St. Patrick, St. Columba, and St. Columban, as they are given you by Montalembert in his ‘*Moines d’Occident.*’ You will find in his pages all the essential facts that are known, encircled with a nimbus of enthusiastic sympathy which I hope you will like better to see them through, than distorted by blackening fog of contemptuous rationalism. But although I ask you thus to make yourselves aware of the greatness of my omission, I must also certify you that it does not break the unity of our own immediate subject. The influence of Celtic passion and art both on Northumbria and the Continent, beneficent in all respects while it lasted, expired without any permanent share in the work or emotion of the Saxon and Frank. The book of Kells, and the bell of St. Patrick, represent sufficiently the peculiar character of Celtic design; and long since, in the first lecture of the ‘*Two Paths,*’ I explained both the modes of skill, and

points of weakness, which rendered such design unprogressive. Perfect in its peculiar manner, and exulting in the faultless practice of a narrow skill, it remained century after century incapable alike of inner growth, or foreign instruction; inimitable, yet incorrigible; marvellous, yet despicable, to its death. Despicable, I mean, only in the limitation of its capacity, not in its quality or nature. If you make a Christian of a lamb or a squirrel—what can you expect of the lamb but jumping—what of the squirrel, but pretty spirals, traced with his tail? He won't steal your nuts any more, and he'll say his prayers like this—*; but you cannot make a Beatrice's griffin, and emblem of all the Catholic Church, out of him.

You will have observed, also, that the plan of these lectures does not include any reference to the Roman Period in England; of which you will find all I think necessary to say, in the part called *Valle Crucis* of 'Our Fathers have told us.' But I must here warn you, with reference to it, of one gravely false prejudice of Montalembert. He is entirely blind to the conditions of Roman virtue, which existed in the midst of the corruptions of the Empire, forming the characters of such Emperors as Pertinax, Carus, Probus, the second Claudius, Aurelian, and our own Constantius; and he denies, with abusive violence, the power for good, of Roman Law, over the Gauls and Britons.

Respecting Roman national character, I will simply beg you to remember, that both St. Benedict and St. Gregory are Roman patricians, before they are either monk or pope; respecting its influence on Britain, I think you may rest content with Shakespeare's estimate of it. Both Lear and Cymbeline belong to this time, so difficult to our apprehension, when the Briton accepted both Roman laws and Roman gods. There is indeed the born Kentish gentleman's protest against them in Kent's—

“Now, by Apollo, king,
Thou swear'st thy gods in vain”;

but both Cordelia and Imogen are just as thoroughly Roman ladies, as Virgilia or Calphurnia.

* Making a sign.

Of British Christianity and the Arthurian Legends, I shall have a word or two to say in my lecture on "Fancy," in connection with the similar romance which surrounds Theodoric and Charlemagne: only the worst of it is, that while both Dietrich and Karl are themselves more wonderful than the legends of them, Arthur fades into intangible vision:—this much, however, remains to this day, of Arthurian blood in us, that the richest fighting element in the British army and navy is British native,—that is to say, Highlander, Irish, Welsh, and Cornish.

Content, therefore, (means being now given you for filling gaps,) with the estimates given you in the preceding lecture of the sources of instruction possessed by the Saxon capital, I pursue to-day our question originally proposed, what London might have been by this time, if the nature of the flowers, trees, and children, born at the Thames-side, had been rightly understood and cultivated.

Many of my hearers can imagine far better than I, the look that London must have had in Alfred's and Canute's days.* I have not, indeed, the least idea myself what its buildings were like, but certainly the groups of its shipping must have been superb; small, but entirely seaworthy vessels, manned by the best seamen in the then world. Of course, now, at Chatham and Portsmouth we have our ironclads,—extremely beautiful and beautifully manageable things, no doubt—to set against this Saxon and Danish shipping; but the Saxon war-ships lay

* Here Alfred's Silver Penny was shown and commented on, thus:—Of what London was like in the days of faith, I can show you one piece of artistic evidence. It is Alfred's silver penny struck in London mint. The character of a coinage is quite conclusive evidence in national history, and there is no great empire in progress, but tells its story in beautiful coins. Here in Alfred's penny, a round coin with L. O. N. D. I. N. I. A. struck on it, you have just the same beauty of design, the same enigmatical arrangement of letters, as in the early inscription, which it is "the pride of my life" to have discovered at Venice. This inscription ("the first words that Venice ever speaks aloud") is, it will be remembered, on the Church of St. Giacomo di Rialto, and runs, being interpreted—"Around this temple, let the merchant's law be just, his weights true, and his covenants faithful."

here at London shore—bright with banner and shield and dragon prow,—instead of these you may be happier, but are not handsomer, in having, now, the coal-barge, the penny steamer, and the wherry full of shop boys and girls. I dwell however for a moment only on the naval aspect of the tidal waters in the days of Alfred, because I can refer you for all detail on this part of our subject to the wonderful opening chapter of Dean Stanley's History of Westminster Abbey, where you will find the origin of the name of London given as "The City of Ships." He does not, however, tell you, that there were built, then and there, the biggest war-ships in the world. I have often said to friends who praised my own books that I would rather have written that chapter than any one of them; yet if I *had* been able to write the historical part of it, the conclusions drawn would have been extremely different. The Dean indeed describes with a poet's joy the River of wells, which rose from those "once consecrated springs which now lie choked in Holywell and Clerkenwell, and the rivulet of Ulebrig which crossed the Strand under the Ivy bridge"; but it is only in the spirit of a modern citizen of Belgravia that he exults in the fact that "the great arteries of our crowded streets, the vast sewers which cleanse our habitations, are fed by the life-blood of those old and living streams; that underneath our tread the Tyburn, and the Holborn, and the Fleet, and the Wall Brook, are still pursuing their ceaseless course, still ministering to the good of man, though in a far different fashion than when Druids drank of their sacred springs, and Saxons were baptized in their rushing waters, ages ago."

Whatever sympathy you may feel with these eloquent expressions of that entire complacency in the present, past, and future, which peculiarly animates Dean Stanley's writings, I must, in this case, pray you to observe that the transmutation of holy wells into sewers has, at least, destroyed the charm and utility of the Thames as a salmon stream, and I must ask you to read with attention the succeeding portions of the chapter which record the legends of the river fisheries in their relation to the first Abbey of Westminster; dedicated by its builders to St. Peter, not merely in his office of corner

stone of the Church, nor even figuratively as a fisher of men, but directly as a fisher of fish :—and which maintained themselves, you will see, in actual ceremony down to 1382, when a fisherman still annually took his place beside the Prior, after having brought in a salmon for St. Peter, which was carried in state down the middle of the refectory.

But as I refer to this page for the exact word, my eye is caught by one of the sentences of Londonian* thought which constantly pervert the well-meant books of pious England. "We see also," says the Dean, "the union of innocent fiction with worldly craft, which marks so many of the legends both of Pagan and Christian times." I might simply reply to this insinuation that times which have no legends differ from the legendary ones merely by uniting guilty, instead of innocent, fiction, with worldly craft; but I must farther advise you that the legends of these passionate times are in no wise, and in no sense, fiction at all; but the true record of impressions made on the minds of persons in a state of eager spiritual excitement, brought into bright focus by acting steadily and frankly under its impulses. I could tell you a great deal more about such things than you would believe, and therefore, a great deal more than it would do you the least good to hear;—but this much any who care to use their common sense modestly, cannot but admit, that unless they choose to try the rough life of the Christian ages, they cannot understand its practical consequences. You have all been taught by Lord Macaulay and his school that because you have Carpets instead of rushes for your feet; and Feather-beds instead of fern for your backs; and Kickshaws instead of beef for your eating; and Drains instead of Holy Wells for your drinking;—that, therefore, you are the Cream of Creation, and every one of you a seven-headed Solomon. Stay in those pleasant circumstances and convictions if you please; but don't accuse your roughly bred and fed fathers of telling lies about the aspect the earth and sky bore to *them*,—till you have trodden the earth as they, barefoot, and seen the heavens as they, face to face. If you care to see and to know for yourselves, you may

* Not Londonian.

do it with little pains ; you need not do any great thing, you needn't keep one eye open and the other shut for ten years over a microscope, nor fight your way through icebergs and darkness to knowledge of the *celestial* pole. Simply, do as much as king after king of the Saxons did,—put rough shoes on your feet and a rough cloak on your shoulders, and walk to Rome and back. Sleep by the roadside, when it is fine,—in the first outhouse you can find, when it is wet ; and live on bread and water, with an onion or two, all the way ; and if the experiences which you will have to relate on your return do not, as may well be, deserve the name of spiritual ; at all events you will not be disposed to let other people regard them either as Poetry or Fiction.

With this warning, presently to be at greater length insisted on, I trace for you, in Dean Stanley's words, which cannot be bettered except in the collection of their more earnest passages from among his interludes of graceful but dangerous qualification,—I trace, with only such omission, the story he has told us of the foundation of that Abbey, which, he tells you, was the Mother of London, and has ever been the shrine and the throne of English faith and truth.

“The gradual formation of a monastic body, indicated in the charters of Offa and Edgar, marks the spread of the Benedictine order throughout England, under the influence of Dunstan. The ‘terror’ of the spot, which had still been its chief characteristic in the charter of the wild Offa, had, in the days of the more peaceful Edgar, given way to a dubious ‘renown.’ Twelve monks is the number traditionally said to have been established by Dunstan. A few acres farther up the river formed their chief property, and their monastic character was sufficiently recognized to have given to the old locality of the ‘terrible place’ the name of the ‘Western Monastery,’ or ‘Minster of the West.’”

The Benedictines then—twelve Benedictine monks—thus began the building of existent Christian London. You know I told you the Benedictines are the Doing people, as the disciples of St. Augustine the Sentimental people. The Benedictines find no terror in their own thoughts—face the terror of

places—change it into beauty of places,—make this terrible place, a Motherly Place—Mother of London.

This first Westminster, however, the Dean goes on to say, “seems to have been overrun by the Danes, and it would have had no further history but for the combination of circumstances which directed hither the notice of Edward the Confessor.

I haven't time to read you all the combination of circumstances. The last clinching circumstance was this—

“There was in the neighbourhood of Worcester, ‘far from men in the wilderness, on the slope of a wood, in a cave deep down in the grey rock,’ a holy hermit ‘of great age, living on fruits and roots.’ One night when, after reading in the Scriptures ‘how hard are the pains of hell, and how the enduring life of Heaven is sweet and to be desired,’ he could neither sleep nor repose, St. Peter appeared to him, ‘bright and beautiful, like to a clerk,’ and warned him to tell the King that he was released from his vow; that on that very day his messengers would return from Rome;” (that is the combination of circumstances—bringing Pope's order to build a church to release the King from his vow of pilgrimage); “that ‘at Thorney, two leagues from the city,’ was the spot marked out where, in an ancient church, ‘situated low,’ he was to establish a perfect Benedictine monastery, which should be ‘the gate of heaven, the ladder of prayer, whence those who serve St. Peter there, shall by him be admitted into Paradise.’ The hermit writes the account of the vision on parchment, seals it with wax, and brings it to the King, who compares it with the answer of the messengers, just arrived from Rome, and determines on carrying out the design as the Apostle had ordered.

“The ancient church, ‘situated low,’ indicated in this vision the one whose attached monastery had been destroyed by the Danes, but its little church remained, and was already dear to the Confessor, not only from the lovely tradition of its dedication by the spirit of St. Peter;” (you must read that for yourselves;) “but also because of two miracles happening there to the King himself.

“The first was the cure of a cripple, who sat in the road be

tween the Palace and 'the Chapel of St. Peter,' which was 'near,' and who explained to the Chamberlain Hugolin that, after six pilgrimages to Rome in vain, St. Peter had promised his cure if the King would, on his own royal neck, carry him to the Monastery. The King immediately consented; and, amidst the scoffs of the court, bore the poor man to the steps of the High Altar. There the cripple was received by Godric the sacristan, and walked away on his own restored feet, hanging his stool on the wall for a trophy.

"Before that same High Altar was also believed to have been seen one of the Eucharistical portents, so frequent in the Middle Ages. A child, 'pure and bright like a spirit,' appeared to the King in the sacramental elements. Leofric, Earl of Mercia, who, with his famous countess, Godiva, was present, saw it also.

"Such as these were the motives of Edward. Under their influence was fixed what has ever since been the local centre of the English monarchy."

"Such as these were the *motives* of Edward," says the Dean. Yes, certainly; but such as these also, first, were the acts and visions of Edward. Take care that you don't slip away, by the help of the glycerine of the word "motives," into fancying that all these tales are only the after colours and pictorial metaphors of sentimental piety. They are either plain truth or black lies; take your choice,—but don't tickle and treat yourselves with the prettiness or the grotesqueness of them, as if they were Anderssen's fairy tales. Either the King did carry the beggar on his back, or he didn't; either Godiva rode through Coventry, or she didn't; either the Earl Leofric saw the vision of the bright child at the altar—or he lied like a knave. Judge, as you will; but do not Doubt.

"The Abbey was fifteen years in building. The King spent upon it one-tenth of the property of the kingdom. It was to be a marvel of its kind. As in its origin it bore the traces of the fantastic and childish" (I must pause, to ask you to substitute for these blameful terms, 'fantastic and childish,' the better ones of 'imaginative and pure') "character of the King

and of the age ; in its architecture it bore the stamp of the peculiar position which Edward occupied in English history between Saxon and Norman. By birth he was a Saxon, but in all else he was a foreigner. Accordingly the Church at Westminster was a wide-sweeping innovation on all that had been seen before. 'Destroying the old building,' he says in his charter, 'I have built up a new one from the very foundation.' Its fame as a 'new style of composition' lingered in the minds of men for generations. It was the first cruciform church in England, from which all the rest of like shape were copied—an expression of the increasing hold which, in the tenth century, the idea of the Crucifixion had laid on the imagination of Europe. The massive roof and pillars formed a contrast with the rude wooden rafters and beams of the common Saxon churches. Its very size—occupying, as it did, almost the whole area of the present building—was in itself portentous. The deep foundations, of large square blocks of grey stone, were duly laid ; the east end was rounded into an apse ; a tower rose in the centre, crowned by a cupola of wood. At the western end were erected two smaller towers, with five large bells. The hard strong stones were richly sculptured ; the windows were filled with stained glass ; the roof was covered with lead. The cloisters, chapter-house, refectory, dormitory, the infirmary, with its spacious chapel, if not completed by Edward, were all begun, and finished in the next generation on the same plan. This structure, venerable as it would be if it had lasted to our time, has almost entirely vanished. Possibly one vast dark arch in the southern transept, certainly the substructures of the dormitory, with their huge pillars, 'grand and regal at the bases and capitals,' the massive, low-browed passage leading from the great cloister to Little Dean's Yard, and some portions of the refectory and of the infirmary chapel, remain as specimens of the work which astonished the last age of the Anglo-Saxon and the first age of the Norman monarchy."

Hitherto I have read to you with only supplemental comment. But in the next following passage, with which I close my series of extracts, sentence after sentence occurs, at which

as I read, I must raise my hand, to mark it for following depreciation, or denial.

“In the centre of Westminster Abbey thus lies its Founder, and such is the story of its foundation. Even apart from the legendary elements in which it is involved, it is impossible not to be struck by the fantastic character of all its circumstances. We seem to be in a world of poetry.” (I protest, No.) “Edward is four centuries later than Ethelbert and Augustine; but the origin of Canterbury is commonplace and prosaic compared with the origin of Westminster.” (Yes, that’s true.) “We can hardly imagine a figure more incongruous to the soberness of later times than the quaint, irresolute, wayward prince whose chief characteristics have just been described. His titles of Confessor and Saint belong not to the general instincts of Christendom; but to the most transitory feelings of the age.” (I protest, No.) “His opinions, his prevailing motives, were such as in no part of modern Europe would now be shared by any educated teacher or ruler.” (That’s true enough.) “But in spite of these irreconcilable differences, there was a solid ground for the charm which he exercised over his contemporaries. His childish and eccentric fancies have passed away;” (I protest, No;) “but his innocent faith and his sympathy with his people are qualities which, even in our altered times, may still retain their place in the economy of the world. Westminster Abbey, so we hear it said, sometimes with a cynical sneer, sometimes with a timorous scruple, has admitted within its walls many who have been great without being good, noble with a nobleness of the earth earthy, worldly with the wisdom of this world. But it is a counterbalancing reflection, that the central tomb, round which all those famous names have clustered, contains the ashes of one who, weak and erring as he was, rests his claims of interment here, not on any act of power or fame, but only on his artless piety and simple goodness. He, towards whose dust was attracted the fierce Norman, and the proud Plantagenet, and the grasping Tudor, and the fickle Stuart, even the Independent Oliver, the Dutch William, and the Hanoverian George, was one whose humble graces are

within the reach of every man, woman, and child of every time, if we rightly part the immortal substance from the perishable form."

Now I have read you these passages from Dean Stanley as the most accurately investigatory, the most generously sympathetic, the most reverently acceptant account of these days, and their people, which you can yet find in any English history. But consider now, point by point, where it leaves you. You are told, first, that you are living in an age of poetry. But the days of poetry are those of Shakespeare and Milton, not of Bede: nay, for their especial wealth in melodious theology and beautifully rhythmic and pathetic meditation, perhaps the days which have given us 'Hiawatha,' 'In Memoriam,' 'The Christian Year,' and the 'Soul's Diary' of George Macdonald, may be not with disgrace compared with those of Caedmon. And nothing can be farther different from the temper, nothing less conscious of the effort, of a poet, than any finally authentic document to which you can be referred for the relation of a Saxon miracle.

I will read you, for a perfectly typical example, an account of one from Bede's 'Life of St. Cuthbert.' The passage is a favourite one of my own, but I do not in the least anticipate its producing upon you the solemnizing effect which I think I could command from reading, instead, a piece of 'Marmion,' 'Manfred,' or 'Childe Harold.'

· · · "He had one day left his cell to give advice to some visitors; and when he had finished, he said to them, 'I must now go in again, but do you, as you are inclined to depart, first take food; and when you have cooked and eaten that goose which is hanging on the wall, go on board your vessel in God's name and return home.' He then uttered a prayer, and, having blessed them, went in. But they, as he had bidden them, took some food; but having enough provisions of their own, which they had brought with them, they did not touch the goose.

"But when they had refreshed themselves they tried to go on board their vessel, but a sudden storm utterly prevented

them from putting to sea. They were thus detained seven days in the island by the roughness of the waves, and yet they could not call to mind what fault they had committed. They therefore returned to have an interview with the holy father, and to lament to him their detention. He exhorted them to be patient, and on the seventh day came out to console their sorrow, and to give them pious exhortations. When, however, he had entered the house in which they were stopping, and saw that the goose was not eaten, he reproved their disobedience with mild countenance and in gentle language: 'Have you not left the goose still hanging in its place? What wonder is it that the storm has prevented your departure? Put it immediately into the caldron, and boil and eat it, that the sea may become tranquil, and you may return home.'

"They immediately did as he commanded; and it happened most wonderfully that the moment the kettle began to boil the wind began to cease, and the waves to be still. Having finished their repast, and seeing that the sea was calm, they went on board, and to their great delight, though with shame for their neglect, reached home with a fair wind. Now this, as I have related, I did not pick up from any chance authority, but I had it from one of those who were present, a most reverend monk and priest of the same monastery, Cynemund, who still lives, known to many in the neighbourhood for his years and the purity of his life."

I hope that the memory of this story, which, thinking it myself an extremely pretty one, I have given you, not only for a type of sincerity and simplicity, but for an illustration of obedience, may at all events quit you, for good and all, of the notion that the believers and witnesses of miracle were poetical persons. Saying no more on the head of that allegation, I proceed to the Dean's second one, which I cannot but interpret as also intended to be injurious,—that they were artless and childish ones; and that because of this rudeness and puerility, their motives and opinions would not be shared by any statesman of the present day.

It is perfectly true that Edward the Confessor was himself

in many respects of really childish temperament ; not therefore, perhaps, as I before suggested to you, less venerable. But the age of which we are examining the progress, was by no means represented or governed by men of similar disposition. It was eminently productive of—it was altogether governed, guided, and instructed by—men of the widest and most brilliant faculties, whether constructive or speculative, that the world till then had seen ; men whose acts became the romance, whose thoughts the wisdom, and whose arts the treasure, of a thousand years of futurity.

I warned you at the close of last lecture against the too agreeable vanity of supposing that the Evangelization of the world began at St. Martin's, Canterbury. Again and again you will indeed find the stream of the Gospel contracting itself into narrow channels, and appearing, after long-concealed filtration, through veins of unmeasured rock, with the bright resilience of a mountain spring. But you will find it the only candid, and therefore the only wise, way of research, to look in each era of Christendom for the minds of culminating power in all its brotherhood of nations ; and, careless of local impulse, momentary zeal, picturesque incident, or vaunted miracle, to fasten your attention upon the force of character in the men, whom, over each newly-converted race, Heaven visibly sets for its shepherds and kings, to bring forth judgment unto victory. Of these I will name to you, as messengers of God and masters of men, five monks and five kings ; in whose arms during the range of swiftly gainful centuries which we are following, the life of the world lay as a nursing babe. Remember, in their successive order,—of monks, St. Jerome, St. Augustine, St. Martin, St. Benedict, and St. Gregory ; of kings,—and your national vanity may be surely enough appeased in recognizing two of them for Saxon,—Theodoric, Charlemagne, Alfred, Canute, and the Confessor. I will read three passages to you, out of the literal words of three of these ten men, without saying whose they are, that you may compare them with the best and most exalted you have read expressing the philosophy, the religion, and the policy of to-day,—from which I admit, with Dean Stanley, but with a far

different meaning from his, that they are indeed separate for evermore.

I give you first, for an example of Philosophy, a single sentence, containing all—so far as I can myself discern—that it is possible for us to know, or well for us to believe, respecting the world and its laws.

“OF GOD’S UNIVERSAL PROVIDENCE, RULING ALL, AND COMPRISING ALL.

“Wherefore the great and mighty God ; He that made man a reasonable creature of soul and body, and He that did neither let him pass unpunished for his sin, nor yet excluded him from mercy ; He that gave, both unto good and bad, essence with the stones, power of production with the trees, senses with the beasts of the field, and understanding with the angels ; He from whom is all being, beauty, form, and order, number, weight, and measure ; He from whom all nature, mean and excellent, all seeds of form, all forms of seed, all motion, both of forms and seeds, derive and have being ; He that gave flesh the original beauty, strength, propagation, form and shape, health and symmetry ; He that gave the unreasonable soul, sense, memory, and appetite ; the reasonable, besides these, fantasy, understanding, and will ; He, I say, having left neither heaven, nor earth, nor angel, nor man, no, nor the most base and contemptible creature, neither the bird’s feather, nor the herb’s flower, nor the tree’s leaf, without the true harmony of their parts, and peaceful concord of composition :—It is in no way credible that He would leave the kingdoms of men and their bondages and freedom loose and uncomprised in the laws of His eternal providence.”*

This for the philosophy.† Next, I take for example of the Religion of our ancestors, a prayer, personally and passionately offered to the Deity conceived as you have this moment heard.

* From St. Augustine’s ‘*Citie of God*,’ Book V., ch. xi. (English trans., printed by George Eld, 1610.)

† Here one of the “*Stones of Westminster*” was shown and commented on.

“O Thou who art the Father of that Son which has awakened us, and yet urgeth us out of the sleep of our sins, and exhorteth us that we become Thine ;” (note you that, for apprehension of what Redemption means, against your base and cowardly modern notion of 'scaping whipping. Not to take away the Punishment of Sin, but by His Resurrection to raise us out of the sleep of sin itself ! Compare the legend at the feet of the Lion of the Tribe of Judah in the golden Gospel of Charles le Chauve * :—

“HIC LEO SURGENDO PORTAS CONFREGIT AVERNI
 QUT NUNQUAM DORMIT, NUSQUAM DORMITAT IN ÆVUM ;”)

“to Thee, Lord, I pray, who art the supreme truth ; for all the truth that is, is truth from Thee. Thee I implore, O Lord, who art the highest wisdom. Through Thee are wise all those that are so. Thou art the true life, and through Thee are living all those that are so. Thou art the supreme felicity, and from Thee all have become happy that are so. Thou art the highest good, and from thee all beauty springs. Thou art the intellectual light, and from Thee man derives his understanding.

“To Thee, O God, I call and speak. Hear, O hear me, Lord ! for Thou art my God and my Lord ; my Father and my Creator ; my ruler and my hope ; my wealth and my honour ; my house, my country, my salvation, and my life ! Hear, hear me, O Lord ! Few of Thy servants comprehend Thee. But Thee alone I *love*, † indeed, above all other things. Thee I seek : Thee I will follow : Thee I am ready to serve. Under Thy power I desire to abide, for Thou alone art the Sovereign of all. I pray Thee to command me as Thou wilt.”

You see this prayer is simply the expansion of that clause of the Lord's Prayer which most men eagerly omit from it,—

* At Munich : the leaf has been exquisitely drawn and legend communicated to me by Prof. Westwood. It is written in gold on purple.

† Meaning—not that he is of those few, but that, without comprehending, at least, as a dog, he can love.

Fiat voluntas tua. In being so, it sums the Christian prayer of all ages. See now, in the third place, how far this king's letter I am going to read to you sums also Christian Policy.

“Wherefore I render high thanks to Almighty God, for the happy accomplishment of all the desires which I have set before me, and for the satisfying of my every wish.

“Now therefore, be it known to you all, that to Almighty God Himself I have, on my knees, devoted my life, to the end that in all things I may do justice, and with justice and rightness rule the kingdoms and peoples under me; throughout everything preserving an impartial judgment. If, heretofore, I have, through being, as young men are, impulsive or careless, done anything unjust, I mean, with God's help, to lose no time in remedying my fault. To which end I call to witness my counsellors, to whom I have entrusted the counsels of the kingdom, and I charge them that by no means, be it through fear of me, or the favour of any other powerful personage, to consent to any injustice, or to suffer any to shoot out in any part of my kingdom. I charge all my viscounts and those set over my whole kingdom, as they wish to keep my friendship or their own safety, to use no unjust force to any man, rich or poor; let all men, noble and not noble, rich and poor alike, be able to obtain their rights under the law's justice; and from that law let there be no deviation, either to favour the king or any powerful person, nor to raise money for me. I have no need of money raised by what is unfair. I also would have you know that I go now to make peace and firm treaty by the counsels of all my subjects, with those nations and people who wished, had it been possible for them to do so, which it was not, to deprive us alike of kingdom and of life. God brought down their strength to nought: and may He of His benign love preserve us on our throne and in honour. Lastly, when I have made peace with the neighbouring nations, and settled and pacified all my dominions in the East, so that we may nowhere have any war or enmity to fear, I mean to come to England this summer, as soon as I can fit out vessels to sail. My reason, however, in sending this letter first is to let all the

people of my kingdom share in the joy of my welfare: for as you yourselves know, I have never spared myself or my labour; nor will I ever do so, where my people are really in want of some good that I can do them."

What think you now, in candour and honour, you youth of the latter days,—what think you of these types of the thought, devotion, and government, which not in words, but pregnant and perpetual fact, animated these which you have been accustomed to call the Dark Ages?

The Philosophy is Augustine's; the Prayer Alfred's; and the Letter Canute's.

And, whatever you may feel respecting the beauty or wisdom of these sayings, be assured of one thing above all, that they are sincere; and of another, less often observed, that they are joyful.

Be assured, in the first place, that they are sincere. The ideas of diplomacy and priestcraft are of recent times. No false knight or lying priest ever prospered, I believe, in any age, but certainly not in the dark ones. Men prospered then, only in following openly-declared purposes, and preaching candidly beloved and trusted creeds.

And that they did so prosper, in the degree in which they accepted and proclaimed the Christian Gospel, may be seen by any of you in your historical reading, however partial, if only you will admit the idea that it could be so, and was likely to be so. You are all of you in the habit of supposing that temporal prosperity is owing either to worldly chance or to worldly prudence; and is never granted in any visible relation to states of religious temper. Put that treacherous doubt away from you, with disdain; take for basis of reasoning the noble postulate, that the elements of Christian faith are sound,—instead of the base one, that they are deceptive; reread the great story of the world in that light, and see what a vividly real, yet miraculous tenor, it will then bear to you.

Their faith then, I tell you first, was sincere; I tell you secondly that it was, in a degree few of us can now conceive, joyful. We continually hear of the trials, sometimes of the

victories, of Faith,—but scarcely ever of its pleasures. Whereas, at this time, you will find that the chief delight of all good men was in the recognition of the goodness and wisdom of the Master, who had come to dwell with them upon earth. It is almost impossible for you to conceive the vividness of this sense in them ; it is totally impossible for you to conceive the comfort, peace, and force of it. In everything that you now do or seek, you expose yourselves to countless miseries of shame and disappointment, because in your doing you depend on nothing but your own powers, and in seeking choose only your own gratification. You cannot for the most part conceive of any work but for your own interests, or the interests of others about whom you are anxious in the same faithless way ; everything about which passion is excited in you or skill exerted is some object of material life, and the idea of doing anything except for your own praise or profit has narrowed itself into little more than the precentor's invitation to the company with little voice and less practice to “sing to the praise and glory of God.”

I have said that you cannot imagine the feeling of the energy of daily life applied in the real meaning of those words. You cannot imagine it, but you *can* prove it. Are any of you willing, simply as a philosophical experiment in the greatest of sciences, to adopt the principles and feelings of these men of a thousand years ago for a given time, say for a year ? It cannot possibly do you any harm to try, and you cannot possibly learn what is true in these things, without trying. If after a year's experience of such method you find yourself no happier than before, at least you will be able to support your present opinions at once with more grace and more modesty ; having conceded the trial it asked for, to the opposite side. Nor in acting temporarily on a faith you do not see to be reasonable, do you compromise your own integrity more, than in conducting, under a chemist's directions, an experiment of which he foretells inexplicable consequences. And you need not doubt the power you possess over your own minds to do this. Were faith not voluntary, it could not be praised, and would not be rewarded.

If you are minded thus to try, begin each day with Alfred's prayer,—*fiat voluntas tua* ; resolving that you will stand to it, and that nothing that happens in the course of the day shall displease you. Then set to any work you have in hand with the sifted and purified resolution that ambition shall not mix with it, nor love of gain, nor desire of pleasure more than is appointed for you ; and that no anxiety shall touch you as to its issue, nor any impatience nor regret if it fail. Imagine that the thing is being done through you, not by you : that the good of it may never be known, but that at least, unless by your rebellion or foolishness, there can come no evil into it, nor wrong chance to it. Resolve also with steady industry to do what you can for the help of your country and its honour, and the honour of its God ; and that you will not join hands in its iniquity, nor turn aside from its misery ; and that in all you do and feel you will look frankly for the immediate help and direction, and to your own consciences, expressed approval, of God. Live thus, and believe, and with swiftness of answer proportioned to the frankness of the trust, most surely the God of hope will fill you with all joy and peace in believing.

But, if you will not do this, if you have not courage nor heart enough to break away the fetters of earth, and take up the sensual bed of it, and walk ; if you say that you are *bound* to win this thing, and become the other thing, and that the wishes of your friends,—and the interests of your family,—and the bias of your genius,—and the expectations of your college,—and all the rest of the bow-wow-wow of the wild dog-world, must be attended to, whether you like it or no,—then, at least, for shame give up talk about being free or independent creatures ; recognize yourselves for slaves in whom the thoughts are put in ward with their bodies, and their hearts manacled with their hands : and then at least also, for shame, if you refuse to believe that ever there were men who gave their souls to God,—know and confess how surely there are those who sell them to His adversary.

LECTURE III.

THE PLEASURES OF DEED.

Alfred to Cœur de Lion.

It was my endeavour, in the preceding lecture, to vindicate the thoughts and arts of our Saxon ancestors from whatever scorn might lie couched under the terms applied to them by Dean Stanley,—‘fantastic,’ and ‘childish.’ To-day my task must be carried forward, first, in asserting the grace in fantasy, and the force in infancy, of the English mind, before the Conquest, against the allegations contained in the final passage of Dean Stanley’s description of the first founded Westminster; a passage which accepts and asserts, more distinctly than any other equally brief statement I have met with, the to my mind extremely disputable theory, that the Norman invasion was in every respect a sanitary, moral, and intellectual blessing to England, and that the arrow which slew her Harold was indeed the Arrow of the Lord’s deliverance.

“The Abbey itself,” says Dean Stanley,—“the chief work of the Confessor’s life,—was the portent of the mighty future. When Harold stood beside his sister Edith, on the day of the dedication, and signed his name with hers as witness to the Charter of the Abbey, he might have seen that he was sealing his own doom, and preparing for his own destruction. The solid pillars, the ponderous arches, the huge edifice, with triple tower and sculptured stones and storied windows, that arose in the place and in the midst of the humble wooden churches and wattled tenements of the Saxon period, might have warned the nobles who were present that the days of their rule were numbered, and that the *avenging, civilizing, stimulating* hand of another and a mightier race was at work, which would change the whole face of their language, their manners, their Church, and their commonwealth. The Abbey, so far exceeding the demands of the *dull and stagnant* minds of our Anglo-Saxon an-

cestors, was founded not only in faith, but in hope: in the hope that England had yet a glorious career to run; that the line of her sovereigns would not be broken, even when the race of Alfred had ceased to reign."

There must surely be some among my hearers who are startled, if not offended, at being told in the terms which I emphasized in this sentence, that the minds of our Saxon fathers were, although fantastic, dull, and, although childish, stagnant; that farther, in their fantastic stagnation, they were savage,—and in their innocent dullness, criminal; so that the future character and fortune of the race depended on the critical advent of the didactic and disciplinarian Norman baron, at once to polish them, stimulate, and chastise.

Before I venture to say a word in distinct arrest of this judgment, I will give you a chart, as clear as the facts observed in the two previous lectures allow, of the state and prospects of the Saxons, when this violent benediction of conquest happened to them: and especially I would rescue, in the measure that justice bids, the memory even of their Pagan religion from the general scorn in which I used Carlyle's description of the idol of ancient Prussia as universally exponent of the temper of Northern devotion. That Triglyph, or Triglyph Idol, (derivation of Triglyph wholly unknown to me—I use Triglyph only for my own handiest epithet), last set up, on what is now St. Mary's hill in Brandenburg, in 1023, belonged indeed to a people wonderfully like the Saxons,—geographically their close neighbours,—in habits of life, and aspect of native land, scarcely distinguishable from them,—in Carlyle's words, a "strong-boned, iracund, herdsman and fisher people, highly averse to be interfered with, in their religion especially, and inhabiting a moory flat country, full of lakes and woods, but with plenty also of alluvial mud, grassy, frugiferous, apt for the plough"—in all things like the Saxons, except, as I read the matter, in that 'aversion to be interfered with' which you modern English think an especially Saxon character in you—but which is, on the contrary, you will find on examination, by no means Saxon; but only Wendisch, Czech, Serbie, Sclavic,—other hard names I could

easily find for it among the tribes of that vehemently heathen old Preussen—“resolutely worshipful of places of oak trees, of wooden or stone idols, of Bangputtis, Patkullos, and I know not what diabolic dumb blocks.” Your English “dislike to be interfered with” is in absolute fellowship with these, but only gathers itself in its places of Stalks, or chimneys, instead of oak trees, round its idols of iron, instead of wood, diabolically *vocal* now; strident, and sibilant, instead of dumb.

Far other than these, their neighbour Saxons, Jutes and Angles!—tribes between whom the distinctions are of no moment whatsoever, except that an English boy or girl may with grace remember that ‘Old England,’ exactly and strictly so called, was the small district in the extreme south of Denmark, totally with its islands estimable at sixty miles square of dead flat land. Directly south of it, the definitely so-called Saxons held the western shore of Holstein, with the estuary of the Elbe, and the sea-mark isle, Heligoland. But since the principal temple of Saxon worship was close to Leipsic,* we may include under our general term, Saxons, the inhabitants of the whole level district of North Germany, from the Gulf of Flensburg to the Hartz; and, eastward, all the country watered by the Elbe as far as Saxon Switzerland.

Of the character of this race I will not here speak at any length: only note of it this essential point, that their religion was at once more practical and more imaginative than that of the Norwegian peninsula; the Norse religion being the conception rather of natural than moral powers, but the Saxon, primarily of moral, as the lords of natural—their central divine image, Irminsul,† holding the standard of peace in her right hand, a balance in her left. Such a religion may degenerate into mere slaughter and rapine; but it has the making in it of the noblest men.

More practical at all events, whether for good or evil, in this trust in a future reward for courage and purity, than the mere Scandinavian awe of existing Earth and Cloud, the Saxon religion was also more imaginative, in its nearer con-

* Turner, vol. i. p. 223.

† Properly plural ‘Images’—Irminsul and Irminsula.

ception of human feeling in divine creatures. And when this wide hope and high reverence had distinct objects of worship and prayer, offered to them by Christianity, the Saxons easily became pure, passionate, and thoughtful Christians; while the Normans, to the last, had the greatest difficulty in apprehending the Christian teaching of the Franks, and still deny the power of Christianity, even when they have become inveterate in its form.

Quite the deepest-thoughted creatures of the then animate world, it seems to me, these Saxon ploughmen of the sand or the sea, with their worshipped deity of Beauty and Justice, a red rose on her banner, for best of gifts, and in her right hand, instead of a sword, a balance, for due doom, without wrath,—of retribution in her left. Far other than the Wends, though stubborn enough, they too, in battle rank,—seven times rising from defeat against Charlemagne, and unsubdued but by death—yet, by no means in that John Bull's manner of yours, 'averse to be interfered with,' in their opinions, or their religion. Eagerly docile on the contrary—joyfully reverent—instantly and gratefully acceptant of whatever better insight or oversight a stranger could bring them, of the things of God or man.

And let me here ask you especially to take account of that origin of the true bearing of the Flag of England, the Red Rose. Her own madness defiled afterwards alike the white and red, into images of the paleness, or the crimson, of death; but the Saxon Rose was the symbol of heavenly beauty and peace.

I told you in my first lecture that one swift requirement in our school would be to produce a beautiful map of England, including old Northumberland, giving the whole country, in its real geography, between the Frith of Forth and Straits of Dover, and with only six sites of habitation given, besides those of Edinburgh and London,—namely, those of Canterbury and Winchester, York and Lancaster, Holy Island and Melrose; the latter instead of Iona, because, as we have seen, the influence of St. Columba expires with the advance of Christianity, while that of Cuthbert of Melrose connects itself

with the most sacred feelings of the entire Northumbrian kingdom, and Scottish border, down to the days of Scott—wreathing also into its circle many of the legends of Arthur. Will you forgive my connecting the personal memory of having once had a wild rose gathered for me, in the glen of Thomas the Rhymer, by the daughter of one of the few remaining Catholic houses of Scotland, with the pleasure I have in reading to you this following true account of the origin of the name of St. Cuthbert's birthplace;—the rather because I owe it to friendship of the same date, with Mr. Cockburn Muir, of Melrose.

“To those who have eyes to read it,” says Mr. Muir, “the name ‘Melrose’ is written full and fair, on the fair face of all this reach of the valley. The name is anciently spelt Mailros, and later, Malros, never Mulros; (‘Mul’ being the Celtic word taken to mean ‘bare’). Ros is Rose; the forms Meal or Mol imply great quantity or number. Thus Malros means the place of many roses.

“This is precisely the notable characteristic of the neighbourhood. The wild rose is indigenous. There is no nook nor cranny, no bank nor brae, which is not, in the time of roses, ablaze with their exuberant loveliness. In gardens, the cultured rose is so prolific that it spreads literally like a weed. But it is worth suggestion that the word may be of the same stock as the Hebrew *rósh* (translated *rós* by the Septuagint), meaning *chief*, *principal*, while it is also the name of *some* flower; but of *which* flower is now unknown. Affinities of *rósh* are not far to seek; Sanskrit, *Raj(a)*, *Ra(ja)ni*; Latin, *Rex*, *Reg(ina)*.”

I leave it to Professor Max Muller to certify or correct for you the details of Mr. Cockburn's research,*—this main head

*I had not time to quote it fully in the lecture; and in my ignorance, alike of Keltic and Hebrew, can only submit it here to the reader's examination. “The ancient Cognizance of the town confirms this etymology beyond doubt, with customary heraldic precision. The shield bears a *Rose*; with a *Maul*, as the exact phonetic equivalent for the expletive. If the herald had needed to express ‘bare promontory,’ quite certainly he would have managed it somehow. Not only this, the Earls of

of it I can positively confirm, that in old Scotch,—that of Bishop Douglas,—the word ‘Rois’ stands alike for King, and Rose.

Summing now the features I have too shortly specified in the Saxon character,—its imagination, its docility, its love of knowledge, and its love of beauty, you will be prepared to accept my conclusive statement, that they gave rise to a form of Christian faith which appears to me, in the present state of my knowledge, one of the purest and most intellectual ever attained in Christendom ;—never yet understood, partly because of the extreme rudeness of its expression in the art of manuscripts, and partly because, on account of its very purity, it sought no expression in architecture, being a religion of daily life, and humble lodging. For these two practical reasons, first ;—and for this more weighty third, that the intellectual character of it is at the same time most truly, as Dean Stanley told you, childlike ; showing itself in swiftness of imaginative apprehension, and in the fearlessly candid application of great principles to small things. Its character in this kind may be instantly felt by any sympathetic and gentle person who will read carefully the book I have already quoted to you, the Venerable Bede’s life of St. Cuthbert ; and the intensity and sincerity of it in the highest orders of the laity, by simply counting the members of Saxon Royal families who ended their lives in monasteries.

Haddington were first created Earls of *Melrose* (1619); and their Shield, quarterly, is charged, for Melrose, in 2d and 3d (fesse wavy between) three *Roses* gu.

“Beyond this ground of certainty, we may indulge in a little excursus into lingual affinities of wide range. The root *mol* is clear enough. It is of the same stock as the Greek *mála*, Latin *multum*, and Hebrew *m’la*. But *Rose*? We call her Queen of Flowers, and since before the Persian poets made much of her, she was everywhere *Regina Florum*, why should not the name mean simply the Queen, the Chief? Now, so few who know Keltic know also Hebrew, and so few who know Hebrew know also Keltic, that few know the surprising extent of the affinity that exists—clear as day—between the Keltic and the Hebrew vocabularies. That the word *Rose* may be a case in point is not hazardously speculative.”

Now, at the very moment when this faith, innocence, and ingenuity were on the point of springing up into their fruitage, comes the Northern invasion; of the real character of which you can gain a far truer estimate by studying Alfred's former resolute contest with and victory over the native Norman in his paganism, than by your utmost endeavours to conceive the character of the afterwards invading Norman, disguised, but not changed, by Christianity. The Norman could not, in the nature of him, become a *Christian* at all; and he never did;—he only became, at his best, the enemy of the Saracen. What he was, and what alone he was capable of being, I will try to-day to explain.

And here I must advise you that in all points of history relating to the period between 800 and 1200, you will find M. Viollet le Duc, incidentally throughout his 'Dictionary of Architecture,' the best-informed, most intelligent, and most thoughtful of guides. His knowledge of architecture, carried down into the most minutely practical details,—(which are often the most significant), and embracing, over the entire surface of France, the buildings even of the most secluded villages; his artistic enthusiasm, balanced by the acutest sagacity, and his patriotism, by the frankest candour, render his analysis of history during that active and constructive period the most valuable known to me, and certainly, in its field, exhaustive. Of the later nationality his account is imperfect, owing to his professional interest in the mere *science* of architecture, and comparative insensibility to the power of sculpture;—but of the time with which we are now concerned, whatever he tells you must be regarded with grateful attention.

I introduce, therefore, the Normans to you, on their first entering France, under his descriptive terms of them.*

"As soon as they were established on the soil, these barbarians became the most hardy and active builders. Within the space of a century and a half, they had covered the country on which they had definitely landed, with religious, monastic, and civil edifices, of an extent and richness then little

* Article "Architecture," vol. i., p. 138.

common. It is difficult to suppose that they had brought from Norway the elements of art,* but they were possessed by a persisting and penetrating spirit; their brutal force did not want for grandeur. Conquerors, they raised castles to assure their domination; they soon recognized the Moral force of the clergy, and endowed it richly. Eager always to attain their end, when once they saw it, they *never left one of their enterprises unfinished*, and in that they differed completely from the Southern inhabitants of Gaul. Tenacious extremely, they were perhaps the only ones among the barbarians established in France who had ideas of order; the only ones who knew how to preserve their conquests, and compose a state. They found the remains of the Carthaginian arts on the territory where they planted themselves, they mingled with those their national genius, positive, grand, and yet supple."

Supple, 'Délié,'—capable of change and play of the mental muscle, in the way that savages are not. I do not, myself, grant this suppleness to the Norman, the less because another sentence of M. le Duc's, occurring incidentally in his account of the archivolt, is of extreme counter-significance, and wide application. "The Norman arch," he says, "is *never derived from traditional classic forms*, but only from mathematical arrangement of line." Yes; that is true: the Norman arch is never derived from classic forms. The cathedral, † whose aisles you saw or might have seen, yesterday, interpenetrated with light, whose vaults you might have heard prolonging the sweet divisions of majestic sound, would have been built in that stately symmetry by Norman law, though never an arch at Rome had risen round her field of blood,—though never her Sublician bridge had been petrified by her Augustan pontifices. But the *decoration*, though not the structure of those arches, they owed to another race, ‡ whose words they stole without understanding, though three centuries before, the

* They *had* brought some, of a variously Charybdic, Serpentine and Diabolic character.—J. R.

† Of Oxford, during the afternoon service.

‡ See the concluding section of the lecture.

Saxon understood, and used, to express the most solemn majesty of his Kingdom,—

“EGO EDGAR, TOTIVS ALBIONIS”—

not Rex, that would have meant the King of Kent or Mercia, not of England,—no, nor Emperor; that would have meant only the profane power of Rome, but *BASILEVS*, meaning a King who reigned with sacred authority given by Heaven and Christ.

With far meaner thoughts, both of themselves and their powers, the Normans set themselves to build impregnable military walls, and sublime religious ones, in the best possible practical ways; but they no more made books of their church fronts than of their bastion flanks; and cared, in the religion they accepted, neither for its sentiments nor its promises, but only for its immediate results on national order.

As I read them, they were men wholly of this world, bent on doing the most in it, and making the best of it that they could;—men, to their death, of *Deed*, never pausing, changing, repenting, or anticipating, more than the completed square, *ἀνευ ψογου*, of their battle, their keep, and their cloister. Soldiers before and after everything, they learned the lockings and bracings of their stones primarily in defence against the battering-ram and the projectile, and esteemed the pure circular arch for its distributed and equal strength more than for its beauty. “I believe again,” says M. le Duc,* “that the feudal castle never arrived at its perfectness till after the Norman invasion, and that this race of the North was the first to apply a defensive system under unquestionable laws, soon followed by the nobles of the Continent, after they had, at their own expense, learned their superiority.”

The next sentence is a curious one. I pray your attention to it. “The defensive system of the Norman is born of a profound sentiment of *distrust* and *cunning foreign to the character of the Frank*.” You will find in all my previous notices of the French, continual insistance upon their natural

* Article “Château,” vol. iii., p. 65.

Franchise, and also, if you take the least pains in analysis of their literature down to this day, that the idea of falseness is to them indeed more hateful than to any other European nation. To take a quite cardinal instance. If you compare Lucian's and Shakspeare's Timon with Molière's Alceste, you will find the Greek and English misanthropes dwell only on men's *ingratitude to themselves*, but Alceste, on their *faisness to each other*.

Now hear M. le Duc farther :

“The castles built between the tenth and twelfth centuries along the Loire, Gironde, and Seine, that is to say, along the lines of the Norman invasions, and in the neighbourhood of their possessions, have a peculiar and uniform character which one finds neither in central France, nor in Burgundy, nor can there be any need for us to throw light on (*faire ressortir*) the superiority of the warrior spirit of the Normans, during the later times of the Carlovingian epoch, over the spirit of the chiefs of Frank descent, established on the Gallo-Roman soil.” There's a bit of honesty in a Frenchman for you !

I have just said that they valued religion chiefly for its influence of order in the present world : being in this, observe, as nearly as may be the exact reverse of modern believers, or persons who profess to be such,—of whom it may be generally alleged, too truly, that they value religion with respect to their future bliss rather than their present duty ; and are therefore continually careless of its direct commands, with easy excuse to themselves for disobedience to them. Whereas the Norman, finding in his own heart an irresistible impulse to action, and perceiving himself to be set, with entirely strong body, brain, and will, in the midst of a weak and dissolute confusion of all things, takes from the Bible instantly into his conscience every exhortation to Do and to Govern ; and becomes, with all his might and understanding, a blunt and rough servant, knecht, or knight of God, liable to much misapprehension, of course, as to the services immediately required of him, but supposing, since the whole make of him, outside and in, is a soldier's, that God meant him for a soldier, and that he is to establish, by main force, the Chris-

tian faith and works all over the world so far as he comprehends them; not merely with the Mahometan indignation against spiritual error, but with a sound and honest soul's dislike of material error, and resolution to extinguish *that*, even if perchance found in the spiritual persons to whom, in their office, he yet rendered total reverence.

Which force and faith in him I may best illustrate by merely putting together the broken paragraphs of Sismondi's account of the founding of the Norman Kingdom of Sicily: virtually contemporary with the conquest of England.

“The Normans surpassed all the races of the west in their ardour for pilgrimages. They would not, to go into the Holy Land, submit to the monotony* of a long sea voyage—the rather that they found not on the Mediterranean the storms or dangers they had rejoiced to encounter on their own sea. They traversed by land the whole of France and Italy, trusting to their swords to procure the necessary subsistence, † if the charity of the faithful did not enough provide for it with alms. The towns of Naples, Amalfi, Gaeta, and Bari, held constant commerce with Syria; and frequent miracles, it was believed, illustrated the Monte Cassino, (St. Benedict again!) on the road of Naples, and the Mount of Angels (Garganus) above Bari.” (Querceta Gargani—verily, laborant; *now*, et orant.) “The pilgrims wished to visit during their journey the monasteries built on these two mountains, and therefore nearly always, either going or returning to the Holy Land, passed through Magna Græcia.

“In one of the earliest years of the eleventh century, about forty of these religious travellers, having returned from the Holy Land, chanced to have met together in Salerno at the moment when a small Saracen fleet came to insult the town, and demand of it a military contribution. The inhabitants of South Italy, at this time, abandoned to the delights of their

* I give Sismondi's idea as it stands, but there was no question in the matter of monotony or of danger. The journey was made on foot because it was the most laborious way, and the most humble.

† See farther on, p. 110, the analogies with English arrangements of the same kind.

enchanted climate, had lost nearly all military courage. The Salernitani saw with astonishment forty Norman knights, after having demanded horses and arms from the Prince of Salerno, order the gates of the town to be opened, charge the Saracens fearlessly, and put them to flight. The Salernitani followed, however, the example given them by these brave warriors, and those of the Mussulmans who escaped their swords were forced to re-embark in all haste.

“The Prince of Salerno, Guaimar III., tried in vain to keep the warrior-pilgrims at his court : but at his solicitation other companies established themselves on the rocks of Salerno and Amalfi, until, on Christmas Day, 1041, (exactly a quarter of a century before the coronation here at Westminster of the Conqueror,) they gathered their scattered forces at Aversa,* twelve groups of them under twelve chosen counts, and all under the Lombard Ardoin, as commander-in-chief.” Be so good as to note that,—a marvellous key-note of historical fact about the unjesting Lombards. I cannot find the total Norman number : the chief contingent, under William of the Iron Arm, the son of Tancred of Hauteville, was only of three hundred knights ; the Count of Aversa’s troop, of the same number, is named as an important part of the little army—admit it for ten times Tancred’s, three thousand men in all. At Aversa, these three thousand men form, coolly on Christmas Day, 1041, the design of—well, I told you they didn’t *design* much, only, now we’re here, we may as well, while we’re about it,—overthrow the Greek empire! That was their little game!—a Christmas mumming to purpose. The following year, the whole of Apulia was divided among them.

I will not spoil, by abstracting, the magnificent following history of Robert Guiscard, the most wonderful soldier of that or any other time : I leave you to finish it for yourselves, only asking you to read together with it, the sketch, in Turner’s history of the Anglo-Saxons, of Alfred’s long previous war with the Norman Hasting ; pointing out to you for foci of character in each contest, the culminating incidents of naval battle. In Guiscard’s struggle with the Greeks, he encounters

* In Lombardy, south of Pavia.

for their chief naval force the Venetian fleet under the Doge Domenico Selvo. The Venetians are at this moment undoubted masters in all naval warfare; the Normans are worsted easily the first day,—the second day, fighting harder, they are defeated again, and so disastrously that the Venetian Doge takes no precautions against them on the third day, thinking them utterly disabled. Guiscard attacks him again on the third day, with the mere wreck of his own ships, and defeats the tired and amazed Italians finally!

The sea-fight between Alfred's ships and those of Hasting, ought to be still more memorable to us. Alfred, as I noticed in last lecture, had built war ships nearly twice as long as the Normans', swifter, and steadier on the waves. Six Norman ships were ravaging the Isle of Wight; Alfred sent nine of his own to take them. The King's fleet found the Northmen's embayed, and three of them aground. The three others engaged Alfred's nine, twice their size; two of the Viking ships were taken, but the third escaped, with only five men! A nation which verily took its pleasures in its Deeds.

But before I can illustrate farther either their deeds or their religion, I must for an instant meet the objection which I suppose the extreme probity of the nineteenth century must feel acutely against these men,—that they all lived by thieving.

Without venturing to allude to the *raison d'être* of the present French and English Stock Exchanges, I will merely ask any of you here, whether of Saxon or Norman blood, to define for himself what he means by the "possession of India." I have no doubt that you all wish to keep India in order, and in like manner I have assured you that Duke William wished to keep England in order. If you will read the lecture on the life of Sir Herbert Edwardes, which I hope to give in London after finishing this course,* you will see how a Christian British officer can, and does, verily, and with his whole heart, keep in order such part of India as may be en-

* This was prevented by the necessity for the re-arrangement of my terminal Oxford lectures: I am now preparing that on Sir Herbert for publication in a somewhat expanded form.

trusted to him, and in so doing, secure our Empire. But the silent feeling and practice of the nation about India is based on quite other motives than Sir Herbert's. Every mutiny, every danger, every terror, and every crime, occurring under, or paralyzing, our Indian legislation, arises directly out of our national desire to live on the loot of India, and the notion always entertained by English young gentlemen and ladies of good position, falling in love with each other without immediate prospect of establishment in Belgrave Square, that they can find in India, instantly on landing, a bungalow ready furnished with the loveliest fans, china, and shawls,—ices and sherbet at command, — four-and-twenty slaves succeeding each other hourly to swing the punkah, and a regiment with a beautiful band to "keep order" outside, all round the house.

Entreating your pardon for what may seem rude in these personal remarks, I will further entreat you to read my account of the death of *Cœur de Lion* in the third number of '*Fors Clavigera*'—and also the scenes in '*Ivanhoe*' between *Cœur de Lion* and *Locksley*; and commending these few passages to your quiet consideration, I proceed to give you another anecdote or two of the Normans in Italy, twelve years later than those given above, and, therefore, only thirteen years before the battle of Hastings.

Their division of South Italy among them especially, and their defeat of Venice, had alarmed everybody considerably,—especially the Pope, *Leo IX.*, who did not understand this manifestation of their piety. He sent to *Henry III.* of Germany, to whom he owed his Popedom, for some German knights, and got five hundred spears; gathered out of all Apulia, Campania, and the March of Ancona, what Greek and Latin troops were to be had, to join his own army of the patrimony of *St. Peter*; and the holy Pontiff, with this numerous army, but no general, began the campaign by a pilgrimage with all his troops to *Monte Cassino*, in order to obtain, if it might be, *St. Benedict* for general.

Against the Pope's collected masses, with *St. Benedict*, their contemplative but at first inactive general, stood the little

army of Normans,—certainly not more than the third of their number—but with Robert Guiscard for captain, and under him his brother, Humphrey of Hauteville, and Richard of Aversa. Not in fear, but in devotion, they prayed the Pope ‘avec instance,’—to say on what conditions they could appease his anger, and live in peace under him. But the Pope would hear of nothing but their evacuation of Italy. Whereupon, they had to settle the question in the Norman manner.

The two armies met in front of Civitella, on Waterloo day, 18th June, thirteen years, as I said, before the battle of Hastings. The German knights were the heart of the Pope’s army, but they were only five hundred; the Normans surrounded *them* first, and slew them, nearly to a man—and then made extremely short work with the Italians and Greeks. The Pope, with the wreck of them, fled into Civitella; but the townspeople dared not defend their walls, and thrust the Pope himself out of their gates—to meet, alone, the Norman army.

He met it, *not* alone, St. Benedict being with him now, when he had no longer the strength of man to trust in.

The Normans, as they approached him, threw themselves on their knees,—covered themselves with dust, and implored his pardon and his blessing.

There is a bit of poetry—if you like,—but a piece of steel-clad fact also, compared to which the battle of Hastings and Waterloo both, were mere boy’s squabbles.

You don’t suppose, you British schoolboys, that *you* overthrew Napoleon—*you*? Your prime Minister folded up the map of Europe at the thought of him. Not you, but the snows of Heaven, and the hand of Him who dasheth in pieces with a rod of iron. He casteth forth His ice like morsels,—who can stand before His cold?

But, so far as you have indeed the right to trust in the courage of your own hearts, remember also—it is not in Norman nor Saxon, but in Celtic race that your real strength lies. The battles both of Waterloo and Alma were won by Irish and Scots—by the terrible Scots Greys, and by Sir Colin’s Highlanders. Your ‘thin red line,’ was kept steady at Alma only by Colonel Yea’s swearing at them.

But the old Pope, alone against a Norman army, wanted nobody to swear at him. Steady enough he, having somebody to bless him, instead of swear at him. St. Benedict, namely ; whose (memory shall we say ?) helped him now at his pinch in a singular manner,—for the Normans, having got the old man's forgiveness, vowed themselves his feudal servants ; and for seven centuries afterwards the whole kingdom of Naples remained a fief of St. Peter,—won for him thus by a single man, unarmed, against three thousand Norman knights, captained by Robert Guiscard !

A day of deeds, gentlemen, to some purpose,—*that* 18th of June, anyhow.

Here, in the historical account of Norman character, I must unwillingly stop for to-day—because, as you choose to spend your University money in building ball-rooms instead of lecture-rooms, I dare not keep you much longer in this black hole, with its nineteenth century ventilation. I try your patience—and tax your breath—only for a few minutes more in drawing the necessary corollaries respecting Norman art.*

How far the existing British nation owes its military prowess to the blood of Normandy and Anjou, I have never examined its genealogy enough to tell you ;—but this I can tell you positively, that whatever constitutional order or personal valour the Normans enforced or taught among the nations they conquered, they did not at first attempt with their own hands to rival them in any of their finer arts, but used both Greek and Saxon sculptors, either as slaves, or hired workmen, and more or less therefore chilled and degraded the hearts of the men thus set to servile, or at best, hireling, labour.

In 1874, I went to see Etna, Scylla, Charybdis, and the tombs of the Norman Kings at Palermo ; surprised, as you

* Given at much greater length in the lecture, with diagrams from Iffley and Poitiers, without which the text of them would be unintelligible. The sum of what I said was a strong assertion of the incapacity of the Normans for any but the rudest and most grotesque sculpture,—Poitiers being, on the contrary, examined and praised as Gallic-French—not Norman.

may imagine, to find that there wasn't a stroke nor a notion of Norman work in them. They are, every atom, done by Greeks, and are as pure Greek as the temple of Ægina; but more rich and refined. I drew with accurate care, and with measured profile of every moulding, the tomb built for Roger II. (afterwards Frederick II. was laid in its dark porphyry). And it is a perfect type of the Greek-Christian form of tomb—temple over sarcophagus, in which the pediments rise gradually, as time goes on, into acute angles—get pierced in the gable with foils, and their sculptures thrown outside on their flanks, and become at last in the fourteenth century, the tombs of Verona. But what is the meaning of the Normans employing these Greek slaves for their work in Sicily (within thirty miles of the field of Himera)? Well, the main meaning is that though the Normans could build, they couldn't carve, and were wise enough not to try to, when they couldn't, as you do now all over this intensely comic and tragic town: but, here in England, they only employed the Saxon with a grudge, and therefore being more and more driven to use barren mouldings without sculpture, gradually developed the structural forms of archivolt, which breaking into the lancet, brighten and balance themselves into the symmetry of early English Gothic.

But even for the first decoration of the archivolt itself, they were probably indebted to the Greeks in a degree I never apprehended, until by pure happy chance, a friend gave me the clue to it just as I was writing the last pages of this lecture.

In the generalization of ornament attempted in the first volume of the 'Stones of Venice,' I supposed the Norman zigzag (and with some practical truth) to be derived from the angular notches with which the blow of an axe can most easily decorate, or at least vary, the solid edge of a square fillet. My good friend, and supporter, and for some time back the single trustee of St. George's Guild, Mr. George Baker, having come to Oxford on Guild business, I happened to show him the photographs of the front of Iffley church, which had been collected for this lecture; and immediately

afterwards, in taking him through the schools, stopped to show him the Athena of Ægina as one of the most important of the Greek examples lately obtained for us by Professor Richmond. The statue is (rightly) so placed that in looking up to it, the plait of hair across the forehead is seen in a steeply curved arch. "Why," says Mr. Baker, pointing to it, "there's the Norman arch of Ifly." Sure enough, there it exactly was: and a moment's reflection showed me how easily and with what instinctive fitness, the Norman builders, looking to the Greeks as their absolute masters in sculpture, and recognizing also, during the Crusades, the hieroglyphic use of the zigzag, for water, by the Egyptians, might have adopted this easily attained decoration at once as the sign of the element over which they reigned, and of the power of the Greek goddess who ruled both it and them.

I do not in the least press your acceptance of such a tradition, nor for the rest, do I care myself whence any method of ornament is derived, if only, as a stranger, you bid it reverent welcome. But much probability is added to the conjecture by the indisputable transition of the Greek egg and arrow moulding into the floral cornices of Saxon and other twelfth century cathedrals in Central France. These and other such transitions and exaltations I will give you the materials to study at your leisure, after illustrating in my next lecture the forces of religious imagination by which all that was most beautiful in them was inspired.

PREFACE.

It seems to me that the real duty involved in my Oxford professorship cannot be completely done by giving lectures in Oxford only, but that I ought also to give what guidance I may to travellers in Italy.

The following letters are written as I would write to any of my friends who asked me what they ought preferably to study in limited time ; and I hope they may be found of use if read in the places which they describe, or before the pictures to which they refer. But in the outset let me give my readers one piece of practical advice. If you can afford it, pay your custode or sacristan well. You may think it an injustice to the next comer ; but your paying him ill is an injustice to all comers, for the necessary result of your doing so is that he will lock up or cover whatever he can, that he may get his penny fee for showing it ; and that, thus exacting a small tax from everybody, he is thankful to none, and gets into a sullen passion if you stay more than a quarter of a minute to look at the object after it is uncovered. And you will not find it possible to examine anything properly under these circumstances. Pay your sacristan well, and make friends with him : in nine cases out of ten an Italian is really grateful for the money, and more than grateful for human courtesy ; and will give you some true zeal and kindly feeling in return for a franc and a pleasant look. How very horrid of him to be grateful for money, you think ! Well, I can only tell you that I know fifty people who will write me letters full of tender sentiment, for one who will give me tenpence ; and I shall be very much obliged to you if you will give me tenpence for each of these letters of mine, though I have done more work than you know of, to make them good ten-pennyworths to you.

THE [illegible]

[The following text is extremely faint and illegible due to the quality of the scan. It appears to be a multi-paragraph document or a list of entries.]

MORNINGS IN FLORENCE.

THE FIRST MORNING.

SANTA CROCE.

IF there is one artist, more than another, whose work it is desirable that you should examine in Florence, supposing that you care for old art at all, it is Giotto. You can, indeed, also see work of his at Assisi; but it is not likely you will stop there, to any purpose. At Padua there is much; but only of one period. At Florence, which is his birthplace, you can see pictures by him of every date, and every kind. But you had surely better see, first, what is of his best time and of the best kind. He painted very small pictures and very large—painted from the age of twelve to sixty—painted some subjects carelessly which he had little interest in—some carefully with all his heart. You would surely like, and it would certainly be wise, to see him first in his strong and earnest work,—to see a painting by him, if possible, of large size, and wrought with his full strength, and of a subject pleasing to him. And if it were, also, a subject interesting to yourself,—better still.

Now, if indeed you are interested in old art, you cannot but know the power of the thirteenth century. You know that the character of it was concentrated in, and to the full expressed by, its best king, St. Louis. You know St. Louis was a Franciscan, and that the Franciscans, for whom Giotto was continually painting under Dante's advice, were prouder of him than of any other of their royal brethren or sisters. If Giotto ever would imagine anybody with care and delight, it would

be St. Louis, if it chanced that anywhere he had St. Louis to paint.

Also, you know that he was appointed to build the Campanile of the Duomo, because he was then the best master of sculpture, painting, and architecture in Florence, and supposed to be without superior in the world.¹ And that this commission was given him late in life, (of course he could not have designed the Campanile when he was a boy :) so therefore, if you find any of his figures painted under pure campanile architecture, and the architecture by his hand, you know, without other evidence, that the painting must be of his strongest time.

So if one wanted to find anything of his to begin with, especially, and could choose what it should be, one would say, "A fresco, life size, with campanile architecture behind it, painted in an important place ; and if one might choose one's subject, perhaps the most interesting saint of all saints—for *him* to do for us—would be St. Louis."

Wait then for an entirely bright morning ; rise with the sun, and go to Santa Croce, with a good opera-glass in your pocket, with which you shall for once, at any rate, see an opus ; and, if you have time, several opera. Walk straight to the chapel on the right of the choir ("k" in your Murray's guide). When you first get into it, you will see nothing but a modern window of glaring glass, with a red-hot cardinal in one pane—which piece of modern manufacture takes away at least seven-eighths of the light (little enough before) by which you might have seen what is worth sight. Wait patiently till you get used to the gloom. Then, guarding your eyes from the accursed modern window as best you may, take your opera-glass and look to the right, at the uppermost of the two figures beside it. It is St. Louis, under campanile architecture, painted by—Giotto ? or the last Florentine painter who wanted a job—over Giotto ? That is the first question

¹ "Cum in universo orbe non reperiri dicatur quenquam qui sufficientior sit in his et aliis multis artibus magistro Giotto Bondonis de Florentia, pictore, et accipiendus sit in patriâ, velut magnus magister."—(Decree of his appointment, quoted by Lord Lindsay, vol. ii., p. 247.)

you have to determine ; as you will have henceforward, in every case in which you look at a fresco.

Sometimes there will be no question at all. These two grey frescos at the bottom of the walls on the right and left, for instance, have been entirely got up for your better satisfaction, in the last year or two—over Giotto's half-effaced lines. But that St. Louis? Re-painted or not, it is a lovely thing,—there can be no question about that ; and we must look at it, after some preliminary knowledge gained, not inattentively.

Your Murray's Guide tells you that this chapel of the Bardi della Libertà, in which you stand, is covered with frescos by Giotto ; that they were whitewashed, and only laid bare in 1853 ; that they were painted between 1296 and 1304 ; that they represent scenes in the life of St. Francis ; and that on each side of the window are paintings of St. Louis of Toulouse, St. Louis king of France, St. Elizabeth, of Hungary, and St. Claire,—“all much restored and repainted.” Under such recommendation, the frescos are not likely to be much sought after ; and accordingly, as I was at work in the chapel this morning, Sunday, 6th September, 1874, two nice-looking Englishmen, under guard of their valet de place, passed the chapel without so much as looking in.

You will perhaps stay a little longer in it with me, good reader, and find out gradually where you are. Namely, in the most interesting and perfect little Gothic chapel in all Italy—so far as I know or can hear. There is no other of the great time which has all its frescos in their place. The Arena, though far larger, is of earlier date—not pure Gothic, nor showing Giotto's full force. The lower chapel at Assisi is not Gothic at all, and is still only of Giotto's middle time. You have here, developed Gothic, with Giotto in his consummate strength, and nothing lost, in form, of the complete design.

By restoration—judicious restoration, as Mr. Murray usually calls it—there is no saying how much you have lost. Putting the question of restoration out of your mind, however, for a while, think where you are, and what you have got to look at.

You are in the chapel next the high altar of the great Franciscan church of Florence. A few hundred yards west of you, within ten minutes' walk, is the Baptistery of Florence. And five minutes' walk west of that is the great Dominican church of Florence, Santa Maria Novella.

Get this little bit of geography, and architectural fact, well into your mind. There is the little octagon Baptistery in the middle; here, ten minutes' walk east of it, the Franciscan church of the Holy Cross; there, five minutes walk west of it, the Dominican church of St. Mary.

Now, that little octagon Baptistery stood where it now stands (and was finished, though the roof has been altered since) in the eighth century. It is the central building of Etrurian Christianity,—of European Christianity.

From the day it was finished, Christianity went on doing her best, in Etruria and elsewhere, for four hundred years,—and her best seemed to have come to very little,—when there rose up two men who vowed to God it should come to more. And they made it come to more, forthwith; of which the immediate sign in Florence was that she resolved to have a fine new cross-shaped cathedral instead of her quaint old little octagon one; and a tower beside it that should beat Babel:—which two buildings you have also within sight.

But your business is not at present with them; but with these two earlier churches of Holy Cross and St. Mary. The two men who were the effectual builders of these were the two great religious Powers and Reformers of the thirteenth century;—St. Francis, who taught Christian men how they should behave, and St. Dominic, who taught Christian men what they should think. In brief, one the Apostle of Works; the other of Faith. Each sent his little company of disciples to teach and to preach in Florence: St. Francis in 1212; St. Dominic in 1220.

The little companies were settled—one, ten minutes' walk east of the old Baptistery; the other five minutes' walk west of it. And after they had stayed quietly in such lodgings as were given them, preaching and teaching through most of the century; and had got Florence, as it were, heated through,

she burst out into Christian poetry and architecture, of which you have heard much talk :—burst into bloom of Arnolfo, Giotto, Dante, Orcagna, and the like persons, whose works you profess to have come to Florence that you may see and understand.

Florence then, thus heated through, first helped her teachers to build finer churches. The Dominicans, or White Friars, the Teachers of Faith, began their church of St. Mary's in 1279. The Franciscans, or Black Friars, the teachers of Works, laid the first stone of this church of the Holy Cross in 1294. And the whole city laid the foundations of its new cathedral in 1298. The Dominicans designed their own building ; but for the Franciscans and the town worked the first great master of Gothic art, Arnolfo ; with Giotto at his side, and Dante looking on, and whispering sometimes a word to both.

And here you stand beside the high altar of the Franciscans' church, under a vault of Arnolfo's building, with at least some of Giotto's colour on it still fresh ; and in front of you, over the little altar, is the only reportedly authentic portrait of St. Francis, taken from life by Giotto's master. Yet I can hardly blame my two English friends for never looking in. Except in the early morning light, not one touch of all this art can be seen. And in any light, unless you understand the relations of Giotto to St. Francis, and of St. Francis to humanity, it will be of little interest.

Observe, then, the special character of Giotto among the great painters of Italy is his being a practical person. Whatever other men dreamed of, he did. He could work in mosaic ; he could work in marble ; he could paint ; and he could build ; and all thoroughly : a man of supreme faculty, supreme common sense. Accordingly, he ranges himself at once among the disciples of the Apostle of Works, and spends most of his time in the same apostleship.

Now the gospel of Works, according to St. Francis, lay in three things. You must work without money, and be poor. You must work without pleasure, and be chaste. You must work according to orders, and be obedient.

Those are St. Francis's three articles of Italian opera. By which grew the many pretty things you have come to see here.

And now if you will take your opera-glass and look up to the roof above Arnolfo's building, you will see it is a pretty Gothic cross vault, in four quarters, each with a circular medallion, painted by Giotto. That over the altar has the picture of St. Francis himself. The three others, of his Commanding Angels. In front of him, over the entrance arch, Poverty. On his right hand, Obedience. On his left, Chastity.

Poverty, in a red patched dress, with grey wings, and a square nimbus of glory above her head, is flying from a black hound, whose head is seen at the corner of the medallion.

Chastity, veiled, is imprisoned in a tower, while angels watch her.

Obedience bears a yoke on her shoulders, and lays her hand on a book.

Now, this same quatrefoil, of St. Francis and his three Commanding Angels, was also painted, but much more elaborately, by Giotto, on the cross vault of the lower church of Assisi, and it is a question of interest which of the two roofs was painted first.

Your Murray's Guide tells you the frescos in this chapel were painted between 1296 and 1304. But as they represent, among other personages, St. Louis of Toulouse, who was not canonized till 1317, that statement is not altogether tenable. Also, as the first stone of the church was only laid in 1294, when Giotto was a youth of eighteen, it is little likely that either it would have been ready to be painted, or he ready with his scheme of practical divinity, two years later.

Farther, Arnolfo, the builder of the main body of the church, died in 1310. And as St. Louis of Toulouse was not a saint till seven years afterwards, and the frescos therefore beside the window not painted in Arnolfo's day, it becomes another question whether Arnolfo left the chapels or the church at all, in their present form.

On which point—now that I have shown you where Giotto's

St. Louis is—I will ask you to think awhile, until you are interested ; and then I will try to satisfy your curiosity. Therefore, please leave the little chapel for the moment, and walk down the nave, till you come to two sepulchral slabs near the west end, and then look about you and see what sort of a church Santa Croce is.

Without looking about you at all, you may find, in your Murray, the useful information that it is a church which “consists of a very wide nave and lateral aisles, separated by seven fine pointed arches.” And as you will be—under ordinary conditions of tourist hurry—glad to learn so much, *without* looking, it is little likely to occur to you that this nave and two rich aisles required also, for your complete present comfort, walls at both ends, and a roof on the top. It is just possible, indeed, you may have been struck, on entering, by the curious disposition of painted glass at the east end ;—more remotely possible that, in returning down the nave, you may this moment have noticed the extremely small-circular window at the west end ; but the chances are a thousand to one that, after being pulled from tomb to tomb round the aisles and chapels, you should take so extraordinary an additional amount of pains as to look up at the roof,—unless you do it now, quietly. It will have had its effect upon you, even if you don't, without your knowledge. You will return home with a general impression that Santa Croce is, somehow, the ugliest Gothic church you ever were in. Well, that is really so ; and now, will you take the pains to see why ?

There are two features, on which, more than on any others, the grace and delight of a fine Gothic building depends ; one is the springing of its vaultings, the other the proportion and fantasy of its traceries. *This* church of Santa Croce has no vaultings at all, but the roof of a farm-house barn. And its windows are all of the same pattern,—the exceedingly prosaic one of two pointed arches, with a round hole above, between them.

And to make the simplicity of the roof more conspicuous, the aisles are successive sheds, built at every arch. In the aisles of the Campo Santo of Pisco, the unbroken flat roof

leaves the eye free to look to the traceries ; but here, a succession of up-and-down sloping beam and lath gives the impression of a line of stabling rather than a church aisle. And lastly, while, in fine Gothic buildings, the entire perspective concludes itself gloriously in the high and distant apse, here the nave is cut across sharply by a line of ten chapels, the apse being only a tall recess in the midst of them, so that, strictly speaking, the church is not of the form of a cross, but of a letter T.

Can this clumsy and ungraceful arrangement be indeed the design of the renowned Arnolfo ?

Yes, this is purest Arnolfo-Gothic ; not beautiful by any means ; but deserving, nevertheless, our thoughtfulest examination. We will trace its complete character another day ; just now we are only concerned with this pre-Christian form of the letter T, insisted upon in the lines of chapels.

Respecting which you are to observe, that the first Christian churches in the catacombs took the form of a blunt cross naturally ; a square chamber having a vaulted recess on each side ; then the Byzantine churches were structurally built in the form of an equal cross ; while the heraldic and other ornamental equal-armed crosses are partly signs of glory and victory, partly of light, and divine spiritual presence.¹

But the Franciscans and Dominicans saw in the cross no sign of triumph, but of trial.² The wounds of their Master

¹ See, on this subject generally, Mr. R. St. J. Tyrwhitt's "Art-Teaching of the Primitive Church." S. P. B. K., 1874.

² I have never obtained time for any right study of early Christian church-discipline,—nor am I sure to how many other causes, the choice of the form of the basilica may be occasionally attributed, or by what other communities it may be made. Symbolism, for instance, has most power with the Franciscans, and convenience for preaching with the Dominicans ; but in all cases, and in all places, the transition from the close tribune to the brightly-lighted apse, indicates the change in Christian feeling between regarding a church as a place for public judgment or teaching, or a place for private prayer and congregational praise. The following passage from the Dean of Westminster's perfect history of his Abbey ought to be read also in the Florentine church:—"The nearest approach to Westminster Abbey in this aspect is the church of Santa

were to be their inheritance. So their first aim was to make what image to the cross their church might present, distinctly that of the actual instrument of death.

And they did this most effectually by using the form of the letter **T**, that of the Furca or Gibbet,—not the sign of peace.

Also, their churches were meant for use; not show, nor self-glorification, nor town-glorification. They wanted places for preaching, prayer, sacrifice, burial; and had no intention of showing how high they could build towers, or how widely they could arch vaults. Strong walls, and the roof of a barn,—these your Franciscan asks of his Arnolfo. These Arnolfo gives,—thoroughly and wisely built; the successions of gable roof being a new device for strength, much praised in its day.

This stern humor did not last long. Arnolfo himself had other notions; much more Cimabue and Giotto; most of all, Nature and Heaven. Something else had to be taught about Christ than that He was wounded to death. Nevertheless, look how grand this stern form would be, restored to its simplicity. It is not the old church which is in itself unimpressive. It is the old church defaced by Vasari, by Michael Angelo, and by modern Florence. See those huge tombs on your right hand and left, at the sides of the aisles, with their alter-

Croce at Florence. There, as here, the present destination of the building was no part of the original design, but was the result of various converging causes. As the church of one of the two great preaching orders, it had a nave large beyond all proportion to its choir. That order being the Franciscan, bound by vows of poverty, the simplicity of the worship preserved the whole space clear from any adventitious ornaments. The popularity of the Franciscans, especially in a convent hal'owed by a visit from St. Francis himself, drew to it not only the chief civic festivals, but also the numerous families who gave alms to the friars, and whose connection with their church was, for this reason, in turn encouraged by them. In those graves, piled with standards and achievements of the noble families of Florence, were successively interred—not because of their eminence, but as members or friends of those families—some of the most illustrious personages of the fifteenth century. Thus it came to pass, as if by accident, that in the vault of the Buonarotti was laid Michael Angelo; in the vault of the Viviani the preceptor of one of their house, Galileo. From those two burials the church gradually became the recognized shrine of Italian genius."

nate gable and round tops, and their paltriest of all possible sculpture, trying to be grand by bigness, and pathetic by expense. Tear them all down in your imagination ; fancy the vast hall with its massive pillars,—not painted calomel-pill colour, as now, but of their native stone, with a rough, true wood for roof,—and a people praying beneath them, strong in abiding, and pure in life, as their rocks and olive forests. That was Arnolfo's Santa Croce. Nor did his work remain long without grace.

That very line of chapels in which we found our St. Louis shows signs of change in temper. *They* have no pent-house roofs, but true Gothic vaults : we found our four-square type of Franciscan Law on one of them.

It is probable, then, that these chapels may be later than the rest—even in their stonework. In their decoration, they are so, assuredly ; belonging already to the time when the story of St. Francis was becoming a passionate tradition, told and painted everywhere with delight.

And that high recess, taking the place of apse, in the centre,—see how noble it is in the coloured shade surrounding and joining the glow of its windows, though their form be so simple. You are not to be amused here by patterns in balanced stone, as a French or English architect would amuse you, says Arnolfo. “You are to read and think, under these severe walls of mine ; immortal hands will write upon them.” We will go back, therefore, into this line of manuscript chapels presently ; but first, look at the two sepulchral slabs by which you are standing. That farther of the two from the west end is one of the most beautiful pieces of fourteenth century sculpture in this world ; and it contains simple elements of excellence, by your understanding of which you may test your power of understanding the more difficult ones you will have to deal with presently.

It represents an old man, in the high deeply-folded cap worn by scholars and gentlemen in Florence from 1300--1500, lying dead, with a book in his breast, over which his hands are folded. At his feet is this inscription : “*Temporibus hic suis phylosophye atq. medicine culmen fuit Galileus de Gali-*

leis olim Bonajntis qui etiam summo in magistratu miro quodam modo rempublicam dilexit, cujus sancte memorie bene acte vite pie benedictus filius hunc tumulum patri sibi suisq. posteris edidit."

Mr. Murray tells you that the effigies "in low relief" (alas, yes, low enough now—worn mostly into flat stones, with a trace only of the deeper lines left, but originally in very bold relief,) with which the floor of Santa Croce is inlaid, of which this by which you stand is characteristic, are "interesting from the costume," but that, "except in the case of John Ketterick, Bishop of St. David's, few of the other names have any interest beyond the walls of Florence." As, however, you are at present within the walls of Florence, you may perhaps condescend to take some interest in this ancestor or relation of the Galileo whom Florence indeed left to be externally interesting, and would not allow to enter in her walls.¹

I am not sure if I rightly place or construe the phrase in the above inscription, "cujus sancte memorie bene acte;" but, in main purport, the legend runs thus: "This Galileo of the Galilei was, in his times, the head of philosophy and medicine; who also in the highest magistracy loved the republic marvellously; whose son, blessed in inheritance of his holy memory and well-passed and pious life, appointed this tomb for his father, for himself, and for his posterity."

There is no date; but the slab immediately behind it, nearer the western door, is of the same style, but of later and inferior work, and bears date—I forget now of what early year in the fifteenth century.

But Florence was still in her pride; and you may observe, in this epitaph, on what it was based. That her philosophy was studied *together with useful arts*, and as a part of them; that the masters in these became naturally the masters in public affairs; that in such magistracy, they loved the State, and neither cringed to it nor robbed it; that the sons honoured their fathers, and received their fathers' honour as the most

¹ "Seven years a prisoner at the city gate,
Let in but his grave-clothes."

blessed inheritance. Remember the phrase "vite pie benedictus filius," to be compared with the "nos nequiores" of the declining days of all states,—chiefly now in Florence, France and England.

Thus much for the local interest of name. Next for the universal interest of the art of this tomb.

It is the crowning virtue of all great art that, however little is left of it by the injuries of time, that little will be lovely. As long as you can see anything, you can see—almost all;—so much the hand of the master will suggest of his soul.

And here you are well quit, for once, of restoration. No one cares for this sculpture; and if Florence would only thus put all her old sculpture and painting under her feet, and simply use them for gravestones and oilcloth, she would be more merciful to them than she is now. Here, at least, what little is left is true.

And, if you look long, you will find it is not so little. That worn face is still a perfect portrait of the old man, though like one struck out at a venture, with a few rough touches of a master's chisel. And that falling drapery of his cap is, in its few lines, faultless, and subtle beyond description.

And now, here is a simple but most useful test of your capacity for understanding Florentine sculpture or painting. If you can see that the lines of that cap are both right, and lovely; that the choice of the folds is exquisite in its ornamental relations of line; and that the softness and ease of them is complete,—though only sketched with a few dark touches,—then you can understand Giotto's drawing, and Botticelli's;—Donatello's carving and Luca's. But if you see nothing in *this* sculpture, you will see nothing in theirs, of theirs. Where they choose to imitate flesh, or silk, or to play any vulgar modern trick with marble—(and they often do)—whatever, in a word, is French, or American, or Cockney, in their work, you can see; but what is Florentine, and for ever great—unless you can see also the beauty of this old man in his citizen's cap,—you will see never.

There is more in this sculpture, however, than its simple portraiture and noble drapery. The old man lies on a piece

of embroidered carpet ; and, protected by the higher relief, many of the finer lines of this are almost uninjured ; in particular, its exquisitely-wrought fringe and tassels are nearly perfect. And if you will kneel down and look long at the tassels of the cushion under the head, and the way they fill the angles of the stone, you will,—or may—know, from this example alone, what noble decorative sculpture is, and was, and must be, from the days of earliest Greece to those of latest Italy.

“Exquisitely sculptured fringe!” and you have just been abusing sculptors who play tricks with marble! Yes, and you cannot find a better example, in all the museums of Europe, of the work of a man who does *not* play tricks with it—than this tomb. Try to understand the difference : it is a point of quite cardinal importance to all your future study of sculpture.

I *told* you, observe, that the old Galileo was lying on a piece of embroidered carpet. I don't think, if I had not told you, that you would have found it out for yourself. It is not so like a carpet as all that comes to.

But had it been a modern trick-sculpture, the moment you came to the tomb you would have said, “Dear me! how wonderfully that carpet is done,—it doesn't look like stone in the least—one longs to take it up and beat it, to get the dust off.”

Now whenever you feel inclined to speak so of a sculptured drapery, be assured, without more ado, the sculpture is base, and bad. You will merely waste your time and corrupt your taste by looking at it. Nothing is so easy as to imitate drapery in marble. You may cast a piece any day; and carve it with such subtlety that the marble shall be an absolute image of the folds. But that is not sculpture. That is mechanical manufacture.

No great sculptor, from the beginning of art to the end of it, has ever carved, or ever will, a deceptive drapery. He has neither time nor will to do it. His mason's lad may do that if he likes. A man who can carve a limb or a face never finishes inferior parts, but either with a hasty and scornful

chisel, or with such grave and strict selection of their lines as you know at once to be imaginative, not imitative.

But if, as in this case, he wants to oppose the simplicity of his central subject with a rich background,—a labyrinth of ornamental lines to relieve the severity of expressive ones,—he will carve you a carpet, or a tree, or a rose thicket, with their fringes and leaves and thorns, elaborated as richly as natural ones; but always for the sake of the ornamental form, never of the imitation; yet, seizing the natural character in the lines he gives, with twenty times the precision and clearness of sight that the mere imitator has. Examine the tassels of the cushion, and the way they blend with the fringe, thoroughly; you cannot possibly see finer ornamental sculpture. Then, look at the same tassels in the same place of the slab next the west end of the church, and you will see a scholar's rude imitation of a master's hand, though in a fine school. (Notice, however, the folds of the drapery at the feet of this figure: they are cut so as to show the hem of the robe within as well as without, and are fine.) Then, as you go back to Giotto's chapel, keep to the left, and just beyond the north door in the aisle is the much celebrated tomb of C. Marsupini, by Desiderio of Settignano. It is very fine of its kind; but there the drapery is chiefly done to cheat you, and chased delicately to show how finely the sculptor could chisel it. It is wholly vulgar and mean in cast of fold. Under your feet, as you look at it, you will tread another tomb of the fine time, which, looking last at, you will recognize the difference between the false and true art, as far as there is capacity in you at present to do so. And if you really and honestly like the low-lying stones, and see more beauty in them, you have also the power of enjoying Giotto, into whose chapel we will return to-morrow;—not to-day, for the light must have left it by this time; and now that you have been looking at these sculptures on the floor you had better traverse nave and aisle across and across; and get some idea of that sacred field of stone. In the north transept you will find a beautiful knight, the finest in chiselling of all these tombs, except one by the same hand in the south aisle just where it enters the south transept.

Examine the lines of the Gothic niches traced above them ; and what is left of arabesque on their armour. They are far more beautiful and tender in chivalric conception than Donatello's St. George, which is merely a piece of vigorous naturalism founded on these older tombs. If you will drive in the evening to the Chartreuse in Val d'Enna, you may see there an uninjured example of this slab-tomb by Donatello himself : very beautiful ; but not so perfect as the earlier ones on which it is founded. And you may see some fading light and shade of monastic life, among which if you stay till the fireflies come out in the twilight, and thus get to sleep when you come home, you will be better prepared for to-morrow morning's walk—if you will take another with me—than if you go to a party, to talk sentiment about Italy, and hear the last news from London and New York.

THE SECOND MORNING.

THE GOLDEN GATE.

TO-DAY, as early as you please, and at all events before doing anything else, let us go to Giotto's own parish-church, Santa Maria Novella. If, walking from the Strozzi Palace, you look on your right for the "Way of the Beautiful Ladies," it will take you quickly there.

Do not let anything in the way of acquaintance, sacristan, or chance sight, stop you in doing what I tell you. Walk straight up to the church, into the apse of it ;—(you may let your eyes rest, as you walk, on the glow of its glass, only mind the step, half way ;)—and lift the curtain ; and go in behind the grand marble altar, giving anybody who follows you anything they want, to hold their tongues, or go away.

You know, most probably, already, that the frescos on each side of you are Ghirlandajo's. You have been told they are very fine, and if you know anything of painting, you know the portraits in them are so. Nevertheless, somehow, you don't really enjoy these frescos, nor come often here, do you ?

The reason of which is, that if you are a nice person, they are not nice enough for you; and if a vulgar person, not vulgar enough. But if you are a nice person, I want you to look carefully, to-day, at the two lowest, next the windows, for a few minutes, that you may better feel the art you are really to study, by its contrast with these.

On your left hand is represented the birth of the Virgin. On your right, her meeting with Elizabeth.

You can't easily see better pieces—nowhere more pompous pieces)—of flat goldsmiths' work. Ghirlandajo was to the end of his life a mere goldsmith, with a gift of portraiture. And here he has done his best, and has put a long wall in wonderful perspective, and the whole city of Florence behind Elizabeth's house in the hill country; and a splendid bas-relief, in the style of Luca della Robbia, in St. Anne's bedroom; and he has carved all the pilasters, and embroidered all the dresses, and flourished and trumpeted into every corner; and it is all done, within just a point, as well as it can be done; and quite as well as Ghirlandajo could do it. But the point in which it *just* misses being as well as it can be done, is the vital point. And it is all simply—good for nothing.

Extricate yourself from the goldsmith's rubbish of it, and look full at the Salutation. You will say, perhaps, at first, "What grand and graceful figures!" Are you sure they are graceful? Look again and you will see their draperies hang from them exactly as they would from two clothes-pegs. Now, fine drapery, really well drawn, as it hangs from a clothes-peg, is always rather impressive, especially if it be disposed in large breadths and deep folds; but that is the only grace of their figures.

Secondly. Look at the Madonna, carefully. You will find she is not the least meek—only stupid,—as all the other women in the picture are.

"St. Elizabeth, you think, is nice"? Yes; "and she says, 'Whence is this to me, that the mother of my Lord should come to me?' really with a great deal of serious feeling?" Yes, with a great deal. Well, you have looked enough at those two. Now—just for another minute—look at the birth

of the Virgin. "A most graceful group, (your Murray's Guide tells you,) in the attendant servants." Extremely so. Also, the one holding the child is rather pretty. Also, the servant pouring out the water does it from a great height, without splashing, most cleverly. Also, the lady coming to ask for St. Anne, and see the baby, walks majestically and is very finely dressed. And as for that bas-relief in the style of Luca della Robbia, you might really almost think it *was* Luca! The very best plated goods, Master Ghirlandajo, no doubt—always on hand at your shop.

Well, now you must ask for the Sacristan, who is civil and nice enough, and get him to let you into the green cloister, and then go into the less cloister opening out of it on the right, as you go down the steps; and you must ask for the tomb of the Marcheza Stiozzi Ridolfi; and in the recess behind the Marcheza's tomb—very close to the ground, and in excellent light, if the day is fine—you will see two small frescos, only about four feet wide each, in odd-shaped bits of wall—quarters of circles; representing—that on the left, the Meeting of Joachim and Anna at the Golden Gate; and that on the right, the Birth of the Virgin.

No flourish of trumpets here, at any rate, you think! No gold on the gate; and, for the birth of the Virgin—is this all! Goodness!—nothing to be seen, whatever, of bas-reliefs, nor fine dresses, nor graceful pourings out of water, nor processions of visitors?

No. There's but one thing you can see, here, which you didn't in Ghirlandajo's fresco, unless you were very clever and looked hard for it—the Baby! And you are never likely to see a more true piece of Giotto's work in this world.

A round-faced, small-eyed little thing, tied up in a bundle!

Yes, Giotto was of opinion she must have appeared really not much else than that. But look at the servant who has just finished dressing her;—awe-struck, full of love and wonder, putting her hand softly on the child's head, who has never cried. The nurse, who has just taken her, is—the nurse, and no more: tidy in the extreme, and greatly proud and pleased; but would be as much so with any other child.

Ghirlandajo's St. Anne (I ought to have told you to notice that,—you can afterwards) is sitting strongly up in bed, watching, if not directing, all that is going on. Giotto's lying down on the pillow, leans her face on her hand; partly exhausted, partly in deep thought. She knows that all will be well done for the child, either by the servants, or God; she need not look after anything.

At the foot of the bed is the midwife, and a servant who has brought drink for St. Anne. The servant stops, seeing her so quiet; asking the midwife, Shall I give it her now? The midwife, her hands lifted under her robe, in the attitude of thanksgiving, (with Giotto distinguishable always, though one doesn't know how, from that of prayer,) answers, with her look, "Let be—she does not want anything."

At the door a single acquaintance is coming in, to see the child. Of ornament, there is only the entirely simple outline of the vase which the servant carries; of colour, two or three masses of sober red, and pure white, with brown and gray.

That is all. And if you can be pleased with this, you can see Florence. But if not, by all means amuse yourself there, if you find it amusing, as long as you like; you can never see it.

But if indeed you are pleased, ever so little, with this fresco, think what that pleasure means. I brought you, on purpose, round, through the richest overture, and farrago of tweedledum and tweedledee, I could find in Florence; and here is a tune of four notes, on a shepherd's pipe, played by the picture of nobody; and yet you like it! You know what music is, then. Here is another little tune, by the same player, and sweeter. I let you hear the simplest first.

The fresco on the left hand, with the bright blue sky, and the rosy figures! Why, anybody might like that!

Yes; but, alas, all the blue sky is repainted. It *was* blue always, however, and bright too; and I dare say, when the fresco was first done, anybody *did* like it.

You know the story of Joachim and Anna, I hope? Not that I do, myself, quite in the ins and outs; and if you don't I'm not going to keep you waiting while I tell it. All you

need know, and you scarcely, before this fresco, need know so much, is, that here are an old husband and old wife, meeting again by surprise, after losing each other, and being each in great fear ;—meeting at the place where they were told by God each to go, without knowing what was to happen there.

“So they rushed into one another’s arms, and kissed each other.”

No, says Giotto,—not that.

“They advanced to meet, in a manner conformable to the strictest laws of composition ; and with their draperies cast into folds which no one until Raphael could have arranged better.”

No, says Giotto,—not that.

St. Anne has moved quickest ; her dress just falls into folds sloping backwards enough to tell you so much. She has caught St. Joachim by his mantle, and draws him to her, softly, by that. St. Joachim lays his hand under her arm, seeing she is like to faint, and holds her up. They do not kiss each other—only look into each other’s eyes. And God’s angel lays his hand on their heads.

Behind them, there are two rough figures, busied with their own affairs,—two of Joachim’s shepherds ; one, bare headed, the other wearing the wide Florentine cap with the falling point behind, which is exactly like the tube of a larkspur or violet ; both carrying game, and talking to each other about—Greasy Joan and her pot, or the like. Not at all the sort of persons whom you would have thought in harmony with the scene ;—by the laws of the drama, according to Racine or Voltaire.

No, but according to Shakespeare, or Giotto, these are just the kind of persons likely to be there : as much as the angel is likely to be there also, though you will be told nowadays that Giotto was absurd for putting *him* into the sky, of which an apothecary can always produce the similar blue, in a bottle. And now that you have had Shakespeare, and sundry other men of head and heart, following the track of this shepherd lad, *you* can forgive him his grotesques in the corner. But that he should have forgiven them to himself, after the train-

ing he had, this is the wonder ! We have seen simple pictures enough in our day ; and therefore we think that of course shepherd boys will sketch shepherds : what wonder is there in that ?

I can show you how in *this* shepherd boy it was very wonderful indeed, if you will walk for five minutes back into the church with me, and up into the chapel at the end of the south transept,—at least if the day is bright, and you get the Sacristan to undraw the window-curtain in the transept itself. For then the light of it will be enough to show you the entirely authentic and most renowned work of Giotto's master ; and you will see through what schooling the lad had gone.

A good and brave master he was, if ever boy had one ; and, as you will find when you know really who the great men are, the master is half their life ; and well they know it—always naming themselves from their master, rather than their families. See then what kind of work Giotto had been first put to. There is, literally, not a square inch of all that panel—some ten feet high by six or seven wide—which is not wrought in gold and colour with the fineness of a Greek manuscript. There is not such an elaborate piece of ornamentation in the first page of any Gothic king's missal, as you will find in that Madonna's throne ;—the Madonna herself is meant to be grave and noble only ; and to be attended only by angels.

And here is this saucy imp of a lad declares his people must do without gold, and without thrones ; nay, that the Golden Gate itself shall have no gilding that St. Joachim and St. Anne shall have only one angel between them : and their servants shall have their joke, and nobody say them nay !

It is most wonderful ; and would have been impossible, had Cimabue been a common man, though ever so great in his own way. Nor could I in any of my former thinking understand how it was, till I saw Cimabue's own work at Assisi ; in which he shows himself, at heart, as independent of his gold as Giotto,—even more intense, capable of higher things than Giotto, though of none, perhaps, so keen or sweet. But to this day, among all the Mater Dolorosas of Christianity, Cimabue's at Assisi is the noblest ; nor did any painter after him

add one link to the chain of thought with which he summed the creation of the earth, and preached its redemption.

He evidently never checked the boy, from the first day he found him. Showed him all he knew : talked with him of many things he felt himself unable to paint : made him a workman and a gentleman,—above all, a Christian,—yet left him—a shepherd. And Heaven had made him such a painter, that, at his height, the words of his epitaph are in nowise overwrought : “*Ille ego sum, per quem pictura extincta revixit.*”

A word or two, now, about the repainting by which *this* *pictura extincta* has been revived to meet existing taste. The sky is entirely daubed over with fresh blue ; yet it leaves with unusual care the original outline of the descending angel, and of the white clouds about his body. This idea of the angel laying his hands on the two heads—(as a bishop at Confirmation does, in a hurry ; and I’ve seen one sweep four together, like Arnold de Winkelied),—partly in blessing, partly as a symbol of their being brought together to the same place by God,—was afterwards repeated again and again : there is one beautiful little echo of it among the old pictures in the schools of Oxford. This is the first occurrence of it that I know in pure Italian painting ; but the idea is Etruscan-Greek, and is used by the Etruscan sculptors of the door of the Baptistery of Pisa, of the *evil* angel, who “lays the heads together” of two very different persons from these—Herodias and her daughter.

Joachim, and the shepherd with the larkspur cap, are both quite safe ; the other shepherd a little reinforced ; the black bunches of grass, hanging about are retouches. They were once bunches of plants drawn with perfect delicacy and care ; you may see one left, faint, with heart-shaped leaves, on the highest ridge of rock above the shepherds. The whole landscape is, however, quite undecipherably changed and spoiled.

You will be apt to think at first, that if anything has been restored, surely the ugly shepherd’s uglier feet have. No, not at all. Restored feet are always drawn with entirely orthodox and academical toes, like the Apollo Belvidere’s. You would have admired them very much. These are Giotto’s

own doing, every bit ; and a precious business he has had of it, trying again and again—in vain. Even hands were difficult enough to him, at this time ; but feet, and bare legs ! Well, he'll have a try, he thinks, and gets really a fair line at last, when you are close to it ; but, laying the light on the ground afterwards, he dare not touch this precious and dear-bought outline. Stops all round it, a quarter of an inch off,¹ with such effect as you see. But if you want to know what sort of legs and feet he *can* draw, look at our *lambs*, in the corner of the fresco under the arch on your left !

And there is one on your right, though more repainted—the little Virgin presenting herself at the Temple,—about which I could also say much. The stooping figure, kissing the hem of her robe without her knowing, is, as far as I remember, first in this fresco ; the origin, itself, of the main design in all the others you know so well ; (and with its steps, by the way, in better perspective already than most of them).

“ *This* the original one ! ” you will be inclined to exclaim, if you have any general knowledge of the subsequent art. “ *This* Giotto ! why it's a cheap rechauffé of Titian ! ” No, my friend. The boy who tried so hard to draw those steps in perspective had been carried down others, to his grave, two hundred years before Titian ran alone at Cadore. But, as surely as Venice looks on the sea, Titian looked upon this, and caught the reflected light of it forever.

What kind of boy is this, think you, who can make Titian his copyist,—Dante his friend ? What new power is here which is to change the heart of Italy ?—can you see it, feel it, writing before you these words on the faded wall ?

“ You shall see things—as they Are.”

“ And the least with the greatest, because God made them.”

“ And the greatest with the least, because God made *you*, and gave you eyes and a heart.”

¹ Perhaps it is only the restorer's white on the ground that stops ; but I think a restorer would never have been so wise, but have gone right up to the outline, and spoiled all.

I. You shall see things—as they are. So easy a matter that, you think? So much more difficult and sublime to paint grand processions and golden thrones, than St. Anne faint on her pillow, and her servant at pause?

Easy or not, it is all the sight that is required of you in this world,—to see things, and men, and yourself,—as they are.

II. And the least with the greatest, because God made them, —shepherd, and flock, and grass of the field, no less than the Golden Gate.

III. But also the golden gate of Heaven itself, open, and the angels of God coming down from it.

These three things Giotto taught, and men believed, in his day. Of which Faith you shall next see brighter work; only before we leave the cloister, I want to sum for you one or two of the instant and evident technical changes produced in the school of Florence by this teaching.

One of quite the first results of Giotto's simply looking at things as they were, was his finding out that a red thing was red, and a brown thing brown, and a white thing white—all over.

The Greeks had painted anything anyhow,—gods black, horses red, lips and cheeks white; and when the Etruscan vase expanded into a Cimabue picture, or a Tafi mosaic, still,—except that the Madonna was to have a blue dress, and everything else as much gold on it as could be managed,—there was very little advance in notions of colour. Suddenly, Giotto threw aside all the glitter, and all the conventionalism; and declared that he saw the sky blue, the tablecloth white, and angels, when he dreamed of them, rosy. And he simply founded the schools of colour in Italy—Venetian and all, as I will show you to-morrow morning, if it is fine. And what is more, nobody discovered much about colour after him.

But a deeper result of his resolve to look at things as they were, was his getting so heartily interested in them that he couldn't miss their decisive *moment*. There is a decisive instant in all matters; and if you look languidly, you are sure to miss it. Nature seems always, somehow, trying to make

you miss it. "I will see that through," you must say, "without turning my head"; or you won't see the trick of it at all. And the most significant thing in all his work, you will find hereafter, is his choice of moments. I will give you at once two instances in a picture which, for other reasons, you should quickly compare with these frescos. Return by the Via delle Belle Donne; keep the Casa Strozzi on your right; and go straight on, through the market. The Florentines think themselves so civilized, forsooth, for building a nuovo Lang-Arno, and three manufactory chimneys opposite it: and yet sell butchers' meat, dripping red, peaches, and anchovies, side by side: it is a sight to be seen. Much more, Luca della Robbia's Madonna in the circle above the chapel door. Never pass near the market without looking at it; and glance from the vegetables underneath to Luca's leaves and lilies, that you may see how honestly he was trying to make his clay like the garden-stuff. But to-day, you may pass quickly on to the Uffizii, which will be just open; and when you enter the great gallery, turn to the right, and there, the first picture you come at will be No. 6, Giotto's "Agony in the garden."

I used to think it so dull that I could not believe it was Giotto's. That is partly from its dead colour, which is the boy's way of telling you it is night:—more from the subject being one quite beyond his age, and which he felt no pleasure in trying at. You may see he was still a boy, for he not only cannot draw feet yet, in the least, and scrupulously hides them therefore; but is very hard put to it for the hands, being obliged to draw them mostly in the same position,—all the four fingers together. But in the careful bunches of grass and weeds you will see what the fresco foregrounds were before they got spoiled; and there are some things he can understand already, even about that Agony, thinking of it in his own fixed way. Some things,—not altogether to be explained by the old symbol of the angel with the cup. He will try if he cannot explain them better in those two little pictures below; which nobody ever looks at; the great Roman sarcophagus being put in front of them, and the light

glancing on the new varnish so that you must twist about like a lizard to see anything. Nevertheless, you may make out what Giotto meant.

“The cup which my Father hath given me, shall I not drink it?” In what was its bitterness?—thought the boy. “Crucifixion?—Well, it hurts, doubtless; but the thieves had to bear it too, and many poor human wretches have to bear worse on our battlefields. But”—and he thinks, and thinks, and then he paints his two little pictures for the predella.

They represent, of course, the sequence of the time in Gethsemane; but see what choice the youth made of his moments, having two panels to fill. Plenty of choice for him—in pain. The Flagellation—the Mocking—the Bearing of the Cross;—all habitually given by the Margheritones, and their school, as extremes of pain.

“No,” thinks Giotto. “There was worse than all that. Many a good man has been mocked, spitefully entreated, spitted on, slain. But who was ever so betrayed? Who ever saw such a sword thrust in his mother’s heart?”

He paints, first, the laying hands on Him in the garden, but with only two principal figures,—Judas and Peter, of course; Judas and Peter were always principal in the old Byzantine composition,—Judas giving the kiss—Peter cutting off the servant’s ear. But the two are here, not merely principal, but almost alone in sight, all the other figures thrown back; and Peter is not at all concerned about the servant, or his struggle with him. He has got him down,—but looks back suddenly at Judas giving the kiss. What!—*you* are the traitor, then—you!

“Yes,” says Giotto; “and you, also, in an hour more.”

The other picture is more deeply felt, still. It is of Christ brought to the foot of the cross. There is no wringing of hands or lamenting crowd—no haggard signs of fainting or pain in His body. Scourging or fainting, feeble knee and torn wound,—he thinks scorn of all that, this shepherd-boy. One executioner is hammering the wedges of the cross harder down. The other—not ungently—is taking Christ’s red robe

off His shoulders. And St. John, a few yards off, is keeping his mother from coming nearer. She looks *down*, not at Christ ; but tries to come.

And now you may go on for your day's seeings through the rest of the gallery, if you will—Fornarina, and the wonderful cobbler, and all the rest of it. I don't want you any more till to-morrow morning.

But if, meantime, you will sit down,—say, before Sandro Botticelli's "Fortitude," which I shall want you to look at, one of these days ; (No. 1299, innermost room from the Tribune,) and there read this following piece of one of my Oxford lectures on the relation of Cimabue to Giotto, you will be better prepared for our work to-morrow morning in Santa Croce ; and may find something to consider of, in the room you are in. Where, by the way, observe that No. 1288 is a most true early Lionardo, of extreme interest : and the savants who doubt it are——never mind what ; but sit down at present at the feet of Fortitude, and read.

Those of my readers who have been unfortunate enough to interest themselves in that most profitless of studies—the philosophy of art—have been at various times teased or amused by disputes respecting the relative dignity of the contemplative and dramatic schools.

Contemplative, of course, being the term attached to the system of painting things only for the sake of their own niceness—a lady because she is pretty, or a lion because he is strong : and the dramatic school being that which cannot be satisfied unless it sees something going on : which can't paint a pretty lady unless she is being made love to, or being murdered ; and can't paint a stag or a lion unless they are being hunted, or shot, or the one eating the other.

You have always heard me—or, if not, will expect by the very tone of this sentence to hear me, now, on the whole recommend you to prefer the Contemplative school. But the comparison is always an imperfect and unjust one, unless quite other terms are introduced.

The real greatness or smallness of schools is not in their preference of inactivity to action, nor of action to inactivity.

It is in their preference of worthy things to unworthy, in rest ; and of kind action to unkind, in business.

A Dutchman can be just as solemnly and entirely contemplative of a lemon pip and a cheese paring, as an Italian of the Virgin in Glory. An English squire has pictures, purely contemplative, of his favorite horse—and a Parisian lady, pictures, purely contemplative, of the back and front of the last dress proposed to her in *La Mode Artistique*. All these works belong to the same school of silent admiration ;—the vital question concerning them is, “What do you admire?”

Now therefore, when you hear me so often saying that the Northern races—Norman and Lombard,—are active, or dramatic, in their art ; and that the Southern races—Greek and Arabian,—are contemplative, you ought instantly to ask farther, Active in what? Contemplative of what? And the answer is, The active art—Lombardic,—rejoices in hunting and fighting ; the contemplative art—Byzantine,—contemplates the mysteries of the Christian faith.

And at first, on such answer, one would be apt at once to conclude—All grossness must be in the Lombard ; all good in the Byzantine. But again we should be wrong,—and extremely wrong. For the hunting and fighting did practically produce strong, and often virtuous, men ; while the perpetual and inactive contemplation of what it was impossible to understand, did not on the whole render the contemplative persons, stronger, wiser, or even more amiable. So that, in the twelfth century, while the Northern art was only in need of direction, the Southern was in need of life. The North was indeed spending its valour and virtue on ignoble objects ; but the South disgracing the noblest objects by its want of valour and virtue.

Central stood Etruscan Florence—her root in the earth, bound with iron and brass—wet with the dew of heaven. Agriculture in occupation, religious in thought, she accepted, like good ground, the good ; refused, like the Rock of Fesole, the evil ; directed the industry of the Northman into the arts of peace ; kindled the dreams of the Byzantine with the fire of charity. Child of her peace, and exponent of her passion,

her Cimabue became the interpreter to mankind of the meaning of the Birth of Christ.

We hear constantly, and think naturally, of him as of a man whose peculiar genius in painting suddenly reformed its principles ; who suddenly painted, out of his own gifted imagination, beautiful instead of rude pictures ; and taught his scholar Giotto to carry on the impulse ; which we suppose thenceforward to have enlarged the resources and bettered the achievements of painting continually, up to our own time,—when the triumphs of art having been completed, and its uses ended, something higher is offered to the ambition of mankind ; and Watt and Faraday initiate the Age of Manufacture and Science, as Cimabue and Giotto instituted that of Art and Imagination.

In this conception of the History of Mental and Physical culture, we much overrate the influence, though we cannot overrate the power, of the men by whom the change seems to have been effected. We cannot overrate their power,—for the greatest men of any age, those who become its leaders when there is a great march to be begun, are indeed separated from the average intellects of their day by a distance which is immeasurable in any ordinary terms of wonder.

But we far overrate their influence ; because the apparently sudden result of their labour or invention is only the manifested fruit of the toil and thought of many who preceded them, and of whose names we have never heard. The skill of Cimabue cannot be extolled too highly ; but no Madonna by his hand could ever have rejoiced the soul of Italy, unless for a thousand years before, many a nameless Greek and nameless Goth had adorned the traditions, and lived in the love, of the Virgin.

In like manner, it is impossible to overrate the sagacity, patience, or precision, of the masters in modern mechanical and scientific discovery. But their sudden triumph, and the unbalancing of all the world by their words, may not in any wise be attributed to their own power, or even to that of the facts they have ascertained. They owe their habits and methods of industry to the paternal example, no less than the inherited energy, of men who long ago prosecuted the truths

of nature, through the rage of war, and the adversity of superstition ; and the universal and overwhelming consequences of the facts which their followers have now proclaimed, indicate only the crisis of a rapture produced by the offering of new objects of curiosity to nations who had nothing to look at ; and of the amusement of novel motion and action to nations who had nothing to do.

Nothing to look at ! That is indeed—you will find, if you consider of it—our sorrowful case. The vast extent of the advertising frescos of London, daily refreshed into brighter and larger frescos by its billstickers, cannot somehow sufficiently entertain the popular eyes. The great Mrs. Allen, with her flowing hair, and equally flowing promises, palls upon repetition, and that Madonna of the nineteenth century smiles in vain above many a borgo unrejoiced ; even the excitement of the shop-window, with its unattainable splendours, or too easily attainable impostures, cannot maintain itself in the wearying mind of the populace, and I find my charitable friends inviting the children, whom the streets educate only into vicious misery, to entertainments of scientific vision, in microscope or magic lantern ; thus giving them something to look at, such as it is ;—fleas mostly ; and the stomachs of various vermin ; and people with their heads cut off and set on again ;—still *something*, to look at.

The fame of Cimabue rests, and justly, on a similar charity. He gave the populace of his day something to look at ; and satisfied their curiosity with science of something they had long desired to know. We have continually imagined in our carelessness, that his triumph consisted only in a new pictorial skill ; recent critical writers, unable to comprehend how any street populace could take pleasure in painting, have ended by denying his triumph altogether, and insisted that he gave no joy to Florence ; and that the “Joyful quarter” was accidentally so named—or at least from no other festivity than that of the procession attending Charles of Anjou. I proved to you, in a former lecture, that the old tradition was true, and the delight of the people unquestionable. But that delight was not merely in the revelation of an art they had

not known how to practise ; it was delight in the revelation of a Madonna whom they had not known how to love.

Again ; what was revelation to *them*—we suppose farther and as unwisely, to have been only art in *him* ; that in better laying of colours,—in better tracing of perspectives—in recovery of principles of classic composition—he had manufactured, as our Gothic Firms now manufacture to order, a Madonna—in whom he believed no more than they.

Not so. First of the Florentines, first of European men—he attained in thought, and saw with spiritual eyes, exercised to discern good from evil,—the face of her who was blessed among women ; and with his following hand, made visible the Magnificat of his heart.

He magnified the Maid ; and Florence rejoiced in her Queen. But it was left for Giotto to make the queenship better beloved, in its sweet humiliation.

You had the Etruscan stock in Florence—Christian, or at least semi-Christian ; the statue of Mars still in its streets, but with its central temple built for Baptism in the name of Christ. It was a race living by agriculture ; gentle, thoughtful, and exquisitely fine in handiwork. The straw bonnet of Tuscany—the Leghorn—is pure Etruscan art, young ladies :—only plaited gold of God's harvest, instead of the plaited gold of His earth.

You had then the Norman and Lombard races coming down on this : kings, and hunters—splendid in war—insatiable of action. You had the Greek and Arabian races flowing from the east, bringing with them the law of the City, and the dream of the Desert.

Cimabue—Etruscan born, gave, we saw, the life of the Norman to the tradition of the Greek : eager action to holy contemplation. And what more is left for his favourite shepherd boy Giotto to do, than this, except to paint with ever-increasing skill ? We fancy he only surpassed Cimabue—eclipsed by greater brightness.

Not so. The sudden and new applause of Italy would never have been won by mere increase of the already-kindled light. Giotto had wholly another work to do. The meeting of the

Norman race with the Byzantine is not merely that of action with repose—not merely that of war with religion,—it is the meeting of *domestic* life with *monastic*, and of practical household sense with unpractical Desert insanity.

I have no other word to use than this last. I use it reverently, meaning a very noble thing; I do not know how far I ought to say—even a divine thing. Decide that for yourselves. Compare the Northern farmer with St. Francis; the palm hardened by stubbing Thornaby waste, with the palm softened by the imagination of the wounds of Christ. To my own thoughts, both are divine; decide that for yourselves; but assuredly, and without possibility of other decision, one is, humanly speaking, healthy; the other *unhealthy*; one sane, the other—insane.

To reconcile Drama with Dream, Cimabue's task was comparatively an easy one. But to reconcile Sense with—I still use even this following word reverently—Nonsense, is not so easy; and he who did it first,—no wonder he has a name in the world.

I must lean, however, still more distinctly on the word "domestic." For it is not Rationalism and commercial competition—Mr. Stuart Mill's "other career for woman than that of wife and mother"—which are reconcilable, by Giotto, or by anybody else, with divine vision. But household wisdom, labour of love, toil upon earth according to the law of Heaven—*these* are reconcilable, in one code of glory, with revelation in cave or island, with the endurance of desolate and loveless days, with the repose of folded hands that wait Heaven's time.

Domestic and monastic. He was the first of Italians—the first of Christians—who *equally* knew the virtue of both lives; and who was able to show it in the sight of men of all ranks,—from the prince to the shepherd; and of all powers,—from the wisest philosopher to the simplest child.

For, note the way in which the new gift of painting, bequeathed to him by his great master, strengthened his hands. Before Cimabue, no beautiful rendering of human form was possible; and the rude or formal types of the Lombard and

Byzantine, though they would serve in the tumult of the chase, or as the recognized symbols of creed, could not represent personal and domestic character. Faces with goggling eyes and rigid lips might be endured with ready help of imagination, for gods, angels, saints, or hunters—or for anybody else in scenes of recognized legend, but would not serve for pleasant portraiture of one's own self—or of the incidents of gentle, actual life. And even Cimabue did not venture to leave the sphere of conventionally revered dignity. He still painted—though beautifully—only the Madonna, and the St. Joseph, and the Christ. These he made living,—Florence asked no more: and “*Credette Cimabue nella pittura tener lo campo.*”

But Giotto came from the field, and saw with his simple eyes a lowlier worth. And he painted—the Madonna, and St. Joseph, and the Christ,—yes, by all means if you choose to call them so, but essentially,—Mamma, Papa, and the Baby. And all Italy threw up its cap,—“*Ora ha Giotto il grido.*”

For he defines, explains, and exalts, every sweet incident of human nature; and makes dear to daily life every mystic imagination of natures greater than our own. He reconciles, while he intensifies, every virtue of domestic and monastic thought. He makes the simplest household duties sacred, and the highest religious passions serviceable and just.

THE THIRD MORNING.

BEFORE THE SOLDAN.

I PROMISED some note of Sandro's Fortitude, before whom I asked you to sit and read the end of my last letter; and I've lost my own notes about her, and forget, now, whether she has a sword, or a mace;—it does not matter. What is chiefly notable in her is—that you would not, if you had to guess who she was, take her for Fortitude at all. Everybody else's Fortitudes announce themselves clearly and proudly. They have tower-like shields, and lion-like helmets—and stand firm astride on their legs,—and are confidently ready for all comers.

Yes ;—that is your common Fortitude. Very grand, though common. But not the highest, by any means.

Ready for all comers, and a match for them,—thinks the universal Fortitude ;—no thanks to her for standing so steady, then !

But Botticelli's Fortitude is no match, it may be, for any that are coming. Worn, somewhat ; and not a little weary, instead of standing ready for all comers, she is sitting,—apparently in reverie, her fingers playing restlessly and idly—nay, I think—even nervously, about the hilt of her sword

For her battle is not to begin to-day ; nor did it begin yesterday. Many a morn and eve have passed since it began—and now—is this to be the ending day of it? And if this—by what manner of end?

That is what Sandro's Fortitude is thinking. And the playing fingers about the sword-hilt would fain let it fall, if it might be : and yet, how swiftly and gladly will they close on it, when the far-off trumpet blows, which she will hear through all her reverie !

There is yet another picture of Sandro's here, which you must look at before going back to Giotto : the small Judith in the room next the Tribune, as you return from this outer one. It is just under Lionardo's Medusa. She is returning to the camp of her Israel, followed by her maid carrying the head of Holofernes. And she walks in one of Botticelli's light dancing actions, her drapery all on flutter, and her hand, like Fortitude's, light on the sword-hilt, but daintily—not nervously, the little finger laid over the cross of it.

And at the first glance—you will think the figure merely a piece of fifteenth-century affectation. 'Judith, indeed !—say rather the daughter of Herodias, at her mincingest.'

Well, yes—Botticelli is affected, in the way that all men in that century necessarily were. Much euphuism, much studied grace of manner, much formal assertion of scholarship, mingling with his force of imagination. And he likes twisting the fingers of hands about, just as Correggio does. But he never does it like Correggio, without cause.

Look at Judith again,—at her face, not her drapery,—and

remember that when a man is base at the heart, he blights his virtues into weaknesses ; but when he is true at the heart, he sanctifies his weaknesses into virtues. It is a weakness of Botticelli's, this love of dancing motion and waved drapery ; but why has he given it full flight here ?

Do you happen to know anything about Judith yourself, except that she cut off Holofernes' head ; and has been made the high light of about a million of vile pictures ever since, in which the painters thought they could surely attract the public to the double show of an execution, and a pretty woman, — especially with the added pleasure of hinting at previously ignoble sin ?

When you go home to-day, take the pains to write out for yourself, in the connection I here place them, the verses underneath numbered from the book of Judith ; you will probably think of their meaning more carefully as you write.

Begin thus :

“ Now at that time, Judith heard thereof, which was the daughter of Merari, * * * the son of Simeon, the son of Israel.” And then write out, consecutively, these pieces—

Chapter viii., verses 2 to 8. (Always inclusive,) and read the whole chapter.

Chapter ix., verses 1 and 5 to 7, beginning this piece with the previous sentence, “ Oh God, oh my God, hear me also, a widow.”

Chapter ix., verses 11 to 14.

“ x.,	“ 1 to 5.
“ xiii.,	“ 6 to 10.
“ xv.,	“ 11 to 13.
“ xvi.,	“ 1 to 6.
“ xvi.,	“ 11 to 15.
“ xvi.,	“ 18 and 19.
“ xvi.,	“ 23 to 25.

Now, as in many other cases of noble history, apocryphal and other, I do not in the least care how far the literal facts are true. The conception of facts, and the idea of Jewish womanhood, are there, grand and real as a marble statue,—possession for all ages. And you will feel, after you have

read this piece of history, or epic poetry, with honourable care, that there is somewhat more to be thought of and pictured in Judith, than painters have mostly found it in them to show you ; that she is not merely the Jewish Delilah to the Assyrian Samson ; but the mightiest, purest, brightest type of high passion in severe womanhood offered to our human memory. Sandro's picture is but slight ; but it is true to her, and the only one I know that is ; and after writing out these verses, you will see why he gives her that swift, peaceful motion, while you read in her face, only sweet solemnity of dreaming thought. "My people delivered, and by my hand ; and God has been gracious to His handmaid !" The triumph of Miriam over a fallen host, the fire of exulting mortal life in an immortal hour, the purity and severity of a guardian angel—all are here ; and as her servant follows, carrying indeed the head, but invisible—(a mere thing to be carried—no more to be so much as thought of)—she looks only at her mistress, with intense, servile, watchful love. Faithful, not in these days of fear only, but hitherto in all her life, and afterwards forever.

After you have seen it enough, look also for a little while at Angelico's Marriage and Death of the Virgin, in the same room ; you may afterwards associate the three pictures always together in your mind. And, looking at nothing else to-day in the Uffizi, let us go back to Giotto's chapel.

We must begin with this work on our left hand, the Death of St. Francis ; for it is the key to all the rest. Let us hear first what Mr. Crowe directs us to think of it. "In the composition of this scene, Giotto produced a masterpiece, which served as a model but too often feebly imitated by his successors. Good arrangement, variety of character and expression in the heads, unity and harmony in the whole, make this an exceptional work of its kind. As a composition, worthy of the fourteenth century, Ghirlandajo and Benedetto da Majano both imitated, without being able to improve it. No painter ever produced its equal except Raphael ; nor could a better be created except in so far as regards improvement in the mere rendering of form."

To these inspiring observations by the rapturous Crowe, more cautious Cavalcasella¹ appends a refrigerating note, saying, "The St. Francis in the glory is new, but the angels are in part preserved. The rest has all been more or less retouched; and no judgment can be given as to the colour of this—or any other (!)—of these works."

You are, therefore—instructed reader—called upon to admire a piece of art which no painter ever produced the equal of except Raphael; but it is unhappily deficient, according to Crowe, in the "mere rendering of form"; and, according to Signor Cavalcasella, "no opinion can be given as to its colour."

Warned thus of the extensive places where the ice is dangerous, and forbidden to look here either for form or colour, you are to admire "the variety of character and expression in the heads." I do not myself know how these are to be given without form or colour; but there appears to me, in my innocence, to be only one head in the whole picture, drawn up and down in different positions.

The "unity and harmony" of the whole—which make this an exceptional work of its kind—mean, I suppose, its general look of having been painted out of a scavenger's cart; and so we are reduced to the last article of our creed according to Crowe,—

"In the composition of this scene Giotto produced a masterpiece."

Well, possibly. The question is, What you mean by 'composition.' Which, putting modern criticism now out of our way, I will ask the reader to think, in front of this wreck of Giotto, with some care.

Was it, in the first place, to Giotto, think you, the "composition of a scene," or the conception of a fact? You probably, if a fashionable person, have seen the apotheosis of Margaret in Faust? You know what care is taken, nightly, in

¹ I venture to attribute the wiser note to Signor Cavalcasella because I have every reason to put real confidence in his judgment. But it was impossible for any man engaged as he is, to go over all the ground covered by so extensive a piece of critical work as these three volumes contain, with effective attention.

the composition of that scene,—how the draperies are arranged for it; the lights turned off, and on; the fiddlestrings taxed for their utmost tenderness; the bassoons exhorted to a grievous solemnity.

You don't believe, however, that any real soul of a Margaret ever appeared to any mortal in that manner?

Here is an apotheosis also. Composed!—yes; figures high on the right and left, low in the middle, etc., etc., etc.

But the important questions seem to me, Was there ever a St. Francis?—*did* he ever receive stigmata?—*did* his soul go up to heaven—did any monk see it rising—and did Giotto mean to tell us so? If you will be good enough to settle these few small points in your mind first, the “composition” will take a wholly different aspect to you, according to your answer.

Nor does it seem doubtful to me what your answer, after investigation made, must be.

There assuredly was a St. Francis, whose life and works you had better study than either to-day's Galignani, or whatever, this year, may supply the place of the Tichborne case, in public interest.

His reception of the stigmata is, perhaps, a marvellous instance of the power of imagination over physical conditions; perhaps an equally marvellous instance of the swift change of metaphor into tradition; but assuredly, and beyond dispute, one of the most influential, significant, and instructive traditions possessed by the Church of Christ. And, that, if ever soul rose to heaven from the dead body, his soul did so rise, is equally sure.

And, finally, Giotto believed that all he was called on to represent, concerning St. Francis, really had taken place, just as surely as you, if you are a Christian, believe that Christ died and rose again; and he represents it with all fidelity and passion: but, as I just now said, he is a man of supreme common sense;—has as much humour and clearness of sight as Chaucer, and as much dislike of falsehood in clergy, or in professedly pious people: and in his gravest moments he will still see and say truly that what is fat, is fat—and what is lean, leau—and what is hollow, empty.

His great point, however, in this fresco, is the assertion of the reality of the stigmata against all question. There is not only one St. Thomas to be convinced ; there are five ;—one to each wound. Of these, four are intent only on satisfying their curiosity, and are peering or probing ; one only kisses the hand he has lifted. The rest of the picture never was much more than a grey drawing of a noble burial service ; of all concerned in which, one monk, only, is worthy to see the soul taken up to heaven ; and he is evidently just the monk whom nobody in the convent thought anything of. (His face is all repainted ; but one can gather this much, or little, out of it, yet.)

Of the composition, or “unity and harmony of the whole,” as a burial service, we may better judge after we have looked at the brighter picture of St. Francis’s Birth—birth spiritual, that is to say, to his native heaven ; the uppermost, namely, of the three subjects on this side of the chapel. It is entirely characteristic of Giotto ; much of it by his hand—all of it beautiful. All important matters to be known of Giotto you may know from this fresco.

‘But we can’t see it, even with our opera-glasses, but all foreshortened and spoiled. What is the use of lecturing us on this?’

That is precisely the first point which is essentially Giottesque in it ; its being so out of the way ! It is this which makes it a perfect specimen of the master. I will tell you next something about a work of his which you can see perfectly, just behind you on the opposite side of the wall ; but that you have half to break your neck to look at this one, is the very first thing I want you to feel.

It is a characteristic—(as far as I know, quite a universal one)—of the greatest masters, that they never expect you to look at them ;—seem always rather surprised if you want to ; and not overpleased. Tell them you are going to hang their picture at the upper end of the table at the next great City dinner, and that Mr. So and So will make a speech about it ; you produce no impression upon them whatever, or an unfavourable one. The chances are ten to one they send you the

most rubbishy thing they can find in their lumber-room. But send for one of them in a hurry, and tell him the rats have gnawed a nasty hole behind the parlor door, and you want it plastered and painted over;—and he does you a masterpiece which the world will peep behind your door to look at for ever.

I have no time to tell you why this is so; nor do I know why, altogether; but so it is.

Giotto, then, is sent for, to paint this high chapel: I am not sure if he chose his own subjects from the life of St. Francis: I think so,—but of course can't reason on the guess securely. At all events, he would have much of his own way in the matter.

Now you must observe that painting a Gothic chapel rightly is just the same thing as painting a Greek vase rightly. The chapel is merely the vase turned upside-down, and outside-in. The principles of decoration are exactly the same. Your decoration is to be proportioned to the size of your vase; to be together delightful when you look at the cup, or chapel, as a whole; to be various and entertaining when you turn the cup round; (you turn *yourself* round in the chapel;) and to bend its heads and necks of figures about, as it best can, over the hollows, and ins and outs, so that anyhow, whether too long or too short—possible or impossible—they may be living, and full of grace. You will also please take it on my word to-day—in another morning walk you shall have proof of it—that Giotto was a pure Etruscan-Greek of the thirteenth century: converted indeed to worship St. Francis instead of Heracles; but as far as vase-painting goes, precisely the Etruscan he was before. This is nothing else than a large, beautiful, coloured Etruscan vase you have got, inverted over your heads like a diving-bell.¹

¹ I observe that recent criticism is engaged in proving all Etruscan vases to be of late manufacture, in imitation of archaic Greek. And I therefore must briefly anticipate a statement which I shall have to enforce in following letters. Etruscan art remains in its own Italian valleys, of the Arno and upper Tiber, in one unbroken series of work, from the seventh century before Christ, to this hour, when the country

Accordingly, after the quatrefoil ornamentation of the top of the bell, you get two spaces at the sides under arches, very difficult to cramp one's picture into, if it is to be a picture only ; but entirely provocative of our old Etruscan instinct of ornament. And, spurred by the difficulty, and pleased by the national character of it, we put our best work into these arches, utterly neglectful of the public below,—who will see the white and red and blue spaces, at any rate, which is all they will want to see, thinks Giotto, if he ever looks down from his scaffold.

Take the highest compartment, then, on the left, looking towards the window. It was wholly impossible to get the arch filled with figures, unless they stood on each other's heads ; so Giotto ekes it out with a piece of fine architecture. Raphael, in the *Sposalizio*, does the same, for pleasure.

Then he puts two dainty little white figures, bending, on each flank, to stop up his corners. But he puts the taller inside on the right, and outside on the left. And he puts his Greek chorons of observant and moralizing persons on each side of his main action.

Then he puts one Choragus—or leader of chorus, supporting the main action—on each side. Then he puts the main action in the middle—which is a quarrel about that white bone of contention in the centre. Choragus on the right, who sees that the bishop is going to have the best of it, backs him serenely. Choragus on the left, who sees that his impetuous

whitewasher still scratches his plaster in Etruscan patterns. All Florentine work of the finest kind—Luca della Robbia's, Ghiberti's, Donatello's, Filippo Lippi's, Botticelli's, Fra Angelico's—is absolutely pure Etruscan, merely changing its subjects, and representing the Virgin instead of Athena, and Christ instead of Jupiter. Every line of the Florentine chisel in the fifteenth century is based on national principles of art which existed in the seventh century before Christ ; and Angelico, in his convent of St. Dominic, at the foot of the hill of Fiesole, is as true an Etruscan as the builder who laid the rude stones of the wall along its crest—of which modern civilization has used the only arch that remained for cheap building stone. Luckily, I sketched it in 1845 ; but alas, too carelessly,—never conceiving of the brutalities of modern Italy as possible.

friend is going to get the worst of it, is pulling him back, and trying to keep him quiet. The subject of the picture, which, after you are quite sure it is good as a decoration, but not till then, you may be allowed to understand, is the following. One of St. Francis's three great virtues being Obedience, he begins his spiritual life by quarreling with his father. He, I suppose in modern terms I should say, 'commercially invests some of his father's goods in charity. His father objects to that investment; on which St. Francis runs away, taking what he can find about the house along with him. His father follows to claim his property, but finds it is all gone, already; and that St. Francis has made friends with the Bishop of Assisi. His father flies into an indecent passion, and declares he will disinherit him; on which St. Francis then and there takes all his clothes off, throws them frantically in his father's face, and says he has nothing more to do with clothes or father. The good Bishop, in tears of admiration, embraces St. Francis, and covers him with his own mantle.

I have read the picture to you as, if Mr. Spurgeon knew anything about art, Mr. Spurgeon would read it,—that is to say, from the plain, common sense, Protestant side. If you are content with that view of it, you may leave the chapel, and, as far as any study of history is concerned, Florence also; for you can never know anything either about Giotto, or her.

Yet do not be afraid of my re-reading it to you from the mystic, nonsensical, and Papistical side. I am going to read it to you—if after many and many a year of thought, I am able—as Giotto meant it; Giotto being, as far as we know, then the man of strongest brain and hand in Florence; the best friend of the best religious poet of the world; and widely differing, as his friend did also, in his views of the world, from either Mr. Spurgeon, or Pius IX.

The first duty of a child is to obey its father and mother; as the first duty of a citizen to obey the laws of his state. And this duty is so strict that I believe the only limits to it are those fixed by Isaac and Iphigenia. On the other hand, the father and mother have also a fixed duty to the child

—not to provoke it to wrath. I have never heard this text explained to fathers and mothers from the pulpit, which is curious. For it appears to me that God will expect the parents to understand their duty to their children, better even than children can be expected to know their duty to their parents.

But farther. A *child's* duty is to obey its parents. It is never said anywhere in the Bible, and never was yet said in any good or wise book, that a man's, or woman's, is. *When*, precisely, a child becomes a man or a woman, it can no more be said, than when it should first stand on its legs. But a time assuredly comes when it should. In great states, children are always trying to remain children, and the parents wanting to make men and women of them. In vile states, the children are always wanting to be men and women, and the parents to keep them children. It may be—and happy the house in which it is so—that the father's at least equal intellect, and older experience, may remain to the end of his life a law to his children, not of force, but of perfect guidance, with perfect love. Rarely it is so; not often possible. It is as natural for the old to be prejudiced as for the young to be presumptuous; and, in the change of centuries, each generation has something to judge of for itself.

But this scene, on which Giotto has dwelt with so great force, represents, not the child's assertion of his independence, but his adoption of another Father.

You must not confuse the desire of this boy of Assisi to obey God rather than man, with the desire of your young cockney Hopeful to have a latch-key, and a separate allowance.

No point of duty has been more miserably warped and perverted by false priests, in all churches, than this duty of the young to choose whom they will serve. But the duty itself does not the less exist; and if there be any truth in Christianity at all, there will come, for all true disciples, a time when they have to take that saying to heart, "He that loveth father or mother more than me, is not worthy of me."

'*Loveth*'—observe. There is no talk of disobeying fathers or mothers whom you do *not* love, or of running away from a

home where you would rather not stay. But to leave the home which is your peace, and to be at enmity with those who are most dear to you,—this, if there be meaning in Christ's words, one day or other will be demanded of His true followers.

And there *is* meaning in Christ's words. Whatever misuse may have been made of them,—whatever false prophets—and Heaven knows there have been many—have called the young children to them, not to bless, but to curse, the assured fact remains, that if you will obey God, there will come a moment when the voice of man will be raised, with all its holiest natural authority, against you. The friend and the wise adviser—the brother and the sister—the father and the master—the entire voice of your prudent and keen-sighted acquaintance—the entire weight of the scornful stupidity of the vulgar world—for *once*, they will be against you, all at one. You have to obey God rather than man. The human race, with all its wisdom and love, all its indignation and folly, on one side,—God alone on the other. You have to choose.

That is the meaning of St. Francis's renouncing his inheritance ; and it is the beginning of Giotto's gospel of Works. Unless this hardest of deeds be done first,—this inheritance of mammon and the world cast away,—all other deeds are useless. You cannot serve, cannot obey, God and mammon. No charities, no obediences, no self-denials, are of any use, while you are still at heart in conformity with the world. You go to church, because the world goes. You keep Sunday, because your neighbours keep it. But you dress ridiculously, because your neighbours ask it ; and you dare not do a rough piece of work, because your neighbours despise it. You must renounce your neighbour, in his riches and pride, and remember him in his distress. That is St. Francis's 'disobedience.'

And now you can understand the relation of subjects throughout the chapel, and Giotto's choice of them.

The roof has the symbols of the three virtues of labour—Poverty, Chastity, Obedience.

A. Highest on the left side, looking to the window. The life of St. Francis begins in his renunciation of the world.

B. Highest on the right side. His new life is approved and ordained by the authority of the church.

C. Central on the left side. He preaches to his own disciples.

D. Central on the right side. He preaches to the heathen.

E. Lowest on the left side. His burial.

F. Lowest on the right side. His power after death.

Besides these six subjects, there are, on the sides of the window, the four great Franciscan saints, St. Louis of France, St. Louis of Toulouse, St. Clare, and St. Elizabeth of Hungary.

So that you have in the whole series this much given you to think of: first, the law of St. Francis's conscience; then, his own adoption of it; then, the ratification of it by the Christian Church; then, his preaching it in life; then, his preaching it in death; and then, the fruits of it in his disciples.

I have only been able myself to examine, or in any right sense to see, of this code of subjects, the first, second, fourth, and the St. Louis and Elizabeth. I will ask *you* only to look at two more of them, namely, St. Francis before the Soldan, midmost on your right, and St. Louis.

The Soldan, with an ordinary opera-glass, you may see clearly enough; and I think it will be first well to notice some technical points in it.

If the little virgin on the stairs of the temple reminded you of one composition of Titian's, this Soldan should, I think, remind you of all that is greatest in Titian; so forcibly, indeed, that for my own part, if I had been told that a careful early fresco by Titian had been recovered in Santa Croce, I could have believed both report and my own eyes, more quickly than I have been able to admit that this is indeed by Giotto. It is so great that—had its principles been understood—there was in reality nothing more to be taught of art in Italy; nothing to be invented afterwards, except Dutch effects of light.

That there is no 'effect of light' here arrived at, I beg you at once to observe as a most important lesson. The subject

is St. Francis challenging the Soldan's Magi,—fire-worshippers—to pass with him through the fire, which is blazing red at his feet. It is so hot that the two Magi on the other side of the throne shield their faces. But it is represented simply as a red mass of writhing forms of flame; and casts no fire-light whatever. There is no ruby colour on anybody's nose; there are no black shadows under anybody's chin; there are no Rembrandtesque gradations of gloom, or glitterings of sword-hilt and armour.

Is this ignorance, think you, in Giotto, and pure artlessness? He was now a man in middle life, having passed all his days in painting, and professedly, and almost contentiously, painting things as he saw them. Do you suppose he never saw fire cast firelight?—and he the friend of Dante! who of all poets is the most subtle in his sense of every kind of effect of light—though he has been thought by the public to know that of fire only. Again and again, his ghosts wonder that there is no shadow cast by Dante's body; and is the poet's friend, *because* a painter, likely, therefore, not to have known that mortal substance casts shadow, and terrestrial flame, light? Nay, the passage in the 'Purgatorio' where the shadows from the morning sunshine make the flames redder, reaches the accuracy of Newtonian science; and does Giotto, think you, all the while, see nothing of the sort?

The fact was, he saw light so intensely that he never for an instant thought of painting it. He knew that to paint the sun was as impossible as to stop it; and he was no trickster, trying to find out ways of seeming to do what he did not. I can paint a rose,—yes; and I will. I can't paint a red-hot coal; and I won't try to, nor seem to. This was just as natural and certain a process of thinking with *him*, as the honesty of it, and true science, were impossible to the false painters of the sixteenth century.

Nevertheless, what his art can honestly do to make you feel as much as he wants you to feel, about this fire, he will do; and that studiously. That the fire be *luminous* or not, is no matter just now. But that the fire is *hot*, he would have you to know. Now, will you notice what colours he has used in

the whole picture. First, the blue background, necessary to unite it with the other three subjects, is reduced to the smallest possible space. St. Francis must be in grey, for that is his dress; also the attendant of one of the Magi is in grey; but so warm, that, if you saw it by itself, you would call it brown. The shadow behind the throne, which Giotto knows he *can* paint, and therefore does, is grey also. The rest of the picture¹ in at least six-sevenths of its area—is either crimson, gold, orange, purple, or white, all as warm as Giotto could paint them; and set off by minute spaces only of intense black,—the Soldan's fillet at the shoulders, his eyes, beard, and the points necessary in the golden pattern behind. And the whole picture is one glow.

A single glance round at the other subjects will convince you of the special character in this; but you will recognize also that the four upper subjects, in which St. Francis's life and zeal are shown, are all in comparatively warm colours, while the two lower ones—of the death, and the visions after it—have been kept as definitely sad and cold.

Necessarily, you might think, being full of monks' dresses. Not so. Was there any need for Giotto to have put the priest at the foot of the dead body, with the black banner stooped over it in the shape of a grave? Might he not, had he chosen, in either fresco, have made the celestial visions brighter? Might not St. Francis have appeared in the centre of a celestial glory to the dreaming Pope, or his soul been seen of the poor monk, rising through more radiant clouds? Look, however, how radiant, in the small space allowed out of the blue, they are in reality. You cannot anywhere see a lovelier piece of Giottesque colour, though here, you have to mourn over the smallness of the piece, and its isolation. For the face of St. Francis himself is repainted, and all the blue sky; but the clouds and four sustaining angels are hardly retouched at all, and their iridescent and exquisitely graceful wings are left with really very tender and delicate care by the restorer of the sky. And no one but Giotto or Turner could have painted them.

¹ The floor has been repainted; but though its grey is now heavy and cold, it cannot kill the splendour of the rest.

For in all his use of opalescent and warm colour, Giotto is exactly like Turner, as, in his swift expressional power, he is like Gainsborough. All the other Italian religious painters work out their expression with toil ; he only can give it with a touch. All the other great Italian colourists see only the beauty of colour, but Giotto also its brightness. And none of the others, except Tintoret, understood to the full its symbolic power ; but with those—Giotto and Tintoret—there is always, not only a colour harmony, but a colour secret. It is not merely to make the picture glow, but to remind you that St. Francis preaches to a fire-worshipping king, that Giotto covers the wall with purple and scarlet ;—and above, in the dispute at Assisi, the angry father is dressed in red, varying like passion ; and the robe with which his protector embraces St. Francis, blue, symbolizing the peace of Heaven. Of course certain conventional colours were traditionally employed by all painters ; but only Giotto and Tintoret invent a symbolism of their own for every picture. Thus in Tintoret's picture of the fall of the manna, the figure of God the Father is entirely robed in white, contrary to all received custom : in that of Moses striking the rock, it is surrounded by a rainbow. Of Giotto's symbolism in colour at Assisi, I have given account elsewhere.¹

You are not to think, therefore, the difference between the colour of the upper and lower frescos unintentional. The life of St. Francis was always full of joy and triumph. His death, in great suffering, weariness, and extreme humility. The tradition of him reverses that of Elijah ; living, he is seen in the chariot of fire ; dying, he submits to more than the common sorrow of death.

There is, however, much more than a difference in colour between the upper and lower frescos. There is a difference in manner which I cannot account for ; and above all, a very singular difference in skill,—indicating, it seems to me, that the two lower were done long before the others, and afterwards united and harmonized with them. It is of no interest to the general reader to pursue this question ; but one point

¹ 'Fors Clavigera' for September, 1874.

he can notice quickly, that the lower frescos depend much on a mere black or brown outline of the features, while the faces above are evenly and completely painted in the most accomplished Venetian manner:—and another, respecting the management of the draperies, contains much interest for us.

Giotto never succeeded, to the very end of his days, in representing a figure lying down, and at ease. It is one of the most curious points in all his character. Just the thing which he could study from nature without the smallest hindrance, is the thing he never can paint; while subtleties of form and gesture, which depend absolutely on their momentariness, and actions in which no model can stay for an instant, he seizes with infallible accuracy.

Not only has the sleeping Pope, in the right hand lower fresco, his head laid uncomfortably on his pillow, but all the clothes on him are in awkward angles, even Giotto's instinct for lines of drapery failing him altogether when he has to lay it on a reposing figure. But look at the folds of the Soldan's robe over his knees. None could be more beautiful or right; and it is to me wholly inconceivable that the two paintings should be within even twenty years of each other in date—the skill in the upper one is so supremely greater. We shall find, however, more than mere truth in its casts of drapery, if we examine them.

They are so simply right, in the figure of the Soldan, that we do not think of them;—we see him only, not his dress. But we see dress first, in the figures of the discomfited Magi. Very fully draped personages these, indeed,—with trains, it appears, four yards long, and bearers of them.

The one nearest the Soldan has done his devoir as bravely as he could; would fain go up to the fire, but cannot; is forced to shield his face, though he has not turned back. Giotto gives him full sweeping breadth of fold; what dignity he can;—a man faithful to his profession, at all events.

The next one has no such courage. Collapsed altogether, he has nothing more to say for himself or his creed. Giotto hangs the cloak upon him, in Ghirlandajo's fashion, as from a peg, but with ludicrous narrowness of fold. Literally, he is

a 'shut-up' Magus—closed like a fan. He turns his head away, hopelessly. And the last Magus shows nothing but his back, disappearing through the door.

Opposed to them, in a modern work, you would have had a St. Francis standing as high as he could in his sandals, contemptuous, denunciatory; magnificently showing the Magi the door. No such thing, says Giotto. A somewhat mean man; disappointing enough in presence—even in feature; I do not understand his gesture, pointing to his forehead—perhaps meaning, 'my life, or my head, upon the truth of this.' The attendant monk behind him is terror-struck; but will follow his master. The dark Moorish servants of the Magi show no emotion—will arrange their masters' trains as usual, and decorously sustain their retreat.

Lastly, for the Soldan himself. In a modern work, you would assuredly have had him staring at St. Francis with his eyebrows up, or frowning thunderously at his Magi, with them bent as far down as they would go. Neither of these aspects does he bear, according to Giotto. A perfect gentleman and king, he looks on his Magi with quiet eyes of decision; he is much the noblest person in the room—though an infidel, the true hero of the scene, far more than St. Francis. It is evidently the Soldan whom Giotto wants you to think of mainly, in this picture of Christian missionary work.

He does not altogether take the view of the Heathen which you would get in an Exeter Hall meeting. Does not expatiate on their ignorance, their blackness, or their nakedness. Does not at all think of the Florentine Islington and Pentonville, as inhabited by persons in every respect superior to the kings of the East; nor does he imagine every other religion but his own to be log-worship. Probably the people who really worship logs—whether in Persia or Pentonville—will be left to worship logs to their hearts' content, thinks Giotto. But to those who worship *God*, and who have obeyed the laws of heaven written in their hearts, and numbered the stars of it visible to them,—to these, a nearer star may rise; and a higher God be revealed.

You are to note, therefore, that Giotto's Soldan is the type

of all noblest religion and law, in countries where the name of Christ has not been preached. There was no doubt what king or people should be chosen: the country of the three Magi had already been indicated by the miracle of Bethlehem; and the religion and morality of Zoroaster were the purest, and in spirit the oldest, in the heathen world. Therefore, when Dante, in the nineteenth and twentieth books of the *Paradise*, gives his final interpretation of the law of human and divine justice in relation to the gospel of Christ—the lower and enslaved body of the heathen being represented by St. Philip's convert, ("Christians like these the Ethiop shall condemn")—the noblest state of heathenism is at once chosen, as by Giotto: "What may the *Persians* say unto *your* kings?" Compare also Milton,—

"At the Soldan's chair,
Defied the best of Paynim chivalry."

And now, the time is come for you to look at Giotto's St. Louis, who is the type of a Christian king.

You would, I suppose, never have seen it at all, unless I had dragged you here on purpose. It was enough in the dark originally—is trebly darkened by the modern painted glass—and dismissed to its oblivion contentedly by Mr. Murray's "Four saints, all much restored and repainted," and Messrs. Crowe and Cavalcasella's serene "The St. Louis is quite new."

Now, I am the last person to call any restoration whatever, judicious. Of all destructive manias, that of restoration is the frightfullest and foolishhest. Nevertheless, what good, in its miserable way, it can bring, the poor art scholar must now apply his common sense to take; there is no use, because a great work has been restored, in now passing it by altogether, not even looking for what instruction we still may find in its design, which will be more intelligible, if the restorer has had any conscience at all, to the ordinary spectator, than it would have been in the faded work. When, indeed, Mr. Murray's *Guide* tells you that a *building* has been 'magnificently restored,' you may pass the building by in resigned despair;

for *that* means that every bit of the old sculpture has been destroyed, and modern vulgar copies put up in its place. But a restored picture or fresco will often be, to *you*, more useful than a pure one; and in all probability—if an important piece of art—it will have been spared in many places, cautiously completed in others, and still assert itself in a mysterious way—as Leonardo's *Cenacolo* does—through every phase of reproduction.¹

But I can assure you, in the first place, that St. Louis is by

¹ For a test of your feeling in the matter, having looked well at these two lower frescos in this chapel, walk round into the next, and examine the lower one on your left hand as you enter that. You will find in your Murray that the frescos in this chapel “were also till lately, (1862) covered with whitewash”; but I happen to have a long critique of this particular picture written in the year 1845, and I see no change in it since then. Mr. Murray's critic also tells you to observe in it that “the daughter of Herodias playing on a violin is not unlike Perugino's treatment of similar subjects” By which Mr. Murray's critic means that the male musician playing on a violin, whom, without looking either at his dress, or at the rest of the fresco, he took for the daughter of Herodias, has a broad face. Allowing you the full benefit of this criticism—there is still a point or two more to be observed. This is the only fresco near the ground in which Giotto's work is untouched, at least, by the modern restorer. So felicitously safe it is, that you may learn from it at once and for ever, what good fresco painting is—how quiet—how delicately clear—how little coarsely or vulgarly attractive—how capable of the most tender light and shade, and of the most exquisite and enduring colour.

In this latter respect, this fresco stands almost alone among the works of Giotto; the striped curtain behind the table being wrought with a variety and fantasy of playing colour which Paul Veronese could not better at his best.

You will find, without difficulty, in spite of the faint tints, the daughter of Herodias in the middle of the picture—slowly *moving*, not dancing, to the violin music—she herself playing on a lyre. In the farther corner of the picture, she gives St. John's head to her mother; the face of Herodias is almost entirely faded, which may be a farther guarantee to you of the safety of the rest. The subject of the Apocalypse, highest on the right, is one of the most interesting mythic pictures in Florence; nor do I know any other so completely rendering the meaning of the scene between the woman in the wilderness, and the Dragon enemy. But it cannot be seen from the floor level: and I have no power of showing its beauty in words.

no means altogether new. I have been up at it, and found most lovely and true colour left in many parts: the crown, which you will find, after our mornings at the Spanish chapel, is of importance, nearly untouched; the lines of the features and hair, though all more or less reproduced, still of definite and notable character; and the junction throughout of added colour so careful, that the harmony of the whole, if not delicate with its old tenderness, is at least, in its coarser way, solemn and unbroken. Such as the figure remains, it still possesses extreme beauty—profoundest interest. And, as you can see it from below with your glass, it leaves little to be desired, and may be dwelt upon with more profit than nine out of ten of the renowned pictures of the Tribune or the Pitti. You will enter into the spirit of it better if I first translate for you a little piece from the *Fioretti di San Francesco*.

“How St. Louis, King of France, went personally in the guise of a pilgrim, to Perugia, to visit the holy Brother Giles.—St. Louis, King of France, went on pilgrimage to visit the sanctuaries of the world; and hearing the most great fame of the holiness of Brother Giles, who had been among the first companions of St. Francis, put it in his heart, and determined assuredly that he would visit him personally; wherefore he came to Perugia, where was then staying the said brother. And coming to the gate of the place of the Brothers, with few companions, and being unknown, he asked with great earnestness for Brother Giles, telling nothing to the porter who he was that asked. The porter, therefore, goes to Brother Giles, and says that there is a pilgrim asking for him at the gate. And by God it was inspired in him and revealed that it was the King of France; whereupon quickly with great fervour he left his cell and ran to the gate, and without any question asked, or ever having seen each other before, kneeling down together with greatest devotion, they embraced and kissed each other with as much familiarity as if for a long time they had held great friendship; but all the while neither the one nor the other spoke, but stayed, so embraced, with such signs of charitable love, in silence. And so having remained for a great while, they parted from one another, and St. Louis

went on his way, and Brother Giles returned to his cell. And the King being gone, one of the brethren asked of his companion who he was, who answered that he was the King of France. Of which the other brothers being told, were in the greatest melancholy because Brother Giles had never said a word to him; and murmuring at it, they said, 'Oh, Brother Giles, wherefore hadst thou so country manners that to so holy a king, who had come from France to see thee and hear from thee some good word, thou hast spoken nothing?'

"Answered Brother Giles: 'Dearest brothers, wonder not ye at this, that neither I to him, nor he to me, could speak a word; for so soon as we had embraced, the light of the divine wisdom revealed and manifested, to me, his heart, and to him, mine; and so by divine operation we looked each in the other's heart on what we would have said to one another, and knew it better far than if we had spoken with the mouth, and with more consolation, because of the defect of the human tongue, which cannot clearly express the secrets of God, and would have been for discomfort rather than comfort. And know, therefore, that the King parted from me marvellously content, and comforted in his mind.'"

Of all which story, not a word, of course, is credible by any rational person.

Certainly not: the spirit, nevertheless, which created the story, is an entirely indisputable fact in the history of Italy and of mankind. Whether St. Louis and Brother Giles ever knelt together in the street of Perugia matters not a whit. That a king and a poor monk could be conceived to have thoughts of each other which no words could speak; and that indeed the King's tenderness and humility made such a tale credible to the people,—this is what you have to meditate on here.

Nor is there any better spot in the world,—whencesoever your pilgrim feet may have journeyed to it, wherein to make up so much mind as you have in you for the making, concerning the nature of Kinghood and Princedom generally; and of the forgeries and mockeries of both which are too often manifested in their room. For it happens that this Christian and

this Persian King are better painted here by Giotto than elsewhere by any one, so as to give you the best attainable conception of the Christian and Heathen powers which have both received, in the book which Christians profess to reverence, the same epithet as the King of the Jews Himself; anointed, or Christos:—and as the most perfect Christian Kinghood was exhibited in the life, partly real, partly traditional, of St. Louis, so the most perfect Heathen Kinghood was exemplified in the life, partly real, partly traditional, of Cyrus of Persia, and in the laws for human government and education which had chief force in his dynasty. And before the images of these two Kings I think therefore it will be well that you should read the charge to Cyrus, written by Isaiah. The second clause of it, if not all, will here become memorable to you—literally illustrating, as it does, the very manner of the defeat of the Zoroastrian Magi, on which Giotto founds his Triumph of Faith. I write the leading sentences continuously; what I omit is only their amplification, which you can easily refer to at home. (Isaiah xlv. 24, to xlv. 13.)

“Thus saith the Lord, thy Redeemer, and he that formed thee from the womb. I the Lord that maketh all; that stretcheth forth the heavens, alone; that spreadeth abroad the earth, alone; *that turneth wise men backward, and maketh their knowledge, foolish; that confirmeth the word of his Servant, and fulfilleth the counsel of his messengers*: that saith of Cyrus, He is my Shepherd, and shall perform all my pleasure, even saying to Jerusalem, ‘thou shalt be built,’ and to the temple, ‘thy foundations shall be laid.’

“Thus saith the Lord to his Christ;—to Cyrus, whose right hand I have holden, to subdue nations before him, and I will loose the loins of Kings.

“I will go before thee, and make the crooked places straight; I will break in pieces the gates of brass, and cut in sunder the bars of iron; and I will give *thee* the treasures of darkness, and hidden riches of secret places, that thou mayest know that I the Lord, which call thee by thy name, am the God of Israel.

“For Jacob my servant’s sake, and Israel mine elect, I have

even called thee by thy name ; I have surnamed thee, though thou hast not known me.

“ I am the Lord, and there is none else ; there is no God beside me. I girded thee, though thou hast not known me. That they may know, from the *rising of the sun*, and from the west, that there is none beside me ; I am the Lord and there is none else. *I form the light*, and create darkness ; I make peace, and create evil. I the Lord do all these things.

“ I have raised him up in Righteousness, and will direct all his ways ; he shall build my city, and let go my captives, not for price nor reward, saith the Lord of Nations.”

To this last verse, add the ordinance of Cyrus in fulfilling it, that you may understand what is meant by a King's being “ raised up in Righteousness,” and notice, with respect to the picture under which you stand, the Persian King's thought of the Jewish temple.

“ In the first year of the reign of Cyrus,¹ King Cyrus commanded that the house of the Lord at Jerusalem should be built again, *where they do service with perpetual fire* ; (the italicized sentence is Darius's, quoting Cyrus's decree—the decree itself worded thus), Thus saith Cyrus, King of Persia :² The Lord God of heaven hath given me all the kingdoms of the earth, and he hath charged me to build him an house at Jerusalem.

“ Who is there among you of all his people?—his God be with him, and let him go up to Jerusalem which is in Judah, and let the men of his place help him with silver and with gold, and with goods and with beasts.”

Between which “ bringing the prisoners out of captivity” and modern liberty, free trade, and anti-slavery eloquence, there is no small interval.

To these two ideals of Kinghood, then, the boy has reached, since the day he was drawing the lamb on the stone, as Cimabue passed by. You will not find two other such, that I know of, in the west of Europe ; and yet there has been many

¹ 1st Esdras vi. 24.

² Ezra i. 3, and 2nd Esdras ii. 3.

a try at the painting of crowned heads,—and King George III. and Queen Charlotte, by Sir Joshua Reynolds, are very fine, no doubt. Also your black-muzzled kings of Velasquez, and Vandyke's long-haired and white-handed ones; and Rubens' riders—in those handsome boots. Pass such shadows of them as you can summon, rapidly before your memory—then look at this St. Louis.

His face—gentle, resolute, glacial-pure, thin-checked; so sharp at the chin that the entire head is almost of the form of a knight's shield—the hair short on the forehead, falling on each side in the old Greek-Etruscan curves of simplest line, to the neck; I don't know if you can see without being nearer, the difference in the arrangement of it on the two sides—the mass of it on the right shoulder bending inwards, while that on the left falls straight. It is one of the pretty changes which a modern workman would never dream of—and which assures me the restorer has followed the old lines rightly.

He wears a crown formed by an hexagonal pyramid, beaded with pearls on the edges: and walled round, above the brow, with a vertical fortress-parapet, as it were, rising into sharp pointed spines at the angles: it is chasing of gold with pearl—beautiful in the remaining work of it; the Soldan wears a crown of the same general form; the hexagonal outline signifying all order, strength, and royal economy. We shall see farther symbolism of this kind, soon, by Simon Memmi, in the Spanish chapel.

I cannot tell you anything definite of the two other frescos—for I can only examine one or two pictures in a day; and never begin with one till I have done with another; and I had to leave Florence without looking at these—even so far as to be quite sure of their subjects. The central one on the left is either the twelfth subject of Assisi—St. Francis in Ecstasy;¹ or the eighteenth, the Apparition of St. Francis at

¹ “Represented” (next to St. Francis before the Soldan, at Assisi) “as seen one night by the brethren, praying, elevated from the ground, his hands extended like the cross, and surrounded by a shining cloud.”
—*Lord Lindsay*.

Arles ;¹ while the lowest on the right may admit choice between two subjects in each half of it: my own reading of them would be—that they are the twenty-first and twenty-fifth subjects of Assisi, the Dying Friar² and Vision of Pope Gregory IX.;³ but Crowe and Cavalcasella may be right in their different interpretation ;⁴ in any case, the meaning of the entire system of work remains unchanged, as I have given it above.

THE FOURTH MORNING.

THE VAULTED BOOK.

As early as may be this morning, let us look for a minute or two into the cathedral :—I was going to say, entering by one of the side doors of the aisles ;—but we can't do anything else, which perhaps might not strike you unless you were thinking specially of it. There are no transept doors ; and one never wanders round to the desolate front.

¹ “St. Anthony of Padua was preaching at a general chapter of the order, held at Arles, in 1224, when St. Francis appeared in the midst, his arms extended, and in an attitude of benediction.”—*Lord Lindsay*.

² “A brother of the order, lying on his deathbed, saw the spirit of St. Francis rising to heaven, and springing forward, cried, ‘Tarry, Father, I come with thee!’ and fell back dead.”—*Lord Lindsay*.

³ “He hesitated, before canonizing St. Francis ; doubting the celestial infliction of the stigmata. St. Francis appeared to him in a vision, and with a severe countenance reproving his unbelief, opened his robe, and, exposing the wound in his side, filled a vial with the blood that flowed from it, and gave it to the Pope, who awoke and found it in his hand.”—*Lord Lindsay*.

⁴ “As St. Francis was carried on his bed of sickness to St. Maria degli Angeli, he stopped at an hospital on the roadside, and ordering his attendants to turn his head in the direction of Assisi, he rose in his litter and said, ‘Blessed be thou amongst cities ! may the blessing of God cling to thee, oh holy place, for by thee shall many souls be saved ;’ and, having said this, he lay down and was carried on to St. Maria degli Angeli. On the evening of the 4th of October his death was revealed at the very hour to the bishop of Assisi on Mount Sarzana.”—*Croce and Cavalcasella*.

From either of the side doors, a few paces will bring you to the middle of the nave, and to the point opposite the middle of the third arch from the west end; where you will find yourself—if well in the mid-nave—standing on a circular slab of green porphyry, which marks the former place of the grave of the bishop Zenobius. The larger inscription, on the wide circle of the floor outside of you, records the translation of his body; the smaller one round the stone at your feet—“*quiescimus, domum hanc quum adimus ultimam*”—is a painful truth, I suppose, to travellers like us, who never rest anywhere now, if we can help it.

Resting here, at any rate, for a few minutes, look up to the whitewashed vaulting of the compartment of the roof next the west end.

You will see nothing whatever in it worth looking at. Nevertheless, look a little longer.

But the longer you look, the less you will understand why I tell you to look. It is nothing but a whitewashed ceiling: vaulted indeed,—but so is many a tailor's garret window, for that matter. Indeed, now that you have looked steadily for a minute or so, and are used to the form of the arch, it seems to become so small that you can almost fancy it the ceiling of a good-sized lumber-room in an attic.

Having attained to this modest conception of it, carry your eyes back to the similar vault of the second compartment, nearer you. Very little further contemplation will reduce that also to the similitude of a moderately-sized attic. And then, resolving to bear, if possible—for it is worth while,—the cramp in your neck for another quarter of a minute, look right up to the third vault, over your head; which, if not, in the said quarter of a minute, reducible in imagination to a tailor's garret, will at least sink, like the two others, into the semblance of a common arched ceiling, of no serious magnitude or majesty.

Then, glance quickly down from it to the floor, and round at the space, (included between the four pillars), which that vault covers.

It is sixty feet square,¹—four hundred square yards of pavement,—and I believe you will have to look up again more than once or twice, before you can convince yourself that the mean-looking roof is swept indeed over all that twelfth part of an acre. And still less, if I mistake not, will you, without slow proof, believe, when you turn yourself round towards the east end, that the narrow niche (it really looks scarcely more than a niche) which occupies, beyond the dome, the position of our northern choirs, is indeed the unnarrowed elongation of the nave, whose breadth extends round you like a frozen lake. From which experiments and comparisons, your conclusion, I think, will be, and I am sure it ought to be, that the most studious ingenuity could not produce a design for the interior of a building which should more completely hide its extent, and throw away every common advantage of its magnitude, than this of the Duomo of Florence.

Having arrived at this, I assure you, quite securely tenable conclusion, we will quit the cathedral by the western door, for once, and as quickly as we can walk, return to the Green cloister of Sta. Maria Novella; and place ourselves on the south side of it, so as to see as much as we can of the entrance, on the opposite side, to the so-called ‘Spanish Chapel.’

There is, indeed, within the opposite cloister, an arch of entrance, plain enough. But no chapel, whatever, externally manifesting itself as worth entering. No walls, or gable, or dome, raised above the rest of the outbuildings—only two windows with traceries opening into the cloister; and one story of inconspicuous building above. You can’t conceive there should be any effect of *magnitude* produced in the interior, however it has been vaulted or decorated. It may be pretty, but it cannot possibly look large.

Entering it, nevertheless, you will be surprised at the effect of height, and disposed to fancy that the circular window

¹ Approximately. Thinking I could find the dimensions of the *duomo* anywhere, I only paced it myself,—and cannot, at this moment, lay my hand on English measurements of it.

cannot surely be the same you saw outside, looking so low. I had to go out again, myself, to make sure that it was.

And gradually, as you let the eye follow the sweep of the vaulting arches, from the small central keystone-boss, with the Lamp carved on it, to the broad capitals of the hexagonal pillars at the angles,—there will form itself in your mind, I think, some impression not only of vastness in the building, but of great daring in the builder; and at last, after closely following out the lines of a fresco or two, and looking up and up again to the coloured vaults, it will become to you literally one of the grandest places you ever entered, roofed without a central pillar. You will begin to wonder that human daring ever achieved anything so magnificent.

But just go out again into the cloister, and recover knowledge of the facts. It is nothing like so large as the blank arch which at home we filled with brickbats or leased for a gin-shop under the last railway we made to carry coals to Newcastle. And if you pace the floor it covers, you will find it is three feet less one way, and thirty feet less the other, than that single square of the Cathedral which was roofed like a tailor's loft,—accurately, for I did measure here, myself, the floor of the Spanish chapel is fifty-seven feet by thirty-two.

I hope, after this experience, that you will need no farther conviction of the first law of noble building, that grandeur depends on proportion and design—not, except in a quite secondary degree, on magnitude. Mere size has, indeed, under all disadvantage, some definite value; and so has mere splendour. Disappointed as you may be, or at least ought to be, at first, by St. Peter's, in the end you will feel its size,—and its brightness. These are all you *can* feel in it—it is nothing more than the pump-room at Leamington built bigger;—but the bigness tells at last: and Corinthian pillars whose capitals alone are ten feet high, and their acanthus leaves, three feet six long, give you a serious conviction of the infallibility of the Pope, and the fallibility of the wretched Corinthians, who invented the style indeed, but built with capitals no bigger than hand-baskets.

Vastness *has* thus its value. But the glory of architecture is to be—whatever you wish it to be,—lovely, or grand, or comfortable,—on such terms as it can easily obtain. Grand, by proportion—lovely, by imagination—comfortable, by ingenuity—secure, by honesty : with such materials and in such space as you have got to give it.

Grand—by proportion, I said ; but ought to have said by *dis*proportion. Beauty is given by the relation of parts—size, by their comparison. The first secret in getting the impression of size in this chapel is the *dis*proportion between pillar and arch. You take the pillar for granted,—it is thick, strong, and fairly high above your head. You look to the vault springing from it—and it soars away, nobody knows where.

Another great, but more subtle secret is in the *ine*quality and immeasurability of the curved lines ; and the hiding of the form by the colour.

To begin, the room, I said, is fifty-seven feet wide, and only thirty-two deep. It is thus nearly one-third larger in the direction across the line of entrance, which gives to every arch, pointed and round, throughout the roof, a different spring from its neighbours.

The vaulting ribs have the simplest of all profiles—that of a chamfered beam. I call it simpler than even that of a square beam ; for in barking a log you cheaply get your chamfer, and nobody cares whether the level is alike on each side : but you must take a larger tree, and use much more work to get a square. And it is the same with stone.

And this profile is—fix the conditions of it, therefore, in your mind,—venerable in the history of mankind as the origin of all Gothic tracery-mouldings ; venerable in the history of the Christian Church as that of the roof ribs, both of the lower church of Assisi, bearing the scroll of the precepts of St. Francis, and here at Florence, bearing the scroll of the faith of St. Dominic. If you cut it out in paper, and cut the corners off farther and farther, at every cut, you will produce a sharper profile of rib, connected in architectural use with differently treated styles. But the entirely venerable form is the massive one in which the angle of the beam is merely, as

it were, secured and completed in stability by removing its too sharp edge.

Well, the vaulting ribs, as in Giotto's vault, then, have here, under their painting, this rude profile: but do not suppose the vaults are simply the shells cast over them. Look how the ornamental borders fall on the capitals! The plaster receives all sorts of indescribably accommodating shapes—the painter contracting and stopping his design upon it as it happens to be convenient. You can't measure anything; you can't exhaust; you can't grasp,—except one simple ruling idea, which a child can grasp, if it is interested and intelligent: namely, that the room has four sides with four tales told upon them; and the roof four quarters, with another four tales told on those. And each history in the sides has its correspondent history in the roof. Generally, in good Italian decoration, the roof represents constant, or essential facts; the walls, consecutive histories arising out of them, or leading up to them. Thus here, the roof represents in front of you, in its main quarter, the Resurrection—the cardinal fact of Christianity; opposite (above, behind you), the Ascension; on your left hand, the descent of the Holy Spirit; on your right, Christ's perpetual presence with His Church, symbolized by His appearance on the Sea of Galilee to the disciples in the storm.

The correspondent walls represent: under the first quarter, (the Resurrection), the story of the Crucifixion; under the second quarter, (the Ascension), the preaching after that departure, that Christ will return—symbolized here in the Dominican church by the consecration of St. Dominic; under the third quarter, (the descent of the Holy Spirit), the disciplining power of human virtue and wisdom; under the fourth quarter, (St. Peter's Ship), the authority and government of the State and Church.

The order of these subjects, chosen by the Dominican monks themselves, was sufficiently comprehensive to leave boundless room for the invention of the painter. The execution of it was first intrusted to Taddeo Gaddi, the best architectural master of Giotto's school, who painted the four quarters of

the roof entirely, but with no great brilliancy of invention, and was beginning to go down one of the sides, when, luckily, a man of stronger brain, his friend, came from Siena. Taddeo thankfully yielded the room to him; he joined his own work to that of his less able friend in an exquisitely pretty and complimentary way; throwing his own greater strength into it, not competitively, but gradually and helpfully. When, however, he had once got himself well joined, and softly, to the more simple work, he put his own force on with a will; and produced the most noble piece of pictorial philosophy¹ and divinity existing in Italy.

This pretty, and, according to all evidence by me attainable, entirely true, tradition has been all but lost, among the ruins of fair old Florence, by the industry of modern mason-critics—who, without exception, labouring under the primal (and necessarily unconscious) disadvantage of not knowing good work from bad, and never, therefore, knowing a man by his hand or his thoughts, would be in any case sorrowfully at the mercy of mistakes in a document; but are tenfold more deceived by their own vanity, and delight in overthrowing a received idea, if they can.

Farther: as every fresco of this early date has been re-touched again and again, and often painted half over,—and as, if there has been the least care or respect for the old work in the restorer, he will now and then follow the old lines and match the old colours carefully in some places, while he puts in clearly recognizable work of his own in others,—two critics, of whom one knows the first man's work well, and the other the last's, will contradict each other to almost any extent on the securest grounds. And there is then no safe refuge for an uninitiated person but in the old tradition, which, if not literally true, is founded assuredly on some root of fact which you are likely to get at, if ever, through it only. So that my general directions to all young people going to Florence or

¹ There is no philosophy *taught* either by the school of Athens or Michael Angelo's 'Last Judgment' and the 'Disputa' is merely a graceful assemblage of authorities, the effects of such authority not being shown.

Rome would be very short: "Know your first volume of Vasari, and your two first books of Livy; look about you, and don't talk, nor listen to talking."

On those terms, you may know, entering this chapel, that in Michael Angelo's time, all Florence attributed these frescos to Taddeo Gaddi and Simon Memmi.

I have studied neither of these artists myself with any speciality of care, and cannot tell you positively, anything about them or their works. But I know good work from bad, as a cobbler knows leather, and I can tell you positively the quality of these frescos, and their relation to contemporary panel pictures; whether authentically ascribed to Gaddi, Memmi, or any one else, it is for the Florentine Academy to decide.

The roof, and the north side, down to the feet of the horizontal line of sitting figures, were originally third-rate work of the school of Giotto; the rest of the chapel was originally, and most of it is still, magnificent work of the school of Siena. The roof and north side have been heavily repainted in many places; the rest is faded and injured, but not destroyed in its most essential qualities. And now, farther, you must bear with just a little bit of tormenting history of painters.

There were two Gaddis, father and son,—Taddeo and Angelo. And there were two Memmis, brothers,—Simon and Philip.

I daresay you will find, in the modern books, that Simon's real name was Peter, and Philip's real name was Bartholomew; and Angelo's real name was Taddeo, and Taddeo's real name was Angelo; and Memmi's real name was Gaddi, and Gaddi's real name was Memmi. You may find out all that at your leisure, afterwards, if you like. What it is important for you to know here, in the Spanish Chapel, is only this much that follows:—There were certainly two persons once called Gaddi, both rather stupid in religious matters and high art; but one of them, I don't know or care which, a true decorative painter of the most exquisite skill, a perfect architect, an amiable person, and a great lover of pretty domestic life. Vasari says this was the father, Taddeo. He built the Ponte Vecchio; and the old stones of it—which if you ever look at anything on the Ponte Vecchio but the shops, you may still

see (above those wooden pent-houses) with the Florentine shield—were so laid by him that they are unshaken to this day.

He painted an exquisite series of frescos at Assisi from the Life of Christ ; in which,—just to show you what the man's nature is,—when the Madonna has given Christ into Simeon's arms, she can't help holding out her own arms to him, and saying, (visibly,) "Won't you come back to mamma?" The child laughs his answer—I love *you*, mamma ; but I'm quite happy just now."

Well ; he, or he and his son together, painted these four quarters of the roof of the Spanish Chapel. They were very probably much retouched afterwards by Antonio Veneziano, or whomsoever Messrs. Crowe and Cavalcasella please ; but that architecture in the descent of the Holy Ghost *is* by the man who painted the north transept of Assisi, and there need be no more talk about the matter,—for you never catch a restorer doing his old architecture right again. And farther, the ornamentation of the vaulting ribs *is* by the man who painted the Entombment, No. 31 in the Galerie des Grands Tableaux, in the catalogue of the Academy for 1874. Whether that picture is Taddeo Gaddi's or not, as stated in the catalogue, I do not know ; but I know the vaulting ribs of the Spanish Chapel are painted by the same hand.

Again : of the two brothers Memmi, one or other, I don't know or care which, had an ugly way of turning the eyes of his figures up and their mouths down ; of which you may see an entirely disgusting example in the four saints attributed to Filippo Memmi on the cross wall of the north (called always in Murray's guide the south, because he didn't notice the way the church was built) transept of Assisi. You may, however, also see the way the mouth goes down in the much repainted, but still characteristic No. 9 in the Uffizii.¹

¹ This picture bears the inscription (I quote from the French catalogue, not having verified it myself), "Simon Martini, et Lippus Memmi de Senis me pinxerunt." I have no doubt whatever, myself, that the two brothers worked together on these frescoes of the Spanish Chapel : but that most of the Limbo is Philip's, and the Paradise, scarcely with his interference, Simon's.

Now I catch the wring and verjuice of this brother again and again, among the minor heads of the lower frescoes in this Spanish Chapel. The head of the Queen beneath Noah, in the Limbo,—(see below) is unmistakable.

Farther : one of the two brothers, I don't care which, had a way of painting leaves ; of which you may see a notable example in the rod in the hand of Gabriel in that same picture of the Annunciation in the Uffizii. No Florentine painter, or any other, ever painted leaves as well as that, till you get down to Sandro Botticelli, who did them much better. But the man who painted that rod in the hand of Gabriel, painted the rod in the right hand of Logie in the Spanish Chapel,—and nobody else in Florence, or the world, *could*.

Farther (and this is the last of the antiquarian business); you see that the frescoes on the roof are, on the whole, dark with much blue and red in them, the white spaces coming out strongly. This is the characteristic colouring of the partially defunct school of Giotto, becoming merely decorative, and passing into a colourist school which connected itself afterwards with the Venetians. There is an exquisite example of all its specialities in the little Annunciation in the Uffizii, No. 14, attributed to Angelo Gaddi, in which you see the Madonna is stupid, and the angel stupid, but the colour of the whole, as a piece of painted glass, lovely ; and the execution exquisite,—at once a painter's and jeweller's ; with subtle sense of chiaroscuro underneath ; (note the delicate shadow of the Madonna's arm across her breast).

The head of this school was (according to Vasari) Taddeo Gaddi ; and henceforward, without further discussion, I shall speak of him as the painter of the roof of the Spanish Chapel,—not without suspicion, however, that his son Angelo may hereafter turn out to have been the better decorator, and the painter of the frescoes from the life of Christ in the north transept of Assisi,—with such assistance as his son or scholars might give—and such change or destruction as time, Antonio Veneziano, or the last operations of the Tuscan railroad company, may have effected on them.

On the other hand, you see that the frescoes on the walls

are of paler colours, the blacks coming out of these clearly, rather than the whites; but the pale colours, especially, for instance, the whole of the Duomo of Florence in that on your right, very tender and lovely. Also, you may feel a tendency to express much with outline, and draw, more than paint, in the most interesting parts; while in the duller ones, nasty green and yellow tones come out, which prevent the effect of the whole from being very pleasant. These characteristics belong, on the whole, to the school of Siena; and they indicate here the work *assuredly* of a man of vast power and most refined education, whom I shall call without further discussion, during the rest of this and the following morning's study, Simon Memmi.

And of the grace and subtlety with which he joined his work to that of the Gaddis, you may judge at once by comparing the Christ standing on the fallen gate of the Limbo, with the Christ in the Resurrection above. Memmi has retained the dress and imitated the general effect of the figure in the roof so faithfully that you suspect no difference of mastership—nay, he has even raised the foot in the same awkward way: but you will find Memmi's foot delicately drawn—Taddeo's, hard and rude: and all the folds of Memmi's drapery cast with unbroken grace and complete gradations of shade, while Taddeo's are rigid and meagre; also in the heads, generally Taddeo's type of face is square in feature, with massive and inelegant clusters or volutes of hair and beard; but Memmi's delicate and long in feature, with much divided and flowing hair, often arranged with exquisite precision, as in the finest Greek coins. Examine successively in this respect only the heads of Adam, Abel, Methuselah, and Abraham, in the Limbo, and you will not confuse the two designers any more. I have not had time to make out more than the principal figures in the Limbo, of which indeed the entire dramatic power is centred in the Adam and Eve. The latter dressed as a nun, in her fixed gaze on Christ, with her hands clasped, is of extreme beauty: and however feeble the work of any early painter may be, in its decent and grave inoffensiveness it guides the imagination unerringly to a certain point. How

far you are yourself capable of filling up what is left untold, and conceiving, as a reality, Eve's first look on this her child, depends on no painter's skill, but on your own understanding. Just above Eve is Abel, bearing the lamb : and behind him, Noah, between his wife and Shem : behind them, Abraham, between Isaac and Ishmael ; (turning from Ishmael to Isaac) ; behind these, Moses, between Aaron and David. I have not identified the others, though I find the white-bearded figure behind Eve called Methuselah in my notes : I know not on what authority. Looking up from these groups, however, to the roof painting, you will at once feel the imperfect grouping and ruder features of all the figures ; and the greater depth of colour. We will dismiss these comparatively inferior paintings at once.

The roof and walls must be read together, each segment of the roof forming an introduction to, or portion of, the subject on the wall below. But the roof must first be looked at alone, as the work of Taddeo Gaddi, for the artistic qualities and failures of it.

I. In front, as you enter, is the compartment with the subject of the Resurrection. It is the traditional Byzantine composition : the guards sleeping, and the two angels in white saying to the women, "He is not here," while Christ is seen rising with the flag of the Cross.

But it would be difficult to find another example of the subject, so coldly treated—so entirely without passion or action. The faces are expressionless ; the gestures powerless. Evidently the painter is not making the slightest effort to conceive what really happened, but merely repeating and spoiling what he could remember of old design, or himself supply of commonplace for immediate need. The "Noli me tangere," on the right, is spoiled from Giotto, and others before him ; a peacock, woefully plumeless and colourless, a fountain, an ill drawn toy-horse, and two toy-children gathering flowers, are emaciate remains of Greek symbols. He has taken pains with the vegetation, but in vain. Yet Taddeo Gaddi was a true painter, a very beautiful designer, and a very amiable person. How comes he to do that Resurrection so badly ?

In the first place, he was probably tired of a subject which was a great strain to his feeble imagination; and gave it up as impossible: doing simply the required figures in the required positions. In the second, he was probably at the time despondent and feeble because of his master's death. See Lord Lindsay, II. 273, where also it is pointed out that in the effect of the light proceeding from the figure of Christ, Taddeo Gaddi indeed was the first of the Giottisti who showed true sense of light and shade. But until Lionardo's time the innovation did not materially affect Florentine art.

II. The Ascension (opposite the Resurrection, and not worth looking at, except for the sake of making more sure our conclusions from the first fresco). The Madonna is fixed in Byzantine stiffness, without Byzantine dignity.

III. The Descent of the Holy Ghost, on the left hand. The Madonna and disciples are gathered in an upper chamber: underneath are the Parthians, Medes, Elamites, etc., who hear them speak in their own tongues.

Three dogs are in the foreground—their mythic purpose the same as that of the two verses which affirm the fellowship of the dog in the journey and return of Tobias: namely, to mark the share of the lower animals in the gentleness given by the outpouring of the Spirit of Christ.

IV. The Church sailing on the Sea of the World. St. Peter coming to Christ on the water.

I was too little interested in the vague symbolism of this fresco to examine it with care—the rather that the subject beneath, the literal contest of the Church with the world, needed more time for study in itself alone than I had for all Florence.

On this, and the opposite side of the chapel, are represented, by Simon Memmi's hand, the teaching power of the Spirit of God, and the saving power of the Christ of God, in the world, according to the understanding of Florence in his time.

We will take the side of Intellect first, beneath the pouring forth of the Holy Spirit.

In the point of the arch beneath, are the three Evangelical

Virtues. Without these, says Florence, you can have no science. Without Love, Faith, and Hope—no intelligence.

Under these are the four Cardinal Virtues, the entire group being thus arranged :—

A, Charity ; flames issuing from her head and hands.

B, Faith ; holds cross and shield, quenching fiery darts. This symbol, so frequent in modern adaptation from St. Paul's address to personal faith, is rare in older art.

C, Hope, with a branch of lilies.

D, Temperance ; bridles a black fish, on which she stands.

E, Prudence, with a book.

F, Justice, with crown and baton.

G, Fortitude, with tower and sword.

Under these are the great prophets and apostles ; on the left,¹ David, St. Paul, St. Mark, St. John ; on the right, St. Matthew, St. Luke, Moses, Isaiah, Solomon. In the midst of the Evangelists, St. Thomas Aquinas, seated on a Gothic throne.

Now observe, this throne, with all the canopies below it, and the complete representation of the Duomo of Florence opposite, are of finished Gothic of Orcagna's school—later than Giotto's Gothic. But the building in which the apostles are gathered at the Pentecost is of the early Romanesque mosaic school, with a wheel window from the duomo of Assisi, and square windows from the Baptistery of Florence. And this is always the type of architecture used by Taddeo Gaddi : while the finished Gothic could not possibly have been drawn by him, but is absolute evidence of the later hand.

Under the line of prophets, as powers summoned by their voices, are the mythic figures of the seven theological or spiritual, and the seven geological or natural sciences : and under

¹ I can't find my note of the first one on the left ; answering to Solomon, opposite.

the feet of each of them, the figure of its Captain-teacher to the world.

I had better perhaps give you the names of this entire series of figures from left to right at once. You will see presently why they are numbered in a reverse order.

	Beneath whom
8. Civil Law.	The Emperor Justinian.
9. Canon Law	Pope Clement V.
10. Practical Theology.	Peter Lombard.
11. Contemplative Theology.	Dionysius the Areopagite.
12. Dogmatic Theology.	Boethius.
13. Mystic Theology.	St. John Damascene.
14. Polemic Theology.	St. Augustine.
7. Arithmetic.	Pythagoras.
6. Geometry.	Euclid.
5. Astronomy.	Zoroaster.
4. Music.	Tubalcain.
3. Logic.	Aristotle.
2. Rhetoric.	Cicero.
1. Grammar.	Priscian.

Here, then, you have pictorially represented, the system of manly education, supposed in old Florence to be that necessarily instituted in great earthly kingdoms or republics, animated by the Spirit shed down upon the world at Pentecost. How long do you think it will take you, or ought to take, to see such a picture? We were to get to work this morning, as early as might be : you have probably allowed half an hour for Santa Maria Novella ; half an hour for San Lorenzo ; an hour for the museum of sculpture at the Bargello ; an hour for shopping ; and then it will be lunch time, and you mustn't be late, because you are to leave by the afternoon train, and must positively be in Rome to-morrow morning. Well, of your half-hour for Santa Maria Novella,—after Ghirlandajo's choir, Orcagna's transept, and Cimabue's Madonna, and the painted windows, have been seen properly, there will remain, suppose, at the utmost, a quarter of an hour for the Spanish Chapel. That will give you two minutes and a half for each side, two for the ceiling, and three for studying Murray's explanations or mine. Two minutes and a half you have got,

then—and I observed, during my five weeks' work in the chapel, that English visitors seldom gave so much)—to read this scheme given you by Simon Memmi of human spiritual education. In order to understand the purport of it, in any the smallest degree, you must summon to your memory, in the course of these two minutes and a half, what you happen to be acquainted with of the doctrines and characters of Pythagoras, Zoroaster, Aristotle, Dionysius the Areopagite, St. Augustine, and the emperor Justinian, and having further observed the expressions and actions attributed by the painter to these personages, judge how far he has succeeded in reaching a true and worthy ideal of them, and how large or how subordinate a part in his general scheme of human learning he supposes their peculiar doctrines properly to occupy. For myself, being, to my much sorrow, now an old person; and, to my much pride, an old-fashioned one, I have not found my powers either of reading or memory in the least increased by any of Mr. Stephenson's or Mr. Wheatstone's inventions; and though indeed I came here from Lucca in three hours instead of a day, which it used to take, I do not think myself able, on that account, to see any picture in Florence in less time than it took formerly, or even obliged to hurry myself in any investigations connected with it.

Accordingly, I have myself taken five weeks to see the quarter of this picture of Simon Memmi's: and can give you a fairly good account of that quarter, and some partial account of a fragment or two of those on the other walls: but, alas! only of their pictorial qualities in either case; for I don't myself know anything whatever, worth trusting to, about Pythagoras, or Dionysius the Areopagite; and have not had, and never shall have, probably, any time to learn much of them; while in the very feeblest light only,—in what the French would express by their excellent word '*lueur*,'—I am able to understand something of the characters of Zoroaster, Aristotle, and Justinian. But this only increases in me the reverence with which I ought to stand before the work of a painter, who was not only a master of his own craft, but so profound a scholar and theologian as to be able to conceive this scheme

of picture, and write the divine law by which Florence was to live. Which Law, written in the northern page of this Vaulted Book, we will begin quiet interpretation of, if you care to return hither, to-morrow morning.

THE FIFTH MORNING.

THE STRAIT GATE.

As you return this morning to St. Mary's, you may as well observe—the matter before us being concerning gates,—that the western façade of the church is of two periods. Your Murray refers it all to the latest of these ;—I forget when, and do not care ;—in which the largest flanking columns, and the entire effective mass of the walls, with their riband mosaics and high pediment, were built in front of, and above, what the barbarian renaissance designer chose to leave of the pure old Dominican church. You may see his ungainly jointings at the pedestals of the great columns, running through the pretty, parti coloured base, which, with the 'Strait' Gothic doors, and the entire lines of the fronting and flanking tombs (where not restored by the Devil-begotten brood of modern Florence), is of pure, and exquisitely severe and refined, fourteenth century Gothic, with superbly carved bearings on its shields. The small detached line of tombs on the left, untouched in its sweet colour and living weed ornament, I would fain have painted, stone by stone : but one can never draw in front of a church in these republican days ; for all the black-guard children of the neighbourhood come to howl, and throw stones, on the steps, and the ball or stone play against these sculptured tombs, as a dead wall adapted for that purpose only, is incessant in the fine days when I could have worked.

If you enter by the door most to the left, or north, and turn immediately to the right, on the interior of the wall of the façade is an Annunciation, visible enough because well preserved, though in the dark, and extremely pretty in its way,—of the

decorated and ornamental school following Giotto:—I can't guess by whom, nor does it much matter ; but it is well to look at it by way of contrast with the delicate, intense, slightly decorated design of Memmi,—in which, when you return into the Spanish chapel, you will feel the dependence for its effect on broad masses of white and pale amber, where the decorative school would have had mosaic of red, blue, and gold.

Our first business this morning must be to read and understand the writing on the book held open by St. Thomas Aquinas, for that informs us of the meaning of the whole picture.

It is this text from the Book of Wisdom vii. 6.

“ Optavi, et datus est mihi sensus.
 Invocavi, et venit in me Spiritus Sapientie,
 Et preposui illam regnis et sedibus.”

“ I willed, and Sense was given me.
 I prayed, and the Spirit of Wisdom came upon me.
 And I set her before, (preferred her to,) kingdoms
 and thrones.”

The common translation in our English Apocrypha loses the entire meaning of this passage, which—not only as the statement of the experience of Florence in her own education, but as universally descriptive of the process of all noble education whatever—we had better take pains to understand.

First, says Florence “I willed, (in sense of resolutely desiring,) and Sense was given me.” You must begin your education with the distinct resolution to know what is true, and choice of the strait and rough road to such knowledge. This choice is offered to every youth and maid at some moment of their life ;—choice between the easy downward road, so broad that we can dance down it in companies, and the steep narrow way, which we must enter alone. Then, and for many a day afterwards, they need that form of persistent Option, and Will : but day by day, the ‘Sense’ of the rightness of what they have done, deepens on them, not in consequence of the effort, but by gift granted in reward of it. And the Sense of difference between right and wrong, and between

beautiful and unbeautiful things, is confirmed in the heroic, and fulfilled in the industrious, soul.

That is the process of education in the earthly sciences, and the morality connected with them. Reward given to faithful Volition.

Next, when Moral and Physical senses are perfect, comes the desire for education in the higher world, where the senses are no more our Teachers ; but the Maker of the senses. And that teaching, we cannot get by labour, but only by petition.

“*Invocavi, et venit in me Spiritus Sapientiae*”—“I prayed, and the Spirit of Wisdom,” (not, you observe, *was given*,¹ but,) “*came upon me.*” The *personal* power of Wisdom : the “*σοφία*” or Santa Sophia, to whom the first great Christian temple was dedicated. This higher wisdom, governing by her presence, all earthly conduct, and by her teaching, all earthly art, Florence tells you, she obtained only by prayer.

And these two Earthly and Divine sciences are expressed beneath in the symbols of their divided powers ;—Seven terrestrial, Seven celestial, whose names have been already indicated to you :—in which figures I must point out one or two technical matters, before touching their interpretation. They are all by Simon Memmi originally ; but repainted, many of them all over, some hundred years later,—(certainly after the discovery of America, as you will see)—by an artist of considerable power, and some feeling for the general action of the figures ; but of no refinement or carelessness. He dashes massive paint in huge spaces over the subtle old work, puts in his own *chiaro-oscuro* where all had been shadeless, and his own violent colour where all had been pale, and repaints the faces so as to make them, to his notion, prettier and more human : some of this upper work has, however, come away since, and the original outline, at least, is traceable ; while in the face of the Logic, the Music, and one or two others, the original work is very pure. Being most interested myself in the earthly sciences, I had a scaffolding put up, made on a level with them, and examined them inch by inch, and the following report will be found accurate until next repainting.

¹ I in careless error, wrote “*was given*” in ‘*Fors Clavigera*.’

For interpretation of them, you must always take the central figure of the Science, with the little medallion above it, and the figure below, all together. Which I proceed to do, reading first from left to right for the earthly sciences, and then from right to left the heavenly ones, to the centre, where their two highest powers sit, side by side.

We begin, then, with the first in the list given above, (Vaulted Book, page 75):—Grammar, in the corner farthest from the window.

1. GRAMMAR: more properly Grammaticö, “Grammatic Act” the Art of *Letters* or “Literature,” or using the word which to some English ears will carry most weight with it,—“Scripture,” and its use. The Art of faithfully reading what has been written for our learning; and of clearly writing what we would make immortal of our thoughts. Power which consists first in recognizing letters; secondly, in forming them; thirdly, in the understanding and choice of words which errorless shall express our thought. Severe exercises all, reaching—very few living persons know, how far: beginning properly in childhood, then only to be truly acquired. It is wholly impossible—this I say from too sorrowful experience—to conquer by any effort or time, habits of the hand (much more of head and soul) with which the vase of flesh has been formed and filled in youth,—the law of God being that parents shall compel the child in the day of its obedience into habits of hand, and eye, and soul, which, when it is old, shall not, by any strength, or any weakness, be departed from.

“Enter ye in,” therefore, says Grammaticö, “at the Strait Gate.” She points through it with her rod, holding a fruit (?) for reward, in her left hand. The gate is very strait indeed—her own waist no less so, her hair fastened close. She had once a white veil binding it, which is lost. Not a gushing form of literature, this,—or in any wise disposed to subscribe to Mudie’s, my English friends—or even patronize Tauchnitz editions of—what is the last new novel you see ticketed up to-day in Mr. Goodban’s window? She looks kindly down,

nevertheless, to the three children whom she is teaching—two boys and a girl: (Qy. Does this mean that one girl out of every two should not be able to read or write? I am quite willing to accept that inference, for my own part,—should perhaps even say, two girls out of three). This girl is of the highest classes, crowned, her golden hair falling behind her, the Florentine girdle round her hips—(not waist, the object being to leave the lungs full play; but to keep the dress always well down in dancing or running). The boys are of good birth also, the nearest one with luxuriant curly hair—only the profile of the farther one seen. All reverent and eager. Above, the medallion is of a figure looking at a fountain. Underneath, Lord Lindsay says, Priscian, and is, I doubt not, right.

Technical Points.—The figure is said by Crowe to be entirely repainted. The dress is so throughout—both the hands also, and the fruit, and rod. But the eyes, mouth, hair above the forehead, and outline of the rest, with the faded veil, and happily, the traces left of the children, are genuine; the strait gate perfectly so, in the colour underneath, though reinforced; and the action of the entire figure is well preserved: but there is a curious question about both the rod and fruit. Seen close, the former perfectly assumes the shape of folds of dress gathered up over the raised right arm, and I am not absolutely sure that the restorer has not mistaken the folds—at the same time changing a pen or style into a rod. The fruit also I have doubts of, as fruit is not so rare at Florence that it should be made a reward. It is entirely and roughly repainted, and is oval in shape. In Giotto's *Charity*, luckily not restored, at Assisi, the guide-books have always mistaken the heart she holds for an apple:—and my own belief is that originally, the *Grammaticæ* of Simon Memmi made with her right hand the sign which said, "Enter ye in at the Strait Gate," and with her left, the sign which said, "My son, give me thine Heart."

II. RHETORIC. Next to learning how to read and write, you are to learn to speak; and, young ladies and gentlemen, ob-

serve,—to speak as little as possible, it is farther implied, till you *have* learned.

In the streets of Florence at this day you may hear much of what some people call “rhetoric”—very passionate speaking indeed, and quite “from the heart”—such hearts as the people have got. That is to say, you never hear a word uttered but in a rage, either just ready to burst, or for the most part, explosive instantly: everybody—man, woman, or child—roaring out their incontinent, foolish, infinitely contemptible opinions and wills, on every smallest occasion, with flashing eyes, hoarsely shrieking and wasted voices,—insane hope to drag by vociferation whatever they would have, out of man and God.

Now consider Simon Memmi's Rhetoric. The Science of Speaking, primarily; of making oneself *heard* therefore: which is not to be done by shouting. She alone, of all the sciences, carries a scroll: and being a speaker gives you something to read. It is not thrust forward at you at all, but held quietly down with her beautiful depressed right hand; her left hand set coolly and strongly on her side.

And you will find that, thus, she alone of all the sciences *needs no use of her hands*. All the others have some important business for them. She none. She can do all with her lips, holding scroll, or bridle, or what you will, with her right hand, her left on her side.

Again, look at the talkers in the streets of Florence, and see how, being essentially *unable* to talk, they try to make lips of their fingers! How they poke, wave, flourish, point, jerk, shake finger and fist at their antagonists—dumb essentially, all the while, if they knew it; unpersuasive and ineffectual, as the shaking of tree branches in the wind.

You will at first think her figure ungainly and stiff. It is so, partly, the dress being more coarsely repainted than in any other of the series. But she is meant to be both stout and strong. What she has to say is indeed to persuade you, if possible; but assuredly to overpower you. And *she* has not the Florentine girdle, for she does not want to move. She has her girdle broad at the waist—of all the sciences, you

would at first have thought, the one that most needed breath ! No, says Simon Memmi. You want breath to run, or dance, or fight with. But to speak !—If you know *how*, you can do your work with few words ; very little of this pure Florentine air will be enough, if you shape it rightly.

Note, also, that calm setting of her hand against her side. You think Rhetoric should be glowing, fervid, impetuous ? No, says Simon Memmi. Above all things,—*cool*.

And now let us read what is written on her scroll :—*Mulceo, dum loquor, varios induta colores.*

Her chief function, to melt ; make soft, thaw the hearts of men with kind fire ; to overpower with peace ; and bring rest, with rainbow colours. The chief mission of all words that they should be of comfort.

You think the function of words is to excite ? Why, a red rag will do that, or a blast through a brass pipe. But to give calm and gentle heat ; to be as the south wind, and the iridescent rain, to all bitterness of frost ; and bring at once strength, and healing. This is the work of human lips, taught of God.

One farther and final lesson is given in the medallion above. Aristotle, and too many modern rhetoricians of his school, thought there could be good speaking in a false cause. But above Simon Memmi's Rhetoric is *Truth*, with her mirror.

There is a curious feeling, almost innate in men, that though they are bound to speak truth, in speaking to a single person, they may lie as much as they please, provided they lie to two or more people at once. There is the same feeling about killing : most people would shrink from shooting one innocent man ; but will fire a mitrailleuse contentedly into an innocent regiment.

When you look down from the figure of the Science, to that of Cicero, beneath, you will at first think it entirely overthrows my conclusion that Rhetoric has no need of her hands. For Cicero, it appears, has three instead of two.

The uppermost, at his chin, is the only genuine one. That raised, with the finger up, is entirely false. That on the book, is repainted so as to defy conjecture of its original action.

But observe how the gesture of the true one confirms instead of overthrowing what I have said above. Cicero is not speaking at all, but profoundly thinking *before* he speaks. It is the most abstractedly thoughtful face to be found among all the philosophers ; and very beautiful. The whole is under Solomon, in the line of Prophets.

Technical Points.—These two figures have suffered from restoration more than any others, but the right hand of Rhetoric is still entirely genuine, and the left, except the ends of the fingers. The ear, and hair just above it, are quite safe, the head well set on its original line, but the crown of leaves rudely retouched, and then faded. All the lower part of the figure of Cicero has been not only repainted but changed ; the face is genuine—I believe retouched, but so cautiously and skilfully, that it is probably now more beautiful than at first.

III. LOGIC. The science of reasoning, or more accurately Reason herself, or pure intelligence.

Science to be gained after that of Expression, says Simon Memmi ; so, young people, it appears, that though you must not speak before you have been taught how to speak, you may yet properly speak before you have been taught how to think.

For indeed, it is only by frank speaking that you *can* learn how to think. And it is no matter how wrong the first thoughts you have may be, provided you express them clearly ; —and are willing to have them put right.

Fortunately, nearly all of this beautiful figure is practically safe, the outlines pure everywhere, and the face perfect : the *prettiest*, as far as I know, which exists in Italian art of this early date. It is subtle to the extreme in gradations of colour : the eyebrows drawn, not with a sweep of the brush, but with separate cross touches in the line of their growth—exquisitely pure in arch ; the nose straight and fine ; the lips—playful slightly, proud, unerringly cut ; the hair flowing in sequent waves, ordered as if in musical time ; head per-

fectly upright on the shoulders ; the height of the brow completed by a crimson frontlet set with pearls, surmounted by a *fleur-de-lys*.

Her shoulders were exquisitely drawn, her white jacket fitting close to soft, yet scarcely rising breasts ; her arms singularly strong, at perfect rest ; her hands, exquisitely delicate. In her right, she holds a branching and leaf-bearing rod, (the syllogism) ; in her left, a scorpion with double sting, (the dilemma)—more generally, the powers of rational construction and dissolution.

Beneath her, Aristotle,—intense keenness of search in his half-closed eyes.

Medallion above, (less expressive than usual) a man writing, with his head stooped.

The whole under Isaiah, in the line of Prophets.

Technical Points.—The only parts of this figure which have suffered seriously in repainting are the leaves of the rod, and the scorpion. I have no idea, as I said above, what the background once was ; it is now a mere mess of scrabbled grey, carried over the vestiges, still with care much redeemable, of the richly ornamental extremity of the rod, which was a cluster of green leaves on a black ground. But the scorpion is indecipherably injured, most of it confused repainting, mixed with the white of the dress, the double sting emphatic enough still, but not on the first lines.

The Aristotle is very genuine throughout, except his hat, and I think that must be pretty nearly on the old lines, through I cannot trace them. They are good lines, new or old.

IV. MUSIC. After you have learned to reason, young people, of course you will be very grave, if not dull, you think. No, says Simon Memmi. By no means anything of the kind. After learning to reason, you will learn to sing ; for you will want to. There is so much reason for singing in the sweet world, when one things rightly of it. None for grumbling, provided always you *have* entered in at the strait gate. You

will sing all along the road then, in a little while, in a manner pleasant for other people to hear.

This figure has been one of the loveliest in the series, an extreme refinement and tender severity being aimed at throughout. She is crowned, not with laurel, but with small leaves,—I am not sure what they are, being too much injured: the face thin, abstracted, wistful; the lips not far open in their low singing; the hair rippling softly on the shoulders. She plays on a small organ, richly ornamented with Gothic tracery, the down slope of it set with crockets like those of Santa Maria del Fiore. Simon Memmi means that *all* music must be “sacred.” Not that you are never to sing anything but hymns, but that whatever is rightly called music, or work of the Muses, is divine in help and healing.

The actions of both hands are singularly sweet. The right is one of the loveliest things I ever saw done in painting. She is keeping down one note only, with her third finger, seen under the raised fourth: the thumb, just passing under; all the curves of the fingers exquisite, and the pale light and shade of the rosy flesh relieved against the ivory white and brown of the notes. Only the thumb and end of the forefinger are seen of the left hand, but they indicate enough its light pressure on the bellows. Fortunately, all these portions of the fresco are absolutely intact.

Underneath, Tubal-Cain. Not Jubal, as you would expect. Jubal is the inventor of musical instruments. Tubal-Cain, thought the old Florentines, invented harmony. They, the best smiths in the world, knew the differences in tones of hammer strokes on anvil. Curiously enough, the only piece of true part-singing, done beautifully and joyfully, which I have heard this year in Italy, (being south of Alps exactly six months, and ranging from Genoa to Palermo) was out of a busy smithy at Perugia. Of bestial howling, and entirely frantic vomiting up of hopelessly damned souls through their still carnal throats, I have heard more than, please God, I will ever endure the hearing of again in one of His summers.

You think Tubal-Cain very ugly? Yes. Much like a shaggy baboon: not accidentally, but with most scientific

understanding of baboon character. Men must have looked like that, before they had invented harmony, or felt that one note differed from another, says, and knows Simon Memmi. Darwinism, like all widely popular and widely mischievous fallacies, has many a curious gleam and grain of truth in its tissue.

Under Moses.

Medallion, a youth drinking. Otherwise, you might have thought only church music meant, and not feast music also.

Technical Points.—The Tubal-Cain, one of the most entirely pure and precious remnants of the old painting, nothing lost: nothing but the redder ends of his beard retouched. Green dress of Music, in the body and over limbs entirely repainted: it was once beautifully embroidered; sleeves, partly genuine, hands perfect, face and hair nearly so. Leaf crown faded and broken away, but not retouched.

V. ASTRONOMY. Properly Astro-logy, as (Theology) the knowledge of so much of the stars as we can know wisely; not the attempt to define their laws for them. Not that it is unbecoming of us to find out, if we can, that they move in ellipses, and so on; but it is no business of ours. What effects their rising and setting have on man, and beast, and leaf; what their times and changes are, seen and felt in this world, it is our business to know, passing our nights, if wakefully, by that divine candlelight, and no other.

She wears a dark purple robe; holds in her left hand the hollow globe with golden zodiac and meridians: lifts her right hand in noble awe.

“When I consider the heavens, the work of Thy fingers, the moon and the stars, which Thou hast ordained.”

Crowned with gold, her dark hair in elliptic waves, bound with glittering chains of pearl. Her eyes dark, lifted.

Beneath her, Zoroaster,¹ entirely noble and beautiful, the

¹ Atlas! according to poor Vasari, and sundry modern guides. I find Vasari's mistakes usually of this *brightly* blundering kind. In matters needing research, after a while, I find *he* is right, usually.

delicate Persian head made softer still by the elaborately wreathed silken hair, twisted into the pointed beard, and into tapering plaits, falling on his shoulders. The head entirely thrown back, he looks up with no distortion of the delicately arched brow : writing, as he gazes.

For the association of the religion of the Magi with their own in the mind of the Florentines of this time, see "Before the Soldan."

The dress must always have been white, because of its beautiful opposition to the purple above and that of Tubal-Cain beside it. But it has been too much repainted to be trusted anywhere, nothing left but a fold or two in the sleeves. The east of it from the knees down is entirely beautiful, and I suppose on the old lines ; but the restorer could throw a fold well when he chose. The warm light which relieves the purple of Zoroaster above, is laid in by him. I don't know if I should have liked it better, flat, as it was, against the dark purple ; it seems to me quite beautiful now. The full red flush on the face of the Astronomy is the restorer's doing also. She was much paler, if not quite pale.

Under St. Luke.

Medallion, a stern man, with sickle and spade. For the flowers, and for us, when stars have risen and set such and such times ;—remember.

Technical Points.—Left hand globe, most of the important folds of the purple dress, eyes, mouth, hair in great part, and crown, genuine. Golden tracery on border of dress lost ; extremity of falling folds from left sleeve altered and confused, but the confusion prettily got out of. Right hand and much of face and body of dress repainted.

Zoroaster's head quite pure. Dress repainted, but carefully, leaving the hair untouched. Right hand and pen, now a common feathered quill, entirely repainted, but dexterously and with feeling. The hand was once slightly different in position, and held, most probably, a reed.

VI. GEOMETRY. You have now learned, young ladies and gentlemen, to read, to speak, to think, to sing, and to see.

You are getting old, and will have soon to think of being married; you must learn to build your house, therefore. Here is your carpenter's square for you, and you may safely and wisely contemplate the ground a little, and the measures and laws relating to that, seeing you have got to abide upon it:—and that you have properly looked at the stars; not before then, lest, had you studied the ground first, you might perchance never have raised your heads from it. This is properly the science of all laws of practical labour, issuing in beauty.

She looks down, a little puzzled, greatly interested, holding her carpenter's square in her left hand, not wanting that but for practical work; following a diagram with her right.

Her beauty, altogether soft and in curves, I commend to your notice, as the exact opposite of what a vulgar designer would have imagined for her. Note the wreath of hair at the back of her head, which though fastened by a *spiral* fillet, escapes at last, and flies off loose in a sweeping curve. Contemplative Theology is the only other of the sciences who has such wavy hair.

Beneath her, Euclid, in white turban. Very fine and original work throughout; but nothing of special interest in him.

Under St. Matthew.

Medallion, a soldier with a straight sword (best for science of defence), octagon shield, helmet like the beehive of Canton Vaud. As the secondary use of music in feasting, so the secondary use of geometry in war—her noble art being all in sweetest peace—is shown in the medallion.

Technical Points.—It is more than fortunate that in nearly every figure, the original outline of the hair is safe. Geometry's has scarcely been retouched at all, except at the ends, once in single knots, now in confused double ones. The lunds, girdle, most of her dress, and her black carpenter's square are original. Face and breast repainted.

VII. ARITHMETIC. Having built your house, young people, and understanding the light of heaven, and the measures of

earth, you may marry—and can't do better. And here is now your conclusive science, which you will have to apply, all your days, to all your affairs.

The Science of Number. Infinite in solemnity of use in Italy at this time ; including, of course, whatever was known of the higher abstract mathematics and mysteries of numbers, but revered especially in its vital necessity to the prosperity of families and kingdoms, and first fully so understood here in commercial Florence.

Her hand lifted, with two fingers bent, two straight, solemnly enforcing on your attention her primal law—Two and two are—four, you observe,—not five, as those accursed usurers think.

Under her, Pythagoras.

Above, medallion of king, with sceptre and globe, counting money. Have you ever chanced to read carefully Carlyle's account of the foundation of the existing Prussian empire, in economy ?

You can, at all events, consider with yourself a little, what empire this queen of the terrestrial sciences must hold over the rest, if they are to be put to good use ; or what depth and breadth of application there is in the brief parables of the counted cost of Power, and number of Armies.

To give a very minor, but characteristic, instance. I have always felt that with my intense love of the Alps, I ought to have been able to make a drawing of Chamouni, or the vale of Cluse, which should give people more pleasure than a photograph ; but I always wanted to do it as I saw it, and engrave pine for pine, and crag for crag, like Albert Dürer. I broke my strength down for many a year, always tiring of my work, or finding the leaves drop off, or the snow come on, before I had well begun what I meant to do. If I had only *counted* my pines first, and calculated the number of hours necessary to do them in the manner of Dürer, I should have saved the available drawing time of some five years, spent in vain effort.

But Turner counted his pines, and did all that could be done for them, and rested content with that.

So in all the affairs of life, the arithmetical part of the business is the dominant one. How many and how much have we? How many and how much do we want? How constantly does noble Arithmetic of the finite lose itself in base Avarice of the Infinite, and in blind imagination of it! In counting of minutes, is our arithmetic ever solicitous enough? In counting our days, is she ever severe enough? How we shrink from putting, in their decades, the diminished store of them! And if we ever pray the solemn prayer that we may be taught to number them, do we even try to do it after praying?

Technical Points.—The Pythagoras almost entirely genuine. The upper figures, from this inclusive to the outer wall, I have not been able to examine thoroughly, my scaffolding not extending beyond the Geometry.

Here then we have the sum of sciences,—seven, according to the Florentine mind—necessary to the secular education of man and woman. Of these the modern average respectable English gentleman and gentlewoman know usually only a little of the last, and entirely hate the prudent applications of that: being unacquainted, except as they chance here and there to pick up a broken piece of information, with either grammar, rhetoric, music,¹ astronomy, or geometry; and are not only unacquainted with logic, or the use of reason, themselves, but instinctively antagonistic to its use by anybody else.

We are now to read the series of the Divine sciences, beginning at the opposite side, next the window.

VIII. CIVIL LAW. Civil, or ‘of citizens,’ not only as distinguished from Ecclesiastical, but from Local law. She is the universal Justice of the peaceful relations of men throughout the world, therefore holds the globe, with its *three* quarters, white, as being justly governed, in her left hand.

She is also the law of eternal equity, not erring statute; therefore holds her sword *level* across her breast.

¹ Being able to play the piano and admire Mendelssohn is not knowing music.

She is the foundation of all other divine science. To know anything whatever about God, you must begin by being Just.

Dressed in red, which in these frescoes is always a sign of power, or zeal ; but her face very calm, gentle and beautiful. Her hair bound close, and crowned by the royal circlet of gold, with pure thirteenth century strawberry leaf ornament.

Under her, the Emperor Justinian, in blue, with conical mitre of white and gold ; the face in profile, very beautiful. The imperial staff in his right hand, the Institutes in his left.

Medallion, a figure, apparently in distress, appealing for justice. (Trajan's suppliant widow ?)

Technical Points.—The three divisions of the globe in her hand were originally inscribed ASIA, AFRICA, EUROPE. The restorer has ingeniously changed AF into AME—RICA. Faces, both of the science and emperor, little retouched, nor any of the rest altered.

IX. CHRISTIAN LAW. After the justice which rules men, comes that which rules the Church of Christ. The distinction is not between secular law, and ecclesiastical authority, but between the equity of humanity, and the law of Christian discipline.

In full, straight-falling, golden robe, with white mantle over it ; a church in her left hand ; her right raised, with the forefinger lifted ; (indicating heavenly source of all Christian law ? or warning ?)

Head-dress, a white veil floating into folds in the air. You will find nothing in these frescoes without significance ; and as the escaping hair of Geometry indicates the infinite conditions of lines of the higher orders, so the floating veil here indicates that the higher relations of Christian justice are indefinable. So her golden mantle indicates that it is a glorious and excellent justice beyond that which unchristian men conceive ; while the severely falling lines of the folds, which form a kind of gabled niche for the head of the Pope beneath, correspond with the strictness of true Church discipline firmer as well as more luminous statute.

Beneath, Pope Clement V., in red, lifting his hand, not in the position of benediction, but, I suppose, of injunction,—only the forefinger straight, the second a little bent, the two last quite. Note the strict level of the book ; and the vertical directness of the key.

The medallion puzzles me. It looks like a figure counting money.

Technical Points.—Fairly well preserved ; but the face of the science retouched : the grotesquely false perspective of the Pope's tiara, one of the most curiously naïve examples of the entirely ignorant feeling after merely scientific truth of form which still characterized Italian art.

Type of church interesting in its extreme simplicity ; no idea of transept, campanile, or dome.

X. PRACTICAL THEOLOGY. The beginning of the knowledge of God being Human Justice, and its elements defined by Christian Law, the application of the law so defined follows, first with respect to man, then with respect to God.

“Render unto Cæsar the things that are Cæsar's—and to God the things that are God's.”

We have therefore now two sciences, one of our duty to men, the other to their Maker.

This is the first : duty to men. She holds a circular medallion, representing Christ preaching on the Mount, and points with her right hand to the earth.

The sermon on the Mount is perfectly expressed by the craggy pinnacle in front of Christ, and the high dark horizon. There is curious evidence throughout all these frescos of Simon Memmi's having read the Gospels with a quite clear understanding of their innermost meaning.

I have called this science Practical Theology :—the instructive knowledge, that is to say, of what God would have us do, personally, in any given human relation : and the speaking His Gospel therefore by act. “Let your light so shine before men.”

She wears a green dress, like Music her hair in the Arabian arch, with jewelled diadem.

Under David.

Medallion, Almsgiving.

Beneath her, Peter Lombard.

Technical Points.—It is curious that while the instinct of perspective was not strong enough to enable any painter at this time to foreshorten a foot, it yet suggested to them the expression of elevation by raising the horizon.

I have not examined the retouching. The hair and diadem at least are genuine, the face is dignified and compassionate, and much on the old lines.

XI. DEVOTIONAL THEOLOGY.—Giving glory to God, or, more accurately, whatever feelings He desires us to have towards Him, whether of affection or awe.

This is the science or method of *devotion* for Christians universally, just as the Practical Theology is their science or method of *action*.

In blue and red : a narrow black rod still traceable in the left hand ; I am not sure of its meaning. ("Thy rod and Thy staff, they comfort me?") The other hand open in admiration, like Astronomy's ; but Devotion's is held at her breast. Her head very characteristic of Memmi, with upturned eyes, and Arab arch in hair. Under her, Dionysius the Areopagite—mending his pen ! But I am doubtful of Lord Lindsay's identification of this figure, and the action is curiously common and meaningless. It may have meant that meditative theology is essentially a writer, not a preacher.

The medallion, on the other hand, is as ingenious. A mother lifting her hands in delight at her child's beginning to take notice.

Under St. Paul.

Technical Points.—Both figures very genuine, the lower one almost entirely so. The painting of the red book is quite exemplary in fresco style.

XII. DOGMATIC THEOLOGY.—After action and worship, thought becoming too wide and difficult, the need of dogma

becomes felt ; the assertion, that is, within limited range, of the things that are to be believed.

Since whatever pride and folly pollute Christian scholarship naturally delight in dogma, the science itself cannot but be in a kind of disgrace among sensible men : nevertheless it would be difficult to overvalue the peace and security which have been given to humble persons by forms of creed ; and it is evident that either there is no such thing as theology, or some of its knowledge must be thus, if not expressible, at least reducible within certain limits of expression, so as to be protected from misinterpretation.

In red,—again the sign of power,—crowned with a black (once golden ?) triple crown, emblematic of the Trinity. The left hand holding a scoop for winnowing corn ; the other points upwards. “ Prove all things—hold fast that which is good, or of God.”

Beneath her, Boethius.

Under St. Mark.

Medallion, female figure, laying hands on breast.

Technical Points.—The Boethius entirely genuine, and the painting of his black bock, as of the red one beside it, again worth notice, showing how pleasant and interesting the commonest things become, when well painted.

I have not examined the upper figure.

XIII. MYSTIC THEOLOGY.¹ Monastic science, above dogma, and attaining to new revelation by reaching higher spiritual states.

In white robes, her left hand gloved (I don't know why)—holding chalice. She wears a nun's veil fastened under her chin, her hair fastened close, like Grammar's, showing her necessary monastic life ; all states of mystic spiritual life involving retreat from much that is allowable in the material and practical world.

There is no possibility of denying this fact, infinite as the evils are which have arisen from misuse of it. They have

¹ Blunderingly in the guide-books called ‘ Faith ! ’

been chiefly induced by persons who falsely pretended to lead monastic life, and led it without having natural faculty for it. But many more lamentable errors have arisen from the pride of really noble persons, who have thought it would be a more pleasing thing to God to be a sibyl or a witch, than a useful housewife. Pride is always somewhat involved even in the true effort : the scarlet head-dress in the form of a horn on the forehead in the fresco indicates this, both here, and in the *Contemplative Theology*.

Under St. John.

Medallion unintelligible, to me. A woman laying hands on the shoulders of two small figures.

Technical Points.—More of the minute folds of the white dress left than in any other of the repainted draperies. It is curious that minute division has always in drapery, more or less, been understood as an expression of spiritual life, from the delicate folds of Athena's peplos down to the rippled edges of modern priests' white robes ; Titian's breadth of fold, on the other hand, meaning for the most part bodily power. The relation of the two modes of composition was lost by Michael Angelo, who thought to express spirit by making flesh colossal.

For the rest, the figure is not of any interest, Memmi's own mind being intellectual rather than mystic.

XIV. POLEMIC THEOLOGY.¹

"Who goes forth, conquering and to conquer?"

"For we war, not with flesh and blood," etc.

In red, as sign of power, but not in armour, because she is herself invulnerable. A close red cap, with cross for crest, instead of helmet. Bow in left hand ; long arrow in right.

She partly means Aggressive Logic : compare the set of her shoulders and arms with Logic's.

She is placed the last of the Divine sciences, not as their culminating power, but as the last which can be rightly learned. You must know all the others, before you go out to

¹ Blunderingly called 'Charity' in the guide-books.

battle. Whereas the general principle of modern Christendom is to go out to battle without knowing *any one* of the others ; one of the reasons for this error, the prince of errors, being the vulgar notion that truth may be ascertained by debate ! Truth is never learned, in any department of industry, by arguing, but by working, and observing. And when you have got good hold of one truth, for certain, two others will grow out of it, in a beautifully dicotyledonous fashion, (which, as before noticed, is the meaning of the branch in Logie's right hand). Then, when you have got so much true knowledge as is worth fighting for, you are bound to fight for it. But not to debate about it, any more.

There is, however, one further reason for Polemic Theology being put beside Mystic. It is only in some approach to mystic science that any man becomes aware of what St. Paul means by "spiritual wickedness in heavenly¹ places ;" or, in any true sense, knows the enemies of God and of man.

Beneath St. Augustine. Showing you the proper method of controversy ;—perfectly firm ; perfectly gentle.

You are to distinguish, of course, controversy from rebuke. The assertion of truth is to be always gentle : the chastisement of wilful falsehood may be—very much the contrary indeed. Christ's sermon on the Mount is full of polemic theology, yet perfectly gentle :—"Ye have heard that it hath been said—but *I* say unto you" ;—"And if ye salute your brethren only, what do ye more than others?" and the like. But His "Ye fools and blind, for whether is greater," is not merely the exposure of error, but rebuke of the avarice which made that error possible.

Under the throne of St. Thomas ; and next to Arithmetic, of the terrestrial sciences.

Medallion, a soldier, but not interesting.

Technical Points.—Very genuine and beautiful throughout. Note the use of St. Augustine's red bands, to connect him with the full red of the upper figures ; and compare the niche

¹ With cowardly intentional fallacy, translated 'high' in the English Bible.

formed by the dress of Canon Law, above the Pope, for different artistic methods of attaining the same object,—unity of composition.

But lunch time is near, my friends, and you have that shopping to do, you know.

THE SIXTH MORNING.

THE SHEPHERD'S TOWER.

I AM obliged to interrupt my account of the Spanish chapel by the following notes on the sculptures of Giotto's Campanile: first because I find that inaccurate accounts of those sculptures are in course of publication; and chiefly because I cannot finish my work in the Spanish chapel until one of my good Oxford helpers, Mr. Caird, has completed some investigations he has undertaken for me upon the history connected with it. I had written my own analysis of the fourth side, believing that in every scene of it the figure of St. Dominic was repeated. Mr. Caird first suggested, and has shown me already good grounds for his belief,¹ that the preaching monks represented are in each scene intended for a different person. I am informed also of several careless mistakes which have got into my description of the fresco of the Sciences; and finally, another of my young helpers, Mr. Charles F. Murray,—one, however, whose help is given much in the form of antagonism,—informs me of various critical discoveries lately made, both by himself, and by industrious Germans, of points respecting the authenticity of this and that, which will require notice from me: more especially he tells me of certification that the picture in the Uffizii, of which I accepted the ordinary attribution to Giotto, is by Lorenzo Monaco,—which indeed may well be, without in the least diminishing the use

¹ He wrote thus to me on 11th November last: "The three preachers are certainly different. The first is Dominic; the second, Peter Martyr, whom I have identified from his martyrdom on the other wall; and the third, Aquinas."

to you of what I have written of its predella, and without in the least, if you think rightly of the matter, diminishing your confidence in what I tell you of Giotto generally. There is one kind of knowledge of pictures which is the artist's, and another which is the antiquary's and the picture-dealer's; the latter especially acute, and founded on very secure and wide knowledge of canvas, pigment, and tricks of touch, without, necessarily, involving any knowledge whatever of the qualities of art itself. There are few practised dealers in the great cities of Europe whose opinion would not be more trustworthy than mine, (if you could *get* it, mind you,) on points of actual authenticity. But they could only tell you whether the picture was by such and such a master, and not at all what either the master or his work were good for. Thus, I have, before now, taken drawings by Varley and by Cousins for early studies by Turner, and have been convinced by the dealers that they knew better than I, as far as regarded the authenticity of those drawings; but the dealers don't know Turner, or the worth of him, so well as I, for all that. So also, you may find me again and again mistaken among the much more confused work of the early Giottesque schools, as to the authenticity of this work or the other; but you will find (and I say it with far more sorrow than pride) that I am simply the only person who can at present tell you the real worth of *any*; you will find that whenever I tell you to look at a picture, it is worth your pains; and whenever I tell you the character of a painter, that it is his character, discerned by me faithfully in spite of all confusion of work falsely attributed to him in which similar character may exist. Thus, when I mistook Cousins for Turner, I was looking at a piece of subtlety in the sky of which the dealer had no consciousness whatever, which was essentially Turneresque, but which another man might sometimes equal; whereas the dealer might be only looking at the quality of Whatman's paper, which Cousins used, and Turner did not.

Not, in the meanwhile, to leave you quite guideless as to the main subject of the fourth fresco in the Spanish chapel,—the Pilgrim's Progress of Florence,—here is a brief map of it

On the right, in lowest angle, St. Dominic preaches to the group of Infidels ; in the next group towards the left, he (or some one very like him) preaches to the Heretics : the Heretics proving obstinate, he sets his dogs at them, as at the fatallest of wolves, who being driven away, the rescued lambs are gathered at the feet of the Pope. I have copied the head of the very pious, but slightly weak-minded, little lamb in the centre, to compare with my rough Cumberland ones, who have had no such grave experiences. The whole group, with the Pope above, (the niche of the Duomo joining with and enriching the decorative power of his mitre,) is a quite delicious piece of design.

The Church being thus pacified, is seen in worldly honour under the powers of the Spiritual and Temporal Rulers. The Pope, with Cardinal and Bishop descending in order on his right ; the Emperor, with King and Baron descending in order on his left ; the ecclesiastical body of the whole Church on the right side, and the laity,—chiefly its poets and artists, on the left.

Then, the redeemed Church nevertheless giving itself up to the vanities and temptations of the world, its forgetful saints are seen feasting, with their children dancing before them, (the Seven Mortal Sins, say some commentators). But the wise-hearted of them confess their sins to another ghost of St. Dominic ; and confessed, becoming as little children, enter hand in hand the gate of the Eternal Paradise, crowned with flowers by the waiting angels, and admitted by St. Peter among the serenely joyful crowd of all the saints, above whom the white Madonna stands reverently before the throne. There is, so far as I know, throughout all the schools of Christian art, no other so perfect statement of the noble policy and religion of men.

I had intended to give the best account of it in my power ; but, when at Florence, lost all time for writing that I might copy the group of the Pope and Emperor for the schools of Oxford ; and the work since done by Mr. Caird has informed me of so much, and given me, in some of its suggestions, so much to think of, that I believe it will be best and most

just to print at once his account of the fresco as a supplement to these essays of mine, merely indicating any points on which I have objections to raise, and so leave matters till Fors lets me see Florence once more.

Perhaps she may, in kindness forbid my ever seeing it more, the wreck of it being now too ghastly and heart-breaking to any human soul that remembers the days of old. Forty years ago, there was assuredly no spot of ground, out of Palestine, in all the round world, on which, if you knew, even but a little, the true course of that world's history, you saw with so much joyful reverence the dawn of morning, as at the foot of the Tower of Giotto. For there the traditions of faith and hope, of both the Gentile and Jewish races, met for their beautiful labour: the Baptistery of Florence is the last building raised on the earth by the descendants of the workmen taught by Dædalus: and the Tower of Giotto is the loveliest of those raised on earth under the inspiration of the men who lifted up the tabernacle in the wilderness. Of living Greek work there is none after the Florentine Baptistery; of living Christian work, none so perfect as the Tower of Giotto; and, under the gleam and shadow of their marbles, the morning light was haunted by the ghosts of the Father of Natural Science, Galileo; of Sacred Art, Angelico, and the Master of Sacred Song. Which spot of ground the modern Florentine has made his principal hackney-coach stand and omnibus station. The hackney coaches, with their more or less farmyard-like litter of occasional hay, and smell of variously mixed horse-manure, are yet in more permissible harmony with the place than the ordinary populace of a fashionable promenade would be, with its cigars, spitting, and harlot-planned fineries: but the omnibus place of call being in front of the door of the tower, renders it impossible to stand for a moment near it, to look at the sculptures either of the eastern or southern side; while the north side is enclosed with an iron railing, and usually encumbered with lumber as well: not a soul in Florence ever caring now for sight of any piece of its old artists' work; and the mass of strangers being on the whole intent

on nothing but getting the omnibus to go by steam ; and so seeing the cathedral in one swift circuit, by glimpses between the puffs of it.

The front of Notre Dame of Paris was similarly turned into a coach-office when I last saw it—1872.¹ Within fifty yards of me as I write, the Oratory of the Holy Ghost is used for a tobacco-store, and in fine, over all Europe, mere Caliban bestiality and Satyric savage staggering, drunk and desperate, into every once enchanted cell where the prosperity of kingdoms ruled and the miraculousness of beauty was shrined in peace.

Deluge of profanity, drowning dome and tower in Stygian pool of vilest thought,—nothing now left sacred, in the places where once—nothing was profane.

For *that* is indeed the teaching, if you could receive it, of the Tower of Giotto ; as of all Christian art in its day. Next to declaration of the facts of the Gospel, its purpose, (often in actual work the eagerest,) was to show the *power* of the Gospel. History of Christ in due place ; yes, history of all He did, and how He died : but then, and often, as I say, with more animated imagination, the showing of His risen presence in granting the harvests and guiding the labour of the year. All sun and rain, and length or decline of days received from His hand ; all joy, and grief, and strength, or cessation of labour, indulged or endured, as in His sight and to His glory. And the familiar employments of the seasons, the homely toils of the peasant, the lowliest skills of the craftsman, are signed always on the stones of the Church, as the first and truest condition of sacrifice and offering.

Of these representations of human art under heavenly guidance, the series of bas-reliefs which stud the base of this tower of Giotto's must be held certainly the chief in Europe.² At first you may be surprised at the smallness of their scale in proportion to their masonry ; but this smallness of scale en-

¹ See Fors Clavigera in that year.

² For account of the series on the main archivolt of St. Mark's, see my sketch of the schools of Venetian sculpture in third forthcoming number of 'St. Mark's Rest.'

abled the master workmen of the tower to execute them with their own hands; and for the rest, in the very finest architecture, the decoration of most precious kind is usually thought of as a jewel, and set with space round it,—as the jewels of a crown, or the clasp of a girdle. It is in general not possible for a great workman to carve, himself, a greatly conspicuous series of ornament; nay, even his energy fails him in design, when the bas-relief extends itself into incrustation, or involves the treatment of great masses of stone. If his own does not, the spectator's will. It would be the work of a long summer's day to examine the over-loaded sculptures of the Certosa of Pavia; and yet in the tired last hour, you would be empty-hearted. Read but these inlaid jewels of Giotto's once with patient following; and your hour's study will give you strength for all your life. So far as you can, examine them of course on the spot; but to know them thoroughly you must have their photographs: the subdued colour of the old marble fortunately keeps the lights subdued, so that the photograph may be made more tender in the shadows than is usual in its renderings of sculpture, and there are few pieces of art which may now be so well known as these, in quiet homes far away.

We begin on the western side. There are seven sculptures on the western, southern, and northern sides: six on the eastern; counting the Lamb over the entrance door of the tower, which divides the complete series into two groups of eighteen and eight. Itself, between them, being the introduction to the following eight, you must count it as the first of the terminal group; you then have the whole twenty-seven sculptures divided into eighteen and nine.

Thus lettering the groups on each side for West, South, East, and North, we have:

$$\begin{array}{rcccc}
 \text{W.} & & \text{S.} & & \text{E.} & & \text{N.} & & \\
 7 & + & 7 & + & 6 & + & 7 & = & 27; \text{ or,} \\
 \text{W.} & & \text{S.} & & \text{E.} & & & & \\
 7 & + & 7 & + & 4 & & & = & 18; \text{ and,} \\
 & & & & \text{E.} & & \text{N.} & & \\
 & & & & 2 & + & 7 & = & 9.
 \end{array}$$

There is a very special reason for this division by nines. but, for convenience' sake, I shall number the whole from 1 to 27, straightforwardly. And if you will have patience with me, I should like to go round the tower once and again; first observing the general meaning and connection of the subjects, and then going back to examine the technical points in each, and such minor specialties as it may be well, at the first time, to pass over.

1. The series begins, then, on the west side, with the Creation of Man. It is not the beginning of the story of Genesis; but the simple assertion that God made us, and breathed, and still breathes, into our nostrils the breath of life.

This, Giotto tells you to believe as the beginning of all knowledge and all power.¹ This he tells you to believe, as a thing which he himself knows.

He will tell you nothing but what he *does* know.

2. Therefore, though Giovanna Pisano and his fellow sculptors had given, literally, the taking of the rib out of Adam's side, Giotto merely gives the mythic expression of the truth he knows,—“they two shall be one flesh.”

3. And though all the theologians and poets of his time would have expected, if not demanded, that his next assertion, after that of the Creation of Man, should be of the Fall of Man, he asserts nothing of the kind. He knows nothing of what man was. What he is, he knows best of living men at that hour, and proceeds to say. The next sculpture is of Eve spinning and Adam hewing the ground into clods. Not *digging*: you cannot, usually, dig but in ground already dug. The native earth you must hew.

They are not clothed in skins. What would have been the use of Eve spinning if she could not weave? They wear, each, one simple piece of drapery, Adam's knotted behind him, Eve's fastened around her neck with a rude brooch.

Above them are an oak and an apple-tree. Into the apple-tree a little bear is trying to climb.

The meaning of which entire myth is, as I read it, that men

¹ So also the Master-builder of the Ducal Palace of Venice. See *Foro Clavigera* for June of this year.

and women must both eat their bread with toil. That the first duty of man is to feed his family, and the first duty of the woman to clothe it. That the trees of the field are given us for strength and for delight, and that the wild beasts of the field must have their share with us.¹

4. The fourth sculpture, forming the centre-piece of the series on the west side, is nomad pastoral life.

Jabal, the father of such as dwell in tents, and of such as have cattle, lifts the curtain of his tent to look out upon his flock. His dog watches it.

5. Jubal, the father of all such as handle the harp and organ.

That is to say, stringed and wind instruments;—the lyre and reed. The first arts (with the Jew and Greek) of the shepherd David, and shepherd Apollo.

Giotto has given him the long level trumpet, afterwards adopted so grandly in the sculptures of La Robbia and Donatello. It is, I think, intended to be of wood, as now the long Swiss horn, and a long and shorter tube are bound together.

6. Tubal Cain, the instructor of every artificer in brass and iron.

Giotto represents him as sitting, *fully robed*, turning a wedge of bronze on the anvil with extreme watchfulness.

These last three sculptures, observe, represent the life of the race of Cain; of those who are wanderers, and have no home. *Nomad* pastoral life; *Nomad* artistic life, Wandering Willie; yonder organ man, whom you want to send the policeman after, and the gipsy who is mending the old school-mistress's kettle on the grass, which the squire has wanted so long to take into his park from the roadside.

7. Then the last sculpture of the seven begins the story of the race of Seth, and of home life. The father of it lying drunk under his trellised vine; such the general image of civilized society, in the abstract, thinks Giotto.

¹ The oak and apple boughs are placed, with the same meaning, by Sandro Botticelli, in the lap of Zipporah. The figure of the bear is again represented by Jacopo della Quercia, on the north door of the Cathedral of Florence. I am not sure of its complete meaning.

With several other meanings, universally known to the Catholic world of that day,—too many to be spoken of here.

The second side of the tower represents, after this introduction, the sciences and arts of civilized or home life.

8. Astronomy. In nomad life you may serve yourself of the guidance of the stars; but to know the laws of *their* nomadic life, your own must be fixed.

The astronomer, with his sextant revolving on a fixed pivot, looks up to the vault of the heavens and beholds their zodiac; prescient of what else with optic glass the Tuscan artist viewed, at evening, from the top of Fésolé.

Above the dome of heaven, as yet unseen, are the Lord of the worlds and His angels. To-day, the Dawn and the Daystar: to-morrow, the Daystar arising in the heart.

9. Defensive architecture. The building of the watch-tower. The beginning of security in possession.

10. Pottery. The making of pot, cup, and platter. The first civilized furniture; the means of heating liquid, and serving drink and meat with decency and economy.

11. Riding. The subduing of animals to domestic service.

12. Weaving. The making of clothes with swiftness, and in precision of structure, by help of the loom.

13. Law, revealed as directly from heaven.

14. Dædalus (not Icarus, but the father trying the wings). The conquest of the element of air.

As the seventh subject of the first group introduced the arts of home after those of the savage wanderer, this seventh of the second group introduces the arts of the missionary, or civilized and gift-bringing wanderer.

15. The Conquest of the Sea. The helmsman, and two rowers, rowing as Venetians, face to bow.

16. The Conquest of the Earth. Hercules victor over Antæus. Beneficent strength of civilization crushing the savageness of inhumanity.

17. Agriculture. The oxen and plough.

18. Trade. The cart and horses.

19. And now the sculpture over the door of the tower. The Lamb of God, expresses the Law of Sacrifice, and door

of ascent to heaven. And then follow the fraternal arts of the Christian world.

20. Geometry. Again the angle sculpture, introductory to the following series. We shall see presently why this science must be the foundation of the rest.

21. Sculpture.

22. Painting.

23. Grammar.

24. Arithmetic. The laws of number, weight, and measures of capacity.

25 Music. The laws of number, weight (or force), and measure, applied to sound.

26. Logic. The laws of number and measure applied to thought.

27. The Invention of Harmony.

You see now—by taking first the great division of pre-Christian and Christian arts, marked by the door of the Tower; and then the divisions into four successive historical periods, marked by its angles—that you have a perfect plan of human civilization. The first side is of the nomad life, learning how to assert its supremacy over other wandering creatures, herbs, and beasts. Then the second side is the fixed home life, developing race and country; then the third side, the human intercourse between stranger races; then the fourth side, the harmonious arts of all who are gathered into the fold of Christ.

Now let us return to the first angle, and examine piece by piece with care.

1. *Creation of Man.*

Scarcely disengaged from the clods of the earth, he opens his eyes to the face of Christ. Like all the rest of the sculptures, it is less the representation of a past fact than of a constant one. It is the continual state of man, 'of the earth,' yet seeing God.

Christ holds the book of His Law—the 'Law of life'—in His left hand.

The trees of the garden above are,—central above Christ,

palm (immortal life) ; above Adam, oak (human life). Pear, and fig, and a large-leaved ground fruit (what ?) complete the myth of the Food of Life.

As decorative sculpture, these trees are especially to be noticed, with those in the two next subjects, and the Noah's vine as differing in treatment from Giotto's foliage, of which perfect examples are seen in 16 and 17. Giotto's branches are set in close sheaf-like clusters ; and every mass disposed with extreme formality of radiation. The leaves of these first, on the contrary, are arranged with careful concealment of their ornamental system, so as to look inartificial. This is done so studiously as to become, by excess, a little unnatural !—Nature herself is more decorative and formal in grouping. But the occult design is very noble, and every leaf modulated with loving, dignified, exactly right and sufficient finish ; not done to show skill, nor with mean forgetfulness of main subject, but in tender completion and harmony with it.

Look at the subdivisions of the palm leaves with your magnifying glass. The others are less finished in this than in the next subject. Man himself incomplete, the leaves that are created with him, for his life, must not be so.

(Are not his fingers yet short ; growing ?)

2. *Creation of Woman.*

Far, in its essential qualities, the transcendent sculpture of this subject, Ghiberti's is only a dainty elaboration and beautification of it, losing its solemnity and simplicity in a flutter of feminine grace. The older sculptor thinks of the Uses of Womanhood, and of its dangers and sins, before he thinks of its beauty ; but, were the arm not lost, the quiet naturalness of this head and breast of Eve, and the bending grace of the submissive rendering of soul and body to perpetual guidance by the hand of Christ—(*grasping* the arm, note, for full support)—would be felt to be far beyond Ghiberti's in beauty, as in mythic truth.

The line of her body joins with that of the serpent-ivy round the tree trunk above her : a double myth—of her fall, and her support afterwards by her husband's strength. “Thy

desire shall be to thy husband." The fruit of the tree—double-set filbert, telling nevertheless the happy equality.

The leaves in this piece are finished with consummate poetical care and precision. Above Adam, laurel (a virtuous woman is a crown to her husband); the filbert for the two together; the fig, for fruitful household joy (under thy vine and fig-tree¹—but vine properly the masculine joy); and the fruit taken by Christ for type of all naturally growing food, in his own hunger.

Examine with lens the ribbing of these leaves, and the insertion on their stem of the three laurel leaves on extreme right: and observe that in all cases the sculptor works the moulding *with* his own part of the design; look how he breaks variously deeper into it, beginning from the foot of Christ, and going up to the left into full depth above the shoulder.

3. *Original labour.*

Much poorer, and intentionally so. For the myth of the creation of humanity, the sculptor uses his best strength, and shows supremely the grace of womanhood; but in representing the first peasant state of life, makes the grace of woman by no means her conspicuous quality. She even walks awkwardly; some feebleness in foreshortening the foot also embarrassing the sculptor. He knows its form perfectly—but its perspective, not quite yet.

The trees stiff and stunted—they also needing culture. Their fruit dropping at present only into beasts' mouths.

4. *Jabal.*

If you have looked long enough, and carefully enough, at the three previous sculptures, you cannot but feel that the hand here is utterly changed. The drapery sweeps in broader, softer, but less true folds; the handling is far more delicate; exquisitely sensitive to gradation over broad surfaces—scarcely using an incision of any depth but in outline; studiously reserved in appliance of shadow, as a thing precious and local—look at it above the puppy's head, and under the tent

¹ Compare Fors Clavigera, February, 1877.

This is assuredly painter's work, not mere sculptor's. I have no doubt whatever it is by the own hand of the shepherd-boy of Fésolo. Cimabue had found him drawing, (more probably *scratching* with Etrurian point,) one of his sheep upon a stone. These, on the central foundation-stone of his tower he engraves, looking back on the fields of life: the time soon near for him to draw the curtains of his tent.

I know no dog like this in method of drawing, and in skill of giving the living form without one touch of chisel for hair, or incision for eye, except the dog barking at Poverty in the great fresco of Assisi.

Take the lens and look at every piece of the work from corner to corner—note especially as a thing which would only have been enjoyed by a painter, and which all great painters do intensely enjoy—the *fringe* of the tent,¹ and precise insertion of its point in the angle of the hexagon, prepared for by the archaic masonry indicated in the oblique joint above;² architect and painter thinking at once, and *doing* as they thought.

I gave a lecture to the Eton boys a year or two ago, on little more than the shepherd's dog, which is yet more wonderful in magnified scale of photograph. The lecture is partly published—somewhere, but I can't refer to it.

5. *Jabal.*

Still Giotto's, though a little less delighted in; but with exquisite introduction of the Gothic of his own tower. See the light surface sculpture of a mosaic design in the horizontal moulding.

Note also the painter's freehand working of the complex mouldings of the table—also resolutely oblong, not square; see central flower.

¹ "I think Jabal's tent is made of leather; the relaxed intervals between the tent-pegs show a curved ragged edge like leather near the ground" (Mr. Caird). The edge of the opening is still more characteristic, I think.

² Prints of these photographs which do not show the masonry all round the hexagon are quite valueless for study.

6. *Tubal Cain.*

Still Giotto's, and entirely exquisite; finished with no less care than the shepherd, to mark the vitality of this art to humanity; the spade and hoe—its heraldic bearing—hung on the hinged door.¹ For subtlety of execution, note the texture of wooden block under anvil, and of its iron hoop.

The workman's face is the best sermon on the dignity of labour yet spoken by thoughtful man. Liberal Parliaments and fraternal Reformers have nothing essential to say more.

7. *Noah.*

Andrea Pisano's again, more or less imitative of Giotto's work.

8. *Astronomy.*

We have a new hand here altogether. The hair and drapery bad; the face expressive, but blunt in cutting; the small upper heads, necessarily little more than blocked out, on the small scale; but not suggestive of grace in completion: the minor detail worked with great mechanical precision, but little feeling; the lion's head, with leaves in its ears, is quite ugly; and by comparing the work of the small cusped arch at the bottom with Giotto's soft handling of the mouldings of his, in 5, you may for ever know common mason's work from fine Gothic. The zodiacal signs are quite hard and common in the method of bas-relief, but quaint enough in design: Capricorn, Aquarius, and Pisces, on the broad heavenly belt; Taurus upside down, Gemini, and Cancer, on the small globe.

I think the whole a restoration of the original panel, or else an inferior workman's rendering of Giotto's design, which the next piece is, with less question.

9. *Building.*

The larger figure, I am disposed finally to think, represents

¹ Pointed out to me by Mr. Caird, who adds farther, "I saw a forge identical with this one at Pelago the other day,—the anvil resting on a tree stump: the same fire, bellows, and implements; the door in two parts, the upper part like a shutter, and used for the exposition of finished work as a sign of the craft; and I saw upon it the same finished work of the same shape as in the bas-relief—a spade and a hoe.

civic power, as in Lorenzetti's fresco at Siena. The extreme rudeness of the minor figures may be guarantee of their originality ; it is the smoothness of mass and hard edge work that make me suspect the 8th for a restoration.

10. *Pottery.*

Very grand ; with much painter's feeling, and fine mouldings again. The *tiled* roof projecting in the shadow above, protects the first Ceramicus-home. I think the women are meant to be carrying some kind of wicker or reed-bound water-vessel. The Potter's servant explains to them the extreme advantages of the new invention. I can't make any conjecture about the author of this piece.

11. *Riding.*

Again Andrea Pisano's, it seems to me. Compare the tossing up of the dress behind the shoulders, in 3 and 2. The head is grand, having nearly an Athenian profile : the loss of the horse's fore-leg prevents me from rightly judging of the entire action. I must leave riders to say.

12. *Weaving.*

Andrea's again, and of extreme loveliness ; the stooping face of the woman at the loom is more like a Leonardo drawing than sculpture. The action of throwing the large shuttle, and all the structure of the loom and its threads, distinguishing rude or smooth surface, are quite wonderful. The figure on the right shows the use and grace of finely woven tissue, under and upper—that over the bosom so delicate that the line of separation from the flesh of the neck is unseen.

If you hide with your hand the carved masonry at the bottom, the composition separates itself into two pieces, one disagreeably rectangular. The still more severely rectangular masonry throws out by contrast all that is curved and rounded in the loom, and unites the whole composition ; that is its æsthetic function ; its historical one is to show that weaving is queen's work, not peasant's ; for this is palace masonry.

13. *The Giving of Law.*

More strictly, of *the* Book of God's Law : the only one which *can* ultimately be obeyed.¹

The authorship of this is very embarrassing to me. The face of the central figure is most noble, and all the work good, but not delicate ; it is like original work of the master whose design No. 8 might be a restoration.

14. *Dædalus.*

Andrea Pisano again ; the head superb, founded on Greek models, feathers of wings wrought with extreme care ; but with no precision of arrangement or feeling. How far intentional in awkwardness, I cannot say ; but note the good mechanism of the whole plan, with strong standing board for the feet.

15. *Navigation.*

An intensely puzzling one ; coarse (perhaps unfinished) in work, and done by a man who could not row ; the plaited bands used for rowlocks being pulled the wrong way. Right, had the rowers been rowing English-wise : but the water at the boat's head shows its motion forwards, the way the oarsmen look. I cannot make out the action of the figure at the stern ; it ought to be steering with the stern oar.

The water seems quite unfinished. Meant, I suppose, for

¹ Mr. Caird convinced me of the real meaning of this sculpture. I had taken it for the giving of a book, writing further of it as follows :—

All books, rightly so called, are Books of Law, and all Scripture is given by inspiration of God. (What *we* now mostly call a book, the infinite reduplication and vibratory echo of a lie, is not given but belched up out of volcanic clay by the inspiration of the devil.) On the Book-giver's right hand the students in cell, restrained by the lifted right hand :

“ Silent, you,—till you know ” ; then, perhaps, you also.

On the left, the men of the world, kneeling, receive the gift.

Recommendable seal, this, for Mr. Mudie !

Mr. Caird says : “ The book is written law, which is given by Justice to the inferiors, that they may know the laws regulating their relations to their superiors—who are also under the hand of law. The vassal is protected by the accessibility of formularized law. The superior is restrained by the right hand of power.”

surface and section of sea, with slimy rock at the bottom ; but all stupid and inefficient.

16. *Hercules and Antæus.*

The Earth power, half hidden by the earth, its hair and hand becoming roots, the strength of its life passing through the ground into the oak tree. With Cereyon, but first named, (Plato, *Laws*, book VII., 796), Antæus is the master of contest without use ;—*φιλονεικίας ἀχρήστου*—and is generally the power of pure selfishness and its various inflation to insolence and degradation to cowardice ;—finding its strength only in fall back to its Earth,—he is the master, in a word, of all such kind of persons as have been writing lately about the “interests of England.” He is, therefore, the Power invoked by Dante to place Virgil and him in the lowest circle of Hell ;—“*Aleides whilom felt,—that grapple, straitened sore,*” etc. The Antæus in the sculpture is very grand ; but the authorship puzzles me, as of the next piece, by the same hand. I believe both Giotto’s design.

17. *Ploughing.*

The sword in its Christian form. Magnificent : the grandest expression of the power of man over the earth and its strongest creatures that I remember in early sculpture,—(or for that matter, in late). It is the subduing of the bull which the sculptor thinks most of ; the plough, though large, is of wood, and the handle slight. But the pawing and bellowing labourer he has bound to it!—here is victory.

18. *The Chariot.*

The horse also subdued to draught—Achilles’ chariot in its first, and to be its last, simplicity. The face has probably been grand—the figure is so still. Andrea’s, I think by the flying drapery.

19. *The Lamb, with the symbol of Resurrection.*

Over the door : ‘I am the door ;—by me, if any man enter in,’ etc. Put to the right of the tower, you see, fearlessly, for the convenience of staircase ascent ; all external symmetry being subject with the great builders to interior use ; and

then, out of the rightly ordained infraction of formal law, comes perfect beauty ; and when, as here, the Spirit of Heaven is working with the designer, his thoughts are suggested in truer order, by the concession to use. After this sculpture comes the Christian arts,—those which necessarily imply the conviction of immortality. Astronomy without Christianity only reaches as far as—‘Thou hast made him a little lower than the angels—and put all *things* under His feet’ :—Christianity says beyond this,—‘Know ye not that we shall judge angels (as also the lower creatures shall judge us!)’¹ The series of sculptures now beginning, show the arts which *can* only be accomplished through belief in Christ.

20. *Geometry.*

Not ‘mathematics’ : *they* have been implied long ago in astronomy and architecture ; but the due Measuring of the Earth and all that is on it. Actually done only by Christian faith—first inspiration of the great Earth-measurers. Your Prince Henry of Spain, your Columbus, your Captain Cook, (whose tomb, with the bright artistic invention and religious tenderness which are so peculiarly the gifts of the nineteenth century, we have just provided a fence for, of old cannon open-mouthed, straight up towards Heaven—your modern method of symbolizing the only appeal to Heaven of which the nineteenth century has left itself capable—‘The voice of thy Brother’s blood crieth to me’—your outworn cannon, now silently agape, but sonorous in the ears of angels with that appeal)—first inspiration, I say, of these ; constant inspiration of all who set true landmarks and hold to them, knowing their measure ; the devil interfering, I observe, lately in his own way, with the Geometry of Yorkshire, where the landed proprietors,² when the neglected walls by the roadside tumble

¹ In the deep sense of this truth, which underlies all the bright fantasy and humour of Mr. Courthope’s “Paradise of Birds,” that rhyme of the risen spirit of Aristophanes may well be read under the tower of Giotto, beside his watch-dog of the fold.

² I mean no accusation against any class ; probably the one fielded statesman is more eager for his little gain of fifty yards of grass than the squire for his bite and sup out of the gypsy’s part of the roadside. But

down, benevolently repair the same, with better stonework, *outside* always of the fallen heaps :—which, the wall being thus built *on* what was the public road, absorb themselves, with help of moss and time, into the heaving swells of the rocky field—and behold, gain of a couple of feet—along so much of the road as needs repairing operations.

This then, is the first of the Christian sciences : division of land rightly, and the general law of measuring between wisely-held compass points. The type of mensuration, circle in square, on his desk, I use for my first exercise in the laws of Fésole.

21. *Sculpture.*

The first piece of the closing series on the north side of the Campanile, of which some general points must be first noted, before any special examination.

The two initial ones, Sculpture and Painting, are by tradition the only ones attributed to Giotto's own hand. The fifth, Song, is known, and recognizable in its magnificence, to be by Luca della Robbia. The remaining four are all of Luca's school,—later work therefore, all these five, than any we have been hitherto examining, entirely different in manner, and with late flower work beneath them instead of our hitherto severe Gothic arches. And it becomes of course instantly a vital question—Did Giotto die leaving the series incomplete, only its subjects chosen, and are these two bas-reliefs of Sculpture and Painting among his last works? or was the series ever completed, and these later bas-reliefs substituted for the earlier ones, under Luca's influence, by way of conducting the whole to a grander close, and making their order more representative of Florentine art in its fulness of power?

I must repeat, once more, and with greater insistence re-

it is notable enough to the passing traveller, to find himself shut into a narrow road between high stone dykes which he can neither see over nor climb over, (I always deliberately pitch them down myself, wherever I need a gap.) instead of on a broad road between low grey walls with all the moor beyond—and the power of leaping over when he chooses, in innocent trespass for herb, or view, or splinter of grey rock.

specting Sculpture than Painting, that I do not in the least set myself up for a critic of authenticity,—but only of absolute goodness. My readers may trust me to tell them what is well done or ill ; but by whom, is quite a separate question, needing for any certainty, in this school of much-associated masters and pupils, extremest attention to minute particulars not at all bearing on my objects in teaching.

Of this closing group of sculptures, then, all I can tell you is that the fifth is a quite magnificent piece of work, and recognizably, to my extreme conviction, Luca della Robbia's; that the last, Harmonia, is also fine work ; that those attributed to Giotto are fine in a different way,—and the other three in reality the poorest pieces in the series, though done with much more advanced sculptural dexterity.

But I am chiefly puzzled by the two attributed to Giotto, because they are much coarser than those which seem to me so plainly his on the west side, and slightly different in workmanship—with much that is common to both, however, in the casting of drapery and mode of introduction of details. The difference may be accounted for partly by haste or failing power, partly by the artist's less deep feeling of the importance of these merely symbolic figures, as compared with those of the Fathers of the Arts ; but it is very notable and embarrassing notwithstanding, complicated as it is with extreme resemblance in other particulars.

You cannot compare the subjects on the tower itself ; but of my series of photographs take 6 and 21, and put them side by side.

I need not dwell on the conditions of resemblance, which are instantly visible ; but the *difference* in the treatment of the heads is incomprehensible. That of the Tubal Cain is exquisitely finished, and with a painter's touch ; every lock of the hair laid with studied flow, as in the most beautiful drawing. In the 'Sculpture,' it is struck out with ordinary tricks of rapid sculptor trade, entirely unfinished, and with offensively frank use of the drill hole to give picturesque rustication to the beard.

Next, put 22 and 5 back to back. You see again the re-

semblance in the earnestness of both figures, in the unbroken arcs of their backs, in the breaking of the octagon moulding by the pointed angles ; and here, even also in the general conception of the heads. But again, in the one of Painting, the hair is struck with more vulgar indenting and drilling, and the Gothic of the picture frame is less precise in touch and later in style. Observe, however,—and this may perhaps give us some definite hint for clearing the question,—a picture-frame *would be* less precise in making, and later in style, properly, than cusped arches to be put under the feet of the inventor of all musical sound by breath of man. And if you will now compare finally the eager tilting of the workman's seat in 22 and 6, and the working of the wood in the painter's low table for his pots of colour, and his three-legged stool, with that of Tubal Cain's anvil block ; and the way in which the lines of the forge and upper triptych are in each composition used to set off the rounding of the head, I believe you will have little hesitation in accepting my own view of the matter—namely, that the three pieces of the Fathers of the Arts were wrought with Giotto's extremest care for the most precious stones of his tower ; that also, being a sculptor and painter, he did the other two, but with quite definite and wilful resolve that they *should be*, as mere symbols of his own two trades, wholly inferior to the other subjects of the patriarchs ; that he made the Sculpture picturesque and bold as you see it is, and showed all a sculptor's tricks in the work of it ; and a sculptor's Greek subject, Bacchus, for the model of it ; that he wrought the Painting, as the higher art, with more care, still keeping it subordinate to the primal subjects, but showed, for a lesson to all the generations of painters for evermore,—this one lesson, like his circle of pure line containing all others,—‘Your soul and body must be all in every touch.’

I can't resist the expression of a little piece of personal exultation, in noticing that he holds his pencil as I do myself : no writing master, and no effort (at one time very steady for many months), having ever cured me of that way of holding both pen and pencil between my fore and second finger ; the third and fourth resting the backs of them on my paper.

As I finally arrange these notes for press, I am further confirmed in my opinion by discovering little finishings in the two later pieces which I was not before aware of. I beg the masters of High Art, and sublime generalization, to take a good magnifying glass to the 'Sculpture' and look at the way Giotto has cut the compasses, the edges of the chisels, and the *keyhole of the lock* of the toolbox.

For the rest, nothing could be more probable, in the confused and perpetually false mass of Florentine tradition, than the preservation of the memory of Giotto's carving his own two trades, and the forgetfulness, or quite as likely ignorance, of the part he took with Andrea Pisano in the initial sculptures.

I now take up the series of subjects at the point where we broke off, to trace their chain of philosophy to its close.

To Geometry, which gives to every man his possession of house and land, succeed 21, Sculpture, and 22, Painting, the adornments of permanent habitation. And then, the great arts of education in a Christian home. First—

23. *Grammar*, or more properly Literature altogether, of which we have already seen the ancient power in the Spanish Chapel series; then,

24. *Arithmetic*, central here as also in the Spanish Chapel, for the same reasons; here, more impatiently asserting, with both hands, that two, on the right, you observe—and two on the left—do indeed and for ever make Four. Keep your accounts, you, with your book of double entry, on that principle; and you will be safe in this world and the next, in your steward's office. But by no means so, if you ever admit the usurers Gospel of Arithmetic, that two and two make Five.

You see by the rich hem of his robe that the asserter of this economical first principle is a man well to do in the world.

25. *Logic*.

The art of Demonstration. Vulgarest of the whole series; far too expressive of the mode in which argument is conducted by those who are not masters of its reins.

26. *Song.*

The essential power of music in animal life. Orpheus, the symbol of it all, the inventor properly of Music, the Law of Kindness, as Dædalus of Music, the Law of Construction. Hence the "Orphic life" is one of ideal mercy, (vegetarian,) —Plato, *Laws*, Book VI., 782,—and he is named first after Dædalus, and in balance to him as head of the school of harmonists, in Book III., 677, (Steph.) Look for the two singing birds clapping their wings in the tree above him: then the five mystic beasts,—closest to his feet the irredeemable boar; then lion and bear, tiger, unicorn, and fiery dragon closest to his head, the flames of its mouth mingling with his breath as he sings. The audient eagle, alas! has lost the beak, and is only recognizable by his proud holding of himself; the duck, sleepily delighted after muddy dinner, close to his shoulder, is a true conquest. Hoopoe, or indefinite bird of crested race, behind; of the other three no clear certainty. The leafage throughout such as only Luca could do, and the whole consummate in skill and understanding.

27. *Harmony.*

Music of Song, in the full power of it, meaning perfect education in all art of the Muses and of civilized life: the mystery of its concord is taken for the symbol of that of a perfect state; one day, doubtless, of the perfect world. So prophesies the last corner stone of the Shepherd's Tower.

TIME AND TIDE

BY WEARE AND TYNE

TWENTY-FIVE LETTERS TO A WORKINGMAN OF SUNDER-
LAND ON THE LAWS OF WORK

PREFACE.

THE following letters were written to Mr. Thomas Dixon, a working cork-cutter of Sunderland, during the agitation for reform in the spring of the present year. They contain, in the plainest terms I could use, the substance of what I then desired to say to our English workmen, which was briefly this :—“The reform you desire may give you more influence in Parliament ; but your influence there will of course be useless to you,—perhaps worse than useless,—until you have wisely made up your minds as to what you wish Parliament to do for you ; and when you *have* made up your minds about that, you will find, not only that you can do it for yourselves, without the intervention of Parliament ; but that eventually nobody *but* yourselves can do it. And to help you, as far as one of your old friends may, in so making up your minds, such and such things are what it seems to me you should ask for, and, moreover, strive for, with your heart and might.”

The letters now published relate only to one division of the laws which I desired to recommend to the consideration of our operatives,—those, namely, bearing upon honesty of work, and honesty of exchange. I hope in the course of next year that I may be able to complete the second part of the series, which will relate to the possible comforts and wholesome laws of fa-

miliar household life, and the share which a labouring nation may attain in the skill, and the treasures, of the higher arts.

The letters are republished as they were written, with here and there correction of a phrase, and omission of one or two passages of merely personal or temporary interest ; the headings only are added, in order to give the reader some clue to the general aim of necessarily desultory discussion ; and the portions of Mr. Dixon's letters in reply, referred to in the text, are added in the Appendix ; and will be found well deserving of attention.

DENMARK HILL, *December 14, 1867.*

TIME AND TIDE, BY WEARE AND TYNE.

LETTER I.

THE TWO KINDS OF CO-OPERATION.—IN ITS HIGHEST SENSE IT IS
NOT YET THOUGHT OF.

DENMARK HILL, *February 4, 1867.*

MY DEAR FRIEND—You have now everything I have yet published on political economy ; but there are several points in these books of mine which I intended to add notes to, and it seems little likely I shall get that soon done. So I think the best way of making up for the want of these is to write you a few simple letters, which you can read to other people, or send to be printed, if you like, in any of your journals where you think they may be useful.

I especially want you, for one thing, to understand the sense in which the word “co-operation” is used in my books. You will find I am always pleading for it ; and yet I don't at all mean the co-operation of partnership (as opposed to the system of wages) which is now so gradually extending itself among our great firms. I am glad to see it doing so, yet not altogether glad ; for none of you who are engaged in the immediate struggle between the system of co-operation and the system of mastership know how much the dispute involves ; and none of us know the results to which it may finally lead. For the alternative is not, in reality, only between two modes of conducting business—it is between two different states of society. It is not the question whether an amount of wages,

no greater in the end than that at present received by the men, may be paid to them in a way which shall give them share in the risks, and interest in the prosperity of the business. The question is, really, whether the profits which are at present taken, as his own right, by the person whose capital, or energy, or ingenuity, has made him head of the firm, are not in some proportion to be divided among the subordinates of it.

I do not wish, for the moment, to enter into any inquiry as to the just claims of capital, or as to the proportions in which profits ought to be, or are in actually existing firms, divided. I merely take the one assured and essential condition, that a somewhat larger income will be in co-operative firms secured to the subordinates, by the diminution of the income of the chief. And the general tendency of such a system is to increase the facilities of advancement among the subordinates ; to stimulate their ambition ; to enable them to lay by, if they are provident, more ample and more early provision for declining years ; and to form in the end a vast class of persons wholly different from the existing operative—members of society, possessing each a moderate competence ; able to procure, therefore, not indeed many of the luxuries, but all the comforts of life ; and to devote some leisure to the attainments of liberal education, and to the other objects of free life. On the other hand, by the exact sum which is divided among them, more than their present wages, the fortune of the man who, under the present system, takes all the profits of the business, will be diminished ; and the acquirement of large private fortune by regular means, and all the conditions of life belonging to such fortune, will be rendered impossible in the mercantile community.

Now, the magnitude of the social change hereby involved, and the consequent differences in the moral relations between individuals, have not as yet been thought of,—much less estimated,—by any of your writers on commercial subjects ; and it is because I do not yet feel able to grapple with them that I have left untouched, in the books I send you, the question of co-operative labour. When I use the word “co-operation,” it

is not meant to refer to these new constitutions of firms at all. I use the word in a far wider sense, as opposed, not to masterhood, but to *competition*. I do not mean for instance, by co-operation, that all the master bakers in a town are to give a share of their profits to the men who go out with the bread ; but that the masters are not to try to undersell each other, nor seek each to get the other's business, but are all to form one society, selling to the public under a common law of severe penalty for unjust dealing, and at an established price. I do not mean that all bankers' clerks should be partners in the bank ; but I do mean that all bankers should be members of a great national body, answerable as a society for all deposits ; and that the private business of speculating with other people's money should take another name than that of "banking." And, for final instance, I mean by "co-operation" not only fellowships between trading *firms*, but between trading *nations* ; so that it shall no more be thought (as it is now, with ludicrous and vain selfishness) an advantage for one nation to undersell another, and take its occupation away from it ; but that the primal and eternal law of vital commerce shall be of all men understood—namely, that every nation is fitted by its character, and the nature of its territories, for some particular employments or manufactures ; and that it is the true interest of every other nation to encourage it in such specialty, and by no means to interfere with, but in all ways forward and protect its efforts, ceasing all rivalry with it, so soon as it is strong enough to occupy its proper place. You see, therefore, that the idea of co-operation, in the sense in which I employ it, has hardly yet entered into the minds of political inquirers ; and I will not pursue it at present ; but return to that system which is beginning to obtain credence and practice among us. This, however, must be in a following letter.

LETTER II.

CO-OPERATION, AS HITHERTO UNDERSTOOD, IS PERHAPS NOT EXPEDIENT.

February 4, 1867.

LIMITING the inquiry, then, for the present, as proposed in the close of my last letter, to the form of co-operation which is now upon its trial in practice, I would beg of you to observe that the points at issue, in the comparison of this system with that of mastership, are by no means hitherto frankly stated; still less can they as yet be fairly brought to test. For all mastership is not alike in principle; there are just and unjust masterships; and while, on the one hand, there can be no question but that co-operation is better than unjust and tyrannous mastership, there is very great room for doubt whether it be better than a just and benignant mastership.

At present you—every one of you—speak, and act, as if there were only one alternative; namely, between a system in which profits shall be divided in due proportion among all; and the present one, in which the workman is paid the least wages he will take, under the pressure of competition in the labour-market. But an intermediate method is conceivable; a method which appears to be more prudent, and in its ultimate results more just, than the co-operative one. An arrangement may be supposed, and I have good hope also may one day be effected, by which every subordinate shall be paid sufficient and regular wages, according to his rank; by which due provision shall be made out of the profits of the business for sick and superannuated workers; and by which the master, *being held responsible, as a minor king or governor, for the conduct as well as the comfort of all those under his rule*, shall, on that condition, be permitted to retain to his own use the surplus profits of the business, which the fact of his being its master may be assumed to prove that he has organized by superior intellect and energy. And I think this principle of regular wage-paying, whether it be in the abstract more just, or not, is at all events the more prudent; for this reason

mainly, that in spite of all the cant which is continually talked by cruel, foolish, or designing persons about "the duty of remaining content in the position in which Providence has placed you," there is a root of the very deepest and holiest truth in the saying, which gives to it such power as it still retains, even uttered by unkind and unwise lips, and received into doubtful and embittered hearts.

If, indeed, no effort be made to discover, in the course of their early training, for what services the youths of a nation are individually qualified; or any care taken to place those who have unquestionably proved their fitness for certain functions, in the offices they could best fulfil,—then, to call the confused wreck of social order and life brought about by malicious collision and competition an arrangement of Providence, is quite one of the most insolent and wicked ways in which it is possible to take the name of God in vain. But if, at the proper time some earnest effort be made to place youths, according to their capacities, in the occupations for which they are fitted, I think the system of organization will be finally found the best, which gives the least encouragement to thoughts of any great future advance in social life.

The healthy sense of progress, which is necessary to the strength and happiness of men, does not consist in the anxiety of a struggle to attain higher place or rank, but in gradually perfecting the manner, and accomplishing the ends, of the life which we have chosen, or which circumstances have determined for us. Thus, I think the object of a workman's ambition should not be to become a master; but to attain daily more subtle and exemplary skill in his own craft, to save from his wages enough to enrich and complete his home gradually with more delicate and substantial comforts; and to lay by such store as shall be sufficient for the happy maintenance of his old age (rendering him independent of the help provided for the sick and indigent by the arrangement pre-supposed), and sufficient also for the starting of his children in a rank of life equal to his own. If his wages are not enough to enable him to do this, they are unjustly low; if they are once raised to this adequate standard, I do not think that by the possible

increase of his gains under contingencies of trade, or by divisions of profits with his master, he should be enticed into feverish hope of an entire change of condition ; and as an almost necessary consequence, pass his days in an anxious discontent with immediate circumstances, and a comfortless scorn of his daily life, for which no subsequent success could indemnify him. And I am the more confident in this belief, because, even supposing a gradual rise in sociable rank possible for all well-conducted persons, my experience does not lead me to think the elevation itself, when attained, would be conducive to their happiness.

The grounds of this opinion I will give you in a future letter ; in the present one, I must pass to a more important point, namely, that if this stability of condition be indeed desirable for those in whom existing circumstances might seem to justify discontent, much more must it be good and desirable for those who already possess everything which can be conceived necessary to happiness. It is the merest insolence of selfishness to preach contentment to a labourer who gets thirty shillings a week, while we suppose an active and plotting covetousness to be meritorious in a man who has three thousand a year. In this, as in all other points of mental discipline, it is the duty of the upper classes to set an example to the lower ; and to recommend and justify the restraint of the ambition of their inferiors, chiefly by severe and timely limitation of their own. And, without at present inquiring into the greater or less convenience of the possible methods of accomplishing such an object (every detail in suggestions of this kind necessarily furnishing separate matter of dispute), I will merely state my long fixed conviction, that one of the most important conditions of a healthful system of social economy, would be the restraint of the properties and incomes of the upper classes within certain fixed limits. The temptation to use every energy in the accumulation of wealth being thus removed, another, and a higher ideal of the duties of advanced life would be necessarily created in the national mind ; by withdrawal of those who had attained the prescribed limits of wealth from commercial competition, earlier

worldly success, and earlier marriage, with all its beneficent moral results, would become possible to the young; while the older men of active intellect, whose sagacity is now lost or warped in the furtherance of their own meanest interests, would be induced unselfishly to occupy themselves in the superintendence of public institutions, or furtherance of public advantage.

And out of this class it would be found natural and prudent always to choose the members of the legislative body of the Commons; and to attach to the order also some peculiar honors, in the possession of which such complacency would be felt as would more than replace the unworthy satisfaction of being supposed richer than others, which to many men is the principal charm of their wealth. And although no law of this purport would ever be imposed on themselves by the actual upper classes, there is no hindrance to its being gradually brought into force from beneath, without any violent or impatient proceedings; and this I will endeavour to show in my next letter.

LETTER III.

OF TRUE LEGISLATION.—THAT EVERY MAN MAY BE A LAW TO HIMSELF.

February 17, 1867.

No, I have not been much worse in health; but I was asked by a friend to look over some work in which you will all be deeply interested one day, so that I could not write again till now. I was the more sorry, because there were several things I wished to note in your last letter; one especially leads me directly to what I in any case was desirous of urging upon you. You say, "In vol. 6th of *Frederick the Great* I find a great deal that I feel quite certain, if our Queen or Government could make law, thousands of our English workmen would hail with a shout of joy and gladness." I do not remember to what you especially allude,

but whatever the rules you speak of may be, unless there be anything in them contrary to the rights of present English property, why should you care whether the Government makes them law or not? Can you not, you thousands of English workmen, simply make them a law to yourselves, by practising them?

It is now some five or six years since I first had occasion to speak to the members of the London Working Men's College on the subject of Reform, and the substance of what I said to them was this: "You are all agape, my friends, for this mighty privilege of having your opinions represented in Parliament. The concession might be desirable,—at all events courteous,—if only it were quite certain you had got any opinions to represent. But have you? Are you agreed on any single thing you systematically want? Less work and more wages, of course; but how much lessening of work do you suppose is possible? Do you think the time will ever come for everybody to have *no* work and *all* wages? Or have you yet taken the trouble so much as to think out the nature of the true connection between wages and work, and to determine, even approximately, the real quantity of the one, that can, according to the laws of God and nature, be given for the other; for, rely on it, make what laws you like, that quantity only can you at last get?"

"Do you know how many mouths can be fed on an acre of land, or how fast those mouths multiply; and have you considered what is to be done finally with unfeedable mouths? 'Send them to be fed elsewhere,' do you say? Have you, then, formed any opinion as to the time at which emigration should begin, or the countries to which it should preferably take place, or the kind of population which should be left at home? Have you planned the permanent state which you would wish England to hold, emigrating over her edges, like a full well, constantly? How full would you have her be of people, first; and of what sort of people? Do you want her to be nothing but a large workshop and forge, so that the name of 'Englishman' shall be synonymous with 'iron-monger,' all over the world; or would you like to keep some

of your lords and landed gentry still, and a few green fields and trees?

“ You know well enough that there is not one of these questions, I do not say which you can answer, but which you have ever *thought* of answering ; and yet you want to have voices in Parliament ! Your voices are not worth a rat’s squeak, either in Parliament or out of it, till you have some ideas to utter with them ; and when you have the thoughts, you will not want to utter them, for you will see that your way to the fulfilling of them does not lie through speech. You think such matters need debating about ? By all means debate about them ; but debate among yourselves, and with such honest helpers of your thoughts as you can find. If that way you cannot get at the truth, do you suppose you could get at it sooner in the House of Commons, where the only aim of many of the members would be to refute every word uttered in your favour ; and where the settlement of any question whatever depends merely on the perturbations of the balance of conflicting interests ? ”

That was, in main particulars, what I then said to the men of the Working Men’s College ; and in this recurrent agitation about Reform, that is what I would steadfastly say again. Do you think it is only under the lacquered splendours of Westminster,—you working men of England,—that your affairs can be rationally talked over ? You have perfect liberty and power to talk over, and establish for yourselves, whatever laws you please, so long as you do not interfere with other people’s liberties or properties. Elect a parliament of your own. Choose the best men among you, the best at least you can find, by whatever system of election you think likeliest to secure such desirable result. Invite trustworthy persons of other classes to join your council ; appoint time and place for its stated sittings, and let this parliament, chosen after your own hearts, deliberate upon the possible modes of the regulation of industry, and advisabest schemes for helpful discipline of life ; and so lay before you the best laws they can devise, which such of you as were wise might submit to, and teach their children to obey. And if any of the laws thus de-

terminated appeared to be inconsistent with the present circumstances or customs of trade, do not make a noise about them, nor try to enforce them suddenly on others, nor embroider them on flags, nor call meetings in parks about them, in spite of railings and police ; but keep them in your thoughts and sight, as objects of patient purpose, and future achievement by peaceful strength.

For you need not think that even if you obtained a majority of representatives in the existing parliament, you could immediately compel any system of business, broadly contrary to that now established by custom. If you could pass laws to-morrow, wholly favourable to yourselves, as you might think, because unfavourable to your masters, and to the upper classes of society,—the only result would be, that the riches of the country would at once leave it, and you would perish in riot and famine. Be assured that no great change for the better can ever be easily accomplished, nor quickly ; nor by impulsive, ill-regulated effort, nor by bad men ; nor even by good men, without much suffering. The suffering must, indeed, come, one way or another, in all greatly critical periods ; the only question, for us, is whether we will reach our ends (if we ever reach them) through a chain of involuntary miseries, many of them useless, and all ignoble ; or whether we will know the worst at once, and deal with it by the wisely sharp methods of God-speed courage.

This, I repeat to you, it is wholly in your own power to do, but it is in your power on one condition only, that of steadfast truth to yourselves and to all men. If there is not, in the sum of it, honesty enough among you to teach you to frame, and strengthen you to obey, *just* laws of trade, there is no hope left for you. No political constitution can enoble knaves ; no privileges can assist them ; no possessions enrich them. Their gains are occult curses ; comfortless loss their truest blessing ; failure and pain Nature's only mercy to them. Look to it, therefore, first, that you get some wholesome honesty for the foundation of all things. Without the resolution in your hearts to do good work, so long as your right hands have motion in them ; and to do it whether the

issue be that you die or live, no life worthy the name will ever be possible to you, while, in once forming the resolution that your work is to be well done, life is really won, here and for ever. And to make your children capable of such resolution, is the beginning of all true education, of which I have more to say in a future letter.

LETTER IV.

THE EXPENSES FOR ART AND FOR WAR.

February 19, 1867.

In the *Pall Mall Gazette* of yesterday, second column of second page, you will find, close to each other, two sentences which bear closely on matters in hand. The first of these is the statement, that in the debate on the grant for the Blacas collection, "Mr. Bernal Osborne got an assenting cheer, when he said that 'whenever science and art were mentioned it was a sign to look after the national pockets.'" I want you to notice this fact, *i.e.* (the debate in question being on a total grant of 164,000*l.* of which 48,000*l.* only were truly for art's sake, and the rest for shop's sake), in illustration of a passage in my *Sesame and Lilies*, pp. 56 and 57,¹ to which I shall have again to refer you, with some further comments, in the sequel of these letters. The second passage is to the effect that "The Trades' Union Bill was read a second time, after a claim from Mr. Hadfield, Mr. Osborne, and Mr. Samuelson, to admit working men into the commission; to which Mr. Watkins answered 'that the working men's friend was too conspicuous in the body;' and Mr. Roebuck, 'that when a butcher was tried for murder it was not necessary to have butchers on the jury.'"

Note this second passage with respect to what I said in my last letter, as to the impossibility of the laws of work being investigated in the House of Commons. What admixture of elements, think you, would avail to obtain so much as

¹ Appendix 1.

decent hearing (how should we then speak of impartial judgment?) of the cause of working men, in an assembly which permits to one of its principal members this insolent discourtesy of language, in dealing with a preliminary question of the highest importance; and permits it as so far expressive of the whole colour and tone of its own thoughts, that the sentence is quoted by one of the most temperate and accurate of our daily journals, as representing the total answer of the opposite side in the debate? No; be assured you can do nothing yet at Westminster. You must have your own parliament, and if you cannot detect enough honesty among you to constitute a justly-minded one, for the present matters must take their course, and that will be, yet awhile, to the worse.

I meant to have continued this subject, but I see two other statements in the *Pall Mall Gazette* of to-day, with which, and a single remark upon them, I think it will be well to close my present letter.

1. "The total sum asked for in the army estimates, published this morning, is 14,752,200*l.*, being an increase of 412,000*l.* over the previous year."

2. "Yesterday the annual account of the navy receipts and expenditure for the year ending 31st March, 1866, was issued from the Admiralty. The expenditure was 10,268,215*l.* 7*s.*"

Omitting the seven shillings, and even the odd hundred thousands of pounds, the net annual expenditure for army and navy appears to be twenty-four millions.

The "grant in science and art," two-thirds of which was not in reality for either, but for amusement and shop interests in the Paris Exhibition—the grant which the House of Commons feels to be indicative of general danger to the national pockets—is, as above stated, 164,000*l.* Now, I believe the three additional ciphers which turn thousands into millions produce on the intelligent English mind usually, the effect of—three ciphers. But calculate the proportion of these two sums, and then imagine to yourself the beautiful state of rationality of any private gentleman, who, having regretfully spent 16*l.* on pictures for his walls, paid willingly

24,000*l.* annually to the policemen who looked after his shutters! You practical English!—will you ever unbar the shutters of your brains, and hang a picture or two in *those* state chambers?

LETTER V.

THE CORRUPTION OF MODERN PLEASURE.—(COVENT GARDEN.
PANTOMIME.)

February 25, 1867.

THERE is this great advantage in the writing real letters, that the direct correspondence is a sufficient reason for saying, in or out of order, everything that the chances of the day bring into one's head, in connection with the matter in hand; and as such things very usually go out of one's head again, after they get tired of their lodging, they would otherwise never get said at all. And thus to-day, quite out of order, but in very close connection with another part of our subject, I am going to tell you what I was thinking on Friday evening last, in Covent Garden Theatre, as I was looking, and not laughing, at the pantomime of *Ali Baba and the Forty Thieves*.

When you begin seriously to consider the question referred to in my second letter, of the essential, and in the outcome inviolable, connection between quantity of wages and quantity of work, you will see that "wages" in the full sense don't mean "pay" merely, but the reward, whatever it may be, of pleasure as well as profit, and of various other advantages, which a man is meant by Providence to get during life, for work well done. Even limiting the idea to "pay," the question is not so much what quantity of coin you get, as—what you can get for it when you have it. Whether a shilling a day be good pay or not, depends wholly on what a "shilling's worth" is; that is to say, what quantity of the things you want may be had for a shilling. And that again depends on what you *do* want; and a great deal more than that depends, besides, on "what you want." If you want only drink, and

foul clothes, such and such pay may be enough for you ; if you want good meat and good clothes, you must have larger wage ; if clean rooms and fresh air, larger still, and so on. You say, perhaps, "every one wants better things." So far from that, a wholesome taste for cleanliness and fresh air is one of the final attainments of humanity. There are now not many European gentlemen, even in the highest classes, who have a pure and right love of fresh air. They would put the filth of tobacco even into the first breeze of a May morning.

But there are better things even than these, which one may want. Grant, that one has good food, clothes, lodging, and breathing, is that all the pay one ought to have for one's work? Wholesome means of existence, and nothing more? Enough, perhaps, you think, if everybody could get these. It may be so ; I will not, at this moment, dispute it ; nevertheless, I will boldly say that you should sometimes want more than these : and for one of many things more, you should want occasionally to be amused !

You know the upper classes, most of them, want to be amused all day long. They think

" One moment *unamused* a misery
Not made for feeble men."

Perhaps you have been in the habit of despising them for this ; and thinking how much worthier and nobler it was to work all day, and care at night only for food and rest, than to do no useful thing all day, eat unearned food, and spend the evening as the morning, in "change of follies and relays of joy." No, my good friend, that is one of the fatallest deceptions. It is not a noble thing, in sum and issue of it, not to care to be amused. It is indeed a far higher *moral* state, but it is a much lower *creature* state than that of the upper classes.

Yonder poor horse, calm slave in daily chains at the railroad siding, who drags the detached rear of the train to the front again, and slips aside so deftly as the buffers meet ; and, within eighteen inches of death every ten minutes, fulfils his dexterous and changeless duty all day long, content for eternal reward with his night's rest and his champed mouthful of hay ;—any-

thing more earnestly moral and beautiful one cannot imagine—I never see the creature without a kind of worship. And yonder musician, who used the greatest power which (in the art he knew) the Father of spirits ever yet breathed into the clay of this world ;—who used it, I say, to follow and fit with perfect sound the words of the *Zauberflöte* and of *Don Giovanni*—basest and most monstrous of conceivable human words and subjects of thought—for the future “amusement” of his race !—No such spectacle of unconscious (and in that unconsciousness all the more fearful) moral degradation of the highest faculty to the lowest purpose can be found in history. That Mozart is nevertheless a nobler creature than the horse at the siding ; nor would it be the least nearer the purpose of his Maker that he, and all his frivolous audiences, should evade the degradation of the profitless piping, only by living like horses, in daily physical labour for daily bread.

There are three things to which man is born¹—labour, and sorrow, and joy. Each of these three things has its baseness and its nobleness. There is base labour, and noble labour. There is base sorrow, and noble sorrow. There is base joy, and noble joy. But you must not think to avoid the corruption of these things by doing without the things themselves. Nor can any life be right that has not all three. Labour without joy is base. Labour without sorrow is base. Sorrow without labour is base. Joy without labour is base.

I dare say you think I am a long time in coming to the pantomime ; I am not ready to come to it yet in due course, for we ought to go and see the Japanese jugglers first, in order to let me fully explain to you what I mean. But I can't write much more to-day ; so I shall merely tell you what part of the play set me thinking of all this, and leave you to consider of it yourself, till I can send you another letter. The pantomime was, as I said, *Ali Baba and the Forty Thieves*. The forty thieves were girls. The forty thieves had forty companions, who were girls. The forty thieves and their forty companions were in some way mixed up with about four hun-

¹ I ask the reader's thoughtful attention to this paragraph, on which much of what else I have to say depends.

dred and forty fairies, who were girls. There was an Oxford and Cambridge boat-race, in which the Oxford and Cambridge men were girls. There was a transformation scene, with a forest, in which the flowers were girls, and a chandelier, in which the lamps were girls, and a great rainbow, which was all of girls.

Mingled incongruously with these seraphic, and, as far as my boyish experience extends, novel, elements of pantomime, there were yet some of its old and fast-expiring elements. There were, in speciality, two thoroughly good pantomime actors—Mr. W. H. Payne and Mr. Frederick Payne. All that these two did, was done admirably. There were two subordinate actors, who played subordinately well, the fore and hind legs of a donkey. And there was a little actress, of whom I have chiefly to speak, who played exquisitely the little part she had to play. The scene in which she appeared was the only one in the whole pantomime in which there was any dramatic effort, or, with a few rare exceptions, any dramatic possibility. It was the home scene, in which Ali Baba's wife, on washing day, is called upon by butcher, baker, and milkman, with unpaid bills; and in the extremity of her distress hears her husband's knock at the door, and opens it for him to drive in his donkey, laden with gold. The children, who have been beaten instead of getting breakfast, presently share in the raptures of their father and mother; and the little lady I spoke of—eight or nine years old—dances a *pas-de-deux* with the donkey.

She did it beautifully and simply, as a child ought to dance. She was not an infant prodigy; there was no evidence, in the finish or strength of her motion, that she had been put to continual torture through half her eight or nine years. She did nothing more than any child, well taught, but painlessly, might easily do. She caricatured no older person,—attempted no curious or fantastic skill. She was dressed decently,—she moved decently,—she looked and behaved innocently,—and she danced her joyful dance with perfect grace, spirit, sweetness, and self-forgetfulness. And through all the vast theatre, full of English fathers and mothers and children,

there was not one hand lifted to give her sign of praise but mine.

Presently after this, came on the forty thieves, who, as I told you, were girls ; and, there being no thieving to be presently done, and time hanging heavy on their hands, arms, and legs, the forty thief-girls proceeded to light forty cigars. Whereupon the British public gave them a round of applause. Whereupon I fell a-thinking ; and saw little more of the piece, except as an ugly and disturbing dream.

LETTER VI.

THE CORRUPTION OF MODERN PLEASURE.—(THE JAPANESE JUGGLERS.)

February 28, 1867.

I HAVE your pleasant letter with references to Frederick. I will look at them carefully.¹ Mr. Carlyle himself will be pleased to hear this letter when he comes home. I heard from him last week at Mentone. He is well, and glad of the light and calm of Italy. I must get back to the evil light, and uncalm, of the places I was taking you through.

(Parenthetically, did you see the article in *The Times* of yesterday on bribery, and the conclusion of the commission—"No one sold any opinions, for no one had any opinions to sell.")

Both on Thursday and Friday last I had been tormented by many things, and wanted to disturb my course of thought any way I could. I have told you what entertainment I got on Friday, first, for it was then that I began meditating over these letters ; let me tell you now what entertainment I found on Thursday.

You may have heard that a company of Japanese jugglers has come over to exhibit in London. There has long been an increasing interest in Japanese art, which has been very harmful to many of our own painters, and I greatly desired to see

¹ Appendix II.

what these people were, and what they did. Well, I have seen Blondin, and various English and French circus work, but never yet anything that surprised me so much as one of these men's exercises on a suspended pole. Its special character was a close approximation to the action and power of the monkey, even to the prehensile power in the foot ; so that I asked a sculptor-friend who sat in front of me, whether he thought such a grasp could be acquired by practice, or indicated difference in race. He said he thought it might be got by practice. There was also much inconceivably dexterous work in spinning of tops—making them pass in balanced motion along the edge of a sword, and along a level string, and the like ;—the father performing in the presence of his two children, who encouraged him continually with short, sharp cries, like those of animals. Then there was some fairly good sleight-of-hand juggling of little interest ; ending with a dance by the juggler, first as an animal, and then as a goblin. Now, there was this great difference between the Japanese masks used in this dance and our common pantomime masks for beasts and demons,—that our English masks are only stupidly and loathsomely ugly, by exaggeration of feature, or of defect of feature. But the Japanese masks (like the frequent monsters of Japanese art) were inventively frightful, like fearful dreams ; and whatever power it is that acts on human minds, enabling them to invent such, appears to me not only to deserve the term “demoniacal,” as the only word expressive of its character ; but to be logically capable of no other definition.

The impression, therefore, produced upon me by the whole scene, was that of being in the presence of human creatures of a partially inferior race, but not without great human gentleness, domestic affection, and ingenious intellect ; who were, nevertheless, as a nation, afflicted by an evil spirit, and driven by it to recreate themselves in achieving, or beholding the achievement, through years of patience, of a certain correspondence with the nature of the lower animals.

These, then, were the two forms of diversion or recreation of my mind possible to me, in two days when I needed such

help, in this metropolis of England. I might, as a rich man, have had better music, if I had so chosen, though, even so, not rational or helpful; but a poor man could only have these, or worse than these, if he cared for any manner of spectacle. (I am not at present, observe, speaking of pure acting, which is a study, and recreative only as a noble book is; but of means of *mere* amusement.)

Now, lastly, in illustration of the effect of these and other such "amusements," and of the desire to obtain them, on the minds of our youth, read *The Times* correspondent's letter from Paris, in the tenth page of the paper, to-day;¹ and that will be quite enough for you to read, for the present, I believe.

LETTER VII.

OF THE VARIOUS EXPRESSIONS OF NATIONAL FESTIVITY.

March 4, 1867.

THE subject which I want to bring before you is now branched, and, worse than branched, reticulated, in so many directions, that I hardly know which shoot of it to trace, or which knot to lay hold of first.

I had intended to return to those Japanese jugglers, after a visit to a theatre in Paris; but I had better, perhaps, at once tell you the piece of the performance which, in connection with the scene in the English pantomime, bears most on matters in hand.

It was also a dance by a little girl—though one older than Ali Baba's daughter (I suppose a girl of twelve or fourteen.) A dance, so called, which consisted only in a series of short, sharp contractions and jerks of the body and limbs, resulting in attitudes of distorted and quaint ugliness, such as might be produced in a puppet by sharp twitching of strings at its joints; these movements being made to the sound of two instruments, which between them accomplished only a quick vibratory beating and strumming, in nearly the time of a hearth-crickets song, but much harsher, and of course louder,

¹ Appendix III.

and without any sweetness; only in the monotony and unintended aimless construction of it, reminding one of various other insect and reptile cries or warnings; partly of the cicada's hiss; partly of the little melancholy German frog which says "Mu, mu, mu," all summer-day long, with its nose out of the pools by Dresden and Leipsic; and partly of the deadened quivering and intense continuousness of the alarm of the rattlesnake.

While this was going on, there was a Bible text repeating itself over and over again in my head, whether I would or no:—"And Miriam the prophetess, the sister of Aaron, took a timbrel in her hand, and all the women went out after her with timbrels and with dances." To which text and some others, I shall ask your attention presently; but I must go to Paris first.

Not at once, however, to the theatre, but to a bookseller's shop, No. 4, Rue Voltaire, where, in the year 1858, was published the fifth edition of Balzac's *Contes Drolatiques*, illustrated by 425 designs by Gustave Doré.

Both text and illustrations are as powerful as it is ever in the nature of evil things to be—(there is no *final* strength but in rightness.) Nothing more witty, nor more inventively horrible, has yet been produced in the evil literature, or by the evil art, of man; nor can I conceive it possible to go beyond either in their specialities of corruption. The text is full of blasphemies, subtle, tremendous, hideous in shamelessness, some put into the mouths of priests; the illustrations are, in a word, one continuous revelry in the most loathsome and monstrous aspects of death and sin, enlarged into fantastic ghastliness of caricature, as if seen through the distortion and trembling of the hot smoke of the mouth of hell. Take this following for a general type of what they seek in death: one of the most laboured designs is of a man cut in two, downwards, by the sweep of a sword—one-half of him falls towards the spectator; the other half is elaborately drawn in its section—giving the profile of the divided nose and lips; cleft jaw—breast—and entrails; and this is done with farther pollution and horror of intent in the circumstances, which I do

not choose to describe—still less some other of the designs which seek for fantastic extreme of sin, as this for the utmost horror of death. But of all the 425, there is not one which does not violate every instinct of decency and law of virtue or life, written in the human soul.

Now, my friend, among the many “Signs of the Times” the production of a book like this is a significant one: but it becomes more significant still when connected with the farther fact, that M. Gustave Doré, the designer of this series of plates, has just been received with loud acclaim by the British Evangelical Public, as the fittest and most able person whom they could at present find to illustrate, to their minds, and recommend with graciousness, of sacred art, their hitherto unadorned Bible for them.

Of which Bible and of the use we at present make of it in England, having a grave word or two to say in my next letter (preparatory to the examination of that verse which haunted me through the Japanese juggling, and of some others also), I leave you first this sign of the public esteem of it to consider at your leisure.

LETTER VIII.

THE FOUR POSSIBLE THEORIES RESPECTING THE AUTHORITY OF THE BIBLE.

March 7, 1867.

I HAVE your yesterday's letter, but must not allow myself to be diverted from the business in hand for this once, for it is the most important of which I have to write to you.

You must have seen long ago that the essential difference between the political economy I am trying to teach, and the popular science, is, that mine is based on *presumably attainable honesty* in men, and conceivable respect in them for the interests of others, while the popular science founds itself wholly on their supposed constant regard for their own, and on their honesty only so far as thereby likely to be secured.

It becomes, therefore, for me, and for all who believe any-

thing I say, a great primal question on what this presumably attainable honesty is to be based.

“Is it to be based on religion?” you may ask. “Are we to be honest for fear of losing heaven if we are dishonest, or (to put it as generously as we may) for fear of displeasing God? Or, are we to be honest on speculation, because honesty is the best policy; and to invest in virtue as in an un-depreciable stock?”

And my answer is—not in any hesitating or diffident way (and you know, my friend, that whatever people may say of me, I often do speak diffidently; though when I am diffident of things, I like to avoid speaking of them, if it may be; but here I say with no shadow of doubt)—your honesty is *not* to be based either on religion or policy. Both your religion and policy must be based on *it*. Your honesty must be based, as the sun is, in vacant heaven; poised, as the lights in the firmament, which have rule over the day and over the night. If you ask why you are to be honest—you are, in the question itself, dishonoured. “Because you are a man,” is the only answer; and therefore I said in a former letter that to make your children *capable of honesty* is the beginning of education. Make them men first, and religious men afterwards, and all will be sound; but a knave’s religion is always the rottenest thing about him.

It is not, therefore, because I am endeavouring to lay down a foundation of religious concrete on which to build piers of policy, that you so often find me quoting Bible texts in defence of this or that principle or assertion. But the fact that such references are an offence, as I know them to be, to many of the readers of these political essays, is one among many others, which I would desire you to reflect upon (whether you are yourself one of the offended or not), as expressive of the singular position which the mind of the British public has at present taken with respect to its worshipped Book. The positions, honestly tenable, before I use any more of its texts, I must try to define for you.

All the theories possible to theological disputants respecting the Bible are resolvable into four, and four only.

1. The first is that of the comparatively illiterate modern religious world, namely, that every word of the book known to them as "The Bible" was dictated by the Supreme Being, and is in every syllable of it His "Word." This theory is of course tenable, though honestly, yet by no ordinarily well-educated person.

2. The second theory is, that although admitting verbal error, the substance of the whole collection of books called the Bible is absolutely true, and furnished to man by Divine inspiration of the speakers and writers of it; and that every one who honestly and prayerfully seeks for such truth in it as is necessary for salvation, will infallibly find it there.

This theory is that held by most of our good and upright clergymen, and the better class of the professedly religious laity.

3. The third theory is that the group of books which we call the Bible were neither written nor collected under any Divine guidance, securing them from substantial error; and that they contain, like all other human writings, false statements mixed with true, and erring thoughts mixed with just thoughts; but that they nevertheless relate, on the whole, faithfully, the dealings of the one God with the first races of man, and His dealings with them in aftertime through Christ; that they record true miracles, and bear true witness to the resurrection of the dead, and the life of the world to come.

This is a theory held by many of the active leaders of modern thought in England.

4. The fourth, and last possible theory is that the mass of religious Scripture contains merely the best efforts which we hitherto know to have been made by any of the races of men towards the discovery of some relations with the spiritual world; that they are only trustworthy as expressions of the enthusiastic visions or beliefs of earnest men oppressed by the world's darkness, and have no more authoritative claim on our faith than the religious speculations and histories of the Egyptians, Greeks, Persians, and Indians; but are, in common with all these, to be reverently studied, as containing the best wisdom which human intellect, earnestly seeking for help from

God, has hitherto been able to gather between birth and death.

This has been, for the last half century, the theory of the leading scholars and thinkers of Europe.

There is yet indeed one farther condition of incredulity attainable, and sorrowfully attained, by many men of powerful intellect—the incredulity, namely, of inspiration in any sense, or of help given by any Divine power, to the thoughts of men. But this form of infidelity merely indicates a natural incapacity for receiving certain emotions; though many honest and good men belong to this insentient class.

The educated men, therefore, who may be seriously appealed to, in these days, on questions of moral responsibility, as modified by Scripture, are broadly divisible into three classes, severally holding the three last theories above stated.

Now, whatever power a passage from the steadily authoritative portions of the Bible may have over the mind of a person holding the fourth theory, it will have a proportionately greater over that of persons holding the third or the second. I, therefore, always imagine myself speaking to the fourth class of theorists. If I can persuade or influence *them*, I am logically sure of the others. I say “logically,” for in the actual fact, strange as it may seem, no persons are so little likely to submit to a passage of Scripture not to their liking, as those who are most positive on the subject of its general inspiration.

Addressing, then, this fourth class of thinkers, I would say to them, when asking them to enter on any subject of importance to national morals, or conduct, “This book, which has been the accepted guide of the moral intelligence of Europe for some 1,500 years, enforces certain simple laws of human conduct which you know have also been agreed upon in every main point by all the religious and by all the greatest profane writers, of every age and country. This book primarily forbids pride, lasciviousness, and covetousness; and you know, that all great thinkers, in every nation of mankind, have similarly forbade these mortal vices. This book enjoins truth, temperance, charity, and equity; and you know that every

great Egyptian, Greek, and Indian, enjoins these also. You know besides, that through all the mysteries of human fate and history, this one great law of fate is written on the walls of cities, or in their dust,—written in letters of light or in letters of blood,—that where truth, temperance, and equity have been preserved, all strength, and peace, and joy have been preserved also ;—that where lying, lasciviousness, and covetousness have been practised, there has followed an infallible, and for centuries irrecoverable, ruin. And you know, lastly, that the observance of this common law of righteousness, commending itself to all the pure instincts of men, and fruitful in their temporal good, is by the religious writers of every nation, and chiefly in this venerated Scripture of ours, connected with some distinct hope of better life, and righteousness, to come.

“Let it not then offend you if, deducing principles of action first from the laws and facts of nature, I nevertheless fortify them also by appliance of the precepts, or suggestive and probable teachings of this Book, of which the authority is over many around you, more distinctly than over you, and which, confessing to be divine, *they*, at least, can only disobey at their moral peril.”

On these grounds, and in this temper, I am in the habit of appealing to passages of Scripture in my writings on political economy ; and in this temper I will ask you to consider with me some conclusions which appear to me derivable from that text about Miriam, which haunted me through the jugglery ; and from certain others.

LETTER IX.

THE USE OF MUSIC AND DANCING UNDER THE JEWISH THEOCRACY,
 COMPARED WITH THEIR USE BY THE MODERN FRENCH.

March 10, 1867.

HAVING, I hope, made you now clearly understand with what feeling I would use the authority of the book which the Brit-

ish public, professing to consider sacred, have lately adorned for themselves with the work of the boldest violator of the instincts of human honour and decency known yet in art-history, I will pursue by the help of that verse about Miriam, and some others, the subject which occupied my mind at both theatres, and to which, though in so apparently desultory manner, I have been nevertheless very earnestly endeavouring to lead you.

The going forth of the women of Israel after Miriam, with timbrels and with dances, was, as you doubtless remember, their expression of passionate triumph and thankfulness, after the full accomplishment of their deliverance from the Egyptians. That deliverance had been by the utter death of their enemies, and accompanied by stupendous miracle ; no human creatures could in an hour of triumph be surrounded by circumstances more solemn. I am not going to try to excite your feelings about them. Consider only for yourself what that seeing of the Egyptians "dead upon the sea-shore" meant to every soul that saw it. And then reflect that these intense emotions of mingled horror, triumph, and gratitude were expressed, in the visible presence of the Deity, by music and dancing. If you answer that you do not believe the Egyptians so perished, or that God ever appeared in a pillar of cloud, I reply, "Be it so—believe or disbelieve, as you choose ;—This is yet assuredly the fact, that the author of the poem or fable of the Exodus supposed that under such circumstances of Divine interposition as he had invented, the triumph of the Israelitish women would have been, and ought to have been, under the direction of a prophetess, expressed by music and dancing."

Nor was it possible that he should think otherwise, at whatever period he wrote ; both music and dancing being among all great ancient nations an appointed and very principal part of the worship of the gods.

And that very theatrical entertainment at which I sate thinking over these things for you—that pantomime, which depended throughout for its success on an appeal to the vices of the lower London populace, was in itself nothing but a cor-

rupt remnant of the religious ceremonies which guided the most serious faiths of the Greek mind, and laid the foundation of their gravest moral and didactic—more forcibly so because at the same time dramatic—literature. Returning to the Jewish history, you find soon afterwards this enthusiastic religious dance and song employed in their more common and habitual manner, in the idolatries under Sinai ; but beautifully again and tenderly, after the triumph of Jephthah, “And behold his daughter came out to meet him with timbrels and with dances.” Again, still more notably at the triumph of David with Saul, “the women came out of all the cities of Israel singing and dancing, to meet King Saul with tabrets, with joy, and with instruments of music.” And you have this joyful song and dance of the virgins of Israel not only incidentally alluded to in the most solemn passages of Hebrew religious poetry (as in Psalm lxxviii., 24, 25, and Psalm cxlix., 2, 3), but approved, and the restoration of it promised as a sign of God’s perfect blessing, most earnestly by the saddest of the Hebrew prophets, and in one of the most beautiful of all his sayings.

“The Lord hath appeared of old unto me saying, ‘Yea, I have loved thee with an everlasting love. Therefore, with loving-kindness have I drawn thee.—I will build thee, and thou shalt be built, O Virgin of Israel ; thou shalt again be adorned with thy tabrets, and shalt go forth in the dances with them that make merry’” (Jerem. xxxi., 3, 4 ; and compare v. 13). And finally, you have in two of quite the most important passages in the whole series of Scripture (one in the Old Testament, one in the New), the rejoicing in the repentance from, and remission of sins, expressed by means of music and dancing, namely, in the rapturous dancing of David before the returning ark ; and in the joy of the Father’s household at the repentance of the prodigal son.

I could put all this much better and more convincingly before you, if I were able to take any pains in writing at present ; but I am not, as I told you ; being weary and ill ; neither do I much care now to use what, in the very truth, are but tricks of literary art, in dealing with this so grave

subject. You see I write you my letter straightforward, and let you see all my scratchings out and puttings in; and if the way I say things shocks you, or any other reader of these letters, I cannot help it; this only I know, that what I tell you is true, and written more earnestly than anything I ever wrote with my best literary care; and that you will find it useful to think upon, however it be said. Now, therefore, to draw towards our conclusion. Supposing the Bible inspired, in any of the senses above defined, you have in these passages a positively Divine authority for the use of song and dance, as a means of religious service, and expression of national thanksgiving. Supposing it not inspired, you have (taking the passages for as slightly authoritative as you choose) record in them, nevertheless, of a state of mind in a great nation producing the most beautiful religious poetry and perfect moral law hitherto known to us, yet only expressible by them, to the fulfilment of their joyful passion, by means of processional dance and choral song.

Now I want you to contrast this state of religious rapture with some of our modern phases of mind in parallel circumstances. You see that the promise of Jeremiah's, "Thou shalt go forth in the dances of them that make merry," is immediately followed by this, "Thou shalt yet *plant vines* upon the mountains of Samaria." And again, at the yearly feast to the Lord in Shiloh, the dancing of the virgins was in the midst of the vineyards (Judges xxi., 21), the feast of the vintage being in the south, as our harvest-home in the north, a peculiar occasion of joy and thanksgiving. I happened to pass the autumn of 1863 in one of the great vine districts of Switzerland, under the slopes of the outlying branch of the Jura which limits the arable plain of the Canton Zurich, some fifteen miles north of Zurich itself. That city has always been a renowned stronghold of Swiss Protestantism, next in importance only to Geneva; and its evangelical zeal for the conversion of the Catholics of Uri, and endeavours to bring about that spiritual result by stopping the supplies of salt they needed to make their cheeses with, brought on (the Uri men reading their Matt. v. 13, in a different sense) the battle of

Keppel, and the death of the reformer, Zwinglius. The town itself shows the most gratifying signs of progress in all the modern arts and sciences of life. It is nearly as black as Newcastle—has a railroad station larger than the London terminus of the Chatham and Dover—fouls the stream of the Limmat as soon as it issues from the lake, so that you might even venture to compare the formerly simple and innocent Swiss river (I remember it thirty years ago—a current of pale green crystal) with the highly educated English streams of Weare or Tyne; and, finally, has as many French prints of dissolute tendency in its principal shop windows, as if they had the privilege of opening on the Parisian Boulevards. I was somewhat anxious to see what species of thanksgiving or exultation would be expressed, at *their* vintage, by the peasantry in the neighbourhood of this much enlightened evangelical and commercial society. It consisted in two ceremonies only. During the day, the servants of the farms where the grapes had been gathered, collected in knots about the vineyards, and slowly fired horse-pistols, from morning to evening. At night they got drunk, and staggered up and down the hill paths, uttering at short intervals yells and shrieks, differing only from the howling of wild animals by a certain intended and insolent discordance, only attainable by the malignity of debased human creatures. I must not do the injustice to the Zurich peasantry of implying that this manner of festivity is peculiar to them. A year before, in 1862, I had formed the intention of living some years in the neighbourhood of Geneva, and had established myself experimentally on the eastern slope of the Mont Salève; but I was forced to abandon my purpose at last, because I could not endure the rabid howling, on Sunday evenings, of the holiday-makers who came out from Geneva to get drunk in the mountain village. By the way, your last letter, with its extracts about our traffic in gin, is very valuable. I will come to that part of the business in a little while. Meantime, my friend, note this, respecting what I have told you, that in the very centre of Europe, in a country which is visited for their chief pleasure by the most refined and thoughtful persons

among all Christian nations—a country made by God's hand the most beautiful in the temperate regions of the earth, and inhabited by a race once capable of the sternest patriotism and simplest purity of life, your modern religion, in the very stronghold of it, has reduced the song and dance of ancient virginal thanksgiving to the howlings and staggerings of men betraying, in intoxication, a nature sunk more than half way towards the beasts; and you will begin to understand why the Bible should have been "illustrated" by Gustave Doré.

One word more is needful, though this letter is long already. The peculiar ghastliness of this Swiss mode of festivity is in its utter failure of joy; the paralysis and helplessness of a vice in which there is neither pleasure, nor art. But we are not, throughout Europe, wholly thus. There is such a thing, yet, as rapturous song and dance among us, though not indicative by any means of joy over repentant sinners. You must come back to Paris with me again. I had an evening to spare there, last summer, for investigation of theatres; and as there was nothing at any of them that I cared much about seeing, I asked a valet-de-place at Meurice's, what people were generally going to. He said, "All the English went to see the *Lanterne Magique*." I do not care to tell you what general entertainment I received in following, for once, the lead of my countrymen; but it closed with the representation of the characteristic dancing of all ages of the world; and the dance given as characteristic of modern time was the Caneau, which you will see alluded to in the extract given in the note at page 61 of *Sesame and Lilies*. "The ball terminated with a Devilish Chain and a Caneau of Hell, at seven in the morning." It was led by four principal dancers (who have since appeared in London in the *Huguenot Captain*), and it is many years since I have seen such perfect dancing, as far as finish and accuracy of art and fulness of animal power and fire are concerned. Nothing could be better done, in its own evil way, the object of the dance throughout being to express in every gesture the wildest fury of insolence and vicious passions possible to human creatures. So that you see, though for the present we find ourselves utterly incapable of a rapt

ure of gladness or thanksgiving, the dance which is presented as characteristic of modern civilization is still rapturous enough—but it is with rapture of blasphemy. Now, just read from the 12th to 16th page of the preface to *Sesame and Lilies*, and I will try to bring all these broken threads into some warp and woof, in my text two letters—if I cannot in one.

LETTER X.

THE MEANING, AND ACTUAL OPERATION, OF SATANIC OR DEMONIAL
INFLUENCE.

March 16, 1867.

I AM afraid my weaving, after all, will be but rough work—and many ends of threads ill-knotted—but you will see there's a pattern at last, meant by them all.

You may gather from the facts given you in my last letter, that as the expression of true and holy gladness was in old time stately offered up by men for a part of worship to God their Father—so the expression of false and unholy gladness is in modern times, with as much distinctness and plainness, asserted by them openly to be offered to another spirit: “Chain of the Devil, and Cancan of Hell” being the names assigned to these modern forms of joyous procession.

Now, you know that among the best and wisest of our present religious teachers, there is a gradual tendency to disbelieve, and to preach their disbelief, in the commonly received ideas of the Devil, and of his place, and his work. While, among some of our equally well-meaning, but far less wise religious teachers, there is, in consequence, a panic spreading, in anticipation of the moral dangers which must follow on the loss of the help of the Devil. One of the last appearances in public of the author of the *Christian Year* was at a conclave of clergymen assembled in defence of faith in damnation. The sense of the meeting generally was, that there *must* be such a place as hell, because no one would ever behave decently upon earth unless they were kept in wholesome fear of

the fires beneath it : and Mr. Keble especially insisting on this view, related a story of an old woman, who had a wicked son, and who having lately heard with horror of the teaching of Mr. Maurice and others, exclaimed pathetically, " My son is bad enough as it is, and if he were not afraid of hell, what would become of him ! " (I write from memory, and cannot answer for the words, but I can for their purport.)

Now, my friend, I am afraid that I must incur the charge of such presumption as may be involved in variance from *both* these systems of teaching.

I do not merely *believe* there is such a place as hell. I *know* there is such a place ; and I know also that when men have got to the point of believing virtue impossible but through dread of it, they have got *into* it.

I mean, that according to the distinctness with which they hold such a creed, the stain of nether fire has passed upon them. In the depth of his heart Mr. Keble could not have entertained the thought for an instant ; and I believe it was only as a conspicuous sign to the religious world of the state into which they were sinking, that this creed, possible in its sincerity only to the basest of them, was nevertheless appointed to be uttered by the lips of the most tender, gracious, and beloved of their teachers.

" Virtue impossible but for fear of hell "—a lofty creed for your English youth—and a holy one ! And yet, my friend, there was something of right in the terrors of this clerical conclave. For, though you should assuredly be able to hold your own in the straight ways of God, without always believing that the Devil is at your side, it is a state of mind much to be dreaded, that you should not *know* the Devil when you *see* him there. For the probability is, that when you see him, the way you are walking in is not one of God's ways at all, but is leading you into quite other neighbourhoods than His. On His way, indeed, you may often, like Albert Durer's Knight, see the Fiend behind you, but you will find that he drops always farther and farther behind ; whereas if he jogs with you at your side, it is probably one of his own by-paths you are got on. And, in any case, it is a highly desirable matter that you

should know him when you set eyes on him, which we are very far from doing in these days, having convinced ourselves that the graminivorous form of him, with horn and tail, is extant no longer. But in fearful truth, the Presence and Power of him is here ; in the world, with us, and within us, mock as you may ; and the fight with him, for the time, sore, and widely unprosperous.

Do not think I am speaking metaphorically, or rhetorically, or with any other than literal and earnest meaning of words. Hear me, I pray you, therefore, for a little while, as earnestly as I speak.

Every faculty of man's soul, and every instinct of it by which he is meant to live, is exposed to its own special form of corruption : and whether within Man, or in the external world, there is a power or condition of temptation which is perpetually endeavouring to reduce every glory of his soul, and every power of his life, to such corruption as is possible to them. And the more beautiful they are, the more fearful is the death which is attached as a penalty to their degradation.

Take for instance that which, in its purity, is the source of the highest and purest mortal happiness—Love. Think of it first at its highest—as it may exist in the disciplined spirit of a perfect human creature ; as it has so existed again and again, and does always, wherever it truly exists at all, as the *purifying* passion of the soul. I will not speak of the transcendental and imaginative intensity in which it may reign in noble hearts, as when it inspired the greatest religious poem yet given to men, but take it in its true and quiet purity in any simple lover's heart—as you have it expressed, for instance, thus, exquisitely, in the *Angel in the House* :—

“ And there, with many a blissful tear,
 I vowed to love and prayed to wed
 The maiden who had grown so dear :—
 Thanked God, who had set her in my path
 And promised, as I hoped to win,
 I never would sully my faith
 By the least selfishness or sin ;
 Whatever in her sight I'd seem

I'd really be ; I ne'er would blend,
 With my delight in her, a dream
 'Twould change her cheek to comprehend ;
 And, if she wished it, would prefer
 Another's to my own success ;
 And always seek the best for her
 With unofficial tenderness."

Take this for the pure type of it in its simplicity ; and then think of what corruption this passion is capable. I will give you a type of that also, and at your very doors. I cannot refer you to the time when the crime happened ; but it was some four or five years ago, near Newcastle, and it has remained always as a ghastly landmark in my mind, owing to the horror of the external circumstances. The body of the murdered woman was found naked, rolled into a heap of ashes, at the mouth of one of your pits.

Take those two limiting examples, of the Pure Passion, and of its corruption. Now, whatever influence it is, without or within us, which has a tendency to degrade the one towards the other, is literally and accurately "Satanic." And this treacherous or deceiving spirit is perpetually at work, so that all the worst evil among us is a betrayed or corrupted good. Take religion itself : the desire of finding out God, and placing one's self in some true son's or servant's relation to Him. The Devil, that is to say, the deceiving spirit within us, or outside of us, mixes up our own vanity with this desire ; makes us think that in our love to God we have established some connection with Him which separates us from our fellow-men, and renders us superior to them. Then it takes but one wave of the Devil's hand ; and we are burning them alive for taking the liberty of contradicting us.

Take the desire of teaching—the eternally unselfish and noble instinct for telling to those who are ignorant, the truth we know, and guarding them from the errors we see them in danger of ;—there is no nobler, no more constant instinct in honourable breasts ; but let the Devil formalise, and mix the pride of a profession with it—get foolish people entrusted with the business of instruction, and make their giddy heads giddier

by putting them up in pulpits above a submissive crowd—and you have it instantly corrupted into its own reverse; you have an alliance *against* the light, shrieking at the sun, and moon, and stars, as profane spectra:—a company of the blind, beseeching those they lead to remain blind also. “The heavens and the lights that rule them are untrue; the laws of creation are treacherous; the poles of the earth are out of poise. But *we* are true. Light is in us only. Shut your eyes close and fast, and we will lead you.”

Take the desire and faith of mutual help; the virtue of vowed brotherhood for the accomplishment of common purpose (without which nothing can be wrought by multitudinous bands of men); let the Devil put pride of caste into it, and you have a military organization applied for a thousand years to maintain that higher caste in idleness by robbing the labouring poor; let the Devil put a few small personal interests into it, and you have all faithful deliberation on national law rendered impossible in the parliaments of Europe, by the antagonism of parties.

Take the instinct for justice, and the natural sense of indignation against crime; let the Devil colour it with personal passion, and you have a mighty race of true and tender-hearted men living for centuries in such bloody feud that every note and word of their national songs is a dirge, and every rock of their hills is a grave-stone. Take the love of beauty, and power of imagination, which are the source of every true achievement in art; let the Devil touch them with sensuality, and they are stronger than the sword or the flame to blast the cities where they were born, into ruin without hope. Take the instinct of industry and ardour of commerce, which are meant to be the support and mutual maintenance of man; let the Devil touch them with avarice, and you shall see the avenues of the exchange choked with corpses that have died of famine.

Now observe—I leave you to call this deceiving spirit what you like—or to theorise about it as you like. All that I desire you to recognise is the fact of its being here, and the need of its being fought with. If you take the Bible’s account of it,

or Dante's, or Milton's, you will receive the image of it as a mighty spiritual creature, commanding others, and resisted by others ; if you take Æschylus's or Hesiod's account of it, you will hold it for a partly elementary and unconscious adversity of fate, and partly for a group of monstrous spiritual agencies, connected with death, and begotten out of the dust ; if you take a modern rationalist's, you will accept it for a mere treachery and want of vitality in our own moral nature exposing it to loathsomeness of moral disease, as the body is capable of mortification or leprosy. I do not care what you call it,—whose history you believe of it,—nor what you yourself can imagine about it ; the origin, or nature, or name may be as you will, but the deadly reality of the thing is with us, and warring against us, and on our true war with it depends whatever life we can win. Deadly reality, I say. The puff-adder or horned asp are not more real. Unbelievable,—*those*,—unless you had seen them ; no fable could have been coined out of any human brain so dreadful, within its own poor material sphere, as that blue-lipped serpent—working its way sidelong in the sand. As real, but with sting of eternal death—this worm that dies not, and fire that is not quenched, within our souls, or around them. Eternal death, I say—sure, that, whatever creed you hold ;—if the old Scriptural one, Death of perpetual banishment from before God's face ; if the modern rationalist one, Death eternal for *us*, instant and unredeemable ending of lives wasted in misery.

That is what this unquestionably present—this, according to his power, *omni*-present—fiend, brings us to daily. *He* is the person to be “voted” against, my working friend ; it is worth something, having a vote against *him*, if you can get it ! Which you can, indeed ; but not by gift from Cabinet Ministers ; you must work warily with your own hands, and drop sweat of heart's blood, before you can record that vote effectually.

Of which more in next letter.

LETTER XI.

THE SATANIC POWER IS MAINLY TWOFOLD ; THE POWER OF CAUSING FALSEHOOD AND THE POWER OF CAUSING PAIN.—THE RESISTANCE IS BY LAW OF HONOUR AND LAW OF DELIGHT.

March 19, 1867.

You may perhaps have thought my last three or four letters mere rhapsodies. They are nothing of the kind ; they are accurate accounts of literal facts, which we have to deal with daily. This thing, or power, opposed to God's power, and specifically called "Mammon" in the Sermon on the Mount, is in deed and in truth a continually present and active enemy, properly called "*Arch-enemy*," that is to say, "Beginning and Prince of Enemies," and daily we have to record our vote for, or against him. Of the manner of which record we were next to consider.

This enemy is always recognisable, briefly in two functions. He is pre-eminently the Lord of *Lies* and the Lord of *Pain*. Wherever lies are, he is ; wherever pain is, he has been—so that of the Spirit of Wisdom (who is called God's Helper, as Satan His Adversary) it is written, not only that by her Kings reign, and Princes decree justice, but also that her ways are ways of Pleasantness, and all her paths Peace.

Therefore, you will succeed, you working men, in recording your votes against this arch-enemy, precisely in the degree in which you can do away with falsehood and pain in your work and lives ; and bring truth into the one, and pleasure into the other ; all education being directed to make yourselves and your children *capable of Honesty*, and *capable of Delight* ; and to rescue yourselves from iniquity and agony. And this is what I meant by saying in the preface to *Unto this Last* that the central requirement of education consisted in giving habits of gentleness and justice ; "gentleness" (as I will show you presently) being the best single word I could have used to express the capacity for giving and receiving true pleasure ; and "justice," being similarly the most comprehensive word for all kind of honest dealing.

Now, I began these letters with the purpose of explaining the nature of the requirements of justice first, and then those of gentleness, but I allowed myself to be led into that talk about the theatres, not only because the thoughts could be more easily written as they came, but also because I was able thus to illustrate for you more directly the nature of the enemy we have to deal with. You do not perhaps know, though I say this diffidently (for I often find working men know many things which one would have thought were out of their way), that music was among the Greeks, quite the first means of education ; and that it was so connected with their system of ethics and of intellectual training, that the God of Music is with them also the God of Righteousness ;—the God who purges and avenges iniquity, and contends with their Satan as represented under the form of Python, “the corrupter.” And the Greeks were incontrovertibly right in this. Music is the nearest at hand, the most orderly, the most delicate, and the most perfect, of all bodily pleasures ; it is also the only one which is equally helpful to all the ages of man, — helpful from the nurse’s song to her infant, to the music, unheard of others, which often, if not most frequently, haunts the death-bed of pure and innocent spirits. And the action of the deceiving or devilish power is in *nothing* shown quite so distinctly among us at this day,—not even in our commercial dishonesties, nor in our social cruelties,—as in its having been able to take away music, as an instrument of education, altogether ; and to enlist it almost wholly in the service of superstition on the one hand, and of sensuality on the other.

This power of the Muses, then, and its proper influence over your workmen, I shall eventually have much to insist upon with you ; and in doing so I shall take that beautiful parable of the Prodigal Son (which I have already referred to), and explain as far as I know, the significance of it, and then I will take the three means of festivity, or wholesome human joy, therein stated—fine dress, rich food, and music ; — (“bring forth the fairest robe for him,”—“bring forth the fatted calf, and kill it ;” “as he drew nigh, he heard music and dancing ;”) and I will show you how all these three things,

fine dress, rich food, and music (including ultimately all the other arts) are meant to be sources of life, and means of moral discipline, to all men ; and how they have all three been made, by the Devil, the means of guilt, dissoluteness, and death. But first I must return to my original plan of these letters, and endeavour to set down for you some of the laws which in a true Working Men's Parliament must be ordained in defence of Honesty.

Of which laws (preliminary to all others, and necessary above all others), having now somewhat got my ravelled threads together again, I will begin to talk in my next letter.

LETTER XII.

THE NECESSITY OF IMPERATIVE LAW TO THE PROSPERITY OF STATES.

March 19, 1867.

I HAVE your most interesting letter,¹ which I keep for reference, when I come to the consideration of its subject in its proper place, under the head of the abuse of Food. I do not wonder that your life should be rendered unhappy by the scenes of drunkenness which you are so often compelled to witness ; nor that this so gigantic and infectious evil should seem to you the root of the greater part of the misery of our lower orders. I do not wonder that Sir Walter Trevelyan has given his best energy to its repression ; nor even that another friend, George Cruikshank, has warped the entire current of his thoughts and life, at once to my admiration and my sorrow, from their natural field of work, that he might spend them, in struggle, for the poor lowest people whom he knows so well, with this fiend who grasps his victims by the throat first, and then by the heart. I wholly sympathise with you in indignation at the methods of temptation employed, and at the use of the fortunes made, by the vendors of death ; and whatever immediately applicable legal means there might be of restricting the causes of drunkenness, I should without

¹ Appendix IV.

hesitation desire to bring into operation. But all such appliance I consider temporary and provisionary ; nor, while there is record of the miracle at Cana (not to speak of the sacrament) can I conceive it possible, without (logically) the denial of the entire truth of the New Testament, to reprobate the use of wine as a stimulus to the powers of life. Supposing we did deny the words and deeds of the Founder of Christianity, the authority of the wisest heathens, especially that of Plato in the *Laws*, is wholly against abstinence from wine ; and much as I can believe, and as I have been endeavouring to make you believe also, of the subtlety of the Devil, I do not suppose the vine to have been one of his inventions. Of this, however, more in another place. By the way, was it not curious that in the *Manchester Examiner*, in which that letter of mine on the abuse of dancing appeared, there chanced to be in the next column a paragraph giving an account of a girl stabbing her betrayer in a ball room ; and another paragraph describing a Parisian character, which gives exactly the extreme type I wanted, for example of the abuse of food ?¹

I return, however, now to the examination of possible means for the enforcement of justice, in temper and in act, as the first of political requirements. And as, in stating my conviction of the necessity of certain stringent laws on this matter, I shall be in direct opposition to Mr. Stuart Mill ; and more or less in opposition to other professors of modern political economy, as well as to many honest and active promoters of the privileges of working men (as if privilege only were wanted, and never restraint !), I will give you, as briefly as I can, the grounds on which I am prepared to justify such opposition.

When the crew of a wrecked ship escape in an open boat, and the boat is crowded, the provisions scanty, and the prospect of making land distant, laws are instantly established and enforced which no one thinks of disobeying. An entire equality of claim to the provisions is acknowledged without dispute ; and an equal liability to necessary labour. No man who can row is allowed to refuse his oar ; no man, however much money he may have saved in his pocket, is allowed so

¹ Appendix V.

much as half a biscuit beyond his proper ration. Any riotous person who endangered the safety of the rest would be bound, and laid in the bottom of the boat, without the smallest compunction for such violation of the principles of individual liberty; and on the other hand, any child, or woman, or aged person, who was helpless, and exposed to greater danger and suffering by their weakness, would receive more than ordinary care and indulgence, not unaccompanied with unanimous self-sacrifice, on the part of the labouring crew.

There is never any question, under circumstances like these, of what is right and wrong, worthy and unworthy, wise or foolish. If there *be* any question, there is little hope for boat or crew. The right man is put at the helm; every available hand is set to the oars; the sick are tended, and the vicious restrained, at once, and decisively; or if not, the end is near.

Now, the circumstances of every associated group of human society, contending bravely for national honours, and felicity of life, differ only from those thus supposed, in the greater, instead of less, necessity for the establishment of restraining law. There is no point of difference in the difficulties to be met, nor in the rights reciprocally to be exercised. Vice and indolence are not less, but more, injurious in a nation than in a boat's company; the modes in which they affect the interests of worthy persons being far more complex, and more easily concealed. The right of restraint, vested in those who labour, over those who would impede their labour, is as absolute in the large as in the small society; the equal claim to share in whatever is necessary to the common life (or commonwealth) is as indefeasible; the claim of the sick and helpless to be cared for by the strong with earnest self-sacrifice, is as pitiful and as imperative; the necessity that the governing authority should be in the hands of a true and trained pilot is as clear, and as constant. In none of these conditions is there any difference between a nation and a boat's company. The only difference is in this, that the impossibility of discerning the effects of individual error and crime, or of counteracting them by individual effort, in the affairs of a great nation, renders it tenfold more necessary than in a small society

that direction by law should be sternly established. Assume that your boat's crew is disorderly and licentious, and will, by agreement, submit to no order;—the most troublesome of them will yet be easily discerned; and the chance is that the best man among them knocks him down. Common instinct of self-preservation will make the rioters put a good sailor at the helm, and impulsive pity and occasional help will be, by heart and hand, here and there given to visible distress. Not so in the ship of the realm. The most troublesome persons in it are usually the least recognized for such, and the most active in its management; the best men mind their own business patiently, and are never thought of; the good helmsman never touches the tiller but in the last extremity; and the worst forms of misery are hidden, not only from every eye, but from every thought. On the deck, the aspect is of Cleopatra's galley—under hatches, there is a slave-hospital; while, finally (and this is the most fatal difference of all), even the few persons who care to interfere energetically, with purpose of doing good, can, in a large society, discern so little of the real state of evil to be dealt with, and judge so little of the best means of dealing with it, that half of their best efforts will be misdirected, and some may even do more harm than good. Whereas it is the sorrowful law of this universe that evil, even unconscious and unintended, never fails of *its* effect; and in a state where the evil and the good, under conditions of individual "liberty," are allowed to contend together, not only every *stroke* on the Devil's side tells—but every *slip* (the mistakes of wicked men being as mischievous as their successes); while on the side of right, there will be much direct and fatal defeat, and, even of its measures of victory, half will be fruitless.

It is true, of course, that, in the end of ends, nothing but the right conquers: the prevalent thorns of wrong, at last crackle away in indiscriminate flame: and of the good seed sown, one grain in a thousand, at last, verily comes up—and somebody lives by it; but most of our great teachers, not excepting Carlyle and Emerson themselves, are a little too encouraging in their proclamation of this comfort, not, to my

mind, very sufficient, when for the present our fields are full of nothing but nettles and thistles, instead of wheat; and none of them seem to me yet to have enough insisted on the inevitable power and infectiousness of all evil, and the easy and utter extinguishableness of good. Medicine often fails of its effect—but poison never: and while, in summing the observation of past life, not unwatchfully spent, I can truly say that I have a thousand times seen patience disappointed of her hope, and wisdom of her aim, I have never yet seen folly fruitless of mischief, nor vice conclude but in calamity.

There is, however, one important condition in national economy, in which the analogy of that of a ship's company is incomplete: namely, that while labour at oar or sail is necessarily united, and can attain no independent good, or personal profit, the labour properly undertaken by the several members of a political community is necessarily, and justly, within certain limits, independent; and obtains for them independent advantage, of which, if you will glance at the last paragraph of the first essay in *Munera Pulveris*,¹ you will see I should be the last person to propose depriving them. This great difference in final condition involves necessarily much complexity in the system and application of general laws; but it in no wise abrogates,—on the contrary, it renders yet more imperative,—the necessity for the firm ordinance of such laws, which, marking the due limits of independent agency, may enable it to exist in full energy, not only without becoming injurious, but so as more variously and perfectly to promote the entire interests of the commonwealth.

I will address myself, therefore, in my next letter, to the statement of some of these necessary laws.

¹ Appendix VI.

LETTER XIII.

THE PROPER OFFICES OF THE BISHOP AND DUKE ; OR, "OVERSEER"
AND "LEADER."

March 21, 1867.

I SEE, by your last letter, for which I heartily thank you, that you would not sympathise with me in my sorrow for the desertion of his own work by George Cruikshank, that he may fight in the front of the temperance ranks. But you do not know what work he has left undone, nor how much richer inheritance you might have received from his hand. It was no more *his* business to etch diagrams of drunkenness than it is mine at this moment to be writing these letters against anarchy. It is the first mild day of March" (high time, I think, that it should be!), and by rights I ought to be out among the budding banks and hedges, outlining sprays of hawthorn, and clusters of primrose. This is *my* right work ; and it is not, in the inner gist and truth of it, right nor good, for you, or for anybody else, that Cruikshank with his great gift, and I with my weak, but yet thoroughly clear and definite one, should both of us be tormented by agony of indignation and compassion, till we are forced to give up our peace, and pleasure, and power ; and rush down into the streets and lanes of the city, to do the little that is in the strength of our single hands against their uncleanness and iniquity. But, as in a sorely besieged town, every man must to the ramparts, whatsoever business he leaves, so neither he nor I have had any choice but to leave our household stuff, and go on crusade, such as we are called to ; not that I mean, if Fate may be anywise resisted, to give up the strength of my life, as he has given his ; for I think he was wrong in doing so ; and that he should only have carried the fiery cross his appointed leagues, and then given it to another hand ; and, for my own part, I mean these very letters to close my political work for many a day ; and I write them, not in any hope of their being at present listened to, but to disburden my heart of the

witness I have to bear, that I may be free to go back to my garden lawns, and paint birds and flowers there.

For these same statutes which we are to consider to-day, have indeed been in my mind now these fourteen years, ever since I wrote the last volume of the *Stones of Venice*, in which you will find, in the long note on Modern Education (p. 212), most of what I have been now in detail writing to you, hinted in abstract; and, at the close of it, this sentence, of which I solemnly now avouch (in thankfulness that I was permitted to write it), every word:—"Finally, I hold it for indisputable, that the first duty of a State is to see that every child born therein shall be well housed, clothed, fed, and educated, till it attain years of discretion. But in order to the effecting this the Government must have an authority over the people of which we now do not so much as dream."

That authority I did not then endeavour to define, for I knew all such assertions would be useless, and that the necessarily resultant outcry would merely diminish my influence in other directions. But now I do not care about influence any more, it being only my concern to say truly that which I know, and, if it may be, get some quiet life, yet, among the fields in the evening shadow.

There is, I suppose, no word which men are prouder of the right to attach to their names, or more envious of others who bear it, when they themselves may not, than the word "noble." Do you know what it originally meant, and always, in the right use of it, means? It means a "known" person; one who has risen far enough above others to draw men's eyes to him, and to be known (honorably) for such and such an one. "Ignoble," on the other hand, is derived from the same root as the word "ignorance." It means an unknown, inglorious person. And no more singular follies have been committed by weak human creatures, than those which have been caused by the instinct, pure and simple, of escaping from this obscurity. Instinct, which, corrupted, will hesitate at no means, good or evil, of satisfying itself with notoriety—instinct, nevertheless, which, like all other natural ones, has a true and pure purpose, and ought always in a worthy way to be satisfied.

All men ought to be in this sense “noble ;” known of each other, and desiring to be known. And the first law which a nation, desiring to conquer all the devices of the Father of Lies, should establish among its people, is that they *shall* be so known.

Will you please now read the forty-third and forty-fourth pages of *Sesame and Lilies*.¹ The reviewers in the ecclesiastical journals laughed at them, as a rhapsody, when the book came out ; none having the slightest notion of what I meant (nor, indeed, do I well see how it could be otherwise!). Nevertheless, I meant precisely and literally what is there said, namely, that a bishop's duty being to watch over the *souls* of his people, and give account of every one of them, it becomes practically necessary for him first to give some account of their *bodies*. Which he was wont to do in the early days of Christianity by help of a person called “deacon” or “ministering servant,” whose name is still retained among preliminary ecclesiastical dignities, vainly enough! Putting, however, all question of forms and names aside, the thing actually needing to be done is this—that over every hundred (or some not much greater number) of the families composing a Christian State, there should be appointed an overseer, or bishop, to render account, to the State, of the life of every individual in those families ; and to have care both of their interest and conduct to such an extent as they may be willing to admit, or as their faults may justify ; so that it may be impossible for any person, however humble, to suffer from unknown want, or live in unrecognised crimes ;—such help and observance being rendered without officiousness either of interference or inquisition (the limits of both being determined by national law), but with the patient and gentle watchfulness which true Christian pastors now exercise over their flocks ; only with a higher legal authority, presently to be defined, of interference on due occasion.

And with this farther function, that such overseers shall be not only the pastors, but the biographers, of their people ; a written statement of the principal events in the life of each family

¹ Appendix VII.

being annually required to be rendered by them to a superior State officer. These records, laid up in public offices, would soon furnish indications of the families whom it would be advantageous to the nation to advance in position, or distinguish with honour, and aid by such reward as it should be the object of every Government to distribute no less punctually, and far more frankly, than it distributes punishment (compare *Munera Pulveris*, Essay IV., in paragraph on Critic Law), while the mere fact of permanent record being kept of every event of importance, whether disgraceful or worthy of praise, in each family, would of itself be a deterrent from crime, and a stimulant to well-deserving conduct, far beyond mere punishment or reward.

Nor need you think that there would be anything in such a system un-English, or tending to espionage. No uninvited visits should ever be made in any house, unless law had been violated ; nothing recorded, against its will, of any family, but what was inevitably known of its publicly visible conduct, and the results of that conduct. What else was written should be only by the desire, and from the communications, of its head. And in a little while it would come to be felt that the true history of a nation was indeed not of its wars, but of its households ; and the desire of men would rather be to obtain some conspicuous place in these honourable annals, than to shrink behind closed shutters from public sight. Until at last, George Herbert's grand word of command would hold not only on the conscience, but the actual system and outer economy of life,

“ Think the King sees thee still, for *his* King does.”

Secondly, above these bishops or pastors, who are only to be occupied in offices of familiar supervision and help, should be appointed higher officers of State, having executive authority over as large districts as might be conveniently (according to the number and circumstances of their inhabitants) committed to their care ; officers, who, according to the reports of the pastors, should enforce or mitigate the operation of too

rigid general law, and determine measures exceptionally necessary for public advantage. For instance, the general law being that all children of the operative classes, at a certain age, should be sent to public schools, these superior officers should have power, on the report of the pastors, to dispense with the attendance of children who had sick parents to take charge of, or whose home-life seemed to be one of better advantage for them than that of the common schools; or who for any other like cause might justifiably claim remission. And it being the general law that the entire body of the public should contribute to the cost, and divide the profits, of all necessary public works and undertakings, as roads, mines, harbour protections, and the like, and that nothing of this kind should be permitted to be in the hands of private speculators, it should be the duty of the district officer to collect whatever information was accessible respecting such sources of public profit; and to represent the circumstances in Parliament: and then, with parliamentary authority, but on his own sole personal responsibility, to see that such enterprises were conducted honestly, and with due energy and order.

The appointment to both these offices should be by election, and for life; by what forms of election shall be matter of inquiry, after we have determined some others of the necessary constitutional laws.

I do not doubt but that you are already beginning to think it was with good reason I held my peace these fourteen years,—and that, for any good likely to be done by speaking, I might as well have held it altogether!

It may be so: but merely to complete and explain my own work, it is necessary that I should say these things finally; and I believe that the imminent danger to which we are now in England exposed by the gradually accelerated fall of our aristocracy (wholly their own fault), and the substitution of money-power for their martial one; and by the correspondently imminent prevalence of mob-violence here, as in America; together with the continually increasing chances of insane war, founded on popular passion, whether of pride, fear, or acquisitiveness,—all these dangers being further darkened

and degraded by the monstrous forms of vice and selfishness which the appliances of recent wealth, and of vulgar mechanical art, make possible to the million,—will soon bring us into a condition in which men will be glad to listen to almost any words but those of a demagogue, and to seek any means of safety rather than those in which they have lately trusted. So, with your good leave, I will say my say to the end, mock at it who may.

P.S.—I take due note of the regulations of trade proposed in your letter just received¹—all excellent. I shall come to them presently, “Cash payment” above all. You may write that on your trade-banners in letters of gold, wherever you would have them raised victoriously.

LETTER XIV.

THE FIRST GROUP OF ESSENTIAL LAWS—AGAINST THEFT BY FALSE WORK, AND BY BANKRUPTCY.—NECESSARY PUBLICITY OF ACCOUNTS.

March 26, 1867.

I FEEL much inclined to pause at this point, to answer the kind questions and objections which I know must be rising in your mind, respecting the authority supposed to be lodged in the persons of the officers just specified. But I can neither define, nor justify to you, the powers I would desire to see given to them, till I state to you the kind of laws they would have to enforce : of which the first group should be directed to the prevention of all kinds of thieving ; but chiefly of the occult and polite methods of it ; and, of all occult methods, chiefly, the making and selling of bad goods. No form of theft is so criminal as this—none so deadly to the State. If you break into a man’s house and steal a hundred pounds’ worth of plate, he knows his loss, and there is an end (besides that you take your risk of punishment for your gain, like a man). And if you do it bravely and openly, and habitually live by such inroad, you

¹ Appendix VIII.

may retain nearly every moral and manly virtue, and become a heroic rider and reiver, and hero of song. But if you swindle me out of twenty shillings'-worth of quality, on each of a hundred bargains, I lose my hundred pounds all the same, and I get a hundred untrustworthy articles besides, which will fail me and injure me in all manner of ways, when I least expect it; and you, having done your thieving basely, are corrupted by the guilt of it to the very heart's core.

This is the first thing, therefore, which your general laws must be set to punish, fiercely, immitigably, to the utter prevention and extinction of it, or there is no hope for you. No religion that ever was preached on this earth of God's rounding, ever proclaimed any salvation to sellers of bad goods. If the Ghost that is in you, whatever the essence of it, leaves your hand a juggler's and your heart a cheat's, it is not a Holy Ghost, be assured of that. And for the rest, all political economy, as well as all higher virtue, depends *first on sound work*.

Let your laws then, I say, in the beginning, be set to secure this. You cannot make punishment too stern for subtle knavery. Keep no truce with this enemy, whatever pardon you extend to more generous ones. For light weights and false measures, or for proved adulteration or dishonest manufacture of article, the penalty should be simply confiscation of goods and sending out of the country. The kind of person who desires prosperity by such practices, could not be made to "emigrate" too speedily. What to do with him in the place you appointed to be blessed by his presence, we will in time consider.

Under such penalty, however, and yet more under the pressure of such a right public opinion as could pronounce and enforce such penalty, I imagine that sham articles would become speedily as rare as sound ones are now. The chief difficulty in the matter would be to fix your standard. This would have to be done by the guild of every trade in its own manner, and within certain easily recognizable limits; and this fixing of standard would necessitate much simplicity in the forms and kinds of articles sold. You could only warrant a certain kind of glazing or painting in china, a certain quality

of leather or cloth, bricks of a certain clay, loaves of a defined mixture of meal. Advisable improvements or varieties in manufacture would have to be examined and accepted by the trade guild : when so accepted, they would be announced in public reports ; and all puffery and self-proclamation, on the part of tradesmen, absolutely forbidden, as much as the making of any other kind of noise or disturbance.

But observe, this law is only to have force over tradesmen whom I suppose to have joined voluntarily in carrying out a better system of commerce. Outside of their guild, they would have to leave the rogue to puff and cheat as he chose, and the public to be gulled as they chose. All that is necessary is that the said public should clearly know the shops in which they could get warranted articles ; and, as clearly, those in which they bought at their own risk.

And the above-named penalty of confiscation of goods should of course be enforced only against dishonest members of the trade guild. If people chose to buy of those who had openly refused to join an honest society, they should be permitted to do so at their pleasure and peril : and this for two reasons ; the first, that it is always necessary, in enacting strict law, to leave some safety valve for outlet of irrepressible vice (nearly all the stern lawgivers of old time erred by oversight in this ; so that the morbid elements of the State, which it should be allowed to get rid of in a cutaneous and openly curable manner, were thrown inwards, and corrupted its constitution, and broke all down) ; the second, that operations of trade and manufacture conducted under and guarded by severe law, ought always to be subject to the stimulus of such erratic external ingenuity as cannot be tested by law, or would be hindered from its full exercise by the dread of it ; not to speak of the farther need of extending all possible indulgence to foreign traders who might wish to exercise their industries here without liability to the surveillance of our trade guilds.

Farther, while for all articles warranted by the guild (as above supposed) the prices should be annually fixed for the trade throughout the kingdom ; and the producing workmen's wages fixed, so as to define the master's profits within limits

admitting only such variation as the nature of the given article of sale rendered inevitable;—yet, in the production of other classes of articles, whether by skill of applied handicraft, or fineness of material above the standard of the guild, attaining, necessarily, values above its assigned prices, every firm should be left free to make its own independent efforts and arrangements with its workmen, subject always to the same penalty, if it could be proved to have consistently described or offered anything to the public for what it was not: and finally, the state of the affairs of every firm should be annually reported to the guild, and its books laid open to inspection, for guidance in the regulation of prices in the subsequent year; and any firm whose liabilities exceeded its assets by a hundred pounds should be forthwith declared bankrupt. And I will anticipate what I have to say in succeeding letters so far as to tell you that I would have this condition extend to every firm in the country, large or small, and of whatever rank in business. And thus you perceive, my friend, I shall not have to trouble you or myself much with deliberations respecting commercial “panics,” nor to propose legislative cures for *them*, by any laxatives or purgatives of paper currency, or any other change of pecuniary diet.

LETTER XV.

THE NATURE OF THEFT BY UNJUST PROFITS.—CRIME CAN FINALLY BE ARRESTED ONLY BY EDUCATION.

29th March.

THE first methods of polite robbery, by dishonest manufacture, and by debt, of which we have been hitherto speaking, are easily enough to be dealt with and ended, when once men have a mind to end them. But the third method of polite robbery, by dishonest *acquisition*, has many branches, and is involved among honest arts of acquisition, so that it is difficult to repress the one without restraining the other.

Observe, first, large fortunes cannot honestly be made by

the work of *one* man's hands or head. If his work benefits multitudes, and involves position of high trust, it may be (I do not say that it *is*) expedient to reward him with great wealth or estate ; but fortune of this kind is freely given in gratitude for benefit, not as repayment for labour. Also, men of peculiar genius in any art, if the public can enjoy the product of their genius, may set it at almost any price they choose ; but this, I will show you when I come to speak of art, is unlawful on their part, and ruinous to their own powers. Genius must not be sold ; the sale of it involves, in a transcendental, but perfectly true sense, the guilt both of simony and prostitution. Your labour only may be sold ; your soul must not.

Now, by fair pay for fair labour, according to the rank of it, a man can obtain means of comfortable, or if he needs it, refined life. But he cannot obtain large fortune. Such fortunes as are now the prizes of commerce can be made only in one of three ways :—

1. By obtaining command over the labour of multitudes of other men, and taxing it for our own profit.

2. By treasure-trove,—as of mines, useful vegetable products, and the like,—in circumstances putting them under our own exclusive control.

3. By speculation (commercial gambling).

The two first of these means of obtaining riches are, in some forms and within certain limits, lawful, and advantageous to the State. The third is entirely detrimental to it ; for in all cases of profit derived from speculation, at best, what one man gains another loses ; and the net result to the State is zero (pecuniarily), with the loss of the time and ingenuity spent in the transaction ; besides the disadvantage involved in the discouragement of the losing party, and the corrupted moral natures of both. This is the result of speculation at its best. At its worst, not only B. loses what A. gains (having taken his fair risk of such loss for his fair chance of gain), but C. and D., who never had any chance at all, are drawn in by B.'s fall, and the final result is that A. sets up his carriage on the collected sum which was once the means of living to a dozen families.

Nor is this all. For while real commerce is founded on real necessities or uses, and limited by these, speculation, of which the object is merely gain, seeks to excite imaginary necessities and popular desires, in order to gather its temporary profit from the supply of them. So that not only the persons who lend their money to it will be finally robbed, but the work done with their money will be for the most part useless, and thus the entire body of the public injured as well as the persons concerned in the transaction. Take, for instance, the architectural decorations of railways throughout the kingdom, —representing many millions of money for which no farthing of dividend can ever be forthcoming. The public will not be induced to pay the smallest fraction of higher fare to Rochester or Dover because the ironwork of the bridge which carries them over the Thames is covered with floral cockades, and the piers of it edged with ornamental cornices. All that work is simply put there by the builders that they may put the percentage upon it into their own pockets; and, the rest of the money being thrown into that floral form, there is an end of it, as far as the shareholders are concerned. Millions upon millions have thus been spent, within the last twenty years, on ornamental arrangements of zigzag bricks, black and blue tiles, cast-iron foliage, and the like; of which millions, as I said, not a penny can ever return into the shareholders' pockets, nor contribute to public speed or safety on the line. It is all sunk forever in ornamental architecture, and (trust me for this!) *all that architecture is bad*. As such, it had incomparably better not have been built. Its only result will be to corrupt what capacity of taste or right pleasure in such work we have yet left to us! And consider a little, what other kind of result than that might have been attained if all those millions had been spent usefully: say, in buying land for the people, or building good houses for them, or (if it had been imperatively required to be spent decoratively) in laying out gardens and parks for them.—or buying noble works of art for their permanent possession,—or, best of all, establishing frequent public schools and libraries! Count what those lost millions would have so accomplished for you! But you

left the affair to "supply and demand," and the British public had not brains enough to "demand" land, or lodging, or books. It "demanded" cast-iron cockades and zigzag cornices, and is "supplied" with them, to its beatitude for ever more.

Now, the theft we first spoke of, by falsity of workmanship or material, is, indeed, so far worse than these thefts by dishonest acquisition, that there is no possible excuse for it on the ground of self-deception; while many speculative thefts are committed by persons who really mean to do no harm, but think the system on the whole a fair one, and do the best they can in it for themselves. But in the real fact of the crime, when consciously committed, in the numbers reached by its injury, in the degree of suffering it causes to those whom it ruins, in the baseness of its calculated betrayal of implicit trust, in the yet more perfect vileness of the obtaining such trust by misrepresentation, only that it *may* be betrayed, and in the impossibility that the crime should be at all committed, except by persons of good position and large knowledge of the world,—what manner of theft is so wholly unpardonable, so inhuman, so contrary to every law and instinct which binds or animates society?

And then consider farther, how many of the carriages that glitter in our streets are driven, and how many of the stately houses that gleam among our English fields are inhabited by this kind of thief!

I happened to be reading this morning (29th March) some portions of the Lent services, and I came to a pause over the familiar words, "And with Him they crucified two thieves." Have you ever considered (I speak to you now as a professing Christian), why, in the accomplishment of the "numbering among transgressors," the transgressors chosen should have been especially thieves—not murderers, nor, as far as we know, sinners by any gross violence? Do you observe how the sin of theft is again and again indicated as the chiefly antagonistic one to the law of Christ? "This he said, not that he cared for the poor, but because he was a thief, and had the bag" (of Judas). And again, though Barabbas was a leader of sedition, and a

murderer besides—(that the popular election might be in all respects perfect)—yet St. John, in curt and conclusive account of him, fastens again on the theft. “Then cried they all again saying, Not this man, but Barabbas. Now Barabbas was a robber.” I believe myself the reason to be that theft is indeed, in its subtle forms, the most complete and excuseless of human crimes. Sins of violence usually have passion to excuse them : they may be the madness of moments ; or they may be apparently the only means of extrication from calamity. In other cases, they are the diseased habits of lower and brutified natures. But theft involving deliberative intellect, and absence of passion, is the purest type of wilful iniquity, in persons capable of doing right. Which being so, it seems to be fast becoming the practice of modern society to crucify its Christ indeed, as willingly as ever, in the persons of His poor ; but by no means now to crucify its thieves beside Him ! It elevates its thieves after another fashion ; sets them upon an hill, that their light may shine before men, and that all may see their good works, and glorify their Father, in—the Opposite of Heaven.

I think your trade parliament will have to put an end to this kind of business somehow ! But it cannot be done by laws merely, where the interests and circumstances are so extended and complex. Nay, even as regards lower and more defined crimes, the assigned punishment is not to be thought of as a preventive means ; but only as the seal of opinion set by society on the fact. Crime cannot be hindered by punishment ; it will always find some shape and outlet, unpunishable or unclosed. Crime can only be truly hindered by letting no man grow up a criminal—by taking away the *will* to commit sin ; not by mere punishment of its commission. Crime, small and great, can only be truly stayed by education—not the education of the intellect only, which is, on some men, wasted, and for others mischievous ; but education of the heart, which is alike good and necessary for all. So, on this matter, I will try to say one or two things of which the silence has kept my own heart heavy this many a day, in my next letter.

LETTER XVI.

OF PUBLIC EDUCATION IRRESPECTIVE OF CLASS-DISTINCTION.—IT CONSISTS ESSENTIALLY IN GIVING HABITS OF MERCY, AND HABITS OF TRUTH.

March 30, 1867.

THANK YOU for sending me the pamphlet containing the account of the meeting of clergy and workmen, and of the reasonings which there took place. I cannot promise you that I shall read much of them, for the question to my mind most requiring discussion and explanation is not, why workmen don't go to church, but—why other people do. However, this I know, that if, among our many spiritual teachers, there are indeed any who heartily and literally believe that the wisdom they have to teach, "is more precious than rubies, and all the things thou canst desire are not to be compared unto her," and if, so believing, they will further dare to affront their congregations by the assertion; and plainly tell them they are not to hunt for rubies or gold any more, at their peril, till they have gained that which cannot be gotten for gold, nor silver weighed for the price thereof,—such believers, so preaching, and refusing to preach otherwise till they are in that attended to, will never want congregations, both of working men, and every other kind of men.

Did you ever hear of anything else so ill-named as the phantom called the "Philosopher's" Stone? A talisman that shall turn base metal into precious metal, nature acknowledges not; nor would any but fools seek after it. But a talisman to turn base souls into noble souls, nature has given us! and that is a "Philosopher's" Stone indeed, but it is a stone which the builders refuse.

If there were two valleys in California or Australia, with two different kinds of gravel in the bottom of them; and in the one stream bed you could dig up, occasionally and by good fortune, nuggets of gold; and in the other stream bed, certainly and without hazard, you could dig up little caskets, con-

taining talismans which gave length of days and peace ; and alabaster vases of precious balms, which were better than the Arabian Dervish's ointment, and made not only the eyes to see, but the mind to know, whatever it would—I wonder in which of the stream beds there would be most diggers ?

“Time is money”—so say your practised merchants and economists. None of them, however, I fancy, as they draw towards death, find that the reverse is true and that “money is time” ? Perhaps it might be better for them in the end if they did not turn so much of their time into money, as no re-transformation is possible ! There are other things, however, which in the same sense are money, or can be changed into it, as well as time. Health is money, wit is money, knowledge is money ; and all your health, and wit, and knowledge may be changed for gold ; and the happy goal so reached, of a sick, insane, and blind, auriferous old age ; but the gold cannot be changed in its turn back into health and wit.

“Time is money,” the words tingle in my ears so that I can't go on writing. Is it nothing better, then ? If we could thoroughly understand that time was—*itself*,—would it not be more to the purpose ? A thing of which loss or gain was absolute loss, and perfect gain. And that it was expedient also to buy health and knowledge with money, if so purchaseable ; but not to buy money with *them* ?

And purchaseable they are, at the beginning of life, though not at its close. Purchaseable, always, for others, if not for ourselves. You can buy, and cheaply, life, endless life, according to your Christian's creed—(there's a bargain for you !) but—long years of knowledge, and peace, and power, and happiness of love—these assuredly, and irrespectively of any creed or question—for all those desolate and haggard children about your streets.

“That is not political economy, however.” Pardon me ; the all-comfortable saying, “What he layeth out, it shall be paid him again,” is quite literally true in matters of education ; no money-seed can be sown with so sure and large return at harvest-time as that ; only of this money-seed, more than of flesh-seed, it is utterly true, “That which thou sowest is not quick

ened, except it *die*." You must forget your money, and every other material interest, and educate for education's sake only! or the very good you try to bestow will become venomous, and that and your money will be lost together.

And this has been the real cause of failure in our efforts for education hitherto—whether from above or below. There is no honest desire for the thing itself. The cry for it among the lower orders is because they think that, when once they have got it, they must become upper orders. There is a strange notion in the mob's mind, now-a-days (including all our popular economists and educators, as we most justly may, under that brief term, "mob"), that *everybody* can be uppermost; or at least, that a state of general scramble, in which everybody in his turn should come to the top, is a proper Utopian constitution; and that, once give every lad a good education, and he cannot but come to ride in his carriage (the methods of supply of coachmen and footmen not being contemplated). And very sternly I say to you—and say from sure knowledge—that a man had better not know how to read or write, than receive education on such terms.

The first condition under which it can be given usefully is, that it should be clearly understood to be no means of getting on in the world, but a means of staying pleasantly in your place there. And the first elements of State education should be calculated equally for the advantage of every order of person composing the State. From the lowest to the highest class, every child born in this island should be required by law to receive these general elements of human discipline, and to be baptized—not with a drop of water on its forehead—but in the cloud and sea of heavenly wisdom and of earthly power.

And the elements of this general State education should be briefly these :

First.—The body must be made as beautiful and perfect in its youth as it can be, wholly irrespective of ulterior purpose. If you mean afterwards to set the creature to business which will degrade its body and shorten its life, first, I should say, simply,—you had better let such business alone;—but if

you must have it done, somehow, yet let the living creature whom you mean to kill, get the full strength of its body first, and taste the joy and bear the beauty of youth. After that, poison it, if you will. Economically, the arrangement is a wiser one, for it will take longer in the killing than if you began with it younger; and you will get an excess of work out of it which will more than pay for its training.

Therefore, first teach—as I said in the preface to *Unto this Last*—“The Laws of Health, and exercises enjoined by them;” and to this end your schools must be in fresh country, and amidst fresh air, and have great extents of land attached to them in permanent estate. Riding, running, all the honest personal exercises of offence and defence, and music, should be the primal heads of this bodily education.

Next to these bodily accomplishments, the two great mental graces should be taught, Reverence and Compassion: not that these are in a literal sense to be “taught,” for they are innate in every well-born human creature, but they have to be developed, exactly as the strength of the body must be, by deliberate and constant exercise. I never understood why Goethe (in the plan of education in *Wilhelm Meister*) says that reverence is not innate, but must be taught from without; it seems to me so fixedly a function of the human spirit, that if men can get nothing else to reverence they will worship a fool, or a stone, or a vegetable.¹ But to teach reverence rightly is to attach it to the right persons and things; first, by setting over your youth masters whom they cannot but love and respect; next, by gathering for them, out of past history, whatever has been most worthy, in human deeds and human passion; and leading them continually to dwell upon such instances, making this the principal element of emotional excitement to them; and, lastly, by letting them justly feel, as far as may be, the smallness of their own powers and knowledge, as compared with the attainments of others.

Compassion, on the other hand, is to be taught chiefly by

¹ By steadily preaching against it, one may quench reverence, and bring insolence to its height; but the instinct cannot be wholly uprooted.

making it a point of honour, collaterally with courage, and in the same rank (as indeed the complement and evidence of courage), so that, in the code of unwritten school law, it shall be held as shameful to have done a cruel thing as a cowardly one. All infliction of pain on weaker creatures is to be stigmatized as unmanly crime; and every possible opportunity taken to exercise the youths in offices of some practical help, and to acquaint them with the realities of the distress which, in the joyfulness of entering into life, it is so difficult for those who have not seen home suffering, to conceive.

Reverence, then, and compassion, we are to teach primarily, and with these, as the bond and guardian of them, truth of spirit and word, of thought and sight. Truth, earnest and passionate, sought for like a treasure and kept like a crown.

This teaching of truth as a habit will be the chief work the master has to do; and it will enter into all parts of education. First, you must accustom the children to close accuracy of statement; this both as a principle of honour, and as an accomplishment of language, making them try always who shall speak truest, both as regards the fact he has to relate or express (not concealing or exaggerating), and as regards the precision of the words he expresses it in, thus making truth (which, indeed, it is) the test of perfect language, and giving the intensity of a moral purpose to the study and art of words: then carrying this accuracy into all habits of thought and observation also, so as always to *think* of things as they truly are and to *see* them as they truly are, as far as in us rests. And it *does* rest much in our power, for all false thoughts and seeings come mainly of our thinking of what we have no business with, and looking for things we want to see, instead of things that ought to be seen.

“Do not talk but of what you know; do not think but of what you have materials to think justly upon; and do not look for things only that you like, when there are others to be seen.”—this is the lesson to be taught to our youth, and inbred in them; and that mainly by our own example and continence. Never teach a child anything of which you are not yourself sure; and, above all, if you feel anxious to force

anything into its mind in tender years, that the virtue of youth and early association may fasten it there, be sure it is no lie which you thus sanctify. There is always more to be taught of absolute, incontrovertible knowledge, open to its capacity, than any child can learn; there is no need to teach it anything doubtful. Better that it should be ignorant of a thousand truths, than have consecrated in its heart a single lie.

And for this, as well as for many other reasons, the principal subjects of education, after history, ought to be natural science and mathematics; but with respect to these studies, your schools will require to be divided into three groups; one for children who will probably have to live in cities, one for those who will live in the country, and one for those who will live at sea; the schools for these last, of course, being always placed on the coast. And for children whose life is to be in cities, the subjects of study should be, as far as their disposition will allow of it, mathematics and the arts; for children who are to live in the country, natural history of birds, insects, and plants, together with agriculture taught practically; and for children who are to be seamen, physical geography, astronomy, and the natural history of sea fish and sea birds.

This, then, being the general course and material of education for all children, observe farther that in the preface to *Unto this Last* I said that every child, besides passing through this course, was at school to learn "the calling by which it was to live." And it may perhaps appear to you that after, or even in the early stages of education such as this above described, there are many callings which, however much called to them, the children might not willingly determine to learn or live by. "Probably," you may say, "after they have learned to ride, and fence, and sing, and know birds and flowers, it will be little to their liking to make themselves into tailors, carpenters, shoemakers, blacksmiths, and the like." And I cannot but agree with you as to the exceeding probability of some such reluctance on their part, which will be a very awkward state of things indeed (since we can by no means get on without tailoring and shoemaking), and one to be meditated upon very seriously in next letter.

P.S.—Thank you for sending me your friend's letter about Gustave Doré ; he is wrong, however, in thinking there is any good in those illustrations of Elaine. I had intended to speak of them afterwards, for it is to my mind quite as significant—almost as awful—a sign of what is going on in the midst of us, that our great English poet should have suffered his work to be thus contaminated, as that the lower Evangelicals, never notable for sense in the arts, should have got their Bibles dishonoured. Those Elaine illustrations are just as impure as anything else that Doré has done ; but they are also vapid, and without any one merit whatever in point of art. The illustrations to the *Contes Drolatiques* are full of power and invention ; but those to Elaine are merely and simply stupid ; theatrical bêtises, with the taint of the charnel-house on them besides.

LETTER XVII.

THE RELATIONS OF EDUCATION TO POSITION IN LIFE.

April 3, 1867.

I AM not quite sure that you will feel the awkwardness of the dilemma I got into at the end of last letter, as much as I do myself. You working men have been crowing and peacocking at such a rate lately ; and setting yourselves forth so confidently for the cream of society, and the top of the world, that perhaps you will not anticipate any of the difficulties which suggest themselves to a thorough-bred Tory and Conservative, like me. Perhaps you will expect a youth properly educated—a good rider—musician—and well-grounded scholar in natural philosophy, to think it a step of promotion when he has to go and be made a tailor of, or a coalheaver ? If you do, I should very willingly admit that you might be right, and go on to the farther development of my notions without pausing at this stumbling-block, were it not that, unluckily, all the wisest men whose sayings I ever heard or read, agree in expressing (one way or another) just such contempt, for

those useful occupations, as I dread on the part of my foolishly refined scholars. Shakspeare and Chaucer,—Dante and Virgil,—Horace and Pindar,—Homer, Æschylus, and Plato,—all the men of any age or country who seem to have had Heaven's music on their lips, agree in their scorn of mechanic life. And I imagine that the feeling of prudent Englishmen, and sensible as well as sensitive Englishwomen, on reading my last letter—would mostly be—"Is the man mad, or laughing at us, to propose educating the working classes this way? He could not, if his wild scheme were possible, find a better method of making them acutely wretched."

It may be so, my sensible and polite friends; and I am heartily willing, as well as curious, to hear you develop your own scheme of operative education, so only that it be universal, orderly, and careful. I do not say that I shall be prepared to advocate my athletics and philosophies instead. Only, observe what you admit, or imply, in bringing forward your possibly wiser system. You imply that a certain portion of mankind must be employed in degrading work; and that, to fit them for this work, it is necessary to limit their knowledge, their active powers, and their enjoyments, from childhood upwards, so that they may not be able to conceive of any state better than the one they were born in, nor possess any knowledge or acquirements inconsistent with the coarseness, or disturbing the monotony, of their vulgar occupation. And by their labour in this contracted state of mind, we superior beings are to be maintained; and always to be curtsied to by the properly ignorant little girls, and capped by the properly ignorant little boys, whenever we pass by.

Mind, I do not say that this is *not* the right state of things. Only, if it be, you need not be so over-particular about the slave-trade, it seems to me. What is the use of arguing so pertinaciously that a black's skull will hold as much as a white's, when you are declaring in the same breath that a white's skull must not hold as much as it can, or it will be the worse for him? It does not appear to me at all a profound state of slavery to be whipped into doing a piece of low work that I don't like; but it is a very profound state of

slavery, to be kept, myself, low in the forehead, that I may not dislike low work.

You see, my friend, the dilemma is really an awkward one, whichever way you look at it. But, what is still worse, I am not puzzled only, at this part of my scheme, about the boys I shall have to make *workmen* of; I am just as much puzzled about the boys I shall have to make *nothing* of! Grant, that by hook or crook, by reason or rattan, I persuade a certain number of the roughest ones into some serviceable business, and get coats and shoes made for the rest,—what is the business of “the rest” to be? Naturally according to the existing state of things, one supposes that they are to belong to some of the gentlemanly professions; to be soldiers, lawyers, doctors, or clergymen. But alas, I shall not want any soldiers, of special skill or pugnacity? *All* my boys will be soldiers. So far from wanting any lawyers, of the kind that live by talking, I shall have the strongest possible objection to their appearance in the country. For doctors, I shall always entertain a profound respect; but when I get my athletic education established, of what help to them will my respect be? They will all starve! And for clergymen, it is true, I shall have a large number of episcopates—one over every hundred families—(and many positions of civil authority also, for civil officers, above them and below), but all these places will involve much hard work, and be anything but covetable; while, of clergymen’s usual work, admonition, theological demonstration, and the like, I shall want very little done indeed, and that little done for nothing! for I will allow no man to admonish anybody, until he has previously earned his own dinner by more productive work than admonition.

Well, I wish, my friend, you would write me a word or two in answer to this, telling me your own ideas as to the proper issue of these difficulties. I should like to know what you think, and what you suppose others will think, before I tell you my own notions about the matter.

LETTER XVIII.

THE HARMFUL EFFECTS OF SERVILE EMPLOYMENTS.—THE POSSIBLE PRACTICE AND EXHIBITION OF SINCERE HUMILITY BY RELIGIOUS PERSONS.

April 7, 1867.

I HAVE been waiting these three days to know what you would say to my last questions ; and now you send me two pamphlets of Combe's to read ! I never read anything in spring-time (except the *Ai, Ai*, on the " sanguine flower inscribed with woe ") ; and besides if, as I gather from your letter, Combe thinks that among well-educated boys there would be a per-centage constitutionally inclined to be cobblers, or looking forward with unction to establishment in the oil and tallow line, or fretting themselves for a flunkey's uniform, nothing that he could say would make me agree with him. I know, as well as he does, the unconquerable differences in the clay of the human creature : and I know that, in the outset, whatever system of education you adopted, a large number of children could be made nothing of, and would necessarily fall out of the ranks, and supply candidates enough for degradation to common mechanical business, but this enormous difference in bodily and mental capacity has been mainly brought about by difference in occupation, and by direct mal-treatment ; and in a few generations, if the poor were cared for, their marriages looked after, and sanitary law enforced, a beautiful type of face and form, and a high intelligence, would become all but universal, in a climate like this of England. Even as it is, the marvel is always to me, how the race resists, at least in its childhood, influences of ill-regulated birth, poisoned food, poisoned air, and soul neglect. I often see faces of children, as I walk through the black district of St. Giles's (lying, as it does, just between my own house and the British Museum), which, through all their pale and corrupt misery, recall the old " Non Angli," and recall it, not by their beauty, but by their sweetness of expression, even though signed already with trace and cloud of the coming life,—a life

so bitter that it would make the curse of the 137th Psalm true upon our modern Babylon, though we were to read it thus, "Happy shall *thy children* be, if one taketh and dasheth them against the stones."

Yes, very solemnly I repeat to you that in those worst treated children of the English race, I yet see the making of gentlemen and gentlewomen—not the making of dog-stealers and gin-drinkers, such as their parents were; and the child of the average English tradesman or peasant, even at this day, well schooled, will show no innate disposition such as must fetter him forever to the clod or the counter. You say that many a boy runs away, or would run away if he could, from good positions to go to sea. Of course he does. I never said I should have any difficulty in finding sailors, but I shall in finding fishmongers. I am at no loss for gardeners either, but what am I to do for greengrocers?

The fact is, a great number of quite necessary employments are, in the accuratest sense, "servile," that is, they sink a man to the condition of a serf, or unthinking worker, the proper state of an animal, but more or less unworthy of men; nay, unholy in some sense, so that a day is made "holy" by the fact of its being commanded, "Thou shalt do no *servile* work therein." And yet, if undertaken in a certain spirit, such work might be the holiest of all. If there were but a thread or two of sound fibre here and there left in our modern religion, so that the stuff of it would bear a real strain, one might address our two opposite groups of evangelicals and ritualists somewhat after this fashion:—"Good friends, these differences of opinion between you cannot but be painful to your Christian charity, and they are unseemly to us, the profane; and prevent us from learning from you what, perhaps, we ought. But, as we read your Book, we, for our part, gather from it that you might, without danger to your own souls, set an undivided example to us, for the benefit of ours. You, both of you, as far as we understand, agree in the necessity of humility to the perfection of your character. We often hear you, of Calvinistic persuasion, speaking of yourselves as 'sinful dust and ashes,'—would it then be inconsistent with your

feelings to make yourselves into 'serviceable' dust and ashes? We observe that of late many of our roads have been hardened and mended with cinders; now, if, in a higher sense, you could allow us to mend the roads of the world with *you* a little, it would be a great proof to us of your sincerity. Suppose only for a little while, in the present difficulty and distress, you were to make it a test of conversion that a man should regularly give Zachæus's portion, half his goods, to the poor, and at once adopt some disagreeable and despised, but thoroughly useful, trade? You cannot think that this would finally be to your disadvantage; you doubtless believe the texts, 'He that giveth to the poor lendeth to the Lord,' and 'He that would be the chief among you, let him be your servant.' The more you parted with, and the lower you stood, the greater would be your final reward, and final exaltation. You profess to despise human learning and worldly riches; leave both of these to *us*: undertake for us the illiterate and ill-paid employments which must deprive you of the privileges of society, and the pleasures of luxury. You cannot possibly preach your faith so forcibly to the world by any quantity of the finest words, as by a few such simple and painful acts; and over your counters, in honest retail business, you might preach a gospel that would sound in more ears than any that was ever proclaimed over pulpit cushions or tabernacle rails. And, whatever may be your gifts of utterance, you cannot but feel (studying St. Paul's Epistles as carefully as you do) that you might more easily and modestly emulate the practical teaching of the silent Apostle of the Gentiles than the speech or writing of his companion. Amidst the present discomforts of your brethren you may surely, with greater prospect of good to them, seek the title of Sons of Consolation, than of Sons of Thunder, and be satisfied with Barnabas's confession of faith (if you can reach no farther), who, 'having land, sold it, and brought the money and laid it at the Apostles' feet.'

"To you, on the other hand, gentlemen of the embroidered robe, who neither despise learning nor the arts, we know that sacrifices such as these would be truly painful, and might

at first appear inexpedient. But the doctrine of self-mortification is not a new one to you : and we should be sorry to think—we would not, indeed, for a moment dishonour you by thinking—that these melodious chants, and prismatic brightnesses of vitreous pictures, and floral graces of deep-wrought stone, were in any wise intended for your own poor pleasures, whatever profane attraction they may exercise on more fleshly-minded persons. And as you have certainly received no definite order for the painting, carving, or lighting up of churches, while the temple of the body of so many poor living Christians is so pale, so mis-shapen, and so ill-lighted ; but have, on the contrary, received very definite orders for the feeding and clothing of such sad humanity, we may surely ask you, not unreasonably, to humiliate yourselves in the most complete way—not with a voluntary, but a sternly *involuntary* humility—not with a show of wisdom in will-worship, but with practical wisdom, in all honour, to the satisfying of the flesh ; and to associate yourselves in monasteries and convents for the better practice of useful and humble trades. Do not burn any more candles, but mould some ; do not paint any more windows, but mend a few, where the wind comes in, in winter time, with substantial clear glass and putty. Do not vault any more high roofs, but thatch some low ones ; and embroider rather on backs which are turned to the cold, than only on those which are turned to congregations. And you will have your reward afterwards, and attain, with all your flocks thus tended, to a place where you may have as much gold, and painted glass, and singing, as you like.”

Thus much, it seems to me, one might say, with some hope of acceptance, to any very earnest member of either of our two great religious parties, if, as I say, their faith could stand a strain. I have not, however, based any of my imaginary political arrangements on the probability of its doing so ; and I trust only to such general good nature and willingness to help each other, as I presume may be found among men of the world ; to whom I should have to make quite another sort of speech, which I will endeavour to set down the heads of, for you, in next letter.

LETTER XIX.

THE GENERAL PRESSURE OF EXCESSIVE AND IMPROPER WORK, IN
ENGLISH LIFE.

April 10, 1867.

I CANNOT go on to-day with the part of my subject I had proposed, for I was disturbed by receiving a letter last night, which I herewith enclose to you, and of which I wish you to print, here following, the parts I have not underlined :—

1 PHENE-STREET, CHELSEA, *April 8, 1867.*

MY DEAR R——: It is long since you have heard of me, and now I ask your patience with me for a little. I have but just returned from the funeral of my dear, dear friend ——, the first artist friend I made in London—a loved and prized one. For years past he had lived in the very humblest way, fighting his battle of life against mean appreciation of his talents, the wants of a rising family, and frequent attacks of illness, crippling him for months at a time, the wolf at the door meanwhile.

But about two years since his prospects brightened * * * and he had but a few weeks since ventured on removal to a larger house. His eldest boy of seventeen years, a very intelligent youth, so strongly desired to be a civil engineer that Mr. ——, not being able to pay the large premium required for his apprenticeship, had been made very glad by the consent of Mr. Penn, of Milwall, to receive him without a premium after the boy should have spent some time at King's College in the study of mechanics. The rest is a sad story. About a fortnight ago Mr. —— was taken ill, and died last week, the doctors say, of sheer physical exhaustion, not thirty-nine years old, leaving eight young children, and his poor widow expecting her confinement, and so weak and ill as to be incapable of effort. This youth is the eldest, and the other children range downwards to a babe of eighteen months. There is not one who knew him, I believe, that will not give cheerfully, to their ability, for his widow and children; but such aid will go but a little way in this painful case, but it

would be a real boon to this poor widow if some of her children could be got into an Orphan Asylum. * * *

If you are able to do anything I would send particulars of the age and sex of the children. * * *

I remain, dear sir, ever obediently yours,
FRED. J. SHIELDS.

P.S.—I ought to say that poor —— has been quite unable to save, with his large family ; and that they would be utterly destitute now, but for the kindness of some with whom he was professionally connected.

Now this case, of which you see the entire authenticity, is, out of the many, of which I hear continually, a *notably* sad one only in so far as the artist in question has died of distress while he was catering for the public amusement. Hardly a week now passes without some such misery coming to my knowledge ; and the quantity of pain, and anxiety of daily effort, through the best part of life, ending all at last in utter grief, which the lower middle classes in England are now suffering, is so great that I feel constantly as if I were living in one great churchyard, with people all round me clinging feebly to the edges of the open graves, and calling for help, as they fall back into them, out of sight.

Now I want you to observe here, in a definite case, the working of your beautiful modern political economy of “supply and demand.” Here is a man who could have “supplied” you with good and entertaining art—say for fifty good years—if you had paid him enough for his day’s work to find him and his children peacefully in bread. But you like having your prints as cheap as possible—you triumph in the little that your laugh costs—you take all you can get from the man, give the least you can give to him—and you accordingly kill him at thirty-nine ; and thereafter have his children to take care of, or to kill also, whichever you choose : but now, observe, you must take care of *them* for nothing, or not at all ; and what you might have had good value for, if you had given it when it would have cheered the father’s heart, you now can have no return for at all, to yourselves ; and what you give to the

orphans, if it does not degrade them, at least afflicts, coming, not through their father's hand, its honest earnings, but from strangers.

Observe farther, whatever help the orphans may receive, will not be from the public at all. It will not be from those who profited by their father's labours; it will be chiefly from his fellow-labourers; or from persons whose money would have been beneficially spent in other directions, from whence it is drawn away to this need, which ought never to have occurred—while those who waste their money without doing any service to the public, will never contribute one farthing to this distress.

Now it is this double fault in the help—that it comes too late, and that the burden of it falls wholly on those who ought least to be charged with it, which would be corrected by that institution of overseers of which I spoke to you in the twelfth of these letters, saying, you remember, that they were to have farther legal powers, which I did not then specify, but which would belong to them chiefly in the capacity of public almoners, or help-givers, aided by their deacons, the reception of such help, in time of true need, being not held disgraceful, but honourable; since the fact of its reception would be so entirely public that no impostor or idle person could ever obtain it surreptitiously.

(11th April.) I was interrupted yesterday, and I am glad of it, for here happens just an instance of the way in which the unjust distribution of the burden of charity is reflected on general interests; I cannot help what taint of ungracefulness you or other readers of these letters may feel that I incur, in speaking, in this instance, of myself. If I could speak with the same accurate knowledge of any one else, most gladly I would; but I also think it right that, whether people accuse me of boasting or not, they should know that I practise what I preach. I had not intended to say what I now shall, but the coming of this letter last night just turns the balance of the decision with me. I enclose it with the other; you see it is one from my bookseller, Mr. Quaritch, offering me Fischer's work on the *Fiora of Java*, and Latour's on *Indian Orchidaceæ*,

bound together, for twenty guineas. Now, I am writing a book on botany just now, for young people, chiefly on wild flowers, and I want these two books very much; but I simply cannot afford to buy them, because I sent my last spare twenty guineas to Mr. Shields yesterday for this widow. And though you may think it not the affair of the public that I have not this book on Indian flowers, it is their affair finally, that what I write for them should be founded on as broad knowledge as possible; whatever value my own book may or may not have, it will just be in a given degree worth *less* to them, because of my want of this knowledge.

So again—for having begun to speak of myself I will do so yet more frankly—I suppose that when people see my name down for a hundred pounds to the Cruikshank Memorial, and for another hundred to the Eyre Defence Fund, they think only that I have more money than I know what to do with. Well, the giving of those subscriptions simply decides the question whether or no I shall be able to afford a journey to Switzerland this year, in the negative; and I wanted to go, not only for health's sake, but to examine the junctions of the molasse sandstones and nagelfluh with the Alpine limestone, in order to complete some notes I meant to publish next spring on the geology of the great northern Swiss valley; notes which must now lie by me at least for another year; and I believe this delay (though I say it) will be really something of a loss to the travelling public, for the little essay was intended to explain to them, in a familiar way, the real wonderfulness of their favourite mountain, the Righi; and to give them some amusement in trying to find out where the many-coloured pebbles of it had come from. But it is more important that I should, with some stoutness, assert my respect for the genius and earnest patriotism of Cruikshank, and my much more than disrespect for the Jamaica Committee, than that I should see the Alps this year, or get my essay finished next spring; but I tell you the fact, because I want you to feel how, in thus leaving their men of worth to be assisted or defended only by those who deeply care for them, the public more or less cripple, to their own ultimate disadvantage, just

the people who could serve them in other ways ; while the speculators and money-seekers, who are only making their profit out of the said public, of course take no part in the help of anybody. And even if the willing bearers could sustain the burden anywise adequately, none of us would complain ; but I am certain there is no man, whatever his fortune, who is now engaged in any earnest offices of kindness to these sufferers, especially of the middle class, among his acquaintance, who will not bear me witness that for one we can relieve, we must leave three to perish. I have left three, myself, in the first three months of this year. One was the artist Paul Gray, for whom an appeal was made to me for funds to assist him in going abroad out of the bitter English winter. I had not the means by me, and he died a week afterwards. Another case was that of a widow whose husband had committed suicide, for whom application was made to me at the same time ; and the third was a personal friend, to whom I refused a sum which he said would have saved him from bankruptcy. I believe six times as much would not have saved him ; however, I refused, and he is ruined.

And observe, also, it is not the mere crippling of my means that I regret. It is the crippling of my temper, and waste of my time. The knowledge of all this distress, even when I can assist it,—much more when I cannot,—and the various thoughts of what I can and cannot, or ought and ought not, to do, are a far greater burden to me than the mere loss of the money. It is peremptorily not my business—it is not my gift, bodily or mentally, to look after other people's sorrow. I have enough of my own ; and even if I had not, the sight of pain is not good for me. I don't want to be a bishop. In a most literal and sincere sense, "*nolo episcopari.*" I don't want to be an almoner, nor a counsellor, nor a Member of Parliament, nor a voter for Members of Parliament. (What would Mr. Holyoake say to me if he knew that I had never voted for anybody in my life, and never mean to do so !) I am essentially a painter and a leaf dissector ; and my powers of thought are all purely mathematical, seizing ultimate principles only—never accidents ; a line is always, to me, length

without breadth ; it is not a cable or a crowbar ; and though I can almost infallibly reason out the final law of anything, if within reach of my industry, I neither care for, nor can trace, the minor exigencies of its daily appliance. So, in every way, I like a quiet life ; and I don't like seeing people cry, or die ; and should rejoice, more than I can tell you, in giving up the full half of my fortune for the poor, provided I knew that the public would make Lord Overstone also give the half of his, and other people who were independent give the half of theirs ; and then set men who were really fit for such office to administer the fund, and answer to us for nobody's perishing innocently ; and so leave us all to do what we chose with the rest, and with our days, in peace.

Thus far of the public's fault in the matter. Next, I have a word or two to say of the sufferers' own fault—for much as I pity them, I conceive that none of them *do* perish altogether innocently. But this must be for next letter.

LETTER XX.

OF IMPROVIDENCE IN MARRIAGE IN THE MIDDLE CLASSES ; AND OF
THE ADVISABLE RESTRICTIONS OF IT.

April 12, 1867.

It is quite as well, whatever irregularity it may introduce in the arrangement of the general subject, that yonder sad letter warped me away from the broad inquiry, to this speciality, respecting the present distress of the middle classes. For the immediate cause of that distress, in their own imprudence, of which I have to speak to you to-day, is only to be finally vanquished by strict laws, which, though they have been many a year in my mind, I was glad to have a quiet hour of sunshine for the thinking over again, this morning. Sunshine which happily rose cloudless ; and allowed me to meditate my tyrannies before breakfast, under the just-opened blossoms of my orchard, and assisted by much melodious advice from the birds ; who (my gardener having positive orders never to

trouble any of them in anything, or object to their eating even my best pease if they like their flavour) rather now get *into* my way, than out of it, when they see me about the walks; and take me into most of their counsels in nest-building.

The letter from Mr. Shields, which interrupted us, reached me, as you see, on the evening of the 9th instant. On the morning of the 10th, I received another, which I herewith forward to you, for verification. It is—characteristically enough—dateless, so you must take the time of its arrival on my word. And substituting M. N. for the name of the boy referred to, and withholding only the address and name of the writer, you see that it may be printed word for word—as follows:—

Sir,—May I beg for the favour of your presentation to Christ's Hospital for my youngest son, M. N. I have nine children, and no means to educate them. I ventured to address you, believing that my husband's name is not unknown to you as an artist.

Believe me to remain faithfully yours,

To John Ruskin, Esq.

* * *

Now this letter is only a typical example of the entire class of those which, being a governor of Christ's Hospital, I receive, in common with all the other governors, at a rate of about three a day, for a month or six weeks from the date of our names appearing in the printed list of the governors who have presentations for the current year. Having been a governor now some twenty-five years, I have documentary evidence enough to found some general statistics upon: from which there have resulted two impressions on my mind, which I wish here specially to note to you, and I do not doubt but that all the other governors, if you could ask them, would at once confirm what I say. My first impression is, a heavy and sorrowful sense of the general feebleness of intellect of that portion of the British public which stands in need of presentations to Christ's Hospital. This feebleness of intellect is mainly shown in the nearly total unconsciousness of the writers that anybody else may want a presentation, beside themselves. With the exception here and there, of a soldier's or a sailor's widow,

hardly one of them seems to have perceived the existence of any distress in the world but their own ; none know what they are asking for, or imagine, unless as a remote contingency, the possibility of its having been promised at a prior date. The second most distinct impression on my mind is, that the portion of the British public which is in need of presentations to Christ's Hospital, considers it a merit to have large families, with or without the means of supporting them !

Now it happened also (and remember, all this is strictly true, nor in the slightest particular represented otherwise than as it chanced ; though the said chance brought thus together exactly the evidence I wanted for my letter to you) it happened, I say, that on this same morning of the 10th April, I became accidentally acquainted with a case of quite a different kind : that of a noble girl, who, engaged at sixteen, and having received several advantageous offers since, has remained for ten years faithful to her equally faithful lover ; while, their circumstances rendering it, as they rightly considered, unjustifiable in them to think of marriage, each of them simply and happily, aided and cheered by the other's love, discharged the duties of their own separate positions in life.

In the nature of things, instances of this kind of noble life remain more or less concealed (while imprudence and error proclaim themselves by misfortune), but they are assuredly not unfrequent in our English homes. Let us next observe the political and national result of these arrangements. You leave your marriages to be settled by "supply and demand," instead of wholesome law. And thus among your youths and maidens, the improvident, incontinent, selfish, and foolish ones marry whether you will or not ; and beget families of children, necessarily inheritors in a great degree of these parental dispositions ; and for whom supposing they had the best dispositions in the world, you have thus provided, by way of educators, the foolishest fathers and mothers you could find (the only rational sentence in their letters, usually, is the invariable one, in which they declare themselves "incapable of providing for their children's education"). On the other

hand, whosoever is wise, patient, unselfish, and pure, among your youth, you keep maid or bachelor; wasting their best days of natural life in painful sacrifice, forbidding them their best help and best reward, and carefully excluding their prudence and tenderness from any offices of parental duty.

Is this not a beatific and beautifully sagacious system for a Celestial Empire, such as that of these British Isles?

I will not here enter into any statement of the physical laws which it is the province of our physicians to explain; and which are indeed at last so far beginning to be understood, that there is hope of the nation's giving some of the attention to the conditions affecting the race of man, which it has hitherto bestowed only on those which may better its races of cattle.

It is enough, I think, to say here that the beginning of all sanitary and moral law is in the regulation of marriage, and that, ugly and fatal as is every form and agency of license, no licentiousness is so mortal as licentiousness in marriage.

Briefly, then, and in main points, subject in minor ones to such modifications in detail as local circumstances and characters would render expedient, these following are laws such as a prudent nation would institute respecting its marriages. Permission to marry should be the reward held in sight of its youth during the entire latter part of the course of their education; and it should be granted as the national attestation that the first portion of their lives had been rightfully fulfilled. It should not be attainable without earnest and consistent effort, though put within the reach of all who were willing to make such effort; and the granting of it should be a public testimony to the fact, that the youth or maid to whom it was given had lived within their proper sphere, a modest and virtuous life, and had attained such skill in their proper handicraft, and in arts of household economy, as might give well-founded expectations of their being able honourably to maintain and teach their children.

No girl should receive her permission to marry before her 17th birthday, nor any youth before his 21st; and it should be a point of somewhat distinguished honour with both sexes

to gain their permission of marriage in the 18th and 22d year ; and a recognized disgrace not to have gained it at least before the close of their 21st and 24th. I do not mean that they should in any wise hasten actual marriage ; but only that they should hold it a point of honour to have the right to marry. In every year there should be two festivals, one on the first of May, and one at the feast of harvest home in each district, at which festivals their permissions to marry should be given publicly to the maidens and youths who had won them in that half year ; and they should be crowned, the maids by the old French title of *Rosières*, and the youths, perhaps by some name rightly derived from one supposed signification of the word "bachelor" "laurel fruit," and so led in joyful procession, with music and singing, through the city street or village lane, and the day ended with feasting of the poor : but not with feasting theirs, except quietly, at their homes.

And every bachelor and *rosière* should be entitled to claim, if they needed it, according to their position in life, a fixed income from the State, for seven years from the day of their marriage, for the setting up of their homes ; and however rich they might be by inheritance, their income should not be permitted to exceed a given sum, proportioned to their rank, for the seven years following that in which they had obtained their permission to marry, but should accumulate in the trust of the State, until that seventh year, in which they should be put (on certain conditions) finally in possession of their property ; and the men, thus necessarily not before their twenty-eighth, nor usually later than their thirty-first year, become eligible to offices of State. So that the rich and poor should not be sharply separated in the beginning of the war of life ; but the one supported against the first stress of it long enough to enable them by proper forethought and economy to secure their footing ; and the other trained somewhat in the use of moderate means, before they were permitted to have the command of abundant ones. And of the sources from which these State incomes for the married poor should be supplied, or of the treatment of those of our youth whose

conduct rendered it advisable to refuse them permission to marry, I defer what I have to say till we come to the general subjects of taxation and criminal discipline, leaving the proposals made in this letter to bear, for the present, whatever aspect of mere romance and unreliable vision they probably may, and to most readers, such as they assuredly will. Nor shall I make the slightest effort to redeem them from these imputations; for though there is nothing in all their purport which would not be approved, as in the deepest sense "practical"—by the "Spirit of Paradise"—

Which gives to all the self-same bent,
Whose lives are wise and innocent,

—and though I know that national justice in conduct, and peace in heart, could by no other laws be so swiftly secured, I confess with much *dis*peace of heart, that both justice and happiness have at this day become, in England, "romantic impossibilities."

LETTER XXI.

OF THE DIGNITY OF THE FOUR FINE ARTS; AND OF THE PROPER
SYSTEM OF RETAIL TRADE.

April 15, 1867.

I RETURN now to the part of the subject at which I was interrupted—the inquiry as to the proper means of finding persons willing to maintain themselves and others by degrading occupations.

That, on the whole, simply manual occupations *are* degrading, I suppose I may assume you to admit; at all events, the fact is so, and I suppose few general readers will have any doubt of it.¹

¹ Many of my working readers have disputed this statement eagerly, feeling the good effect of work in themselves; but observe, I only say, *simply* or *totally* manual work; and that, alone, *is* degrading, though often in measure refreshing, wholesome, and necessary. So it is highly necessary and wholesome to eat sometimes; but degrading to eat all

Granting this, it follows as a direct consequence that it is the duty of all persons in higher stations of life, by every means in their power, to diminish their demand for work of such kind, *and to live with as little aid from the lower trades as they can possibly contrive.*

I suppose you see that this conclusion is not a little at variance with received notions on political economy? It is popularly supposed that it benefits a nation to invent a want. But the fact is, that the true benefit is in extinguishing a want—in living with as few wants as possible.

I cannot tell you the contempt I feel for the common writers on political economy, in their stupefied missing of this first principle of all human economy—individual or political—to live, namely, with as few wants as possible, and to waste nothing of what is given you to supply them.

This ought to be the first lesson of every rich man's political code. "Sir," his tutor should early say to him, "you are so placed in society—it may be for your misfortune, it *must* be for your trial—that you are likely to be maintained all your life by the labour of other men. You will have to make shoes for nobody, but some one will have to make a great many for you. You will have to dig ground for nobody, but some one will have to dig through every summer's hot day for you. You will build houses and make clothes for no one, but many a rough hand must knead clay, and many an elbow be crooked to the stitch, to keep that body of yours warm and fine. Now remember, whatever you and your work may be worth, the less your keep costs, the better. It does not cost money only. It costs degradation. You do not merely employ these people. You also tread upon them. It cannot be helped;—you have your place, and they have theirs; but see that you tread as lightly as possible, and on as few as possible. What food, and clothes, and lodging, you honestly need, for your health and peace, you may righteously take.

day, as to labour with the hands all day. But it is not degrading to think all day—if you can. A highly bred court lady, rightly interested in politics and literature, is a much finer type of the human creature than a servant of all work, however clever and honest.

See that you take the plainest you can serve yourself with—that you waste or wear nothing vainly ;—and that you employ no man in furnishing you with any useless luxury.” That is the first lesson of Christian—or human—economy ; and depend upon it, my friend, it is a sound one, and has every voice and vote of the spirits of Heaven and earth to back it, whatever views the Manchester men, or any other manner of men, may take respecting “demand and supply.” Demand what you deserve, and you shall be supplied with it, for your good. Demand what you do *not* deserve, and you shall be supplied with something which you have not demanded, and which Nature perceives that you deserve, quite to the contrary of your good. That is the law of your existence, and if you do not make it the law of your resolved acts—so much, precisely, the worse for you and all connected with you.

Yet observe, though it is out of its proper place said here, this law forbids no luxury which men are not degraded in providing. You may have Paul Veronese to paint your ceiling, if you like, or Benvenuto Cellini to make cups for you. But you must not employ a hundred divers to find beads to stitch over your sleeve. (Did you see the account of the sales of the Esterhazy jewels the other day ?)

And the degree in which you recognize the difference between these two kinds of services, is precisely what makes the difference between your being a civilized person or a barbarian. If you keep slaves to furnish forth your dress—to glut your stomach—sustain your indolence—or deck your pride, you are a barbarian. If you keep servants, properly cared for, to furnish you with what you verily want, and no more than that—you are a “civil” person—a person capable of the qualities of citizenship. (Just look to the note on Liebig’s idea that civilization means the consumption of coal, page 87 of the *Crown of Wild Olive*,¹ and please observe the sentence at the end of it, which signifies a good deal of what I have to expand here,—“Civilization is the making of civil persons.”)

Now, farther, observe that in a truly civilized and disci-

¹ Appendix 9.

plined state, no man would be allowed to meddle with any material who did not know how to make the best of it. In other words, the arts of working in wood, clay, stone, and metal, would all be *fine* arts (working in iron for machinery becoming an entirely distinct business). There would be no joiner's work, no smith's, no pottery nor stone-cutting, so debased in character as to be entirely unconnected with the finer branches of the same art; and to at least one of these finer branches (generally in metal work) every painter and sculptor would be necessarily apprenticed during some years of his education. There would be room, in these four trades alone, for nearly every grade of practical intelligence and productive imagination.

But it should not be artists alone who are exercised early in these crafts. It would be part of my scheme of physical education that every youth in the State—from the King's son downwards—should learn to do something finely and thoroughly with his hand, so as to let him know what *touch* meant; and what stout craftsmanship meant; and to inform him of many things besides, which no man can learn but by some severely accurate discipline in doing. Let him once learn to take a straight shaving off a plank, or draw a fine curve without faltering, or lay a brick level in its mortar; and he has learned a multitude of other matters which no lips of man could ever teach him. He might choose his craft, but whatever it was, he should learn it to some sufficient degree of true dexterity: and the result would be, in after life, that among the middle classes a good deal of their house furniture would be made, and a good deal of rough work, more or less clumsily, but not ineffectively, got through, by the master himself and his sons, with much furtherance of their general health and peace of mind, and increase of innocent domestic pride and pleasure, and to the extinction of a great deal of vulgar upholstery and other mean handicraft.

Farther. A great deal of the vulgarity, and nearly all the vice, of retail commerce, involving the degradation of persons occupied in it, depends simply on the fact that their minds are always occupied by the vital (or rather mortal) question of

profits. I should at once put an end to this source of baseness by making all retail dealers merely salaried officers in the employ of the trade guilds ; the stewards, that is to say, of the saleable properties of those guilds, and purveyors of such and such articles to a given number of families. A perfectly well-educated person might without the least degradation hold such an office as this, however poorly paid ; and it would be precisely the fact of his being well educated which would enable him to fulfil his duties to the public without the stimulus of direct profit. Of course the current objection to such a system would be that no man, for a regularly paid salary, would take pains to please his customers ; and the answer to that objection is, that if you can train a man to so much unselfishness as to offer himself fearlessly to the chance of being shot, in the course of his daily duty, you can most assuredly, if you make it also a point of honour with him, train him to the amount of self-denial involved in looking you out with care such a piece of cheese or bacon as you have asked for.

You see that I have already much diminished the number of employments involving degradation ; and raised the character of many of those that are left. There remain to be considered the necessarily painful or mechanical works of mining, forging, and the like : the unclean, noisome, or paltry manufactures—the various kinds of transport—(by merchant shipping, etc.)—and the conditions of menial service.

It will facilitate the examination of these if we put them for the moment aside, and pass to the other division of our dilemma, the question, namely, what kind of lives our gentlemen and ladies are to live, for whom all this hard work is to be done.

LETTER XXII.

OF THE NORMAL POSITION AND DUTIES OF THE UPPER CLASSES.—
GENERAL STATEMENT OF THE LAND QUESTION.

April 17, 1867.

IN passing now to the statement of conditions affecting the interests of the upper classes, I would rather have addressed these closing letters to one of themselves than to you, for it is with their own faults and needs that each class is primarily concerned. As however, unless I kept the letters private, this change of their address would be but a matter of courtesy and form, not of any true prudential use; and as besides I am now no more inclined to reticence—prudent or otherwise; but desire only to state the facts of our national economy as clearly and completely as may be, I pursue the subject without respect of persons.

Before examining what the occupation and estate of the upper classes ought, as far as may reasonably be conjectured, finally to become, it will be well to set down in brief terms what they actually have been in past ages: for this, in many respects, they must also always be. The upper classes, broadly speaking, are always originally composed of the best-bred (in the merely animal sense of the term), the most energetic, and most thoughtful, of the population, who either by strength of arm seize the land from the rest, and make slaves of them, or bring desert land into cultivation, over which they have therefore, within certain limits, true personal right; or by industry, accumulate other property, or by choice devote themselves to intellectual pursuits, and, though poor, obtain an acknowledged superiority of position, shown by benefits conferred in discovery, or in teaching, or in gifts of art. This is all in the simple course of the law of nature; and the proper offices of the upper classes, thus distinguished from the rest, become, therefore, in the main threefold:—

(A) Those who are strongest of arm have for their proper function the restraint and punishment of vice, and the general

maintenance of law and order ; releasing only from its original subjection to their power that which truly deserves to be emancipated.

(B) Those who are superior by forethought and industry, have for their function to be the providences of the foolish, the weak, and the idle ; and to establish such systems of trade and distribution of goods as shall preserve the lower orders from perishing by famine, or any other consequence of their carelessness or folly, and to bring them all, according to each man's capacity, at last into some harmonious industry.

(C) The third class, of scholars and artists, of course have for function the teaching and delighting of the inferior multitude.

The office of the upper classes, then, as a body, is to keep order among their inferiors, and raise them always to the nearest level with themselves of which those inferiors are capable. So far as they are thus occupied, they are invariably loved and revered intensely by all beneath them, and reach, themselves, the highest types of human power and beauty.

This, then, being the natural ordinance and function of aristocracy, its corruption, like that of all other beautiful things under the Devil's touch, is a very fearful one. Its corruption is, that those who ought to be the rulers and guides of the people, forsake their task of painful honourableness ; seek their own pleasure and pre-eminence only ; and use their power, subtlety, conceded influence, prestige of ancestry, and mechanical instrumentality of martial power, to make the lower orders toil for them, and feed and clothe them for nothing, and become in various ways their living property, goods, and chattels, even to the point of utter regardlessness of whatever misery these serfs may suffer through such insolent domination, or they themselves, their masters, commit of crime to enforce it.

And this is especially likely to be the case when means of various and tempting pleasure are put within the reach of the upper classes by advanced conditions of national commerce and knowledge : and it is *certain* to be the case as soon as po-

sition among those upper classes becomes any way purchasable with money, instead of being the assured measure of some kind of worth (either strength of hand, or true wisdom of conduct, or imaginative gift). It has been becoming more and more the condition of the aristocracy of Europe, ever since the fifteenth century; and is gradually bringing about its ruin, and in that ruin, checked only by the power which here and there a good soldier or true statesman achieves over the putrid chaos of its vain policy, the ruin of all beneath it; which can be arrested only, either by the repentance of that old aristocracy (hardly to be hoped), or by the stern substitution of other aristocracy worthier than it. Corrupt as it may be, it and its laws together, I would at this moment, if I could, fasten every one of its institutions down with bands of iron and trust for all progress and help against its tyranny simply to the patience and strength of private conduct. And if I had to choose, I would tenfold rather see the tyranny of old Austria triumphant in the old and new worlds, and trust to the chance (or rather the distant certainty) of some day seeing a true Emperor born to its throne, than, with every privilege of thought and act, run the most distant risk of seeing the thoughts of the people of Germany and England become like the thoughts of the people of America.*

* My American friends, of whom one, Charles Eliot Norton, of Cambridge, is the best I have in the world, tell me I know nothing about America. It may be so, and they must do me the justice to observe that I, therefore, usually *say* nothing about America. But this I say, because the Americans as a nation set their trust in liberty and in equality, of which I detest the one, and deny the possibility of the other; and because, also, as a nation, they are wholly undesirous of Rest, and incapable of it; irreverent of themselves, both in the present and in the future; discontented with what they are, yet having no ideal of anything which they desire to become, as the tide of the troubled sea, when it *cannot* rest.

Some following passages in this letter, containing personal references which might, in permanence, have given pain or offence, are now omitted—the substance of them being also irrelevant to my main purpose. These few words about the American war, with which they concluded, are, I think, worth retaining:—“All methods of right Government are to be communicated to foreign nations by perfectness of example and

But, however corrupted, the aristocracy of any nation may thus be always divided into three great classes. First, the landed proprietors and soldiers, essentially one political body (for the possession of land can only be maintained by military power); secondly, the moneyed men and leaders of commerce; thirdly, the professional men and masters in science, art, and literature.

And we were to consider the proper duties of all these, and the laws probably expedient respecting them. Whereupon, in the outset we are at once brought face to face with the great land question.

Great as it may be, it is wholly subordinate to those we have hitherto been considering. The laws you make regarding methods of labour, or to secure the genuineness of the things produced by it, affect the entire moral state of the nation, and all possibility of human happiness for them. The mode of distribution of the land only affects their numbers. By this or that law respecting land, you decide whether the nation shall consist of fifty or of a hundred millions. But by this or that law respecting work, you decide whether the given number of millions shall be rogues, or honest men;—shall be wretches, or happy men. And the question of numbers is wholly immaterial, compared with that of character; or rather, its own materialness depends on the prior determination of character. Make your nation consist of knaves, and, as Emerson said long ago, it is but the case of any other vermin—"the more, the worse." Or, to put the matter in narrower limits, it is a matter of no final concern to any parent whether he shall have two children, or four; but matter of quite final concern whether those he has, shall, or shall not,

gentleness of patiently expanded power, not suddenly, nor at the bayonet's point. And though it is the duty of every nation to interfere, at bayonet point, if they have the strength to do so, to save any oppressed multitude, or even individual, from manifest violence, it is wholly unlawful to interfere in such matter, except with sacredly pledged limitation of the objects to be accomplished in the oppressed person's favour and with absolute refusal of all selfish advantage and *increase of territory or of political power* which might otherwise accrue from the victory."

deserve to be hanged. The great difficulty in dealing with the land question at all arises from the false, though very natural, notion on the part of many reformers, and of large bodies of the poor, that the division of the land among the said poor would be an immediate and everlasting relief to them. An *immediate* relief it would be to the extent of a small annual sum (you may easily calculate how little, if you choose) to each of them; on the strength of which accession to their finances, they would multiply into as much extra personality as the extra pence would sustain, and at that point be checked by starvation, exactly as they are now.

Any other form of pillage would benefit them only in like manner; and in reality the difficult part of the question respecting numbers is, not where they shall be arrested, but what shall be the method of their arrest.

An island of a certain size has standing room only for so many people; feeding ground for a great many fewer than could stand on it. Reach the limits of your feeding ground, and you must cease to multiply, must emigrate, or starve. The modes in which the pressure is gradually brought to bear on the population depend on the justice of your laws; but the pressure itself must come at last, whatever the distribution of the land. And arithmeticians seem to me a little slow to remark the importance of the old child's puzzle about the nails in the horseshoe—when it is populations that are doubling themselves, instead of farthings.

The essential land question then is to be treated quite separately from that of the methods of restriction of population. The land question is—At what point will you resolve to stop? It is separate matter of discussion how you are to stop at it.

And this essential land question—“At what point will you stop?”—is itself twofold. You have to consider first, by what methods of land distribution you can maintain the greatest number of healthy persons; and secondly, whether, if by any other mode of distribution and relative ethical laws, you can raise their character, while you diminish their numbers, such sacrifice should be made, and to what extent?

I think it will be better, for clearness sake, to end this letter with the putting of these two queries in their decisive form, and to reserve suggestions of answer for my next.

LETTER XXIII.

OF THE JUST TENURE OF LANDS : AND THE PROPER FUNCTIONS
OF HIGH PUBLIC OFFICERS.

20th April, 1867.

I MUST repeat to you, once more, before I proceed, that I only enter on this part of our inquiry to complete the sequence of its system and explain fully the bearing of former conclusions, and not for any immediately practicable good to be got out of the investigation. Whatever I have hitherto urged upon you, it is in the power of all men quietly to promote, and finally to secure, by the patient resolution of personal conduct ; but no action could be taken in redistribution of land, or in limitation of the incomes of the upper classes, without grave and prolonged civil disturbance.

Such disturbance, however, is only too likely to take place, if the existing theories of political economy are allowed credence much longer. In the writings of the vulgar economists, nothing more excites my indignation than the subterfuges by which they endeavour to accommodate their pseudo-science to the existing abuses of wealth by disguising the true nature of rent. I will not waste time in exposing their fallacies, but will put the truth for you into as clear a shape as I can.

Rent, of whatever kind, is, briefly, the price continuously paid for the loan of the property of another person. It may be too little, or it may be just, or exorbitant, or altogether unjustifiable, according to circumstances. Exorbitant rents can only be exacted from ignorant or necessitous rent payers ; and it is one of the most necessary conditions of state economy that there should be clear laws to prevent such exaction.

I may interrupt myself for a moment to give you an instance of what I mean. The most wretched houses of the poor in Lon-

don often pay ten or fifteen per cent. to the landlord ; and I have known an instance of sanitary legislation being hindered, to the loss of many hundreds of lives, in order that the rents of a noblenan, derived from the necessities of the poor, might not be diminished. And it is a curious thing to me to see Mr. J. S. Mill foaming at the mouth, and really afflicted conscientiously, because he supposes one man to have been unjustly hanged, while by his own failure (I believe, *wilful* failure) in stating clearly to the public one of the first elementary truths of the science he professes, he is aiding and abetting the commission of the cruellest possible form of murder on many thousands of persons yearly, for the sake simply of putting money into the pockets of the landlords. I felt this evil so strongly that I bought, in the worst part of London, one freehold and one leasehold property, consisting of houses inhabited by the lowest poor ; in order to try what change in their comfort and habits I could effect by taking only a just rent, but that firmly. The houses of the leasehold pay me five per cent.; the families that used to have one room in them have now two ; and are more orderly and hopeful besides ; and there is a surplus still on the rents they pay, after I have taken my five per cent., with which, if all goes well, they will eventually be able to buy twelve years of the lease from me. The freehold pays three per cent., with similar results in the comfort of the tenant. This is merely an example of what might be done by firm State action in such matters.

Next, of wholly unjustifiable rents. These are for things which are not, and which it is criminal to consider as, personal or exchangeable property. Bodies of men, land, water, and air, are the principal of these things.

Parenthetically, may I ask you to observe, that though a fearless defender of some forms of slavery, I am no defender of the slave *trade*. It is by a blundering confusion of ideas between *governing* men, and *trading in* men, and by consequent interference with the restraint, instead of only with the sale, that most of the great errors in action have been caused among the emancipation men. I am prepared, if the need be clear to my own mind, and if the power is in my hands, to

throw men into prison, or any other captivity—to bind them or to beat them—and force them for such periods, as I may judge necessary, to any kind of irksome labour; and on occasion of desperate resistance, to hang or shoot them. But I will not *sell* them.

Bodies of men, or women, then (and much more, as I said before, their souls), must not be bought or sold. Neither must land, nor water, nor air.

Yet all these may on certain terms be bound, or secured in possession, to particular persons under certain conditions. For instance, it may be proper at a certain time, to give a man permission to possess land, as you give him permission to marry; and farther, if he wishes it and works for it, to secure to him the land needful for his life, as you secure his wife to him; and make both utterly his own, without in the least admitting his right to buy other people's wives, or fields, or to sell his own.

And the right action of a State respecting its land is, indeed, to secure it in various portions to those of its citizens who deserve to be trusted with it, according to their respective desires, and proved capacities; and after having so secured it to each, to exercise only such vigilance over his treatment of it as the State must give also to his treatment of his wife and servants; for the most part leaving him free, but interfering in cases of gross mismanagement or abuse of power. And in the case of great old families, which always ought to be, and in some measure, however decadent, still truly are, the noblest monumental architecture of the kingdom, living temples of sacred tradition and hero's religion, so much land ought to be granted to them in perpetuity as may enable them to live thereon with all circumstances of state and outward nobleness; *but their income must in no wise be derived from the rents of it*, nor must they be occupied (even in the most distant or subordinately administered methods), in the exaction of rents. That is not noblemen's work. Their income must be fixed, and paid them by the State, as the King's is.

So far from their land being to them a source of income, it should be on the whole costly to them, being kept over

great part of it in conditions of natural grace, which return no rent but their loveliness; and the rest made, at whatever cost, exemplary in perfection of such agriculture as develops the happiest pleasant life; agriculture which, as I will show you hereafter, must reject the aid of all mechanism except that of instruments guided solely by the human hand, or by animal, or directly natural forces; and which, therefore, cannot compete for profitableness with agriculture carried on by aid of machinery.

And now for the occupation of this body of men, maintained at fixed perennial cost of the State.

You know I said I should want no soldiers of special skill or pugnacity, for all my boys would be soldiers. But I assuredly want *captains* of soldiers, of special skill and pugnacity. And also, I said I should strongly object to the appearance of any lawyers in my territory. Meaning, however, by lawyers, people who live by arguing about law—not people appointed to administer law; and people who live by eloquently misrepresenting facts—not people appointed to discover and plainly represent them.

Therefore, the youth of this landed aristocracy are to be trained in my schools to these two great callings, not *by* which, but *in* which, they are to live.

They are to be trained, all of them, in perfect science of war, and in perfect science of essential law. And from their body are to be chosen the captains and the judges of England, its advocates, and generally its State officers, all such functions being held for fixed pay (as already our officers of the Church and army are paid), and no function connected with the administration of law ever paid by casual fee. And the head of such family should, in his own right, having passed due (and high) examination in the science of law, and not otherwise, be a judge, law-ward or Lord, having jurisdiction both in civil and criminal cases, such as our present judges have, after such case shall have been fully represented before, and received verdict from, a jury, composed exclusively of the middle or lower orders, and in which no member of the aristocracy should sit. But from the decision of these juries,

or from the Lord's sentence, there should be a final appeal to a tribunal, the highest in the land, held solely in the King's name, and over which, in the capital, the King himself should preside, and therein give judgment on a fixed number of days in each year; and in other places and at other times, Judges appointed by election (under certain conditions) out of any order of men in the State (the election being national, not provincial), and all causes brought before these judges should be decided, without appeal, by their own authority; not by juries. This, then, recasting it for you into brief view, would be the entire scheme of State authorities:—

1. The King: exercising, as part both of his prerogative and his duty, the office of a supreme judge at stated times in the central court of appeal of his kingdom.

2. Supreme judges appointed by national election; exercising sole authority in courts of final appeal.

3. Ordinary judges, holding the office hereditarily under conditions; and with power to add to their number (and liable to have it increased if necessary by the King's appointment); the office of such judges being to administer the national laws under the decision of juries.

4. State officers charged with the direction of public agency in matters of public utility.

5. Bishops, charged with offices of supervision and aid, to family by family, and person by person.

6. The officers of war, of various ranks.

7. The officers of public instruction, of various ranks.

I have sketched out this scheme for you somewhat prematurely, for I would rather have conducted you to it step by step, and as I brought forward the reasons for the several parts of it; but it is on other grounds desirable that you should have it to refer to, as I go on.

Without depending anywise upon nomenclature, yet holding it important as a sign and record of the meanings of things, I may tell you further that I should call the elected supreme Judges, "Princes;" the hereditary Judges, "Lords;" and the officers of public guidance, "Dukes;" and that the social rank of these persons would be very closely

correspondent to that implied by such titles under our present constitution ; only much more real and useful. And in conclusion of this letter, I will but add, that if you, or other readers, think it idle of me to write or dream of such things ; as if any of them were in our power, or within possibility of any near realisation, and above all, vain to write of them to a workman at Sunderland ; you are to remember what I told you at the beginning, that I go on with this part of my subject in some fulfilment of my long-conceived plan, too large to receive at present any deliberate execution from my failing strength (being the body of the work to which *Munera Pulveris* was intended merely for an introduction) ; and that I address it to you because I know that the working men of England must for some time be the only body to which we can look for resistance to the deadly influence of moneyed power.

I intend, however, to write to you at this moment one more letter, partly explanatory of minor details necessarily omitted in this, and chiefly of the proper office of the soldier ; and then I must delay the completion of even this poor task until after the days have turned, for I have quite other work to do in the brightness of the full-opened spring.

P. S.—As I have used somewhat strong language, both here and elsewhere, of the equivocations of the economists on the subject of rent, I had better refer you to one characteristic example. You will find in paragraph 5th and 6th of Book II., chap. 2, of Mr. Mill's *Principles* that the right to tenure of land is based, by his admission, only on the proprietor's being its improver.

Without pausing to dwell on the objection that land cannot be improved beyond a certain point, and that, at the reaching of that point, farther claim to tenure would cease, on Mr. Mill's principle,—take even this admission, with its proper subsequent conclusion, that “in no sound theory of private property was it ever contemplated that the proprietor of land should be merely a sinecurist quartered on it.” Now, had that conclusion been farther followed, it would have compelled the admission that all rent was unjustifiable which nor-

mally maintained any person in idleness; which is indeed the whole truth of the matter. But Mr. Mill instantly retreats from this perilous admission; and after three or four pages of discussion (quite accurate for *its* part) of the limits of power in management of the land itself (which apply just as strictly to the peasant proprietor as to the cottier's landlord), he begs the whole question at issue in one brief sentence, slipped cunningly into the middle of a long one which appears to be telling all the other way, and in which the fatal assertion (of the right to rent) nestles itself, as if it had been already proved,—thus I italicise the unproved assertion in which the venom of the entire falsehood is concentrated.

“Even in the case of cultivated land, a man whom, though only one among millions, the law permits to hold thousands of acres as his single share, is not entitled to think that all this is given to him to use and abuse, and deal with it as if it concerned nobody but himself. *The rents or profits which he can obtain from it are his, and his only*; but with regard to the land, in everything which he abstains from doing, he is morally bound, and should, whenever the case admits, be legally compelled, to make his interest and pleasure consistent with the public good.”

I say, this sentence in italics is slipped *cunningly* into the long sentence, as if it were of no great consequence; and above I have expressed my belief that Mr. Mill's equivocations on this subject are wilful. It is a grave accusation; but I cannot, by any stretch of charity, attribute these misrepresentations to absolute dulness and bluntness of brain, either in Mr. Mill or his follower, Mr. Fawcett. Mr. Mill is capable of immense involuntary error; but his involuntary errors are usually owing to his seeing only one or two of the many sides of a thing: not to obscure sight of the side he *does* see. Thus, his “*Essay on Liberty*” only takes cognisance of facts that make for liberty, and of none that make for restraint. But in its statement of all that can be said for liberty, it is so clear and keen that I have myself quoted it before now as the best authority on that side. And if arguing in favor of Rent, absolutely, and with clear explanation of what it was, he had then defended

it with all his might, I should have attributed to him only the honest shortsightedness of partisanship ; but when I find his defining sentences full of subtle entanglement and reserve—and that reserve held throughout his treatment of this particular subject—I cannot, whether I utter the suspicion or not, keep the sense of wilfulness in the misrepresentation from remaining in my mind. And if there be indeed ground for this blame, and Mr. Mill, for fear of fostering political agitation,¹ has disguised what he knows to be facts about rent, I would ask him as one of the leading members of the Jamaica Committee, which is the greater crime, boldly to sign warrant for the sudden death of one man, known to be an agitator, in the immediate outbreak of such agitation, or by equivocation in a scientific work, to sign warrants for the deaths of thousands of men in slow misery, for *fear* of an agitation which has not begun ; and if begun, would be carried on by debate, not by the sword ?

LETTER XXIV.

THE OFFICE OF THE SOLDIER.

April 22, 1867.

I MUST once more deprecate your probable supposition that I bring forward this ideal plan of State government, either with any idea of its appearing, to our present public mind, practicable even at a remote period, or with any positive and obstinate adherence to the particular form suggested. There are no wiser words among the many wise ones of the most rational and keen-sighted of old English men of the world, than these :—

“ For forms of government let fools contest ;
That which is best administered is best.”

¹ With at last the natural consequences of cowardice,—nitroglycerine and fireballs ! Let the upper classes speak the truth about themselves boldly, and they will know how to defend themselves fearlessly. It is equivocation in principle, and dereliction from duty, which melt at last into tears in a mob's presence.—(Dec. 16th, 1867.)

For, indeed, no form of government is of any use among bad men ; and any form will work in the hands of the good ; but the essence of all government among good men is this, that it is mainly occupied in the *production and recognition of human worth*, and in the detection and extinction of human unworthiness ; and every Government which produces and recognizes worth, will also inevitably use the worth it has found to govern with ; and therefore fall into some approximation to such a system as I have described. And, as I told you, I do not contend for names, nor particular powers—though I state those which seem to me most advisable ; on the contrary, I know that the precise extent of authorities must be different in every nation at different times, and ought to be so, according to their circumstances and character ; and all that I assert with confidence is the necessity, within afterwards definable limits, of *some such* authorities as these ; that is to say,

I. An *observant* one :—by which all men shall be looked after and taken note of.

II. A *helpful* one, from which those who need help may get it.

III. A *prudential* one, which shall not let people dig in wrong places for coal, nor make railroads where they are not wanted ; and which shall also, with true providence, insist on their digging in right places for coal, in a safe manner, and making railroads where they *are* wanted.

IV. A *martial* one, which will punish knaves, and make idle persons work.

V. An *instructive* one, which shall tell everybody what it is their duty to know, and be ready pleasantly to answer questions if anybody asks them.

VI. A *deliberate* and *decisive* one, which shall judge by law, and amend or make law ;

VII. An *exemplary* one, which shall show what is loveliest in the art of life.

You may divide or name those several offices as you will, or they may be divided in practice as expediency may recommend ; the plan I have stated merely puts them all into the simplest forms and relations.

You see I have just defined the martial power as that "which punishes knaves and makes idle persons work." For that is indeed the ultimate and perennial soldiership; that is the essential warrior's office to the end of time. "There is no discharge in that war." To the compelling of sloth, and the scourging of sin, the strong hand will have to address itself as long as this wretched little dusty and volcanic world breeds nettles, and spits fire. The soldier's office at present is indeed supposed to be the defence of his country against other countries; but that is an office which—Utopian as you may think the saying—will soon now be extinct. I say so fearlessly, though I say it with wide war threatened, at this moment, in the East and West. For observe what the standing of nations on their defence really means. It means that, but for such armed attitude, each of them would go and rob the other; that is to say, that the majority of active persons in every nation are at present—thieves. I am very sorry that this should still be so; but it will not be so long. National exhibitions, indeed, will not bring peace; but national education will, and that is soon coming. I can judge of this by my own mind, for I am myself naturally as covetous a person as lives in this world, and am as eagerly-minded to go and steal some things the French have got, as any housebreaker could be, having clue to attractive spoons. If I could by military incursion carry off Paul Veronese's "Marriage in Cana," and the "Venus Victrix" and the "Hours of St. Louis," it would give me the profoundest satisfaction to accomplish the foray successfully; nevertheless, being a comparatively educated person, I should most assuredly not give myself that satisfaction, though there were not an ounce of gunpowder, nor a bayonet, in all France. I have not the least mind to rob anybody, however much I may covet what they have got; and I know that the French and British public may and will, with many other publics, be at last brought to be of this mind also; and to see farther that a nation's real strength and happiness do not depend on properties and territories, nor on machinery for their defence; but on their getting such territory as they *have*, well filled with none but

respectable persons. Which is a way of *infinitely* enlarging one's territory, feasible to every potentate ; and dependent no wise on getting Trent turned, or Rhine-edge reached.

Not but that, in the present state of things, it may often be soldiers' duty to seize territory, and hold it strongly ; but only from banditti, or savage and idle persons.

Thus, both Calabria and Greece ought to have been irresistibly occupied long ago. Instead of quarrelling with Austria about Venice, the Italians ought to have made a truce with her for ten years, on condition only of her destroying no monuments, and not taxing Italians more than Germans ; and then thrown the whole force of their army on Calabria, shot down every bandit in it in a week, and forced the peasantry of it into honest work on every hill side, with stout and immediate help from the soldiers in embanking streams, building walls, and the like ; and Italian finance would have been a much pleasanter matter for the King to take account of by this time ; and a fleet might have been floating under Garganus strong enough to sweep every hostile sail out of the Adriatic, instead of a disgraced and useless remnant of one, about to be put up to auction.

And similarly, *we* ought to have occupied Greece instantly, when they asked us, whether Russia liked it or not ; given them an English king, made good roads for them, and stout laws ; and kept them, and their hills and seas, with righteous shepherding of Arcadian fields, and righteous ruling of Salaminian wave, until they could have given themselves a Greek king of men again ; and obeyed him, like men.

April 24.

It is strange that just before I finish work for this time, there comes the first real and notable sign of the victory of the principles I have been fighting for, these seven years. It is only a newspaper paragraph, but it means much. Look at the second column of the 11th page of yesterday's *Pall Mall Gazette*. The paper has taken a wonderful fit of misprinting lately (unless my friend John Simon has been knighted on his way to Weimar, which would be much too right and good a

thing to be a likely one); but its straws of talk mark which way the wind blows perhaps more early than those of any other journal—and look at the question it puts in that page, “Whether political economy be the sordid and materialistic science some account it, or almost the noblest on which thought can be employed?” Might not you as well have determined that question a little while ago, friend Public? and known what political economy *was*, before you talked so much about it?

But, hark, again—“Ostentation, parental pride, and a host of moral” (immoral?) “qualities must be recognized as among the springs of industry; political economy should not ignore these, but, to discuss them, *it must abandon its pretensions to the precision of a pure science.*”

Well done the *Pall Mall*! Had it written “Prudence and parental affection,” instead of “Ostentation and parental pride,” “must be recognized among the springs of industry,” it would have been still better; and it would then have achieved the expression of a part of the truth, which I put into clear terms in the first sentence of *Unto this Last*, in the year 1862—which it has thus taken five years to get half way into the public’s head.

“Among the delusions which at different periods have possessed themselves of the minds of large masses of the human race, perhaps the most curious—certainly the least creditable—is the modern *soi-disant* science of political economy, based on the idea that an advantageous code of social action may be determined, irrespectively of the influence of social affection.”

Look also at the definition of skill.

“Under the term ‘skill’ I mean to include the united force of experience, intellect, and passion, in their operation on manual labour, and under the term ‘passion’ to include the entire range of the moral feelings.”

I say half way into the public’s head, because you see, a few lines further on, the *Pall Mall* hopes for a pause “half way between the rigidity of Ricardo and the sentimentality of Ruskin.”

With one hand on their pocket, and the other on their heart!

Be it so for the present ; we shall see how long this statuesque attitude can be maintained ; meantime, it chanced strangely—as several other things have chanced while I was writing these notes to you—that they should have put in that sneer (two lines before) at my note on the meaning of the Homeric and Platonic sirens, at the very moment when I was doubting whether I would or would not tell you the significance of the last song of Ariel in the *Tempest*.

I had half determined not, but now I shall. And this was what brought me to think of it—

Yesterday afternoon I called on Mr. H. C. Sorby, to see some of the results of an inquiry he has been following all last year, into the nature of the colouring matter of leaves and flowers.

You most probably have heard (at all events, may with little trouble hear) of the marvellous power which chemical analysis has received in recent discoveries respecting the laws of light.

My friend showed me the rainbow of the rose, and the rainbow of the violet, and the rainbow of the hyacinth, and the rainbow of forest leaves being born, and the rainbow of forest leaves dying.

And, last, he showed me the rainbow of blood. It was but the three hundredth part of a grain, dissolved in a drop of water : and it cast its measured bars, for ever recognisable now to human sight, on the chord of the seven colours. And no drop of that red rain can now be shed, so small as that the stain of it cannot be known, and the voice of it heard out of the ground.

But the seeing these flower colours, and the iris of blood together with them, just while I was trying to gather into brief space the right laws of war, brought vividly back to me my dreaming fancy of long ago, that even the trees of the earth were “capable of a kind of sorrow, as they opened their innocent leaves in vain for men ; and along the dells of England her beeches cast their dappled shades only where the outlaw drew his bow, and the king rode his careless chase ; amidst the fair defiles of the Apennines, the twisted olive-

trunks hid the ambushes of treachery, and on their meadows, day by day, the lilies which were white at the dawn were washed with crimson at sunset."

And so also now this chance word of the daily journal, about the sirens, brought to my mind the divine passage in the *Cratylus* of Plato, about the place of the dead:—

"And none of those who dwell there desire to depart thence, —no, not even the Sirens; but even they, the seducers, are there themselves beguiled, and they who lulled all men, themselves laid to rest—they, and all others—such sweet songs doth death know how to sing to them."

So also the Hebrew.

"And desire shall fail, because man goeth to his long home." For you know I told you the Sirens were not pleasures, but desires; being always represented in old Greek art as having human faces, with birds' wings and feet, and sometimes with eyes upon their wings; and there are not two more important passages in all literature, respecting the laws of labour and of life, than those two great descriptions of the Sirens in Homer and Plato,—the Sirens of death, and Sirens of eternal life, representing severally the earthly and heavenly desires of men; the heavenly desires singing to the motion of circles of the spheres, and the earthly on the rocks of fatallest shipwreck. A fact which may indeed be regarded "sentimentally," but it is also a profoundly important politico-economical one.

And now for Shakespeare's song.

You will find if you look back to the analysis of it, given in *Munera Pulveris* that the whole play of the *Tempest* is an allegorical representation of the powers of true, and therefore spiritual, Liberty, as opposed to true, and therefore carnal and brutal Slavery. There is not a sentence nor a rhyme, sung or uttered by Ariel or Caliban, throughout the play, which has not this undermeaning.

Now the fulfilment of all human liberty is in the peaceful inheritance of the earth, with its "herb yielding seed, and fruit tree yielding fruit" after his kind; the pasture, or arable, land, and the blossoming, or wooded and fruited, land uniting the final elements of life and peace, for body and soul. There-

fore, we have the two great Hebrew forms of benediction, "His eyes shall be red with wine, and his teeth white with milk," and again, "Butter and honey shall he eat, that he may know to refuse the evil and choose the good." And as the work of war and sin has always been the devastation of this blossoming earth, whether by spoil or idleness, so the work of peace and virtue is also that of the first day of Paradise, to "Dress it and to keep it." And that will always be the song of perfectly accomplished Liberty, in her industry, and rest, and shelter from troubled thoughts in the calm of the fields, and gaining, by migration, the long summer's day from the shortening twilight:—

Where the bee sucks, there suck I;
 In a cowslip's bell I lie;
 There I couch when owls do cry.
 On the bat's back I do fly
 After summer merrily;
 Merrily, merrily, shall I live now
 Under the blossom that hangs on the bough.

And the security of this treasure to all the poor, and not the ravage of it down the valleys of the Shenandoah, is indeed the true warrior's work. But, that they may be able to restrain vice rightly, soldiers must themselves be first in virtue; and that they may be able to compel labour sternly, they must themselves be first in toil, and their spears, like Jonathan's at Beth-aven, enlighteners of the eyes.

LETTER XXV.

OF INEVITABLE DISTINCTION OF RANK, AND NECESSARY SUBMISSION
 TO AUTHORITY.—THE MEANING OF PURE-HEARTEDNESS.—CON-
 CLUSION.

I WAS interrupted yesterday, just as I was going to set my soldiers to work; and to-day, here comes the pamphlet you promised me, containing the Debates about Church-going, in which I find so interesting a text for my concluding letter

that I must still let my soldiers stand at ease for a little while. Look at its twenty-fifth page, and you will find, in the speech of Mr. Thomas (carpenter), this beautiful explanation of the admitted change in the general public mind, of which Mr. Thomas, for his part, highly approves (the getting out of the unreasonable habit of paying respect to anybody). There were many reasons to Mr. Thomas's mind why the working classes did not attend places of worship; one was, that "the parson was regarded as an object of reverence. In the little town he came from, if a poor man did not make a bow to the parson he was a marked man. This was no doubt wearing away to a great extent" (the base habit of making bows), "because, the poor man was beginning to get education, and to think for himself. It was only while the priest kept the press from him that he was kept ignorant, and was compelled to bow, as it were, to the parson. . . . It was the case all over England. The clergyman seemed to think himself something superior. Now he (Mr. Thomas) did not admit there was any inferiority" (laughter, audience throughout course of meeting mainly in the right), "except, perhaps, on the score of his having received a classical education, which the poor man could not get."

Now, my dear friend, here is the element which is the veriest devil of all that have got into modern flesh; this infidelity of the nineteenth-century St. Thomas in there being anything better than himself, alive; coupled, as it always is, with the farther resolution—if unwillingly convinced of the fact—to seal the Better living thing down again out of his way, under the first stone handy. I had not intended, till we entered on the second section of our inquiry, namely, into the influence of gentleness (having hitherto, you see, been wholly concerned with that of justice), to give you the clue out of our dilemma about equalities produced by education; but by this speech of our superior carpenter's, I am driven into it at once, and it is perhaps as well.

The speech is not, observe, without its own root of truth at the bottom of it, nor at all, as I think, ill intended by the speaker; but you have in it a clear instance of what I was

saying in the sixteenth of these letters,—that education *was desired by the lower orders because they thought it would make them upper orders*, and be a leveller and effacer of distinctions. They will be mightily astonished, when they really get it, to find that it is, on the contrary, the fatallest of all discerners and enforcers of distinctions; piercing, even to the division of the joints and marrow, to find out wherein your body and soul are less, or greater, than other bodies and souls, and to sign deed of separation with unequivocal seal.

Education is, indeed, of all differences not divinely appointed, an instant effacer and reconciler. Whatever is undivinely poor, it will make rich; whatever is undivinely maimed, and halt, and blind, it will make whole, and equal, and seeing. The blind and the lame are to it as to David at the siege of the Tower of the Kings, “hated of David’s soul.” But there are other divinely-appointed differences, eternal as the ranks of the everlasting hills, and as the strength of their ceaseless waters. And these, education does *not* do away with; but measures, manifests, and employs.

In the handful of shingle which you gather from the sea-beach, which the indiscriminate sea, with equality of eternal foam, has only educated to be, every one, round, you will see little difference between the noble and mean stones. But the jeweller’s trenchant education of them will tell you another story. Even the meanest will be better for it, but the noblest so much better that you can class the two together no more. The fair veins and colours are all clear now, and so stern is Nature’s intent regarding this, that not only will the polish show which is best, but the best will take the most polish. You shall not merely see they have more virtue than the others, but see that more of virtue more clearly; and the less virtue there is, the more dimly you shall see what there is of it.

And the law about education, which is sorrowfullest to vulgar pride, is this—that all its gains are at compound interest; so that, as our work proceeds, every hour throws us farther behind the greater men with whom we began on equal terms. Two children go to school hand in hand, and spell for half an

hour over the same page. Through all their lives, never shall they spell from the same page more. One is presently a page ahead,—two pages, ten pages,—and evermore, though each toils equally, the interval enlarges—at birth nothing, at death, infinite.

And by this you may recognise true education from false. False education is a delightful thing, and warms you, and makes you every day think more of yourself. And true education is a deadly cold thing, with a Gorgon's head on her shield, and makes you every day think worse of yourself.

Worse in two ways, also, more's the pity. It is perpetually increasing the personal sense of ignorance and the personal sense of fault. And this last is the truth which is at the bottom of the common evangelical notions about conversion, and which the Devil has got hold of, and hidden, until, instead of seeing and confessing personal ignorance and fault, as compared with the sense and virtue of others, people see nothing but corruption in human nature, and shelter their own sins under accusation of their race (the worst of all assertions of equality and fraternity). And so they avoid the blessed and strengthening pain of finding out wherein they are fools, as compared with other men, by calling everybody else a fool too; and avoid the pain of discerning their own faults, by vociferously claiming their share in the great capital of original sin.

I must also, therefore, tell you here what properly ought to have begun the next following section of our subject—the point usually unnoticed in the parable of the Prodigal Son.

First, have you observed that all Christ's main teachings, by direct order, by earnest parable, and by His own permanent emotion, regard the use and misuse of *money*? We might have thought, if we had been asked what a divine teacher was most likely to teach, that He would have left inferior persons to give directions about money; and Himself spoken only concerning faith and love, and the discipline of the passions, and the guilt of the crimes of soul against soul. But not so. He speaks in general terms of these. But He does not speak parables about them for all men's memory,

nor permit Himself fierce indignation against them, in all men's sight. The Pharisees bring Him an adulteress. He writes her forgiveness on the dust of which he had formed her. Another, despised of all for known sin, He recognized as a giver of unknown love. But He acknowledges no love in buyers and sellers in His house. One should have thought there were people in that house twenty times worse than they; — Caiaphas and his like—false priests, false prayer-makers, false leaders of the people—who needed putting to silence, or to flight, with darkest wrath. But the scourge is only against the traffickers and thieves. The two most intense of all the parables: the two which lead the rest in love and in terror (this of the Prodigal, and of Dives) relate, both of them, to management of riches. The practical order given to the only seeker of advice, of whom it is recorded that Christ “loved him,” is briefly about his property. “Sell that thou hast.”

And the arbitrament of the day of Last Judgment is made to rest wholly, neither on belief in God, nor in any spiritual virtue in man, nor on freedom from stress of stormy crime, but on this only, “I was an hungered and ye gave me drink; naked, and ye clothed me; sick, and ye came unto me.”

Well, then, the first thing I want you to notice in the parable of the Prodigal Son (and the last thing which people usually *do* notice in it), is—that it is about a Prodigal! He begins by asking for his share of his father's goods; he gets it, carries it off, and wastes it. It is true that he wastes it in riotous living, but you are not asked to notice in what kind of riot: He spends it with harlots—but it is not the harlotry which his elder brother accuses him of mainly, but of having devoured his father's living. Nay, it is not the sensual life which he accuses himself of—or which the manner of his punishment accuses him of. But the *wasteful* life. It is not said that he had become debauched in soul, or diseased in body, by his vice; but that at last he would fain have filled his belly with husks, and could not. It is not said that he was struck with remorse for the consequences of his evil passions, but only that he remembered there was bread enough and to spare, even for the servants, at home.

Now, my friend, do not think I want to extenuate sins of passion (though, in very truth, the sin of Magdalene is a light one compared to that of Judas); but observe, sins of passion, if of *real* passion, are often the errors and back-falls of noble souls; but prodigality is mere and pure selfishness, and essentially the sin of an ignoble or undeveloped creature; and I would rather, ten times rather, hear of a youth that (certain degrees of temptation and conditions of resistance being understood) he had fallen into any sin you chose to name, of all the mortal ones, than that he was in the habit of running bills which he could not pay.

Farther, though I hold that the two crowning and most accursed sins of the society of this present day are the carelessness with which it regards the betrayal of women, and brutality with which it suffers the neglect of children, both these head and chief crimes, and all others, are rooted first in abuse of the laws, and neglect of the duties, concerning wealth. And thus the love of money, with the parallel (and, observe, *mathematically commensurate* looseness in management of it), the “mal tener,” followed necessarily by the “mal dare,” is, indeed, the root of all evil.

Then, secondly, I want you to note that when the prodigal comes to his senses, he complains of nobody but himself, and speaks of no unworthiness but his own. He says nothing against any of the women who tempted him—nothing against the citizen who left him to feed on husks—nothing of the false friends of whom “no man gave unto him”—above all, nothing of the “corruption of human nature,” or the corruption of things in general. He says that *he himself* is unworthy, as distinguished from honourable persons, and that *he himself* has sinned, as distinguished from righteous persons. And *that* is the hard lesson to learn, and the beginning of faithful lessons. All right and fruitful humility, and purging of Heart, and seeing of God, is in that. It is easy to call yourself the chief of sinners, expecting every sinner round you to decline—or return—the compliment; but learn to measure the real degrees of your own relative baseness, and to be ashamed, not in heaven’s sight, but in man’s sight; and re-

demption is indeed begun. Observe the phrase, I have sinned "against heaven," against the great law of that, and before thee, visibly degraded before my human sire and guide, unworthy any more of being esteemed of his blood, and desirous only of taking the place I deserve among his servants.

Now, I do not doubt but that I shall set many a reader's teeth on edge by what he will think my carnal and material rendering of this "beautiful" parable. But I am just as ready to spiritualize it as he is, provided I am sure first that we understand it. If we want to understand the parable of the sower, we must first think of it as of literal husbandry; if we want to understand the parable of the prodigal, we must first understand it as of literal prodigality. And the story has also for us a precious lesson in this literal sense of it, namely this, which I have been urging upon you throughout these letters, that all redemption must begin in subjection, and in the recovery of the sense of Fatherhood and authority, as all ruin and desolation begin in the loss of that sense. The lost son began by claiming his rights. He is found when he resigns them. He is lost by flying from his father, when his father's authority was only paternal. He is found by returning to his father, and desiring that his authority may be absolute, as over a hired stranger.

And this is the practical lesson I want to leave with you, and all other working men.

You are on the eve of a great political crisis; and every rascal with a tongue in his head will try to make his own stock out of you. Now this is the test you must try them with. Those that say to you, "Stand up for your rights—get your division of living—be sure that you are as well off as others, and have what they have!—don't let any man dictate to you—have not you all a right to your opinion?—are you not all as good as everybody else?—let us have no governors, or fathers—let us all be free and alike." Those, I say, who speak thus to you, take Nelson's rough order for—and hate them as you do the Devil, for they *are* his ambassadors. But those, the few, who have the courage to say to you, "My friends, you and I, and all of us, have somehow got very

wrong ; we've been hardly treated, certainly ; but here we are in a piggery, mainly by our own fault, hungry enough, and for ourselves, anything but respectable ; we *must* get out of this ; there are certainly laws we may learn to live by, and there are wiser people than we in the world, and kindly ones, if we can find our way to them ; and an infinitely wise and kind Father, above all of them and us, if we can but find our way to *Him*, and ask Him to take us for servants, and put us to any work He will, so that we may never leave Him more." The people who will say that to you, and (for by *no* saying, but by their fruits, only, you shall finally know them) who are themselves orderly and kindly, and do their own business well,—take *those* for your guides, and trust them ; on ice and rock alike, tie yourselves well together with them, and with much scrutiny, and cautious walking (perhaps nearly as much back as forward, at first), you will verily get off the glacier, and into meadow land, in God's time.

I meant to have written much to you respecting the meaning of that word "hired servants," and to have gone on to the duties of soldiers, for you know "Soldier" means a person who is paid to fight with regular pay—literally with "soldi" or "sous"—the "penny a day" of the vineyard labourers : but I can't now : only just this much, that our whole system of work must be based on the nobleness of soldiership—so that we shall all be soldiers of either ploughshare or sword ; and literally, all our actual and professed soldiers, whether professed for a time only, or for life, must be kept to hard work of hand, when not in actual war ; their honour consisting in being set to services of more pain and danger than others ; to lifeboat service ; to redeeming of ground from furious rivers or sea—or mountain ruin ; to subduing wild and unhealthy land, and extending the confines of colonies in the front of miasm and famine, and savage races.

And much of our harder home work must be done in a kind of soldiership, by bands of trained workers sent from place to place and town to town ; doing with strong and sudden hand what is needed for help, and setting all things in more prosperous courses for the future.

Of all which I hope to speak in its proper place, after we know what offices the higher arts of gentleness have among the lower ones of force, and how their prevalence may gradually change spear to pruning-hook, over the face of all the earth.

And now—but one word more—either for you, or any other readers who may be startled at what I have been saying as to the peculiar stress laid by the Founder of our religion on right dealing with wealth. Let them be assured that it is with no fortuitous choice among the attributes or powers of evil, that “Mammon” is assigned for the direct adversary of the Master whom they are bound to serve. You cannot, by any artifice of reconciliation, be God’s soldier, and his. Nor while the desire of gain is within your heart, can any true knowledge of the Kingdom of God come there. No one shall enter its stronghold,—no one receive its blessing, except, “he that hath clean hands and a pure heart;” clean hands, that have done no cruel deed;—pure heart, that knows no base desire. And, therefore, in the highest spiritual sense that can be given to words, be assured, not respecting the literal temple of stone and gold, but of the living temple of your body and soul, that no redemption, nor teaching, nor hallowing, will be anywise possible for it, until these two verses have been, for it also, fulfilled:—

“And He went into the temple, and began to cast out them that sold therein, and them that bought. And He taught daily in the temple.”

APPENDICES.

APPENDIX I.

Page 19.—*Expenditure on Science and Art.*

THE following is the passage referred to. The fact it relates is so curious, and so illustrative of our national interest in science, that I do not apologize for the repetition :—

“Two years ago there was a collection of the fossils of Solenhofen to be sold in Bavaria ; the best in existence, containing many specimens unique for perfectness, and one, unique as an example of a species (a whole kingdom of unknown living creatures being announced by that fossil). This collection, of which the mere market worth, among private buyers, would probably have been some thousand or twelve hundred pounds, was offered to the English nation for seven hundred : but we would not give seven hundred, and the whole series would have been in the Munich museum at this moment, if Professor Owen¹ had not, with loss of his own time, and patient tormenting of the British public in the person of its representatives, got leave to give four hundred pounds at once, and himself become answerable for the other three !—which the said public will doubtless pay him eventually, but sulkily, and caring nothing about the matter all the while ; only always ready to cackle if any credit comes of it. Consider, I beg of you, arithmetically, what this fact means. Your annual expenditure for public purposes (a third of it

¹ I originally stated this fact without Professor Owen's permission ; which, of course, he could not with propriety have granted had I asked it ; but I considered it so important that the public should be aware of the fact that I did what seemed to me right, though rude.

for military apparatus) is at least fifty millions. Now seven hundred pounds is to fifty million pounds roughly, as seven pence to two thousand pounds. Suppose then, a gentleman of unknown income, but whose wealth was to be conjectured from the fact that he spent two thousand a year on his park walls and footmen only, professes himself fond of science; and that one of his servants comes eagerly to tell him that an unique collection of fossils, giving clue to a new era of creation, is to be had for the sum of sevenpence sterling; and that the gentleman, who is fond of science, and spends two thousand a year on his park, answers after keeping his servant waiting several months, 'Well! I'll give you fourpence for them, if you will be answerable for the extra threepence yourself till next year!'"

APPENDIX II.

Page 25.—*Legislation of Frederick the Great.*

The following are the portions of Mr. Dixon's letters referred to:—

"Well, I am now busy with *Frederick the Great*; I am not now astonished that Carlyle calls him Great, neither that this work of his should have had such a sad effect upon him in producing it, when I see the number of volumes he must have had to wade through to produce such a clear terse set of utterances; and yet I do not feel the work as a book likely to do a reader of it the good that some of his other books will do. It is truly awful to read these battles after battles, lies after lies, called *Diplomacy*; it's fearful to read all this, and one wonders how he that set himself to this,—He, of all men,—could have the rare patience to produce such a laboured, heart-rending piece of work. Again, when one reads of the stupidity, the shameful waste of our moneys by our forefathers, to see that our National Debt (the curse to our labour now, the millstone to our commerce, to our fair chance of competition in our day) thus created, and for what? Even Carlyle cannot tell; then how are we to tell? Now, who will deliver

us? that is the question; who will help us in those days of *idle or no work*, while our foreign neighbours have plenty and are actually selling their produce to our men of capital cheaper than we can make it! House-rent getting dearer, taxes getting dearer, rates, clothing, food, &c. Sad times, my master, do seem to have fallen upon us. And the cause of nearly all this lies embedded in that Frederick; and yet, so far as I know of it, no critic has yet given an exposition of such laying there. ~~After~~ ^{For} our behoof, is there no one that will take this, that there lies so woven in with much other stuff so sad to read, to any man that does not believe man was made to fight alone, to be a butcher of his fellow-man? Who will do this work, or piece of work, so that all who care to know how it is that our debt grew so large, and a great deal more that we ought to know?—that clearly is one great reason why the book was written and was printed. Well, I hope some day all this will be clear to our people, and some man or men will arise and sweep us clear of these hindrances, these sad drawbacks to the vitality of our work in this world.”

“57, Nile Street, Sunderland, Feb. 7, 1867.

“DEAR SIR,—I beg to acknowledge the receipt of two letters as additions to your books, which I have read with deep interest, and shall take care of them, and read them over again, so that I may thoroughly comprehend them, and be able to think of them for future use. I myself am not fully satisfied with our co-operation, and never have been; it is too much tinged with the very elements that they complain of in our present systems of trade—selfishness. I have for years been trying to direct the attention of the editor of the *Co-operator* to such evils that I see in it. Now, further, I may state that I find you and Carlyle seem to agree quite on the idea of the *Masterhood* qualification. There, again, I find you both feel and write as all working men consider just. I can assure you there is not an honest, noble, working man that would not by far serve under such *masterhood*, than be the employé or workman of a co-operative store. Working men do not as a rule make good masters; neither do they treat each other

with that courtesy as a noble master treats his working man. George Fox shadows forth some such treatment that Friends ought to make law and guidance for their working men and slaves, such as you speak of in your letters. I will look the passage up, as it is quite to the point, so far as I now remember it. In Vol. VI. of *Frederick the Great*, I find a great deal there that I feel quite certain, if our Queen or Government could make law, thousands of English working men would hail it with such a shout of joy and gladness as would astonish the Continental world. These changes suggested by Carlyle, and placed before the thinkers of England, are the noblest, the truest utterances on real kinghood, that I have ever read; the more I think over them, the more I feel the truth, the justness, and also the fitness of them, to our nation's present dire necessities; yet this is the man, and these are the thoughts of his, that our critics seem never to see, or if seen, don't think worth printing or in any way wisely directing the attention of the public thereto, alas! All this and much more fills me with such sadness that I am driven almost to despair. I see from the newspapers, Yorkshire, Lancashire, and other places are sternly endeavouring to carry out the short-time movement until such times as trade revives, and I find the masters and men seem to adopt it with a good grace and friendly spirit. I also beg to inform you I see a Mr. Morley, a large manufacturer at Nottingham, has been giving pensions to all his old workmen. I hope such a noble example will be followed by other wealthy masters. It would do more to make a master loved, honoured, and cared for, than thousands of pounds expended in other ways. The Government Savings Bank is one of the wisest acts of late years done by our Government. I, myself, often wish the Government held all our banks instead of private men; that would put an end to false speculations, such as we too often in the provinces suffer so severely by, so I hail with pleasure and delight the shadowing forth by you of these noble plans for the future: I feel glad and uplifted to think of the good that such teaching will do for us all.

Yours truly,

“THOMAS DIXON.”

“57, Nile Street, Sunderland, Feb. 24, 1867.

“DEAR SIR,—I now give you the references to *Frederick the Great*, Vol. VI. : Land Question, 365 page, where he increases the number of small farmers to 4,000 (202, 204). English soldiers and T. C.’s remarks on our system of purchase, &c. His law (620, 623, 624), State of Poland and how he repaired it (487, 488, 489, 490). I especially value the way he introduced all kinds of industries therein, and so soon changed the chaos into order. Again, the schoolmasters also are given (not yet in England, says T. C.). Again, the use he made of 15,000*l.* surplus in Brandenburg ; how it was applied to better his staff of masters. To me, the Vol. VI. is one of the wisest pieces of modern thought in our language. I only wish I had either your power, C. Kingsley, Maurice, or some such able pen-generalship, to illustrate and show forth all the wise teaching on law, government, and social life I see in it, and shining like a star through all its pages. I feel also the truth of all you have written, and will do all I can to make such men or women that care for such thoughts, see it, or read it. I am copying the letters as fast and as well as I can, and will use my utmost endeavour to have them done that justice to they merit.

Yours truly,

“THOMAS DIXON.”

APPENDIX III.

Page 27.—*Effect of Modern Entertainments on the Mind of Youth.*

THE letter of the *Times* correspondent referred to contained an account of one of the most singular cases of depravity ever brought before a criminal court ; but it is unnecessary to bring any of its details under the reader’s attention, for nearly every other number of our journals has of late contained some instances of atrocities before unthought of, and, it might have seemed, impossible to humanity. The connection of these with the modern love of excitement in the sensation novel and drama may not be generally understood, but it is direct and constant ; all furious pursuit of pleasure ending

in actual desire of horror and delight in death. I entered into some fuller particulars on this subject in a lecture given in the spring at the Royal Institution, which will be shortly published in a form accessible to the readers of these Letters, and I therefore give no extracts from it.

APPENDIX IV.

Page 47.—*Drunkenness as the Cause of Crime.*

THE following portions of Mr. Dixon's letter referred to, will be found interesting :—

“DEAR SIR,—YOUR last letters I think will arouse the attention of thinkers more than any of the series, it being on topics they in general feel more interested in than the others, especially as in these you do not assail their pockets so much as in the former ones. Since you seem interested with the notes or rough sketches on gin, G * * * of Dublin was the man I alluded to as making his money by drink, and then giving the results of such traffic to repair the Cathedral of Dublin. It was thousands of pounds. I call such charity robbing Peter to pay Paul! Immense fortunes are made in the *Liquor Traffic*, and I will tell you why; it is all paid for in cash, at least such as the poor people buy; they get credit for clothes, butcher's meat, groceries, &c., while they give the gin-palace keeper *cash*; they never begrudge the price of a glass of gin or beer, they never haggle over *its* price, never once think of doing that; but in the purchase of almost every other article they haggle and begrudge its price. To give you an idea of its profits—there are houses here whose average weekly takings in cash at their bars, is 50*l.*, 60*l.*, 70*l.*, 80*l.*, 90*l.*, to 150*l.*, per week! Nearly all the men of intelligence in it, say it is the curse of the *working classes*. Men whose earnings are, say 20*s.* to 30*s.* per week, spend on the average 3*s.* to 6*s.* per week (some even 10*s.*). It's my mode of living to supply these houses with corks, that makes me see so much of the drunkenness; and that is the cause why I never really cared for *my trade*, seeing the misery that was entailed on my fellow

men and women by the use of this stuff. Again, a house with a license to sell spirit, wine, and ale, to be consumed on the premises, is worth two to three times more money than any other class of property. One house here worth nominally 140*l.* sold the other day for 520*l.*; another one worth 200*l.* sold for 800*l.* I know premises with a license that were sold for 1,300*l.*, and then sold again two years after for 1,800*l.*; another place was rented for 50*l.* now rents at 100*l.*—this last is a house used by working men and labourers chiefly! No, I honour men like *Sir W. Trevelyn*, that are teetotallers, or total abstainers, as an example to poor men, and to prevent his work people being tempted, will not allow any public-house on his estate. If our land had a few such men it would help the cause. We possess one such a man here, a banker. I feel sorry to say the progress of temperance is not so great as I would like to see it. The only religious body that approaches to your ideas of political economy is Quakerism as taught by George Fox. Carlyle seems deeply tinged with their teachings. *Silence* to them is as valuable as to him. Again, why should people howl and shriek over the law that the Alliance is now trying to carry out in our land, called the Permissive Bill? If we had just laws we then would not be so miserable or so much annoyed now and then with cries of Reform and cries of Distress. I send you two pamphlets;—one gives the workingman's reasons why he don't go to church; in it you will see a few opinions expressed very much akin to those you have written to me. The other gives an account how it is the poor Indians have died of *Famine*, simply because they have destroyed the very system of Political Economy, or one having some approach to it, that you are now endeavouring to direct the attention of thinkers to in our country. The *Sesame and Lilies* I have read as you requested. I feel now fully the aim and object you have in view in the Letters, but I cannot help directing your attention to that portion where you mention or rather exclaim against the Florentines pulling down their *Ancient Walls* to build a *Boulevard*. That passage is one that would gladden the hearts of all true *Italians*, especially men that love *Italy and Dante!*

APPENDIX V.

Page 48.—*Abuse of Food.*

PARAGRAPHS cut from *Manchester Examiner* of March 16, 1867 :—

“ A PARISIAN CHARACTER.—A celebrated character has disappeared from the Palais Royal. René Lartique was a Swiss, and a man of about sixty. He actually spent the last fifteen years in the Palais Royal—that is to say, he spent the third of his life at dinner. Every morning at ten o'clock he was to be seen going into a restaurant (usually Tissat's), and in a few moments was installed in a corner, which he only quitted about three o'clock in the afternoon, after having drunk at least six or seven bottles of different kinds of wine. He then walked up and down the garden till the clock struck five, when he made his appearance again at the same restaurant, and always at the same place. His second meal, at which he drank quite as much as at the first, invariably lasted till half-past nine. Therefore, he devoted nine hours a day to eating and drinking. His dress was most wretched—his shoes broken, his trousers torn, his paletôt without any lining, and patched, his waistcoat without buttons, his hat a rusty red from old age, and the whole surmounted by a dirty white beard. One day he went up to the *comptoir*, and asked the presiding divinity there to allow him to run in debt for one day's dinner. He perceived some hesitation in complying with the request, and immediately called one of the waiters, and desired him to follow him. He went into the office, unbuttoned a certain indispensable garment, and, taking off a broad leather belt, somewhat startled the waiter by displaying two hundred gold pieces, each worth one hundred francs. Taking up one of them, he tossed it to the waiter, and desired him to pay whatever he owed. He never again appeared at that restaurant, and died a few days ago of indigestion.”

“REVENGE IN A BALL-ROOM.—A distressing event lately took place at Castellaz, a little commune of the Alpes-Maritimes, near Mentone. All the young people of the place being assembled in a dancing-room, one of the young men was seen to fall suddenly to the ground, whilst a young woman, his partner, brandished a poniard, and was preparing to inflict a second blow on him, having already desperately wounded him in the stomach. The author of the crime was at once arrested. She declared her name to be Maria P——, twenty-one years of age, and added that she had acted from a motive of revenge, the young man having led her astray formerly with a promise of marriage, which he had never fulfilled. In the morning of that day she had summoned him to keep his word, and, upon his refusal, had determined on making the dancing-room the scene of her revenge. She was at first locked up in the prison of Mentone, and afterwards sent on to Nice. The young man continues in an alarming state.”

APPENDIX VI.

Page 51.—*Law of Property.*

THE following is the paragraph referred to :—

“The first necessity of all economical government is to secure the unquestioned and unquestionable working of the great law of property—that a man who works for a thing shall be allowed to get it, keep it, and consume it, in peace ; and that he who does not eat his cake to-day, shall be seen, without grudging, to have his cake to-morrow. This, I say, is the first point to be secured by social law ; without this, no political advance, nay, no political existence, is in any sort possible. Whatever evil, luxury, iniquity, may seem to result from it, this is nevertheless the first of all equities : and to the enforcement of this, by law and by police-truncheon, the nation must always primarily set its mind—that the cupboard-door may have a firm lock to it, and no man’s dinner be carried off by the mob, on its way home from the baker’s.”

APPENDIX VII.

Page 54.—*Ambition of Bishops.*

“NEARLY all the evils in the Church have arisen from bishops desiring power more than light. They want authority, not outlook. Whereas their real office is not to rule, though it may be vigorously to exhort and rebuke; it is the king’s office to rule; the bishop’s office is to oversee the flock, to number it, sheep by sheep, to be ready always to give full account of it. Now it is clear he cannot give account of the souls, if he has not so much as numbered the bodies, of his flock. The first thing, therefore, that a bishop has to do is at least to put himself in a position in which, at any moment, he can obtain the history, from childhood, of every living soul in his diocese, and of its present state. Down in that back street, Bill and Nancy knocking each other’s teeth out!—Does the bishop know all about it? Has he had his eye upon them? Can he circumstantially explain to us how Bill got into the habit of beating Nancy about the head? If he cannot, he is no bishop, though he had a mitre as high as Salisbury steeple; he is no bishop—he has sought to be at the helm instead of the mast-head; he has no sight of things. ‘Nay,’ you say, ‘it is not his duty to look after Bill in the “back street.”’ What! the fat sheep that have full fleeces—you think it is only those he should look after, while (go back to your Milton) ‘the hungry sheep look up, and are not fed,’ besides what the grim wolf, ‘with privy paw’ (bishops knowing nothing about it) ‘daily devours apace, and nothing said?’ ‘But that’s not our idea of a bishop.’ Perhaps not; but it was St. Paul’s, and it was Milton’s. They may be right, or we may be; but we must not think we are reading either one or the other by putting our meaning into their words.”—*Sesame and Lilies*, p. 43.

APPENDIX VIII.

Page 57.—*Regulations of Trade.*

I PRINT portions of two letters of Mr. Dixon's in this place; one referring to our former discussion respecting the sale of votes.

“ 57, Nile Street, Sunderland, March 21, 1867.

“ I only wish I could write in some tolerable good style, so that I could idealize, or rather realize to folks, the life, and love, and marriage of a working man and his wife. It is in my opinion a working man that really does know what a true wife is, for his every want, his every comfort in life depends on her; and his children's home, their daily lives and future lives, are shaped by her. Napoleon wisely said, ‘ France needs good mothers more than brave men. Good mothers are the makers or shapers of good and brave men.’ I cannot say that these are the words, but it is the import of his speech on the topic. We have a saying amongst us: ‘ The man may spend and money lend, if his wife be *ought*,’—*i. e.*, good wife;—‘ but he may work and try to save, but will have *nought*, if his wife be *nought*,’—*i. e.*, bad or thriftless wife.

“ Now, since you are intending to treat of the working man's parliament and its duties, I will just throw out a few suggestions of what I consider should be the questions or measures that demand an early inquiry into and debate on. That guilds be established in every town, where masters and men may meet, so as to avoid the temptations of the public-house and *drink*. And then, let it be made law that every lad should serve an apprenticeship of not less than seven years to a trade or art, before he is allowed to be a member of such guild; also, that all wages be based on a rate of so much *per hour*, and not day, as at present; and let every man prove his workmanship before such a guild; and then allow to him such payment per hour as his craft merits. Let there be three grades, and then let there be trials of skill in workman-

ship every year ; and then, if the workman of the third grade prove that he has made progress in his craft, reward him accordingly. Then, before a lad is put to any trade, why not see what he is naturally fitted for? Combe's book, entitled *The Constitution of Man*, throws a good deal of truth on to these matters. Now, here are two branches of the science of life that, so far, have never once been given trial of in this way. We certainly use them after a *crime* has been committed, but not till then.

“Next to that, cash payment for all and everything needed in life. *Credit is a curse* to him that gives it, and he that takes it. He that lives by credit lives in general carelessly. If there was no credit, people then would have to live on what they earned ! Then, after that, the Statute of Limitations of Fortune you propose. By the hour system, not a single man *need be idle* ; it would give employment to all, and even two hours per day would realize more to a man than *breaking stones*. Thus you would make every one self-dependent—also no fear of being out of work altogether. Then let there be a Government fund for all the savings of the working man. I am afraid you will think this a wild, discursive sort of a letter.

“Yours truly,

“THOMAS DIXON.”

“I have read your references to the *Times* on ‘Bribery.’ Well, that has long been my own opinion ; they simply have a vote to sell, and sell it the same way as they sell potatoes, or a coat, or any other saleable article. Voters generally say, ‘What does this gentleman want in Parliament? Why, to help himself and his family or friends ; he does not spend all the money he spends over his election for pure good of his country ! No : it’s to benefit his pocket, to be sure.’ ‘Why should I not make a penny with my vote, as well as he does with his in Parliament?’ I think that if the system of canvassing or election agents were done away with, and all personal canvassing for votes entirely abolished, it would help to put down bribery. Let each gentleman send to the electors his political opinions in a circular, and then let papers be

sent, or cards, to each elector, and then let them go and record their votes in the same way they do for a councillor in the Corporation. It would save a great deal of expense, and prevent those scenes of drunkenness so common in our towns during elections. *Bewick's opinions* of these matters are quite to the purpose, I think (*see page 201 of Memoir*). Again, respecting the Paris matter referred to in your last letter, I have read it. Does it not manifest plainly enough that Europeans are also in a measure possessed with that same *demoniacal spirit like the Japanese?*"

APPENDIX IX.

Page 90.—*Greatness Coal-begotten.*

"Here is a bit of paper in my hand,¹ a good one too, and an honest one; quite representative of the best common public thought of England at this moment; and it is holding forth in one of its leaders upon our 'social welfare,'—upon our 'vivid life,'—upon the 'political supremacy of Great Britain.' And what do you think all these are owing to? To what our English sires have done for us, and taught us, age after age? No: not to that. To our honesty of heart, or coolness of head, or steadiness of will? No: not to these. To our thinkers, or our statesmen, or our poets, or our captains, or our martyrs, or the patient labour of our poor? No: not to these; or at least not to these in any chief measure.

¹ A saying of Baron Liebig's, quoted at the head of a leader on the same subject in the *Daily Telegraph* of January 11, 1866, summarily digests and presents the maximum folly of modern thought in this respect. "Civilization," says the Baron, "is the economy of power, and English power is coal." Not altogether so, my chemical friend. Civilization is the making of civil persons, which is a kind of distillation of which alembics are incapable, and does not at all imply the turning of a small company of gentlemen into a large company of ironmongers. And English power (what little of it may be left) is by no means coal, but indeed, of that which, "when the whole world turns to coal, they chiefly lives."

Nay, says the journal, 'more than any agency, it is the cheapness and abundance of our coal which have made us what we are.' If it be so, then 'ashes to ashes' be our epitaph! and the sooner the better. I tell you, gentlemen of England, if ever you would have your country breathe the pure breath of heaven again, and receive again a soul into her body, instead of rotting into a carcase, blown up in the belly with carbonic acid (and great that way), you must think, and feel, for your England, as well as fight for her: you must teach her that all the true greatness she ever had, or ever can have, she won while her fields were green and her faces ruddy;—that greatness is still possible for Englishmen, even though the ground be not hollow under their feet, nor the sky black over their heads."—*Crown of Wild Olive*, p. 88.

APPENDIX X.

THE following letter did not form part of the series written to Mr. Dixon; but is perhaps worth reprinting. I have not the date of the number of the *Gazette* in which it appeared, but it was during the tailors' strike in London.

"To the Editor of the Pall Mall Gazette :

"SIR,—In your yesterday's article on strikes you have very neatly and tersely expressed the primal fallacy of modern political economy—to wit, that 'the value of any piece of labour cannot be defined'—and that 'all that can be ascertained is simply whether any man can be got to do it for a certain sum.' Now, sir, the 'value' of any piece of labour, that is to say, the quantity of food and air which will enable a man to perform it without losing actually any of his flesh or his nervous energy, is as absolutely fixed a quantity as the weight of powder necessary to carry a given ball a given distance. And within limits varying by exceedingly minor and unimportant circumstances, it is an ascertainable quantity. I told the public this five years ago—and under pardon of your politico-economical contributors—it is not a 'sentimental,' but a chemical, fact.

“Let any half-dozen of recognized London physicians state in precise terms the quantity and kind of food, and space of lodging, they consider approximately necessary for the healthy life of a labourer in any given manufacture, and the number of hours he may, without shortening his life, work at such business daily if so sustained.

“And let all masters be bound to give their men a choice between an order for that quantity of food and lodging, or such wages as the market may offer for that number of hours’ work.

“Proper laws for the maintenance of families would require further concession—but, in the outset, let but *this* law of wages be established, and if then we have any more strikes you may denounce them without one word of remonstrance either from sense or sensibility.

“I am, Sir,

“Your faithful servant,

“JOHN RUSKIN.”

THE ART OF ENGLAND

LECTURES GIVEN IN OXFORD

THE ART OF ENGLAND.

LECTURE I.

Realistic Schools of Painting.

D. G. ROSSETTI AND W. HOLMAN HUNT.

I AM well assured that this audience is too kind, and too sympathetic, to wish me to enlarge on the mingled feelings of fear and thankfulness, with which I find myself once again permitted to enter on the duties in which I am conscious that before I fell short in too many ways ; and in which I only have ventured to ask, and to accept, your farther trust, in the hope of being able to bring to some of their intended conclusions, things not in the nature of them, it seems to me, beyond what yet remains of an old man's energy ; but, before, too eagerly begun, and too irregularly followed. And indeed I am partly under the impression, both in gratitude and regret, that Professor Richmond's resignation, however justly motived by his wish to pursue with uninterrupted thought the career open to him in his profession, had partly also for its reason the courtesy of concession to his father's old friend ; and his own feeling that while yet I was able to be of service in advancing the branches of elementary art with which I was specially acquainted, it was best that I should make the attempt on lines already opened, and with the aid of old friends. I am now alike comforted in having left you, and encouraged in return ; for on all grounds it was most desirable that to the imperfect, and yet in many points new and untried code of practice which I had instituted, the foundations of higher study should have been added by Mr

Richmond, in connection with the methods of art-education recognized in the Academies of Europe. And although I have not yet been able to consult with him on the subject, I trust that no interruption of the courses of figure study, thus established, may be involved in the completion, for what it is worth, of the system of subordinate exercises in natural history and landscape, indicated in the schools to which at present, for convenience' sake, my name is attached; but which, if they indeed deserve encouragement, will, I hope, receive it ultimately, as presenting to the beginner the first aspects of art, in the widest, because the humblest, relation to those of divinely organized and animated Nature.

The immediate task I propose to myself is to make serviceable, by all the illustration I can give them, the now unequalled collection possessed by the Oxford schools of Turner drawings and sketches, completed as it has been by the kindness of the Trustees of the National Gallery at the intercession of Prince Leopold; and furnishing the means of progress in the study of landscape such as the great painter himself only conceived the scope of toward the closing period of his life. At the opening of next term, I hope, with Mr. Maedonald's assistance, to have drawn up a little synopsis of the elementary exercises which in my earlier books have been recommended for practice in Landscape,—a subject which, if you look back to the courses of my lectures here, you will find almost affectedly neglected, just because it was my personal province. Other matters under deliberation, till I get them either done, or determined, I have no mind to talk of; but to-day, and in the three lectures which I hope to give in the course of the summer term, I wish to render such account as is possible to me of the vivid phase into which I find our English art in general to have developed since first I knew it: and, though perhaps not without passing deprecation of some of its tendencies, to rejoice with you unqualifiedly in the honour which may most justly be rendered to the leaders, whether passed away or yet present with us, of England's Modern Painters.

I may be permitted, in the reverence of sorrow, to speak first of my much loved friend, Gabriel Rossetti. But, in jus-

tice, no less than in the kindness due to death, I believe his name should be placed first on the list of men, within my own range of knowledge, who have raised and changed the spirit of modern Art: raised, in absolute attainment; changed, in direction of temper. Rossetti added to the before accepted systems of colour in painting, one based on the principles of manuscript illumination, which permits his design to rival the most beautiful qualities of painted glass, without losing either the mystery or the dignity of light and shade. And he was, as I believe it is now generally admitted, the chief intellectual force in the establishment of the modern romantic school in England.

Those who are acquainted with my former writings must be aware that I use the word 'romantic' always in a noble sense; meaning the habit of regarding the external and real world as a singer of Romancers would have regarded it in the middle ages, and as Scott, Burns, Byron, and Tennyson have regarded it in our own times. But, as Rossetti's colour was based on the former art of illumination, so his romance was based on traditions of earlier and more sacred origin than those which have inspired our highest modern romantic literature. That literature has in all cases remained strongest in dealing with contemporary fact. The genius of Tennyson is at its highest in the poems of 'Maud,' 'In Memoriam,' and the 'Northern Farmer'; but that of Rossetti, as of his greatest disciple, is seen only when on pilgrimage in Palestine.

I trust that Mr. Holman Hunt will not think that in speaking of him as Rossetti's disciple I derogate from the respect due to his own noble and determined genius. In all living schools it chances often that the disciple is greater than his master; and it is always the first sign of a dominant and splendid intellect, that it knows of whom to learn. Rossetti's great poetical genius justified my claiming for him total, and, I believe, earliest, originality in the sternly materialistic, though deeply reverent veracity, with which alone, of all schools of painters, this brotherhood of Englishmen has conceived the circumstances of the life of Christ. And if I had to choose one picture which represented in purity and com-

pleteness, this manner of their thought, it would be Rossetti's 'Virgin in the House of St. John.'

But when Holman Hunt, under such impressive influence, quitting virtually forever the range of worldly subjects, to which belonged the pictures of Valentine and Sylvia, of Claudio and Isabel, and of the 'Awakening Conscience,' rose into the spiritual passion which first expressed itself in the 'Light of the World,' an instant and quite final difference was manifested between his method of conception, and that of his forerunner. To Rossetti, the Old and New Testaments were only the greatest poems he knew; and he painted scenes from them with no more actual belief in their relation to the present life and business of men than he gave also to the *Morte d'Arthur* and the *Vita Nuova*. But to Holman Hunt, the story of the New Testament, when once his mind entirely fastened on it, became what it was to an old Puritan, or an old Catholic of true blood,—not merely a Reality, not merely the greatest of Realities, but the only Reality. So that there is nothing in the earth for him any more that does not speak of that;—there is no course of thought nor force of skill for him, but it springs from and ends in that.

So absolutely, and so involuntarily—I use the word in its noblest meaning—is this so with him, that in all subjects which fall short in the religious element, his power also is shortened, and he does those things worst which are easiest to other men.

Beyond calculation, greater, beyond comparison, happier, than Rossetti, in this sincerity, he is distinguished also from him by a respect for physical and material truth which renders his work far more generally, far more serenely, exemplary.

The specialty of colour-method which I have signalized in Rossetti, as founded on missal painting, is in exactly that degree conventional and unreal. Its light is not the light of sunshine itself, but of sunshine diffused through coloured glass. And in object-painting he not only refused, partly through idleness, partly in the absolute want of opportunity for the study of nature involved in his choice of abode in a garret at Black-

friars,—refused,—I say, the natural aid of pure landscape and sky, but wilfully perverted and lacerated his powers of conception with Chinese puzzles and Japanese monsters, until his foliage looked generally fit for nothing but a fire-screen, and his landscape distances like the furniture of a Noah's Ark from the nearest toy-shop. Whereas Holman Hunt, in the very beginning of his career, fixed his mind, as a colourist, on the true representation of actual sunshine, of growing leafage, of living rock, of heavenly cloud; and his long and resolute exile, deeply on many grounds to be regretted both for himself and us, bound only closer to his heart the mighty forms and hues of God's earth and sky, and the mysteries of its appointed lights of the day and of the night—opening on the foam—"Of desolate seas, in—Sacred—lands forlorn."

You have, for the last ten or fifteen years, been accustomed to see among the pictures principally characteristic of the English school, a certain average number of attentive studies, both of sunshine, and the forms of lower nature, whose beauty is meant to be seen by its light. Those of Mr. Brett may be named with especial praise; and you will probably many of you remember with pleasure the study of cattle on a Highland moor in the evening, by Mr. Davis, which in last year's Academy carried us out, at the end of the first room, into sudden solitude among the hills. But we forget, in the enjoyment of these new and healthy pleasures connected with painting, to whom we first owe them all. The apparently unimportant picture by Holman Hunt, 'The strayed Sheep,' which—painted thirty years ago—you may perhaps have seen last autumn in the rooms of the Art Society in Bond Street, at once achieved all that can ever be done in that kind: it will not be surpassed—it is little likely to be rivalled—by the best efforts of the times to come. It showed to us, for the first time in the history of art, the absolutely faithful balances of colour and shade by which actual sunshine might be transposed into a key in which the harmonies possible with material pigments should yet produce the same impressions upon the mind which were caused by the light itself.

And remember, all previous work whatever had been either

subdued into narrow truth, or only by convention suggestive of the greater. Claude's sunshine is colourless,—only the golden haze of a quiet afternoon;—so also that of Cuypp: Turner's, so bold in conventionalism that it is credible to few of you, and offensive to many. But the pure natural green and tufted gold of the herbage in the hollow of that little sea-cliff must be recognized for true merely by a minute's pause of attention. Standing long before the picture, you were soothed by it, and raised into such peace as you are intended to find in the glory and the stillness of summer, possessing all things.

I cannot say of this power of true sunshine, the least thing that I would. Often it is said to me by kindly readers, that I have taught them to see what they had not seen: and yet never—in all the many volumes of effort—have I been able to tell them my own feelings about what I myself see. You may suppose that I have been all this time trying to express my personal feelings about Nature. No; not a whit. I soon found I could not, and did not try to. All my writing is only the effort to distinguish what is constantly, and to all men, loveable, and if they will look, lovely, from what is vile, or empty,—or, to well trained eyes and hearts, loathsome; but you will never find me talking about what *I* feel, or what *I* think. I know that fresh air is more wholesome than fog, and that blue sky is more beautiful than black, to people happily born and bred. But you will never find, except of late, and for special reasons, effort of mine to say how I am myself oppressed or comforted by such things.

This is partly my steady principle, and partly it is incapacity. Forms of personal feeling in this kind can only be expressed in poetry: and I am not a poet, nor in any articulate manner could I the least explain to you what a deep element of life, for me, is in the sight merely of pure sunshine on a bank of living grass.

More than any pathetic music,—yet I love music,—more than any artful colour—and yet I love colour,—more than other merely material thing visible to these old eyes, in earth or sky. It is so, I believe, with many of you also,—with many

more than know it of themselves ; and this picture, were it only the first that cast true sunshine on the grass, would have been in that virtue sacred : but in its deeper meaning, it is, actually, the first of Hunt's sacred paintings—the first in which, for those who can read, the substance of the conviction and the teaching of his after life is written, though not distinctly told till afterwards in the symbolic picture of 'The Scapegoat.' "All we like sheep have gone astray, we have turned every one to his own way, and the Lord hath laid on Him the iniquity of us all."

None of you, who have the least acquaintance with the general tenor of my own teaching, will suspect in me any bias towards the doctrine of vicarious Sacrifice, as it is taught by the modern Evangelical Preacher. But the great mystery of the idea of Sacrifice itself, which has been manifested as one united and solemn instinct by all thoughtful and affectionate races, since the wide world became peopled, is founded on the secret truth of benevolent energy which all men who have tried to gain it have learned—that you cannot save men from death but by facing it for them, nor from sin but by resisting it for them. It is, on the contrary, the favourite, and the worst falsehood of modern infidel morality, that you serve your fellow-creatures best by getting a percentage out of their pockets, and will best provide for starving multitudes by regaling yourselves. Some day or other—probably now very soon—too probably by heavy afflictions of the State, we shall be taught that it is not so ; and that all the true good and glory even of this world—not to speak of any that is to come, must be bought still, as it always has been, with our toil, and with our tears. That is the final doctrine, the inevitable one, not of Christianity only, but of all Heroic Faith and Heroic Being ; and the first trial questions of a true soul to itself must always be,—Have I a religion, have I a country, have I a love, that I am ready to die for ?

That is the Doctrine of Sacrifice ; the faith in which Isaac was bound, in which Iphigenia died, in which the great army of martyrs have suffered, and by which all victories in the cause of justice and happiness have been gained by the men

who became more than conquerors, through Him that loved them.

And yet there is a deeper and stranger sacrifice in the system of this creation than theirs. To resolute self-denial, and to adopted and accepted suffering, the reward is in the conscience sure, and in the gradual advance and predominance of good, practically and to all men visible. But what shall we say of involuntary suffering,—the misery of the poor and the simple, the agony of the helpless and the innocent, and the perishing, as it seems, in vain, and the mother weeping for the children of whom she knows only that they are not?

I saw it lately given as one of the incontrovertible discoveries of modern science, that all our present enjoyments were only the outcome of an infinite series of pain. I do not know how far the statement fairly represented—but it announced as incapable of contradiction—this melancholy theory. If such a doctrine is indeed abroad among you, let me comfort some, at least, with its absolute denial. That in past æons, the pain suffered throughout the living universe passes calculation, is true; that it is infinite, is untrue; and that all our enjoyments are based on it, contemptibly untrue. For, on the other hand, the pleasure felt through the living universe during past ages is incalculable also, and in higher magnitudes. Our own talents, enjoyments, and prosperities, are the outcome of that happiness with its energies, not of the death that ended them. So manifestly is this so, that all men of hitherto widest reach in natural science and logical thought have been led to fix their minds only on the innumerable paths of pleasure, and ideals of beauty, which are traced on the scroll of creation, and are no more tempted to arraign as unjust, or even lament as unfortunate, the essential equivalent of sorrow, than in the seven-fold glories of sunrise to deprecate the mingling of shadow with its light.

This, however, though it has always been the sentiment of the healthiest natural philosophy, has never, as you well know, been the doctrine of Christianity. That religion, as it comes to us with the promise of a kingdom in which there shall be no more Death, neither sorrow nor crying, so it has always

brought with it the confession of calamity to be at present in patience of mystery endured ; and not by us only, but apparently for our sakes, by the lower creatures, for whom it is inconceivable that any good should be the final goal of ill. Toward these, the one lesson we have to learn is that of pity. For all human loss and pain, there is no comfort, no interpretation worth a thought, except only in the doctrine of the Resurrection ;—of which doctrine, remember, it is an immutable historical fact that all the beautiful work, and all the happy existence of mankind, hitherto, has depended on, or consisted in, the hope of it.

The picture of which I came to-day chiefly to speak, as a symbol of that doctrine, was incomplete when I saw it, and is so still ; but enough was done to constitute it the most important work of Hunt's life, as yet ; and if health is granted to him for its completion, it will, both in reality and in esteem, be the greatest religious painting of our time.

You know that in the most beautiful former conceptions of the Flight into Egypt, the Holy Family were always represented as watched over, and ministered to, by attendant angels. But only the safety and peace of the Divine Child and its mother are thought of. No sadness or wonder of meditation returns to the desolate homes of Bethlehem.

But in this English picture all the story of the escape, as of the flight, is told, in fulness of peace, and yet of compassion. The travel is in the dead of the night, the way unseen and unknown ;—but, partly stooping from the starlight, and partly floating on the desert mirage. move, with the Holy Family the glorified souls of the Innocents. Clear in celestial light, and gathered into child-garlands of gladness, they look to the Child in whom they live, and yet, for them to die. Waters of the River of Life flow before on the sands : the Christ stretches out His arms to the nearest of them ;—leaning from His mother's breast.

To how many bereaved households may not this happy vision of conquered death bring in the future, days of peace !

I do not care to speak of other virtues in this design than those of its majestic thought,—but you may well imagine

for yourselves how the painter's quite separate and, in its skill, better than magical, power of giving effects of intense light, has aided the effort of his imagination, while the passion of his subject has developed in him a swift grace of invention which for my own part I never recognized in his design till now. I can say with deliberation that none even of the most animated groups and processions of children which constitute the loveliest sculpture of the Robbias and Donatello, can more than rival the freedom and felicity of motion, or the subtlety of harmonious line, in the happy wreath of these angel-children.

Of this picture I came to-day chiefly to speak, nor will I disturb the poor impression which my words can give you of it by any immediate reference to other pictures by our leading masters. But it is not, of course, among these men of splendid and isolated imagination that you can learn the modes of regarding common and familiar nature which you must be content to be governed by—in early lessons. I count myself fortunate, in renewing my effort to systematize these, that I can now place in the schools, or at least lend, first one and then another—some exemplary drawings by young people—youths and girls of your own age—clever ones, yes,—but not cleverer than a great many of you:—eminent only, among the young people of the present day whom I chance to know, in being extremely old-fashioned;—and,—don't be spiteful when I say so,—but really they all are, all the four of them—two lads and two lassies—quite provokingly good.

Lads, not exactly lads perhaps—one of them is already master of the works in the ducal palace at Venice; lassies, to an old man of sixty-four, who is vexed to be beaten by them in his own business—a little older, perhaps, than most of the lassies here, but still brightly young; and, mind you, not artists, but drawing in the joy of their hearts—and the builder at Venice only in his play-time—yet, I believe you will find these, and the other drawings I speak of, more helpful, and as I just said, exemplary, than any I have yet been able to find for you; and of these, little stories are to be told, which

bear much on all that I have been most earnestly trying to make you assured of, both in art and in real life.

Let me, however, before going farther, say, to relieve your minds from unhappily too well-grounded panic, that I have no intention of making my art lectures any more one-half sermons. All the pieces of theological or other grave talk which seemed to me a necessary part of my teaching here, have been already spoken, and printed; and are, I only fear at too great length, legible. Nor have I any more either strength or passion to spare in matters capable of dispute. I must in silent resignation leave all of you who are led by your fancy, or induced by the fashion of the time, to follow, without remonstrance on my part, those modes of studying organic beauty for which preparation must be made by depriving the animal under investigation first of its soul within, and secondly of its skin without. But it chanced to-day, that the merely literal histories of the drawings which I bring with me to show you or to lend, do carry with them certain evidences of the practical force of religious feeling on the imagination, both in artists and races, such as I cannot, if I would, overlook, and such as I think you will yourselves, even those who have least sympathy with them, not without admiration recognise.

For a long time I used to say, in all my elementary books, that, except in a graceful and minor way, women could not paint or draw. I am beginning, lately, to bow myself to the much more delightful conviction that nobody else can. How this very serious change of mind was first induced in me it is, if not necessary, I hope pardonable, to delay you by telling.

When I was at Venice in 1876—it is almost the only thing that makes me now content in having gone there,—two English ladies, mother and daughter, were staying at the same hotel, the Europa. One day the mother sent me a pretty little note asking if I would look at the young lady's drawings. On my somewhat sulky permission, a few were sent, in which I saw there was extremely right-minded and careful work, almost totally without knowledge. I sent back a re-

quest that the young lady might be allowed to come out sketching with me. I took her over into the pretty cloister of the church of La Salute, and set her, for the first time in her life, to draw a little piece of gray marble with the sun upon it, rightly. She may have had one lesson after that—she may have had two; the three, if there were three, seem to me, now, to have been only one! She seemed to learn everything the instant she was shown it—and ever so much more than she was taught. Next year she went away to Norway, on one of these frolics which are now-a-days necessary to girl-existence; and brought back a little pocket-book, which she thought nothing of, and which I begged of her: and have framed half a dozen leaves of it (for a loan to you, only, mind.) till you have enough copied them.

Of the minute drawings themselves, I need not tell you—for you will in examining them, beyond all telling, feel, that they are exactly what we should all like to be able to do; and in the plainest and frankest manner show us how to do it—or, more modestly speaking, how, if heaven help us, it *can* be done. They can only be seen, as you see Bewick vignettes, with a magnifying glass, and they are patterns to you, therefore, only of pocket-book work; but what skill is more precious to a traveller than that of minute, instantaneous, and unerring record of the things that are precisely best? For in this, the vignettes upon these leaves differ, widely as the are of heaven, from the bitter truths of Bewick. Nothing is recorded here but what is lovely and honourable: how much there is of both in the peasant life of Norway, many an English traveller has recognised; but not always looking for the cause or enduring the conclusion, that its serene beauty, its hospitable patriotism, its peaceful courage, and its happy virtue, were dependent on facts little resembling our modern English institutions;—namely, that the Norwegian peasant “is a free man on the scanty bit of ground which he has inherited from his forefathers; that the Bible is to be found in every hut; that the schoolmaster wanders from farm to farm; that no Norwegian is confirmed who does not know how to read; and no Norwegian is allowed to marry who has not

been confirmed." I quote straightforwardly, (missing only some talk of Parliaments ; but not caring otherwise how far the sentences are with my own notions, or against,) from Dr. Hartwig's collected descriptions of the Polar world. I am not myself altogether sure of the wisdom of teaching everybody to read : but might be otherwise persuaded if here, as in Norway, every town had its public library, " while in many districts the peasants annually contribute a dollar towards a collection of books, which, under the care of the priest, are lent out to all comers."

I observe that the word 'priest' has of late become more than ever offensive to the popular English mind ; and pause only to say that in whatever capacity, or authority, the essential function of a public librarian must in every decent and rational country be educational ; and consist in the choosing, for the public, books authoritatively or essentially true, free from vain speculation or evil suggestion : and in noble history or cheerful fancy, to the utmost, entertaining.

One kind of periodical literature, it seems to me as I study these drawings, must at all events in Norway be beautifully forbidden,—the "*Journal des Modes*." You will see evidence here that the bright fancying alike of maidens' and matrons' dress, capable of prettiest variation in its ornament, is yet ancestral in its form, and the white caps, in their daily purity, have the untroubled constancy, of the seashell and the snow.

Next to these illustrations of Norwegian economy, I have brought you a drawing of deeper and less imitable power : it is by a girl of quite peculiar gift, whose life has hitherto been spent in quiet and unassuming devotion to her art, and to its subjects. I would fain have said, an English girl, but all my prejudices have lately had the axe laid to their roots one by one,—she is an American ! But for twenty years she has lived with her mother among the peasants of Tuscany—under their olive avenues in summer—receiving them, as they choose to come to chat with her, in her little room by Santa Maria Novella in Florence during winter. They come to her as their loving guide, and friend, and sister in all their work, and pleasure, and—suffering. I lean on the last word.

For those of you who have entered into the heart of modern Italy know that there is probably no more oppressed, no more afflicted order of gracious and blessed creatures—God's own poor, who have not yet received their consolation, than the mountain peasantry of Tuscany and Romagna. What their minds are, and what their state, and what their treatment, those who do not know Italy may best learn, if they can bear the grief of learning it, from Ouida's photographic story of 'A Village Commune'; yet amidst all this, the sweetness of their natural character is undisturbed, their ancestral religious faith unshaken—their purity and simplicity of household life uncorrupted. They may perish, by our neglect or our cruelty, but they cannot be degraded. Among them, as I have told you, this American girl has lived—from her youth up, with her (now widowed) mother, who is as eagerly, and which is the chief matter, as sympathizingly benevolent as herself. The peculiar art gift of the younger lady is rooted in this sympathy, the gift of truest expression of feelings serene in their rightness; and a love of beauty—divided almost between the peasants and the flowers that live round Santa Maria del Fiore. This power she has trained by its limitation, severe, and in my experience unexampled, to work in light and shade only, with the pure pen line: but the total strength of her intellect and fancy being concentrated in this engraver's method, it expresses of every subject what she loves best, in simplicity undebased by any accessory of minor emotion.

She has thus drawn, in faithfullest portraiture of these peasant Florentines, the loveliness of the young and the majesty of the aged: she has listened to their legends, written down their sacred songs; and illustrated, with the sanctities of mortal life, their traditions of immortality.

I have brought you only one drawing to-day; in the spring I trust you shall have many,—but this is enough, just now. It is drawn from memory only, but the fond memory which is as sure as sight—it is the last sleep from which she waked on this earth, of a young Florentine girl, who had brought heaven down to earth, as truly as ever saint of old, while she lived, and of whom even I, who never saw her, cannot believe

that she is dead. Her friend, who drew this memorial of her, wrote also the short story of her life, which I trust you will soon be able to read.

Of this, and of the rest of these drawings, I have much to say to you ; but this first and last, — that they are representations of beautiful human nature, such as could only have been found among people living in the pure Christian faith—such as it was, and is, since the twelfth century ; and that although, as I said, I have returned to Oxford only to teach you technical things, this truth must close the first words, as it must be the sum of all that I may be permitted to speak to you, — that the history of the art of the Greeks is the eulogy of their virtues ; and the history of Art after the fall of Greece, is that of the Obedience and the Faith of Christianity.

There are two points of practical importance which I must leave under your consideration. I am confirmed by Mr. Macdonald in my feeling that some kind of accurately testing examination is necessary to give consistency and efficiency to the present drawing-school. I have therefore determined to give simple certificates of merit, annually, to the students who have both passed through the required course, and at the end of three years have produced work satisfactory to Mr. Macdonald and myself. After Easter, I will at once look over such drawings as Mr. Macdonald thinks well to show me, by students who have till now complied with the rules of the school ; and give certificates accordingly ;—henceforward, if my health is spared, annually : and I trust that the advantage of this simple and uncompetitive examination will be felt by succeeding holders of the Slade Professorship, and in time commend itself enough to be held as a part of the examination system of the University.

Uncompetitive, always. The drawing certificate will imply no compliment, and convey no distinction. It will mean merely that the student who obtains it knows perspective, with the scientific laws of light and colour in illustrating form, and has attained a certain proficiency in the management of the pencil.

The second point is of more importance and more difficulty.

I now see my way to making the collection of examples in the schools, quite representative of all that such a series ought to be. But there is extreme difficulty in finding any books that can be put into the hands of the home student which may supply the place of an academy. I do not mean merely as lessons in drawing, but in the formation of taste, which, when we analyse it, means of course merely the right direction of feeling.

I hope that in many English households there may be found already—I trust some day there may be found wherever there are children who can enjoy them, and especially in country village schools—the three series of designs by Ludwig Richter, in illustration of the Lord's Prayer, of the Sunday, and of the Seasons. Perfect as types of easy line drawing, exquisite in ornamental composition, and refined to the utmost in ideal grace, they represent all that is simplest, purest, and happiest in human life, all that is most strengthening and comforting in nature and religion. They are enough, in themselves, to show that whatever its errors, whatever its backslidings, this century of ours has in its heart understood and fostered, more than any former one, the joys of family affection, and of household piety.

For the former fairy of the woods, Richter has brought to you the angel on the threshold; for the former promises of distant Paradise, he has brought the perpetual blessing, "God be with you": amidst all the turmoil and speeding to and fro, and wandering of heart and eyes which perplex our paths, and betray our wills, he speaks to us continuous memorial of the message—"My Peace I leave with you."

LECTURE II.

Mythic Schools of Painting.

E. BURNE-JONES AND G. F. WATTS.

It is my purpose, in the lectures I may be permitted henceforward to give in Oxford, so to arrange them as to dispense with notes in subsequent printing; and, if I am forced for

shortness, or in oversight, to leave anything insufficiently explained, to complete the passage in the next following lecture, or in any one, though after an interval, which may naturally recur to the subject. Thus the printed text will always be simply what I have read, or said; and the lectures will be more closely and easily connected than if I went always on without the care of explanatory retrospect.

It may have been observed, and perhaps with question of my meaning, by some readers, that in my last lecture I used the word "materialistic" of the method of conception common to Rossetti and Hunt, with the greater number of their scholars. I used that expression to denote their peculiar tendency to feel and illustrate the relation of spiritual creatures to the substance and conditions of the visible world; more especially, the familiar, or in a sort humiliating, accidents or employments of their earthly life;—as, for instance, in the picture I referred to, Rossetti's Virgin in the house of St. John, the Madonna's being drawn at the moment when she rises to trim their lamp. In many such cases, the incidents may of course have symbolical meaning, as, in the unfinished drawing by Rossetti of the Passover, which I have so long left with you, the boy Christ is watching the blood struck on the doorpost;—but the peculiar value and character of the treatment is in what I called its *material* veracity, compelling the spectator's belief, if he have the instinct of belief in him at all, in the thing's having verily happened; and not being a mere poetical fancy. If the spectator, on the contrary, have no capacity of belief in him, the use of such representation is in making him detect his own incredulity, and recognise that in his former dreamy acceptance of the story, he had never really asked himself whether these things were so.

Thus, in what I believe to have been in actual time the first—though I do not claim for it the slightest lead in suggestive influence, yet the first dated example of such literal and close realization—my own endeavour in the third volume of 'Modern Painters' to describe the incidents preceding the charge to Peter, I have fastened on the words, "He girt his fisher's coat about him, and did cast himself into the sea."

following them out with, "Then, to Peter, all wet and shivering, staring at Christ in the *sun*;" not in the least supposing or intending any symbolism either in the coat, or the dripping water, or the morning sunshine; but merely and straitly striving to put the facts before the reader's eyes as positively as if he had seen the thing come to pass on Brighton beach, and an English fisherman dash through the surf of it to the feet of his captain,—once dead, and now with the morning brightness on his face.

And you will observe farther, that this way of thinking about a thing compels, with a painter, also a certain way of painting it. I do not mean a necessarily close or minute way, but a necessarily complete, substantial, and emphatic one. The thing may be expressed with a few fierce dashes of the pencil; but it will be wholly and bodily there; it may be in the broadest and simplest terms, but nothing will be hazy or hidden, nothing clouded round, or melted away; and all that is told will be as explanatory and lucid as may be—as of a thing examined in daylight, not dreamt of in moonlight.

I must delay you a little, though perhaps tiresomely, to make myself well understood on this point; for the first celebrated pictures of the pre-Raphaelite school having been extremely minute in finish, you might easily take minuteness for a speciality of the style.—but it is not so in the least. Minuteness I *do* somewhat claim, for a quality insisted upon by myself, and required in the work of my own pupils; it is—at least in landscape—Turnerian and Ruskinian—not pre-Raphaelite at all:—the pre-Raphaelism common to us all is in the frankness and honesty of the touch, not in its dimensions.

I think I may, once for all, explain this to you, and convince you of it, by asking you, when you next go up to London, to look at a sketch by Vandyke in the National Gallery, No. 680, purporting to represent this very scene I have been speaking of,—the miraculous draught of fishes. It is one of the too numerous brown sketches in the manner of the Flemish School, which seem to me always rather done for the sake of wiping the brush clean than of painting anything. There is no colour in it, and no light and shade;—but a certain

quantity of bitumen is rubbed about so as to slip more or less greasily into the shape of figures ; and one of St. John's (or St. James's) legs is suddenly terminated by a wriggle of white across it, to signify that he is standing in the sea. Now that was the kind of work of the Dutch School, which I spent so many pages in vituperating throughout the first volume of 'Modern Painters'—pages, seemingly, vain to this day ; for still, the brown daubs are hung in the best rooms of the National Gallery, and the loveliest Turner drawings are nailed to the wall of its cellar,—and might as well be buried at Pompeii for any use they are to the British public ;—but, vain or effectless as the said chapters may be, they are altogether true in that firm statement, that these brown flourishes of the Dutch brush are by men who lived, virtually, the gentle, at court,—the simple, in the pothouse ; and could indeed paint according to their habitation, a nobleman or a boor, but were not only incapable of conceiving, but wholly unwishful to conceive, anything, natural or supernatural, beyond the precincts of the Presence and the tavern. So that they especially failed in giving the life and beauty of little things in lower nature ; and if, by good hap, they may sometimes more or less succeed in painting St. Peter the Fisher's face, never by any chance realize for you the green wave dashing over his feet.

Now, therefore, understand of the opposite so called 'Pre-Raphaelite,' and, much more, pre-Rubensite, society, that its primary virtue is the trying to conceive things as they are, and thinking and feeling them quite out :—believing joyfully if we may, doubting bravely, if we must,—but never mystifying, or shrinking from, or choosing for argument's sake, this or that fact ; but giving every fact its own full power, and every incident and accessory its own true place,—so that, still keeping to our illustrations from Brighton or Yarmouth beach, in that most noble picture by Millais which probably most of you saw last autumn in London, the 'Caller Herrin,'—picture which, as a piece of art, I should myself put highest of all yet produced by the pre-Raphaelite school :—in that most noble picture, I say, the herrings were painted just as well as the girl, and the master was not the least afraid that,

for all he could do to them, you would look at the herrings first.

Now then, I think I have got the manner of pre-Raphaelite 'Realization'—'Verification'—'Materialization'—or whatever else you choose to call it, positively enough asserted and defined: and hence you will see that it follows, as a necessary consequence, that pre-Raphaelite subjects must usually be of real persons in a solid world—not of personifications in a vaporescent one.

The persons may be spiritual, but they are individual,—St. George, himself, not the vague idea of Fortitude; St. Cecily herself, not the mere power of music. And, although spiritual, there is no attempt whatever made by this school to indicate their immortal nature by any evanescence or obscurity of aspect. All transparent ghosts and unoutlined spectra are the work of failing imagination,—rest you sure of that. Botticelli indeed paints the Favonian breeze transparent, but never the angel Gabriel; and in the picture I was telling you of in last lecture,—if there *be* a fault which may jar for a moment on your feelings when you first see it, I am afraid it will be that the souls of the Innocents are a little too chubby, and one or two of them, I should say, just a dimple too fat.

And here I must branch for a moment from the direct course of my subject, to answer another question which may by this time have occurred to some of my hearers, how, if this school be so obstinately realistic, it can also be characterized as romantic.

When we have concluded our review of the present state of English art, we will collect the general evidence of its romance; meantime, I will say only this much, for you to think out at your leisure, that romance does not consist in the manner of representing or relating things, but in the kind of passions appealed to by the things related. The three romantic passions are those by which you are told, in Wordsworth's aphoristic line, that the life of the soul is fed.

"We live by Admiration, Hope, and Love." Admiration, meaning primarily all the forms of Hero Worship, and secondarily, the kind of feeling towards the beauty of nature, which

I have attempted too feebly to analyze in the second volume of 'Modern Painters';—Hope, meaning primarily the habit of mind in which we take present pain for the sake of future pleasure, and expanding into the hope of another world;—and Love, meaning of course whatever is happiest or noblest in the life either of that world or this.

Indicating, thus briefly, what, though not always consciously, we mean by Romance, I proceed with our present subject of enquiry, from which I branched at the point where it had been observed that the realistic school could only develop its complete force in representing persons, and could not happily rest in personifications. Nevertheless, we find one of the artists whose close friendship with Rossetti, and fellowship with other members of the pre-Raphaelite brotherhood, have more or less identified his work with theirs, yet differing from them all diametrically in this, that his essential gift and habit of thought is *in* personification, and that,—for sharp and brief instance, had both Rossetti and he been set to illustrate the first chapter of Genesis, Rossetti would have painted either Adam or Eve—but Edward Burne-Jones, a Day of Creation.

And in this gift, he becomes a painter, neither of Divine History, nor of Divine Natural History, but of Mythology, accepted as such, and understood by its symbolic figures to represent only general truths, or abstract ideas.

And here I must at once pray you, as I have prayed you to remove all associations of falsehood from the word romance, so also to clear them out of your faith, when you begin the study of mythology. Never confuse a Myth with a Lie,—nay, you must even be cautious how far you even permit it to be called a fable. Take the frequentest and simplest of myths for instance—that of Fortune and her wheel. Enid does not herself conceive, or in the least intend the hearers of her song to conceive, that there stands anywhere in the universe a real woman, turning an adamantine wheel whose revolutions have power over human destiny. She means only to assert, under that image, more clearly the law of Heaven's continual dealing with man,—“He hath put down the mighty from their seat, and hath exalted the humble and meek.”

But in the imagined symbol, or rather let me say, the visiting and visible dream, of this law, other ideas variously conducive to its clearness are gathered;—those of gradual and irresistible motion of rise and fall,—the *tide* of Fortune, as distinguished from instant change of catastrophe;—those of the connection of the fates of men with each other, the yielding and occupation of high place, the alternately appointed and inevitable humiliation:—and the fastening, in the sight of the Ruler of Destiny, of all to the mighty axle which moves only as the axle of the world. These things are told or hinted to you, in the mythic picture, not with the impertinence and the narrowness of words, nor in any order compelling a monotonous succession of thought,—but each as you choose or chance to read it, to be rested in or proceeded with, as you will.

Here then is the ground on which the Dramatic, or personal, and Mythic—or personifying, schools of our young painters, whether we find for them a general name or not, must be thought of as absolutely one—that, as the dramatic painters seek to show you the substantial truth of persons, so the mythic school seeks to teach you the spiritual truth of myths.

Truth is the vital power of the entire school, Truth its armour—Truth its war-word; and the grotesque and wild forms of imagination which, at first sight, seem to be the reaction of a desperate fancy, and a terrified faith, against the incisive scepticism of recent science, so far from being so, are a part of that science itself: they are the results of infinitely more accurate scholarship, of infinitely more detective examination, of infinitely more just and scrupulous integrity of thought, than was possible to any artist during the two preceding centuries; and exactly as the eager and sympathetic passion of the dramatic designer now assures you of the way in which an event happened, so the scholarly and sympathetic thought of the mythic designer now assures you of the meaning, in what a fable said.

Much attention has lately been paid by archæologists to what they are pleased to call the development of myths: but,

for the most part, with these two erroneous ideas to begin with—the first, that mythology is a temporary form of human folly, from which they are about in their own perfect wisdom to achieve our final deliverance; the second, that you may conclusively ascertain the nature of these much-to-be-lamented misapprehensions, by the types which early art presents of them! You will find in the first section of my ‘Queen of the Air,’ contradiction enough of the first supercilious theory;—though not with enough clearness the counter statement, that the thoughts of all the greatest and wisest men hitherto, since the world was made, have been expressed through mythology.

You may find a piece of most convincing evidence on this point by noticing that whenever, by Plato, you are extricated from the play of logic, and from the debate of points dubitable or trivial; and are to be told somewhat of his inner thought, and highest moral conviction,—that instant you are cast free in the elements of phantasy, and delighted by a beautiful myth. And I believe that every master here who is interested, not merely in the history, but in the *substance*, of moral philosophy, will confirm me in saying that the direct maxims of the greatest sages of Greece, do not, in the sum of them, contain a code of ethics either so pure, or so practical, as that which may be gathered by the attentive interpretation of the myths of Pindar and Aristophanes.

Of the folly of the second notion above-named, held by the majority of our students of ‘development’ in fable,—that they can estimate the dignity of ideas by the symbols used for them, in early art; and trace the succession of thought in the human mind by the tradition of ornament in its manufactures, I have no time to-day to give any farther illustration than that long since instanced to you, the difference between the ideas conveyed by Homer’s description of the shield of Achilles, (much more, Hesiod’s of that of Herakles,) and the impression which we should receive from any actually contemporary Greek art. You may with confidence receive the restoration of the Homeric shield, given by Mr. A. Murray in his history of Greek sculpture, as authoritatively representing the utmost graphic skill which could at the time have been employed in the deco-

ration of a hero's armour. But the poet describes the rude imagery as producing the effect of reality, and might praise in the same words the sculpture of Donatello or Ghiberti. And you may rest entirely satisfied that when the surrounding realities are beautiful, the imaginations, in all distinguished human intellect, are beautiful also, and that the forms of gods and heroes were entirely noble in dream, and in contemplation, long before the clay became ductile to the hand of the potter, or the likeness of a living body possible in ivory and gold.

And herein you see with what a deeply interesting function the modern painter of mythology is invested. He is to place, at the service of former imagination, the art which it had not—and to realize for us, with a truth then impossible, the visions described by the wisest of men as embodying their most pious thoughts and their most exalted doctrines: not indeed attempting with any literal exactitude to follow the words of the visionary, for no man can enter literally into the mind of another, neither can any great designer refuse to obey the suggestions of his own: but only bringing the resources of accomplished art to unveil the hidden splendour of old imagination; and showing us that the forms of gods and angels which appeared in fancy to the prophets and saints of antiquity, were indeed more natural and beautiful than the black and red shadows on a Greek vase, or the dogmatic outlines of a Byzantine fresco.

It should be a ground of just pride to all of us here in Oxford, that out of this University came the painter whose indefatigable scholarship and exhaustless fancy have together fitted him for this task, in a degree far distinguishing him above all contemporary European designers. It is impossible for the general public to estimate the quantity of careful and investigatory reading, and the fine tact of literary discrimination, which are signified by the command now possessed by Mr. Burne-Jones over the entire range both of Northern and Greek mythology, or the tenderness at once, and largeness, of sympathy which have enabled him to harmonize these with the loveliest traditions of Christian legend. Hitherto, there has

been adversity between the schools of classic and Christian art, only in part conquered by the most liberal-minded of artists and poets: Nicholas of Pisa accepts indeed the technical aid of antiquity, but with much loss to his Christian sentiment; Dante uses the imagery of Æschylus for the more terrible picturing of the Hell to which, in common with the theologians of his age, he condemned his instructor; but while Minos and the Furies are represented by him as still existent in Hades, there is no place in Paradise for Diana or Athena. Contrariwise, the later revival of the legends of antiquity meant scorn of those of Christendom. It is but fifty years ago that the value of the latter was again perceived and represented to us by Lord Lindsay: and it is only within the time which may be looked back to by the greater number even of my younger auditors, that the transition of Athenian mythology, through Byzantine, into Christian, has been first felt, and then traced and proved, by the penetrative scholarship of the men belonging to this pre-Raphaelite school, chiefly Mr. Burne-Jones and Mr. William Morris,—noble collaborateurs, of whom, may I be forgiven, in passing, for betraying to you a pretty little sacredness of their private life—that they solemnly and jovially have breakfasted together every Sunday, for many and many a year.

Thus far, then, I am able with security to allege to you the peculiar function of this greatly gifted and highly trained English painter; and with security also, the function of any noble myth, in the teaching, even of this practical and positive British race. But now, when for purposes of direct criticism I proceed to ask farther in what manner or with what precision of art any given myth should be presented—instantly we find ourselves involved in a group of questions and difficulties which I feel to be quite beyond the proper sphere of this Professorship. So long as we have only to deal with living creatures, or solid substances, I am able to tell you—and to show—that they are to be painted under certain optical laws which prevail in our present atmosphere; and with due respect to laws of gravity and movement which cannot be evaded in our terrestrial constitution. But when we have only an idea to paint, or a symbol, I do not feel authorized to insist any

longer upon these vulgar appearances, or mortal and temporal limitations. I cannot arrogantly or demonstratively define to you how the light should fall on the two sides of the nose of a Day of Creation ; nor obstinately demand botanical accuracy in the graining of the wood employed for the spokes of a Wheel of Fortune. Indeed, so far from feeling justified in any such vexatious and vulgar requirements, I am under an instinctive impression that some kind of strangeness or quaintness, or even violation of probability, would be not merely admissible, but even desirable, in the delineation of a figure intended neither to represent a body, nor a spirit, neither an animal, nor a vegetable, but only an idea, or an aphorism. Let me, however, before venturing one step forward amidst the insecure snows and cloudy wreaths of the Imagination, secure your confidence in my guidance, so far as I may gain it by the assertion of one general rule of proper safeguard ; that no mystery or majesty of intention can be alleged by a painter to justify him in careless or erroneous drawing of any object—so far as he chooses to represent it at all. The more license we grant to the audacity of his conception, the more careful he should be to give us no causeless ground of complaint of offence : while, in the degree of importance and didactic value which he attaches to his parable, will be the strictness of his duty to allow no faults, by any care avoidable, to disturb the spectator's attention, or provoke his criticism.

I cannot but to this day remember, partly with amusement, partly in vexed humiliation, the simplicity with which I brought out, one evening when the sculptor Marochetti was dining with us at Denmark Hill, some of the then but little known drawings of Rossetti, for his instruction in the beauties of pre-Raphaelism.

You may see with the slightest glance at the statue of *Cœur de Lion*, (the only really interesting piece of historical sculpture we have hitherto given to our City populace), that Marochetti was not only trained to perfectness of knowledge and perception in the structure of the human body, but had also peculiar delight in the harmonies of line which express its easy and powerful motion. Knowing a little more both of

men and things now, than I did on the evening in question, I too clearly apprehend that the violently variegated segments and angular anatomies of Sir Lancelot at the grave of King Arthur must have produced on the bronze-minded sculptor simply the effect of a Knave of Clubs and Queen of Diamonds ; and that the Italian master, in his polite confession of inability to recognize the virtues of Rossetti, cannot but have greatly suspected the sincerity of his entertainer, in the profession of sympathy with his own.

No faults, then, that we can help,—this we lay down for certain law to start with ; therefore, especially, no ignoble faults, of mere measurement, proportion, perspective, and the like, may be allowed to art, which is by claim learned and magisterial ; therefore bound to be, in terms, grammatical. And yet we are not only to allow, but even to accept gratefully, any kind of strangeness and deliberate difference from merely realistic painting, which may raise the work, not only above vulgarity, but above incredulity. For it is often by realizing it most positively that we shall render it least credible.

For instance, in the prettiest design of the series, by Richter, illustrating the Lord's Prayer, which I asked you in my last lecture to use for household lessons ;—that of the mother giving her young children their dinner in the field which their father is sowing,—one of the pieces of the enclosing arabesque represents a little winged cherub emergent from a flower, holding out a pitcher to a bee, who stoops to drink. The species of bee is not scientifically determinable ; the wings of the tiny servitor terminate rather in petals than plumes ; and the unpretentious jug suggests nothing of the clay of Dresden, Sevres, or Chelsea. You would not, I think, find your children understand the lesson in divinity better, or believe it more frankly, if the hymenopterous insect were painted so accurately that, (to use the old method of eulogium on painting,) you could hear it buzz ; and the cherub completed into the living likeness of a little boy with blue eyes and red cheeks, but of the size of a humming-bird. In this and in myriads of similar cases, it is possible to imagine from an outline what a finished picture would only provoke us to deny in contempt.

Again, in my opening lecture on Light and Shade, the sixth of those given in the year 1870, I traced in some completeness the range of idea which a Greek vase-painter was in the habit of conveying by the mere opposition of dark and light in the figures and background, with the occasional use of a modifying purple. It has always been matter of surprise to me that the Greeks rested in colours so severe, and I have in several places formerly ventured to state my conviction that their sense of colour was inferior to that of other races. Nevertheless, you will find that the conceptions of moral and physical truth which they were able with these narrow means to convey, are far loftier than the utmost that can be gathered from the iridescent delicacy of Chinese design, or the literally imitative dexterities of Japan.

Now, in both these methods, Mr. Burne-Jones has developed their applicable powers to their highest extent. His outline is the purest and quietest that is possible to the pencil; nearly all other masters accentuate falsely, or in some places, as Richter, add shadows which are more or less conventional. But an outline by Burne-Jones is as pure as the lines of engraving on an Etruscan mirror; and I placed the series of drawings from the story of Psyche in your school as faultlessly exemplary in this kind. Whether pleasing or displeasing to your taste, they are entirely masterful; and it is only by trying to copy these or other such outlines, that you will fully feel the grandeur of action in the moving hand, tranquil and swift as a hawk's flight, and never allowing a vulgar tremor, or a momentary impulse, to impair its precision, or disturb its serenity.

Again, though Mr. Jones has a sense of colour in its kind, perfect, he is essentially a chiaroscuroist. Diametrically opposed to Rossetti, who could conceive in color only, he prefers subjects which can be divested of superficial attractiveness, appeal first to the intellect and the heart; and convey their lesson either through intricacies of delicate line, or in the dimness or coruscation of ominous light.

The heads of Medea and of Danae, which I placed in your schools long ago, are representative of all that you need aim

at in chiaroscuro ; and lately a third type of his best work, in subdued pencil light and shade, has been placed within your reach in Dr. Acland's drawing-room,—the portrait of Miss Gladstone, in which you will see the painter's best powers stimulated to their utmost, and reaching a serene depth of expression unattainable by photography, and nearly certain to be lost in finished painting.

For there is this perpetually increasing difficulty towards the completion of any work, that the added forces of colour destroy the value of the pale and subtle tints or shades which give the nobleness to expression ; so that the most powerful masters in oil painting rarely aim at expression, but only at general character—and I believe the great artist whose name I have associated with that of Burne-Jones as representing the mythic schools, Mr. G. F. Watts, has been partly restrained, and partly oppressed by the very earnestness and extent of the study through which he has sought to make his work on all sides perfect. His constant reference to the highest examples of Greek art in form, and his sensitiveness to the qualities at once of tenderness and breadth in pencil and chalk drawing, have virtually ranked him among the painters of the great Athenian days, of whom, in the sixth book of the *Laws*, Plato wrote :—“ You know how the anciently accurate toil of a painter seems never to reach a term that satisfies him ; but he must either farther touch, or soften the touches laid already, and never seems to reach a point where he has not yet some power to do more, so as to make the things he has drawn more beautiful, and more apparent *καλλίω τε καὶ φανερώτερα.*”

Of course within the limits of this lecture there is no possibility of entering on the description of separate pictures ; but I trust it may be hereafter my privilege to carry you back to the beginning of English historical art, when Mr. Watts first showed victorious powers of design in the competition for the frescoes of the Houses of Parliament—and thence to trace for you, in some completeness, the code of mythic and heroic story which these two artists, Mr. Watts and Mr. Burne-Jones, have gathered, and in the most deep sense written, for us.

To-day I have only brought with me a few designs by Mr. Burne-Jones, of a kind which may be to some extent well represented in photograph, and to which I shall have occasion to refer in subsequent lectures. They are not to be copied, but delighted in, by those of you who care for them, —and, under Mr. Fisher's care, I shall recommend them to be kept out of the way of those who do *not*. They include the Days of Creation ; three outlines from Solomon's Song ; two from the Romance of the Rose ; the great one of Athena inspiring Humanity ; and the story of St. George and Sabra. They will be placed in a cabinet in the upper gallery, together with the new series of Turner sketches, and will by no means be intruded on your attention, but made easily accessible to your wish.

To justify this monastic treatment of them, I must say a few words, in conclusion, of the dislike which these designs, in common with those of Carpaccio, excite in the minds of most English people of a practical turn. A few words only, both because this lecture is already long enough, and besides, because the point in question is an extremely curious one, and by no means to be rightly given account of in a concluding sentence. The point is, that in the case of ordinary painters, however peculiar their manner, people either like them, or pass them by with a merciful contempt or condemnation, calling them stupid, or weak, or foolish, but without any expression of real disgust or dislike. But in the case of painters of the mythic schools, people either greatly like them, or they dislike in a sort of frightened and angry way, as if they had been personally aggrieved. And the persons who feel this antipathy most strongly, are often extremely sensible and good, and of the kind one is extremely unwilling to offend ; but either they are not fond of art at all, or else they admire, naturally, pictures from real life only, such as, to name an extremely characteristic example, those of the (I believe, Bavarian) painter Vautier, of whom I shall have much, in another place, to say in praise, but of whom, with the total school he leads, I must peremptorily assure my hearers that their manner of painting is merely part of our

general modern system of scientific illustration aided by photography, and has no claim to rank with works of creative art at all ; and farther, that it is essentially illiterate, and can teach you nothing but what you can easily see without the painter's trouble. Here is, for instance, a very charming little picture of a school girl going to her class, and telling her doll to be good till she comes back ; you like it, and ought to like it, because you see the same kind of incident in your own children every day ; but I should say, on the whole, you had better look at the real children than the picture. Whereas, you can't every day at home see the goddess Athena telling you yourselves to be good,—and perhaps you wouldn't altogether like to, if you could.

Without venturing on the rudeness of hinting that any such feeling underlies the English dislike for didactic art, I will pray you at once to check the habit of carelessly blaming the things that repel you in early or existing religious artists, and to observe, for the sum of what is to be noted respecting the four of whom I have thus far ventured to speak—Mr. Rossetti, Mr. Hunt, Mr. Jones, and Mr. Watts, that they are in the most solemn sense, Hero-worshippers ; and that, whatever may be their faults or shortcomings, their aim has always been the brightest and the noblest possible. The more you can admire them, and the longer you read, the more your minds and hearts will be filled with the best knowledge accessible in history, and the loftiest associations conveyable by the passionate and reverent skill, of which I have told you in the 'Laws of Fesole,' that "All great Art is Praise."

LECTURE III.

Classic Schools of Painting.

SIR F. LEIGHTON AND ALMA TADEMA.

I HAD originally intended this lecture to be merely the exposition, with direct reference to painting and literature, of the single line of Horace which sums the conditions of a

gentleman's education, be he rich or poor, learned or unlearned :

“ Est animus tibi,—sunt mores et lingua,—fidesque,”

‘animus’ being that part of him in which he differs from an ox or an ape ; ‘mores,’ the difference in him from the ‘malignum vulgus’ ; ‘lingua,’ eloquence, the power of expression ; and ‘fides,’ fidelity, to the Master, or Mistress, or Law, that he loves. But since I came to London and saw the exhibitions, I have thought good to address my discourse more pertinently to what must at this moment chiefly interest you in them. And I must at once, and before everything, tell you the delight given me by the quite beautiful work in portraiture, with which my brother-professor Richmond leads and crowns the general splendour of the Grosvenor Gallery. I am doubly thankful that his release from labour in Oxford has enabled him to develop his special powers so nobly, and that my own return grants me the privilege of publicly expressing to him the admiration we all must feel.

And now in this following lecture, you must please understand at once that I use the word ‘classic,’ first in its own sense of senatorial, academic, and authoritative ; but, as a necessary consequence of that first meaning, also in the sense, more proper to our immediate subject, of Anti-Gothic ; antagonist, that is to say, to the temper in which Gothic architecture was built : and not only antagonist to that form of art, but contemptuous of it ; unforgiving to its faults, cold to its enthusiasms, and impatient of its absurdities. In which contempt the classic mind is certainly illiberal ; and narrower than the mind of an equitable art student should be in these enlightened days :—for instance, in the British Museum, it is quite right that the British public should see the Elgin marbles to the best advantage ; but not that they should be unable to see any example of the sculpture of Chartres or Wells, unless they go to the miscellaneous collection of Kensington, where Gothic saints and sinners are confounded alike among steam threshing-machines and dynamite-proof ships of

war ; or to the Crystal Palace, where they are mixed up with Rimmel's perfumery.

For this hostility, in our present English schools, between the votaries of classic and Gothic art, there is no ground in past history, and no excuse in the nature of those arts themselves. Briefly, to-day I would sum for you the statement of their historical continuity which you will find expanded and illustrated in my former lectures.

Only observe, for the present, you must please put Oriental Art entirely out of your heads. I shall allow myself no allusion to China, Japan, India, Assyria, or Arabia : though this restraint on myself will be all the more difficult, because, only a few weeks since, I had a delightful audience of Sir Frederick Leighton beside his Arabian fountain, and beneath his Aladdin's palace glass. Yet I shall not allude, in what I say of his designs, to any points in which they may perchance have been influenced by those enchantments. Similarly there were some charming Zobeides and Cleopatras among the variegated colour fancies of Mr. Alma Tadema in the last Grosvenor ; but I have nothing yet to say of *them* : it is only as a careful and learned interpreter of certain phases of Greek and Roman life, and as himself a most accomplished painter, on long established principles, that I name him as representatively 'classic.'

The summary, therefore, which I have to give you of the course of Pagan and Gothic Art must be understood as kept wholly on this side of the Bosphorus, and recognizing no farther shore beyond the Mediterranean. Thus fixing our termini, you find from the earliest times, in Greece and Italy, a multitude of artists gradually perfecting the knowledge and representation of the human body, glorified by the exercises of war. And you have, north of Greece and Italy, innumerable and incorrigibly savage nations, representing, with rude and irregular efforts, on huge stones, and ice-borne boulders, on cave-bones and forest-stocks and logs, with any manner of innocent tinting or scratching possible to them, sometimes beasts. sometimes hobgoblins—sometimes, heaven only knows what ; but never attaining any skill in figure-drawing, until, whether invading or invaded, Greece and Italy teach them

what a human being is like ; and with that help they dream and blunder on through the centuries, achieving many fantastic and amusing things, more especially the art of rhyming, whereby they usually express their notions of things far better than by painting. Nevertheless, in due course we get a Holbein out of them ; and, in the end, for best product hitherto, Sir Joshua, and the supremely Gothic Gainsborough, whose last words we may take for a beautiful reconciliation of all schools and souls who have done their work to the best of their knowledge and conscience,—“ We are all going to Heaven, and Vandyke is of the company.”

“ We are all going to Heaven.” Either that is true of men and nations, or else that they are going the other way ; and the question of questions for them is—not how far from heaven they are, but whether they are going to it. Whether in Gothic or Classic Art, it is not the wisdom or the barbarism that you have to estimate—not the skill nor the rudeness ;—but the *tendency*. For instance, just before coming to Oxford this time, I received by happy chance from Florence the noble book just published at Monte-Cassino, giving facsimiles of the Benedictine manuscripts there, between the tenth and thirteenth centuries. Out of it I have chosen these four magnificent letters to place in your schools—magnificent I call them, as pieces of Gothic writing ; but they are still, you will find on close examination, extremely limited in range of imaginative subject. For these, and all the other letters of the alphabet in that central Benedictine school at the period in question, were composed of nothing else but packs of white dogs, jumping, with more contortion of themselves than has been contrived even by modern stage athletes, through any quantity of hoops. But I place these chosen examples in our series of lessons, not as patterns of dog-drawing, but as distinctly progressive Gothic art, leading infallibly forward—though the good monks had no notion how far,—to the Benedictine collie, in Landseer’s ‘ Shepherd’s Chief Mourner,’ and the Benedictine bulldog, in Mr. Britton Rivière’s ‘ Sympathy.’

On the other hand, here is an enlargement, made to about the proper scale, from a small engraving which I brought with

me from Naples, of a piece of the Classic Pompeian art which has lately been so much the admiration of the æsthetic cliques of Paris and London. It purports to represent a sublimely classic cat, catching a sublimely classic chicken ; and is perhaps quite as much like a cat as the white spectra of Monte Cassino are like dogs. But at a glance I can tell you,—nor will you, surely, doubt the truth of the telling,—that it is art in precipitate decadence ; that no bettering or even far dragging on of its existence is possible for it ;—that it is the work of a nation already in the jaws of death, and of a school which is passing away in shame.

Remember, therefore, and write it on the very tables of your heart, that you must never, when you have to judge of character in national styles, regard them in their decadence, but always in their spring and youth. Greek art is to be studied from Homeric days to those of Marathon ; Gothic, from Alfred to the Black Prince in England, from Clovis to St. Louis in France ; and the combination of both, which occurs first with absolute balance in the pulpit by Nicholas of Pisa in her baptistery, thenceforward up to Perugino and Sandro Botticelli. A period of decadence follows among all the nations of Europe, out of the ashes and embers of which the flame leaps again in Rubens and Vandyke ; and so gradually glows and coruscates into the intermittent corona of indescribably various modern mind, of which in England you may, as I said, take Sir Joshua and Gainsborough for not only the topmost, but the hitherto total, representatives ; total, that is to say, out of the range of landscape, and above that of satire and caricature. All that the rest can do partially, they can do perfectly. They do it, not only perfectly, but nationally ; they are at once the greatest, and the Englishest, of all our school.

The Englishest—and observe also, *therefore* the greatest : take that for an universal, exceptionless law ;—the largest soul of any country is altogether *its own*. Not the citizen of the world, but of his own city,—nay, for the best men, you may say, of his own village. Patriot always, provincial always, of his own crag or field always. A Liddesdale man, or a Tyne-dale ; Angelico from the Rock of Fesole, or Virgil from the

Mantuan marsh. You dream of National unity!—you might as well strive to melt the stars down into one nugget, and stamp them small into coin with one Cæsar's face.

What mental qualities, especially English, you find in the painted heroes and beauties of Reynolds and Gainsborough, I can only discuss with you hereafter. But what external and corporeal qualities these masters of our masters love to paint, I must ask you to-day to consider for a few moments, under Mr. Carlyle's guidance, as well as mine, and with the analysis of 'Sartor Resartus.' Take, as types of the best work ever laid on British canvas,—types which I am sure you will without demur accept,—Sir Joshua's Age of Innocence, and Mrs. Pellam feeding chickens; Gainsborough's Mrs. Graham divinely doing nothing, and Blue Boy similarly occupied; and, finally, Reynolds' Lord Heathfield magnanimously and irrevocably locking up Gibraltar. Suppose, now, under the instigation of Mr. Carlyle and 'Sartor,' and under the counsel of Zeuxis and Parrhasius, we had it really in our power to bid Sir Joshua and Gainsborough paint all these over again, in the classic manner. Would you really insist on having her white frock taken off the Age of Innocence; on the Blue Boy's divesting himself of his blue; on—we may not dream of anything more classic—Mrs. Graham's taking the feathers out of her hat; and on Lord Heathfield's parting,—I dare not suggest, with his regimentals, but his orders of the Bath, or what else?

I own that I cannot, even myself, as I propose the alternatives, answer absolutely as a Goth, nor without some wistful leanings towards classic principle. Nevertheless, I feel confident in your general admission that the charm of all these pictures is in great degree dependent on toilette; that the fond and graceful flatteries of each master do in no small measure consist in his management of frillings and trimmings, cuffs and collarettes; and on beautiful flingings or fastenings of investiture, which can only here and there be called a *drapery*, but insists on the perfectness of the forms it conceals, and deepens their harmony by its contradiction. And although now and then, when great ladies wish to be painted as sibyls or god-

desses, Sir Joshua does his best to bethink himself of Michael Angelo, and Guido, and the Lightnings, and the Auroras, and all the rest of it,—you will, I think, admit that the culminating sweetness and rightness of him are in some little Lady So-and-so, with round hat and strong shoes ; and that a final separation from the Greek art which can be proud in a torso without a head, is achieved by the master who paints for you five little girls' heads, without ever a torso !

Thus, then, we arrive at a clearly intelligible distinction between the Gothic and Classic schools, and a clear notion also of their dependence on one another. All jesting apart,—I think you may safely take Luca della Robbia with his scholars for an exponent of their unity, to all nations. Luca is brightly Tuscan, with the dignity of a Greek ; he has English simplicity, French grace, Italian devotion,—and is, I think, delightful to the truest lovers of art in all nations, and of all ranks. The Florentine Contadina rejoices to see him above her fruit-stall in the Mercato Vecchio : and, having by chance the other day a little Nativity by him on the floor of my study (one of his frequentest designs of the Infant Christ laid on the ground, and the Madonna kneeling to Him)—having it, I say, by chance on the floor, when a fashionable little girl with her mother came to see me, the child about three years old—though there were many pretty and glittering things about the room which might have caught her eye or her fancy, the first thing, nevertheless, my little lady does, is to totter quietly up to the white Infant Christ, and kiss it.

Taking, then, Luca, for central between Classic and Gothic in sculpture, for central art of Florence, in painting, I show you the copies made for the St. George's Guild, of the two frescoes by Sandro Botticelli, lately bought by the French Government for the Louvre. These copies, made under the direction of Mr. C. F. Murray, while the frescoes were still untouched, are of singular value now. For in their transference to canvas for carriage much violent damage was sustained by the originals ; and as, even before, they were not presentable to the satisfaction of the French public, the backgrounds were filled in with black, the broken edges cut away ; and, thus

repainted and maimed, they are now, disgraced and glassless, let into the wall of a stair-landing on the outside of the Louvre galleries.

You will judge for yourselves of their deservings; but for my own part I can assure you of their being quite central and classic Florentine painting, and types of the manner in which, so far as you follow the instructions given in the 'Laws of Fesole,' you will be guided to paint. Their subjects should be of special interest to us in Oxford and Cambridge, as bearing on institutions of colleges for maidens no less than bachelors. For these frescoes represent the Florentine ideal of education for maid and bachelor,—the one baptised by the Graces for her marriage, and the other brought to the tutelage of the Great Powers of Knowledge, under a great presiding Muse, whose name you must help me to interpret; and with good help, both from maid and bachelor, I hope we shall soon be able to name, and honour, all their graces and virtues rightly.

Five out of the six Sciences and Powers on her right hand and left, I know. They are, on her left—geometry, astronomy, and music; on her right—logic and rhetoric. The third, nearest her, I do not know, and will not guess. She herself bears a mighty bow, and I could give you conjectural interpretations of her, if I chose, to any extent; but will wait until I hear what you think of her yourselves. I must leave you also to discover by whom the youth is introduced to the great conclave; but observe, that, as in the frescoes of the Spanish Chapel, before he can approach that presence he has passed through the 'Strait Gate,' of which the bar has fallen, and the valve is thrown outwards. This portion of the fresco, on which the most important significance of the whole depended, was cut away in the French restoration.

Taking now Luca and Sandro for standards of sweet consent in the feelings of either school, falling aside from them according to their likings or knowledge, you have the two evermore adverse parties, of whom Lord Lindsay speaks, as one studying the spirit, and the other the flesh: but you will find it more simply true to say that the one studies the head, and the other the body. And I think I am almost alone

among recent tutors or professors, in recommending you to study both, at their best, and neither the skull of the one, nor skeleton of the other.

I had a special lesson, leading me to this balance, when I was in Venice, in 1880. The authorities of the Academy did me the grace of taking down my two pet pictures of St. Ursula, and putting them into a quiet room for me to copy. Now in this quiet room where I was allowed to paint, there were a series of casts from the Ægina marbles, which I never had seen conveniently before; and so, on my right hand and left, I had, all day long, the best pre-Praxitelite Classic art, and the best pre-Raphaelite Gothic art: and could turn to this side, or that, in an instant, to enjoy either;—which I could do, in each case, with my whole heart; only on this condition, that if I was to admire St. Ursula, it was necessary on the whole to be content with her face, and not to be too critical or curious about her elbows; but, in the Ægina marbles, one's principal attention had to be given to the knees and elbows, while no ardent sympathies were excited by the fixed smile upon the face.

Without pressing our northern cherubic principles to an extreme, it is really a true and extremely important consequence that all portraiture is essentially Gothic. You will find it stated—and with completely illustrative proof, in 'Aratra Pentelici,' that portraiture was the destruction of *Greek* design; certain exceptions being pointed out which I do not wish you now to be encumbered with. You may understand broadly that we Goths claim portraiture altogether for our own, and contentedly leave the classic people to round their chins by rule, and fix their smiles by precedent: *we* like a little irregularity in feature, and a little caprice in humour—and with the condition of dramatic truth in passion, necessarily accept dramatic difference in feature.

Our English masters of portraiture must not therefore think that I have treated them with disrespect, in not naming them, in these lectures, separately from others. Portraiture is simply a necessary function of good Gothic painting, nor can any man claim pre-eminence in epic or historic art who

does not first excel in that. Nevertheless, be it said in passing, that the number of excellent portraits given daily in our illustrated papers prove the skill of mere likeness-taking to be no unfrequent or particularly admirable one ; and that it is to be somewhat desired that our professed portrait-painters should render their work valuable in all respects, and exemplary in its art, no less than delightful in its resemblance. The public, who are naturally in the habit of requiring rather the felicity and swiftness of likeness than abstract excellence in painting, are always ready to forgive the impetuosity which resembles force ; and the interests connected with rate of production tend also towards the encouragement of superficial execution. Whereas in a truly great school, for the reasons given in my last lecture, it may often be inevitable, and sometimes desirable, that works of high imaginative range and faculty should be slightly traced, and without minuteness finished ; but there is no excuse for imperfection in a portrait, or failure of attention to its minor accessories. I have long ago given, for one instance of perfect portraiture, Holbein's George Guysen, at Berlin, quite one of the most accomplished pictures in the world ; and in my last visit to Florence none of the pictures before known in the Uffizii retained their power over me so completely as a portrait of a lady in the Tribune, which is placed as a pendant to Raphael's Fornarina, and has always been attributed to Raphael, being without doubt by some earlier and more laborious master ; and, by whosoever it may be, unrivalled in European galleries for its faultless and unaffected finish.

I may be permitted in this place to express my admiration of the kind of portraiture, which without supporting its claim to public attention by the celebrity of its subjects, renders the pictures of Mr. Stacy Marks so valuable as epitomes and types of English life. No portrait of any recognized master in science could be more interesting than the gentle Professor in this year's Academy, from whom even a rebelliously superficial person like myself might be content to receive instruction in the mysteries of anatomy. Many an old traveler's remembrances were quite pathetically touched by his monu-

mental record of the 'Three Jolly Postboys'; and that he scarcely paints for us but in play, is our own fault. Among all the endeavours in English historical painting exhibited in recent years, quite the most conscientious, vivid and instructive, was Mr. Marks' rendering of the interview between Lord Say and Jack Cade; and its quiet sincerity was only the cause of its being passed without attention.

In turning now from these subjects of Gothic art to consider the classic ideal, though I do so in painful sense of transgressing the limits of my accurate knowledge, I do not feel entirely out of my element, because in some degree I claim even Sir Frederick Leighton as a kindred Goth. For, if you will overpass quickly in your minds what you remember of the treasures of Greek antiquity, you will find that, among them all, you can get no notion of what a Greek little girl was like. Matronly Junos, and tremendous Demeters, and Gorgonian Minervas, as many as you please; but for my own part, always speaking as a Goth, I had much rather have had some idea of the Spartan Helen dabbling with Castor and Pollux in the Eurotas,—none of them over ten years old. And it is with extreme gratitude, therefore, and unqualified admiration, that I find Sir Frederick condescending from the majesties of Olympus to the worship of these unappalling powers, which, heaven be thanked, are as brightly Anglo-Saxon as Hellenic; and painting for us, with a soft charm peculiarly his own, the witchcraft and the wonderfulness of childhood.

I have no right whatever to speak of the works of higher effort and claim, which have been the result of his acutely observant and enthusiastic study of the organism of the human body. I am indeed able to recognize his skill; but have no sympathy with the subjects that admit of its display. I am enabled, however, to show you with what integrity of application it has been gained, by his kindness in lending me for the Ruskin school two perfect early drawings, one of a lemon tree,—and another, of the same date, of a Byzantine well, which determine for you without appeal, the question respecting necessity of delineation as the first skill of a painter. Of all our present masters, Sir Frederick Leighton delights most

in softly-blended colours, and his ideal of beauty is more nearly that of Correggio than any seen since Correggio's time. But you see by what precision of terminal outline he at first restrained, and exalted, his gift of beautiful vaghezza.

Nor is the lesson one whit less sternly conveyed to you by the work of M. Alma Tadema, who differs from all the artists I have ever known, except John Lewis, in the gradual increase of technical accuracy, which attends and enhances together the expanding range of his dramatic invention; while every year he displays more varied and complex powers of minute draughtsmanship, more especially in architectural detail, wherein, somewhat priding myself as a specialty, I nevertheless receive continual lessons from him; except only in this one point,—that, with me, the translucency and glow of marble is the principal character of its substance, while with M. Tadema it is chiefly the superficial lustre and veining which seem to attract him; and these, also, seen, not in the strength of southern sun, but in the cool twilight of luxurious chambers. With which insufficient, not to say degrading, choice of architectural colour and shade, there is a fallacy in his classic idealism, against which, while I respectfully acknowledge his scholarship and his earnestness, it is necessary that you should be gravely and conclusively warned.

I said that the Greeks studied the *body* glorified by war; but much more, remember, they studied the *mind* glorified by it. It is the *μηρις* Ἀχιλλῆος, not the muscular force, which the good beauty of the body itself signifies; and you may most strictly take the Homeric words describing the aspect of Achilles showing himself on the Greek rampart as representative of the total Greek ideal. Learn by heart, unforgettably, the seven lines—

Αὐτὰρ Ἀχιλλεύς ὤρτο Διὶ φίλος· ἀμφὶ δ' Ἀθήνη
 ὦμοις ἰρθίμοισι βάλ' Αἰγίδα θυσσανέσσαν·
 Ἀμφὶ δέ οἱ κεφαλῇ νέφος ἔστερε δῖα θεῶν
 χρύσειον, ἐκ δ' αὐτοῦ δαίε φλόγα παυφανόωσαν.
 Ἥνίοχοι δ' ἔκπληγῆν, ἐπεὶ ἴδον' ἀκαματον πῆρ
 Δεινον ὑπὲρ κεφαλῆς μεγαθύμου Πηλείωνος
 Δαίμενον· τὸ δ' ἔδαε θεὰ γλαυκῶπις Ἀθήνη;

which are enough to remind you of the whole context, and to assure you of the association of light and cloud, in their terrible mystery, with the truth and majesty of human form, in the Greek conception; light and cloud, whether appointed either to show or to conceal, both given by a divine spirit, according to the bearing of your own university shield, "Dominus illuminatio." In all ancient heroic subjects, you will find these two ideas of light and mystery combined; and these with height of standing—the Goddess central and high in the pediment of her temple, the hero on his chariot, or the Egyptian king colossal above his captives.

Now observe, that whether of Greek or Roman life, M. Alma Tadema's pictures are always in twilight—interiors, *ὑπο σνμμεγεί σκιᾷ*. I don't know if you saw the collection of them last year at the Grosvenor, but with that universal twilight there was also universal crouching or lolling posture,—either in fear or laziness. And the most gloomy, the most crouching, the most dastardly of all these representations of classic life, was the little picture called the Pyrrhic Dance, of which the general effect was exactly like a microscopic view of a small detachment of black-beetles, in search of a dead rat.

I have named to you the Achillean splendour as primary type of Greek war; but you need only glance, in your memory, for a few instants, over the habitual expressions of all the great poets, to recognize the magnificence of light, terrible or hopeful; the radiance of armour, over all the field of battle, or flaming at every gate of the city; as in the blazoned heraldry of the seven against Thebes,—or beautiful, as in the golden armour of Glaucus, down to the baser brightness for which Camilla died: remember also that the ancient Doric dance was strictly the dance of Apollo; seized again by your own mightiest poet for the chief remnant of the past in the Greece of to-day—

"You have the Pyrrhic dance as yet:
Where is the Pyrrhic phalanx gone?"

And *this* is just the piece of classic life which your nineteenth century fancy sets forth under its fuliginous and cantharoid disfigurement and disgrace.

I say, *your* nineteenth century fancy, for M. Alma Tadema does but represent—or rather, has haplessly got himself entangled in,—the vast vortex of recent Italian and French revolutionary rage against all that resists, or ever did resist, its license ; in a word, against all priesthood and knighthood.

The Roman state, observe, in the strength of it expresses both these ; the orders of chivalry do not rise out of the disciplining of the hordes of Tartar horsemen, but by the Christianizing of the Roman eques ; and the noble priesthood of Western Christendom is not, in the heart of it hieratic, but pontifical. And it is the last corruption of this Roman state, and its Bacchanalian phrenzy, which M. Alma Tadema seems to hold it his heavenly mission to pourtray.

I have no mind, as I told you, to darken the healthy work I hope to lead you into by any frequent reference to antagonist influences. But it is absolutely necessary for me to-day to distinguish, once for all, what it is above everything your duty, as scholars in Oxford, to know and love—the perpetual laws of classic literature and art, the laws of the Muses, from what has of late again infected the schools of Europe under the pretence of classic study, being indeed only the continuing poison of the Renaissance, and ruled, not by the choir of the Muses, but by the spawn of the Python. And this I have been long-minded to do ; but am only now enabled to do completely and clearly, and beyond your doubt, by having obtained for you the evidence, unmistakable, of what remains classic from the ancient life of Italy—the ancient Etruscan life, down to this day ; which is the perfection of humility, modesty, and serviceableness, as opposed to the character which remains in my mind as the total impression of the Academy and Grosvenor,—that the young people of this day desire to be painted first as proud, saying, How grand I am ; next as immodest, saying, How beautiful I am ; lastly as idle, saying, I am able to pay for flunkeys, and never did a stroke of work in my life.

Since the day of the opening of the great Manchester exhibition in 1851, every Englishman, desiring to express interest in the arts, considers it his duty to assert with Keats, that

a thing of beauty is a *joy* for ever. I do not know in what sense the saying was understood by the Manchester school. But this I know, that what joy may remain still for you and for your children—in the fields, the homes, and the churches of England—you must win by otherwise reading the fallacious line. A beautiful thing may exist but for a moment, as a reality ;—it exists for ever as a testimony. To the law and to the witness of it the nations must appeal, “in secula seculorum” ; and in very deed and very truth, a thing of beauty is a *law* for ever.

That is the true meaning of classic art and of classic literature ;—not the license of pleasure, but the law of goodness ; and if, of the two words, *καλὸς κ'ἀγαθός*, one can be left unspoken, as implied by the other, it is the first, not the last. It is written that the Creator of all things beheld them—not in that they were beautiful, but in that they were good.

This law of beauty may be one for aught we know, fulfilling itself more perfectly as the years roll on ; but at least it is one from which no jot shall pass. The beauty of Greece depended on the laws of Lycurgus ; the beauty of Rome, on those of Numa ; our own, on the laws of Christ. On all the beautiful features of men and women, throughout the ages, are written the solemnities and majesty of the law they knew, with the charity and meekness of their obedience ; on all un-beautiful features are written either ignorance of the law, or the malice and insolence of the disobedience.

I showed you, on the occasion of my first address, a drawing of the death of a Tuscan girl,—a saint, in the full sense of that word, such as there have been, and still are, among the Christian women of all nations. I bring you to-day the portrait of a Tuscan Sibyl,—such as there have been, and still are. She herself is still living ; her portrait is the first drawing illustrating the book of the legends of the peasantry of Val d'Arno, which I obtained possession of in Florence last year ; of which book I will now read you part of the preface, in which the authoress gives you the story of the life of this Etrurian Sibyl.

“Beatrice was the daughter of a stonemason at Melo, a

little village of not very easy access on the mountain-side above Cutigliano ; and her mother having died in Beatrice's infancy, she became from early childhood, the companion and assistant of her father, accompanying him to his winter labours in the Maremma, and as she grew stronger, helping him at his work by bringing him stones for the walls and bridges which he built—carrying them balanced on her head. She had no education, in the common sense of the word, never learning even the alphabet ; but she had a wonderful memory, and could sing or recite long pieces of poetry. As a girl, she used in summer to follow the sheep, with her distaff at her waist, and would fill up her hours of solitude by singing such ballads as 'The War of St. Michael and the Dragon, 'The Creation of the World, and the Fall of Man,' or, 'The History of San Pelegrino, son of Romano, King of Scotland : ' and now, in her old age, she knows nearly all the New Testament history, and much of the Old, in a poetical form. She was very beautiful then, they say ; with curling black hair and wonderful-inspired looking eyes, and there must always have been a great charm in her voice and smile ; so it is no great wonder that Matteo Bernardi, much older than herself, and owner of a fine farm at Pian degli Ontani, and of many cattle, chose rather to marry the shepherd girl who could sing so sweetly, than another woman whom his family liked better, and who might perhaps have brought him more increase of worldly prosperity. On Beatrice's wedding-day according to the old custom of the country, one or two poets improvised verses suitable to the occasion ; and as she listened to them, suddenly she felt in herself a new power, and began to sing the poetry which was then born in her mind, and having once begun, found it impossible to stop, and kept on singing a great while, so that all were astonished, and her uncle, who was present, said—"Beatrice, you have deceived me ! if I had known what you were, I would have put you in a convent." From that time forth she was the great poetess of all that part of the country ; and was sent for to sing and recite at weddings, and other festivals, for many miles around : and perhaps she might have been happy, but

her husband's sister, Barbara, who lived in the house, and who had not approved of the marriage, tried very wickedly to set her brother against his wife, and to some extent succeeded. He tried to stop her singing, which seemed to him a sort of madness, and at times he treated her with great unkindness ; but sing she must and sing she did, for it was what the Lord made her for, and she lived down all their dislike ; her husband loved her in his old age, and Barbara, whom she nursed with motherly kindness through a long and most distressing illness, was her friend before she died. Beatrice is still living, at a great age now, but still retaining much of her old beauty and brilliancy, and is waited on and cared for with much affection by a pretty granddaughter bearing the same name as herself."

There are just one or two points I want you to note in this biography, specially.

The girl is put, in her youth, to three kinds of noble work. She is a shepherdess, like St. Genevieve ; a spinner and knitter, like Queen Bertha ; chiefly and most singularly, she is put to help her father in the pontifical art of bridge-building. Gymnastic to purpose, you observe. In the last, or last but one, number of your favourite English chronicle, the proud mother says of her well-trained daughters, that there is not one who could not knock down her own father : here is a strong daughter who can *help* her father—a Grace Darling of the rivers instead of the sea.

These are the first three things to be noted of her. Next the material of her education,—not in words, but in thoughts, and the greatest of thoughts. You continually hear that Roman Catholics are not allowed to read the Bible. Here is a little shepherdess who has it in her heart.

Next, the time of her inspiration,—at her wedding feast ; as in the beginning of her Master's ministry, at Cana. Here is right honour put upon marriage ; and, in spite of the efforts made to disturb her household peace, it was entirely blessed to her in her children : nor to her alone, but to us, and to myriads with us ; for her second son, Angelo, is the original of the four drawings of St. Christopher which illustrate the cen-

tral poem in Miss Alexander's book ; and which are, to the best of my knowledge, the most beautiful renderings of the legend hitherto attained by religious imagination.

And as you dwell on these portraits of a noble Tuscan peasant, the son of a noble Christian mother,—learn this farther and final distinction between the greatest art of past time, and that which has become possible now and in future.

The Greek, I said, portrayed the body and the mind of man, glorified in mortal war. But to us is given the task of holier portraiture, of the countenance and the heart of man, glorified by the peace of God.

Whether Francesca's book is to be eventually kept together or distributed I do not yet know. But if distributed, the drawings of St. Christopher must remain in Oxford, being as I have said, the noblest statements I have ever seen of the unchangeable meaning of this Ford of ours, for all who pass it honestly, and do not contrive false traverse for themselves over a widened Magdalen Bridge. That ford, gentlemen, for ever,—know what you may,—hope what you may,—believe or deny what you may,—you have to pass barefoot. For it is a baptism as well as a ford, and the waves of it, as the sands, are holy. Your youthful days in this place are to you the dipping of your feet in the brim of the river, which is to be manfully stemmed by you all your days ; not drifted with,—nor toyed upon. Fallen leaves enough it is strewn with, of the flowers of the forest ; moraine enough it bears, of the ruin of the brave. Your task is to *cross* it ; your doom may be to go down with it, to the depths out of which there is no crying. Traverse it, staff in hand, and with loins girded, and with whatsoever law of Heaven you know, for your light. On the other side is the Promised Land, the Land of the Leal.

LECTURE IV.

Fairy Land.

MRS. ALLINGHAM AND KATE GREENAWAY.

WE have hitherto been considering the uses of legendary art to grown persons, and to the most learned and powerful minds. To-day I will endeavour to note with you some of the least controvertible facts respecting its uses to children; and to obtain your consent to the main general principles on which I believe it should be offered to them.

Here, however, I enter on ground where I must guard carefully against being misled by my own predilections, and in which also the questions at issue are extremely difficult, because most of them new. It is only in recent times that pictures have become familiar means of household pleasure and education: only in our own days—nay, even within the last ten years of those, that the means of illustration by colour-printing have been brought to perfection, and art as exquisite as we need desire to see it, placed, if our school-boards choose to have it so, within the command of every nursery governess.

Having then the colour-print, the magic-lantern, the electric-light, and the—to any row of ciphers—magnifying, lens, it becomes surely very interesting to consider what we may most wisely represent to children by means so potent, so dazzling, and, if we will, so faithful. I said just now that I must guard carefully against being misled by my own predilections, because having been myself brought up principally on fairy legends, my first impulse would be to insist upon every story we tell to a child being untrue, and every scene we paint for it, impossible. But I have been led, as often before confessed, gravely to doubt the expediency of some parts of my early training; and perhaps some day may try to divest myself wholly, for an hour, of these dangerous recollections; and prepare a lecture for you in which I will take Mr. Gradgrind

on his own terms, and consider how far, making it a rule that we exhibit nothing but facts, we could decorate our pages of history, and illuminate the slides of our lantern, in a manner still sufficiently attractive to childish taste. For indeed poor Louise and her brother, kneeling to peep under the fringes of the circus-tent, are as much in search after facts as the most scientific of us all! A circus-rider, with his hoop, is as much a fact as the planet Saturn and his ring, and exemplifies a great many more laws of motion, both moral and physical; nor are any descriptions of the Valley of Diamonds, or the Lake of the Black Islands, in the 'Arabian Nights,' anything like so wonderful as the scenes of California and the Rocky Mountains which you may find described in the April number of the 'Cornhill Magazine,' under the heading of 'Early Spring in California'; and may see represented with most sincere and passionate enthusiasm by the American landscape painter, Mr. Moran, in a survey lately published by the Government of the United States.

Scenes majestic as these, portrayed with mere and pure fidelity by such scientific means as I have referred to, would form a code of geographic instruction beyond all the former grasp of young people; and a source of entertainment,—I had nearly said, and most people who had not watched the minds of children carefully, might think,—inexhaustible. Much, indeed, I should myself hope from it, but by no means an infinitude of entertainment. For it is quite an inexorable law of this poor human nature of ours, that in the development of its healthy infancy, it is put by Heaven under the absolute necessity of using its imagination as well as its lungs and its legs;—that it is forced to develop its power of invention, as a bird its feathers of flight; that no toy you can bestow will supersede the pleasure it has in fancying something that isn't there; and the most instructive histories you can compile for it of the wonders of the world will never conquer the interest of the tale which a clever child can tell itself, concerning the shipwreck of a rose-leaf in the shallows of a rivulet.

One of the most curious proofs of the need to children of this exercise of the inventive and believing power,—the *besoin*

de croire, which precedes the *besoin d'aimer*, you will find in the way you destroy the vitality of a toy to them, by bringing it too near the imitation of life. You never find a child make a pet of a mechanical mouse that runs about the floor—of a poodle that yelps—of a tumbler who jumps upon wires. The child falls in love with a quiet thing, with an ugly one—nay, it may be, with one, to us, totally devoid of meaning. My little—ever-so-many-times-grand—cousin, Lily, took a bit of stick with a round knob at the end of it for her doll one day;—nursed it through any number of illnesses with the most tender solicitude; and, on the deeply-important occasion of its having a new nightgown made for it, bent down her mother's head to receive the confidential and timid whisper—“Mamma, perhaps it had better have no sleeves, because, as Bibsey has no arms, she mightn't like it.”

I must take notice here, but only in passing,—the subject being one to be followed out afterwards in studying more grave branches of art,—that the human mind in its full energy having thus the power of believing simply what it likes, the responsibilities and the fatalities attached to the effort of Faith are greater than those belonging to bodily deed, precisely in the degree of their voluntariness. A man can't always *do* what he likes, but he can always *fancy* what he likes; and he may be forced to do what he doesn't like, but he can't be forced to fancy what he doesn't like.

I use for the moment, the word 'to fancy' instead of 'to believe,' because the whole subject of Fidelity and Infidelity has been made a mere mess of quarrels and blunders by our habitually forgetting that the proper power of Faith is to trust *without* evidence, not *with* evidence. You perpetually hear people say, 'I won't believe this or that unless you give me evidence of it.' Why, if you give them evidence of it, they *know* it,—they don't believe, any more. A man doesn't believe there's any danger in nitro-glycerine; at last he gets his parlour-door blown into next street. He is then better informed on the subject, but the time for belief is past.

Only, observe, I don't say that you can fancy what you like, to the degree of receiving it for truth. Heaven forbid we

should have a power such as that, for it would be one of voluntary madness. But we are, in the most natural and rational health, able to foster the fancy, up to the point of influencing our feelings and character in the strongest way ; and for the strength of that healthy imaginative faculty, and all the blending of the good and grace, "*richiesto al vero ed al trastullo,*"* we are wholly responsible. We may cultivate it to what brightness we choose, merely by living in a quiet relation with natural objects and great and good people, past or present ; and we may extinguish it to the last snuff, merely by living in town, and reading the 'Times' every morning.

"We are scarcely sufficiently conscious," says Mr. Kinglake, with his delicate precision of serenity in satire, "scarcely sufficiently conscious in England, of the great debt we owe to the *wise and watchful press which presides over the formation of our opinions* ; and which brings about this splendid result, namely, that in matters of belief, the humblest of us are lifted up to the level of the most sagacious, so that really a simple Cornet in the blues is no more likely to entertain a foolish belief about ghosts, or witchcraft, or any other supernatural topic, than the Lord High Chancellor, or the Leader of the House of Commons."

And thus, at the present day, for the education or the extinction of the Fancy, we are absolutely left to our choice. For its occupation, not wholly so, yet in a far greater measure than we know. Mr. Wordsworth speaks of it as only impossible to "have sight of Proteus rising from the sea," because the world is too much with us ; also Mr. Kinglake, though in another place, he calls it "a vain and heathenish longing to be fed with divine counsels from the lips of Pallas Athene,"—yet is far happier than the most scientific traveller could be in a trigonometric measurement, when he discovers that Neptune could really have seen Troy from the top of Samothrace : and I believe that we should many of us find it an extremely wholesome and useful method of treating our ordinary affairs, if before deciding, even upon very minor points of conduct admitting of prudential and conscientious debate, we were in the habit

* Dante, Purg. xiv. 93.

of imagining that Pallas Athene was actually in the room with us, or at least outside the window in the form of a swallow, and permitted us, on the condition always of instant obedience, to ask her advice upon the matter.

Here ends my necessary parenthesis, with its suspicion of preachment, for which I crave pardon, and I return to my proper subject of to-day,—the art which intends to address only childish imagination, and whose object is primarily to entertain with grace.

With grace:—I insist much on this latter word. We may allow the advocates of a material philosophy to insist that every wild-weed tradition of fairies, gnomes, and sylphs should be well ploughed out of a child's mind to prepare it for the good seed of the Gospel of—*Disgrace*: but no defence can be offered for the presentation of these ideas to its mind in a form so vulgarized as to defame and pollute the masterpieces of former literature. It is perfectly easy to convince the young proselyte of science that a cobweb on the top of a thistle cannot be commanded to catch a honey-bee for him, without introducing a dance of ungainly fairies on the site of the cabstand under the Westminster clock tower, or making the Queen of them fall in love with the sentry on guard.

With grace, then, assuredly,—and I think we may add also, with as much seriousness as an entirely fictitious subject may admit of—seeing that it touches the border of that higher world which is not fictitious. We are all perhaps too much in the habit of thinking the scenes of burlesque in the 'Midsummer Night's Dream' exemplary of Shakespeare's general treatment of fairy character: we should always remember that he places the most beautiful words descriptive of virgin purity which English poetry possesses, in the mouth of the Fairy King, and that to the Lord of Fancies he entrusts the praise of the conquest of Fancy,—

“In maiden meditation,—Fancy free.”

Still less should we forget the function of household benediction, attributed to them always by happy national super-

stition, and summed in the closing lines of the same play,—

“ With this field-dew consecrate,
 Every fairy take his gait ;
 And each several chamber bless,
 Through this palace, with sweet peace.”

With seriousness then,—but only, I repeat, such as entirely fictitious elements properly admit of. The general grace and sweetness of Scott's moorland fairy, ‘The White Lady,’ failed of appeal to the general justice of public taste, because in two places he fell into the exactly opposite errors of unbecoming jest, and too far-venturing solemnity. The ducking of the Sacristan offended even his most loving readers ; but it offended them chiefly for a reason of which they were in great part unconscious, that the jest is carried out in the course of the charge with which the fairy is too gravely entrusted, to protect, for Mary of Avenel, her mother's Bible.

It is of course impossible, in studying questions of this kind, to avoid confusion between what is fit in literature and in art ; the leading principles are the same in both, but of course much may be allowed to the narrator which is impossible or forbidden to the draughtsman. And I necessarily take examples chiefly from literature, because the greatest masters of story have never disclaimed the playfully supernatural elements of fairy-tale, while it is extremely rare to find a good painter condescending to them,—or, I should rather say, contending with them, the task being indeed one of extreme difficulty. I believe Sir Noel Paton's pictures of the Court of Titania, and Fairy Raid, are all we possess in which the accomplished skill of painting has been devoted to fairy-subject ; and my impression when I saw the former picture—the latter I grieve not yet to have seen—was that the artist intended rather to obtain leave by the closeness of ocular distance to display the exquisite power of minute delineation, which he felt in historical painting to be inapplicable, than to arrest, either in his own mind or the spectator's, even a momentary credence in the enchantment of fairy-wand and fairy-ring.

And within the range of other art which I can call to mind, touching on the same ground,—or rather, breathing in the same air,—it seems to me a sorrowful and somewhat unaccountable law that only grotesque or terrible fancies present themselves forcibly enough, in these admittedly fabling states of the imagination, to be noted with the pencil. For instance, without rating too highly the inventive powers of the old German outline-draughtsman, Retsch, we cannot but attribute to him a very real gift of making visibly terrible such legend as that of the ballad of Leonora, and interpreting, with a wild aspect of veracity, the passages of sorcery in 'Faust.' But the drawing which I possess by his hand, of the Genius of Poetry riding upon a swan, could not be placed in my school with any hope of deepening your impression either of the beauty of swans, or the dignity of genii.

You must, however, always carefully distinguish these states of gloomy fantasy, natural, though too often fatal, to men of real imagination,—the spectra which appear, whether they desire it or not,—to men like Orcagna, Durer, Blake, and Alfred Rethel,—and dwelt upon by them, in the hope of producing some moral impression of salutary awe by their record—as in Blake's Book of Job, in Durer's Apocalypse, in Rethel's Death the Avenger and Death the Friend,—and more nobly in his grand design of Barbarossa entering the grave of Charlemagne;—carefully, I say, you must distinguish this natural and lofty phase of visionary terror, from the coarse delight in mere pain and crisis of danger, which, in our infidel art and literature for the young, fills our books of travel with pictures of alligators swallowing children, hippopotami upsetting canoes full of savages, bears on their hind-legs doing battle with northern navigators, avalanches burying Alpine villages, and the like, as the principal attractions of the volume; not, in the plurality of cases, without vileness of exaggeration which amounts to misleading falsehood—unless happily pushed to the point where mischief is extinguished by absurdity. In Strahan's 'Magazine for the Youth of all Ages,' for June, 1879, at page 328, you will find it related, in a story proposed for instruction in scientific natural history,

that “the fugitives saw an enormous elephant cross the clearing, surrounded by ten tigers, some clinging to its back, and others keeping alongside.”

I may in this place, I think, best introduce—though again parenthetically—the suggestion of a healthy field for the labouring scientific fancy which remains yet unexhausted, and I believe inexhaustible,—that of the fable, expanded into narrative, which gives a true account of the life of animals, supposing them to be endowed with human intelligence, directed to the interests of their animal life. I said just now that I had been brought up upon fairy legends, but I must gratefully include, under the general title of these, the stories in ‘Evenings at Home’ of *The Transmigrations of Indur*, *The Discontented Squirrel*, *The Travelled Ant*, *The Cat and her Children*, and *Little Fido*; and with these, one now quite lost, but which I am minded soon to reprint for my younger pupils,—*The History of a Field-Mouse*, which in its pretty detail is no less amusing, and much more natural, than the town and country mice of Horace and Pope,—classic, in the best sense, though these will always be.

There is the more need that some true and pure examples of fable in this kind should be put within the reach of children, because the wild efforts of weak writers to increase their incomes at Christmas, and the unscrupulous encouragement of them by competing booksellers, fill our nurseries with forms of rubbish which are on the one side destructive of the meaning of all ancient tradition, and on the other, reckless of every really interesting truth in exact natural history. Only the other day, in examining the mixed contents of a somewhat capacious nursery bookcase, the first volume I opened was a fairy tale in which the benevolent and moral fairy drove a “matchless pair of white cockatrices.” I might take up all the time yet left for this lecture in exposing to you the mingled folly and mischief in those few words;—the pundering to the first notion of vulgar children that all glory consists in driving a matchless pair of something or other,—and the implied ignorance in which only such a book could be presented to *any* children, of the most solemn of scriptural promises to

them,—“the weaned child shall lay his hand on the cockatrice’ den.”

And the next book I examined was a series of stories imported from Japan,* most of them simply sanguinary and loathsome, but one or two pretending to be zoological—as, for instance, that of the Battle of the Ape and the Crab, of which it is said in the introduction that “men should lay it up in their hearts, and teach it as a profitable lesson to their children.” In the opening of this profitable story, the crab plants a “persimmon seed in his garden” (the reader is not informed what manner of fruit the persimmon may be), and watches the growth of the tree which springs from it with great delight; being, we are told in another paragraph, “a simple-minded creature.”

I do not know whether this conception of character in the great zodiacal crustacean is supposed to be scientific or æsthetic,—but I hope that British children at the seaside are capable of inventing somewhat better stories of crabs for themselves; and if they would farther know the foreign manners of the sidelong-pacing people, let me ask them to look at the account given by Lord George Campbell, in his ‘Log Letters from the Challenger,’ of his landing on the island of St. Paul, and of the manner in which the quite unsophisticated crabs of that locality succeeded first in stealing his fishbait, and then making him lose his temper, to a degree extremely unbecoming in a British nobleman. They will not, after the perusal of that piquant—or perhaps I should rather say, pincant,—narrative, be disposed, whatever other virtues they may possess, to ascribe to the obliquitous nation that of simplicity of mind.

I have no time to dwell longer on the existing fallacies in the representation either of the fairy or the animal kingdoms. I must pass to the happier duty of returning thanks for the truth with which our living painters have drawn for us the lovely dynasty of little creatures, about whose reality there can be no doubt; and who are at once the most powerful of fairies, and the most amusing, if not always the most sagacious! of animals.

In my last lecture, I noted to you, though only parentheti-

* Macmillan, 1871.

cally, the singular defect in Greek art, that it never gives you any conception of Greek children. Neither—up to the thirteenth century—does Gothic art give you any conception of Gothic children; for, until the thirteenth century, the Goth was not perfectly Christianized, and still thought only of the strength of humanity as admirable in battle or venerable in judgment, but not as dutiful in peace, nor happy in simplicity.

But from the moment when the spirit of Christianity had been entirely interpreted to the Western races, the sanctity of womanhood worshipped in the Madonna, and the sanctity of childhood in unity with that of Christ, became the light of every honest hearth, and the joy of every pure and chastened soul. Yet the traditions of art-subject, and the vices of luxury which developed themselves in the following (fourteenth) century, prevented the manifestation of this new force in domestic life for two centuries more; and then at last in the child angels of Luca, Mino of Pesole, Luini, Angelico, Perugino, and the first days of Raphael, it expressed itself as the one pure and sacred passion which protected Christendom from the ruin of the Renaissance.

Nor has it since failed; and whatever disgrace or blame obscured the conception of the later Flemish and incipient English schools, the children, whether in the pictures of Rubens, Rembrandt, Vandyke, or Sir Joshua, were always beautiful. An extremely dark period indeed follows, leading to and persisting in the French Revolution, and issuing in the merciless manufacturing fury, which to-day grinds children to dust between millstones, and tears them to pieces on engine-wheels,—against which rises round us, Heaven be thanked, again the protest and the power of Christianity, restoring the fields of the quiet earth to the steps of her infancy.

In Germany, this protest, I believe, began with—it is at all events perfectly represented by—the Ludwig Richter I have so often named; in France, with Edward Frère, whose pictures of children are of quite immortal beauty. But in England it was long repressed by the terrible action of our wealth, compelling our painters to represent the children of the poor as in wickedness or misery. It is one of the most terrific facts

in all the history of British art that Bewick never draws children but in mischief.

I am not able to say with whom, in Britain, the reaction first begins,—but certainly not in painting until after Wilkie, in all whose works there is not a single example of a beautiful Scottish boy or girl. I imagine in literature, we may take the ‘Cotter’s Saturday Night’ and the ‘toddlin’ wee things’ as the real beginning of child benediction ; and I am disposed to assign in England much value to the widely felt, though little acknowledged, influence of an authoress now forgotten—Mary Russell Mitford. Her village children in the Lowlands—in the Highlands, the Lucy Grays and Alice Fells of Wordsworth—brought back to us the hues of Fairy Land ; and although long by Academic art denied or resisted, at last the charm is felt in London itself,—on pilgrimage in whose suburbs you find the Little Nells and boy David Copperfields ; and in the heart of it, Kit’s baby brother at Astley’s, indenting his cheek with an oyster-shell to the admiration of all beholders ; till at last, bursting out like one of the sweet Surrey fountains, all dazzling and pure, you have the radiance and innocence or reinstated infant divinity showered again among the flowers of English meadows by Mrs. Allingham and Kate Greenaway.

It has chanced strangely, that every one of the artists to whom in these lectures I wished chiefly to direct your thoughts, has been insufficiently, or even disadvantageously, represented by his work in the exhibitions of the season. But chiefly I have been disappointed in finding no drawing of the least interest by Mrs. Allingham in the room of the Old Water-colour Society. And let me say, in passing, that none of these new splendours and spaces of show galleries, with attached restaurants to support the cockney constitution under the trial of getting from one end of them to the other, will in the least make up to the real art-loving public for the loss of the goodfellowship of our old societies, every member of which sent everything he had done best in the year into the room, for the May meetings ; shone with his debited measure of admiration in his accustomed corner ; supported his asso-

ciates without eclipsing them ; supplied his customers without impoverishing them ; and was permitted to sell a picture to his patron or his friend, without paying fifty guineas commission on the business to a dealer.

Howsoever it may have chanced, Mrs. Allingham has nothing of importance in the water-colour room ; and I am even sorrowfully compelled to express my regret that she should have spent unavailing pains in finishing single heads, which are at the best uninteresting miniatures, instead of fulfilling her true gift, and doing what (in Miss Alexander's words) 'the Lord made her for'—in representing the gesture, character, and humour of charming children in country landscapes. Her 'Tea Party,' in last year's exhibition, with the little girl giving her doll its bread and milk, and taking care that she supped it with propriety, may be named as a most lovely example of her feeling and her art ; and the drawing which some years ago riveted, and ever since has retained, the public admiration,—the two deliberate housewives in their village toyshop, bent on domestic utilities and economies, and proud in the acquisition of two flat irons for a farthing,—has become, and rightly, a classic picture, which will have its place among the memorable things in the art of our time, when many of its loudly trumpeted magnificences are remembered no more.

I must not in this place omit mention, with sincere gratitude, of the like motives in the paintings of Mr. Birkett Foster ; but with regret that in too equal, yet incomplete, realization of them, mistaking, in many instances, mere spotty execution for finish, he has never taken the high position that was open to him as an illustrator of rustic life.

And I am grieved to omit the names of many other artists who have protested, with consistent feeling, against the misery entailed on the poor children of our great cities,—by painting the real inheritance of childhood in the meadows and fresh air. But the graciousness and sentiment of them all is enough represented by the hitherto undreamt-of, and, in its range, unrivalled, fancy, which is now re-establishing throughout gentle Europe, the manners and customs of fairyland.

I may best indicate to you the grasp which the genius of Miss Kate Greenaway has taken upon the spirit of foreign lands, no less than her own, by translating the last paragraph of the entirely candid, and intimately observant, review of modern English art, given by Monsieur Ernest Chesneau, in his small volume, 'La Peinture Anglaise,' of which I will only at present say, that any of my pupils who read French with practice enough to recognize the finesse of it in exact expression, may not only accept his criticism as my own, but will find it often more careful than mine, and nearly always better expressed; because French is essentially a critical language, and can say things in a sentence which it would take half a page of English to explain.

He gives first a quite lovely passage (too long to introduce now) upon the gentleness of the satire of John Leech, as opposed to the bitter malignity of former caricature. Then he goes on: "The great softening of the English mind, so manifest already in John Leech, shows itself in a decisive manner by the enthusiasm with which the public have lately received the designs of Mr. Walter Crane, Mr. Caldecott, and Miss Kate Greenaway. The two first named artists began by addressing to children the stories of Perrault and of the Arabian Nights, translated and adorned for them in a dazzling manner; and, in the works of all these three artists, landscape plays an important part;—familiar landscape, very English, interpreted with a 'bonhomie savante'" (no translating that), "spiritual, decorative in the rarest taste,—strange and precious adaptation of Etruscan art, Flemish and Japanese, reaching, together with the perfect interpretation of nature, to incomparable chords of colour harmony. These powers are found in the work of the three, but Miss Greenaway, with a profound sentiment of love for children, puts the child alone on the scene, companions him in his own solitudes, and shows the infantine nature in all its naïveté, its gaucherie, its touching grace, its shy alarm, its discoveries, ravishments, embarrassments, and victories; the stumblings of it in wintry ways, the enchanted smiles of its spring time, and all the history of its fond heart and guiltless egoism.

“From the honest but fierce laugh of the coarse Saxon, William Hogarth, to the delicious smile of Kate Greenaway, there has passed a century and a half. Is it the same people which applauds to day the sweet genius and tender malices of the one, and which applauded the bitter genius and slaughterous satire of the other? After all, that is possible,—the hatred of vice is only another manifestation of the love of innocence.”

Thus far M. Chesneau—and I venture only to take up the admirable passage at a question I did not translate: “*Ira-t-on au dela, fera-t-on mieux encore?*”—and to answer joyfully, Yes, if you choose; you, the British public, to encourage the artist in doing the best she can for you. She will, if you will receive it when she does.

I have brought with me to-day in the first place some examples of her pencil sketches in primary design. These in general the public cannot see, and these, as is always the case with the finest imaginative work, contain the best essence of it,—qualities never afterwards to be recovered, and expressed with the best of all sensitive instruments, the pencil point.

You have here, for consummate example, a dance of fairies under a mushroom, which she did under challenge to show me what fairies were like. “They’ll be very like children,” she said; I answered that I didn’t mind, and should like to see them, all the same;—so here they are, with a dance, also, of two girlies, outside of a mushroom; and I don’t know whether the elfins or girls are fairyfootedest: and one or two more subjects, which you may find out;—but, in all, you will see that the line is ineffably tender and delicate, and can’t in the least be represented by the lines of a woodcut. But I have long since shown you the power of line engraving as it was first used in Florence; and if you choose, you may far recover the declining energies of line engraving in England, by encouraging its use in the multiplication, whether of these, or of Turner outlines, or of old Florentine silver point outlines, no otherwise to be possessed by you. I have given you one example of what is possible in Mr. Rolfe’s engraving of *Ida*; and, if all goes well, before the autumn fairy rings are traced, you shall see some fairy *Idas* caught flying.

So far of pure outline. Next, for the enrichment of it by colour. Monsieur Chesneau doubts if the charm of Miss Greenaway's work can be carried farther. I answer, with security,—yes, very much farther, and that in two directions: first, in her own method of design; and secondly, the manner of its representation in printing.

First, her own design has been greatly restricted by being too ornamental, or, in your modern phrase decorative; contracted into any corner of a Christmas card, or stretched like an elastic band round the edges of an almanack. Now, her art is much too good to be used merely for illumination; it is essentially and perfectly that of true colour-picture, and that the most naïve and delightful manner of picture, because, on the simplest terms, it comes nearest reality. No end of mischief has been done to modern art by the habit of running semi-pictorial illustration round the margins of ornamental volumes, and Miss Greenaway has been wasting her strength too sorrowfully in making the edges of her little birthday books, and the like, glitter with unregarded gold, whereas her power should be concentrated in the direct illustration of connected story, and her pictures should be made complete on the page, and far more realistic than decorative. There is no charm so enduring as that of the real representation of any given scene; her present designs are like living flowers flattened to go into an herbarium, and sometimes too pretty to be believed. We must ask her for more descriptive reality, for more convincing simplicity, and we must get her to organize a school of colourists by hand, who can absolutely facsimile her own first drawing.

This is the second matter on which I have to insist. I bring with me to-day twelve of her original drawings, and have mounted beside them, good impressions of the published prints.

I may heartily congratulate both the publishers and possessors of the book on the excellence of these; yet if you examine them closely, you will find that the colour blocks of the print sometimes slip a little aside, so as to lose the precision of the drawing in important places; and in many other re-

spects better can be done, in at least a certain number of chosen copies. I must not, however, detain you to-day by entering into particulars in this matter. I am content to ask your sympathy in the endeavour, if I can prevail on the artist to undertake it.

Only with respect to this and every other question of method in engraving, observe farther that *all* the drawings I bring you to-day agree in one thing,—minuteness and delicacy of touch carried to its utmost limit, visible in its perfectness to the eyes of youth, but neither executed with a magnifying glass, nor, except to aged eyes, needing one. Even I, at sixty-four, can see the essential qualities of the work without spectacles; though only the youngest of my friends here can see, for instance, Kate's fairy dance, perfectly, but *they* can, with their own bright eyes.

And now please note this, for an entirely general law, again and again reiterated by me for many a year. *All great art is delicate*, and fine to the uttermost. Wherever there is blotting, or daubing, or dashing, there is weakness, at least; probably, affectation; certainly, bluntness of feeling. But, all delicacy which is rightly pleasing to the human mind is addressed to the *unaided human sight*, not to microscopic help or mediation.

And now generalize that law farther. As all noble sight is with the eyes that God has given you, so all noble motion is with the limbs God has balanced for you, and all noble strength with the arms He has knit. Though you should put electric coils into your high heels, and make spring-heeled Jacks and Gills of yourselves, you will never dance, so, as you could barefoot. Though you could have machines that would swing a ship of war into the sea, and drive a railway train through a rock, all divine strength is still the strength of Herakles, a man's wrestle, and a man's blow.

There are two other points I must try to enforce in closing, very clearly. "Landscape," says M. Chesneau, "takes great part in these lovely designs." He does not say of what kind; may I ask you to look, for yourselves, and think?

There are no railroads in it, to carry the children away

with, are there? no tunnel or pit mouths to swallow them up, no league-long viaducts—no blinkered iron bridges? There are only winding brooks, wooden foot-bridges, and grassy hills without any holes cut into them!

Again,—there are no parks, no gentlemen's seats with attached stables and offices!—no rows of model lodging houses! no charitable institutions!! It seems as if none of these things which the English mind now rages after, possess any attraction whatever for this unimpressionable person. She is a graceful Gallio—*Gallia gratia plena*, and cares for none of those things.

And more wonderful still,—there are no gasworks! no waterworks, no mowing machines, no sewing machines, no telegraph poles, no vestige, in fact, of science, civilization, economical arrangements, or commercial enterprise!!!

Would you wish me, with professorial authority, to advise her that her conceptions belong to the dark ages, and must be reared on a new foundation? Or is it, on the other hand, recommendably conceivable by *you*, that perhaps the world we truly live in may not be quite so changeable as you have thought it;—that all the gold and silver you can dig out of the earth are not worth the kingcups and the daisies she gave you of her grace; and that all the fury, and the flutter, and the wonder, and the wistfulness, of your lives, will never discover for you any other than the ancient blessing: “He maketh me to lie down in green pastures, He leadeth me beside the still waters, He restoreth my soul”?

Yet one word more. Observe that what this unimpressionable person *does* draw, she draws as like it as she can. It is true that the combination or composition of things is not what you can see every day. You can't every day, for instance, see a baby thrown into a basket of roses; but when she has once pleasantly invented that arrangement for you, baby is as like baby, and rose as like rose, as she can possibly draw them. And the beauty of them is in *being* like. They are blissful, just in the degree that they are natural; and the fairyland she creates for you is not beyond the sky nor beneath the sea, but nigh you, even at your doors. She does but show you how to see it, and how to cherish.

Long since I told you this great law of noble imagination. It does not create, it does not even adorn, it does but *reveal*, the treasures to be possessed by the spirit. I told you this of the work of the great painter whom, in that day, everyone accused of representing only the fantastic and the impossible. I said forty years ago, and say at this instant, more solemnly, All his magic is in his truth.

I show you, to-day, a beautiful copy made for me by Mr. Maedonald, of the drawing which, of all the Turners I gave you, I miss the most. I never thought it could have been copied at all, and have received from Mr. Maedonald, in this lovely rendering of it, as much a lesson as a consolation. For my purpose to-day it is just as good as if I had brought the drawing itself.

It is one of the Loire series, which the engravers could not attempt, because it was too lovely; or would not attempt, because there was, to their notion, nothing in it. It is only a coteau, scarce a hundred feet above the river, nothing like so high as the Thames banks between here and Reading,—only a coteau, and a recess of calm water, and a breath of mist, and a ray of sunset. The simplest things, the frequentest, the dearest; things that you may see any summer evening by a thousand thousand streams among the low hills of old familiar lands. Love them, and see them rightly,—Andes and Caucasus, Amazon and Indus, can give you no more.

The danger imminent on you is the destruction of what you *have*. I walked yesterday afternoon round St. John's gardens, and found them, as they always are in spring time, almost an ideal of earthly Paradise,—the St. John's students also disporting themselves therein in games preparatory to the advent of the true fairies of Commemoration. But, the afternoon before, I had walked down St. John's *Road*, and, on emerging therefrom to cross the railway, found on my left hand a piece of waste ground, extremely characteristic of that with which we now always adorn the suburbs of our cities, and of which it can only be said that no demons could contrive, under the earth, a more uncomfortable and abominable place of misery for the condemned souls of dirty people,

than Oxford thus allows the western light to shine upon—
 ‘ nel aer dolce, che dal sol s’allegra.’ For many a year I have
 now been telling you, and in the final words of this first course
 of lectures in which I have been permitted again to resume
 work among you, let me tell you yet once more, and if possible,
 more vehemently, that neither sound art, policy, nor religion,
 can exist in England, until, neglecting, if it must be, your
 own pleasure gardens and pleasure chambers, you resolve
 that the streets which are the habitation of the poor, and the
 fields which are the playgrounds of their children, shall be
 again restored to the rule of the spirits, whosoever they are
 in earth, and heaven, that ordain, and reward, with constant
 and conscious felicity, all that is decent and orderly, beautiful
 and pure.

LECTURE V.

The Fireside.

JOHN LEECH AND JOHN TENNIEL.

THE outlines of the schools of our National Art which I at-
 tempted in the four lectures given last spring, had led us to
 the point where the, to us chiefly important, and, it may per-
 haps be said, temporarily, all important questions respecting
 the uses of art in popular education, were introduced to us by
 the beautiful drawings of Miss Alexander and Miss Greenaway.
 But these drawings, in their dignified and delicate, often re-
 served, and sometimes severe characters, address themselves
 to a circle, which however large,—or even (I say it with thank-
 fulness) practically infinite, yet consists exclusively of persons
 of already cultivated sensibilities, and more or less gentle and
 serious temper. The interests of general education compel
 our reference to a class entirely beneath these, or at least dis-
 tinct from them; and our consideration of art-methods to
 which the conditions of cheapness, and rapidity of multiplica-
 tion, are absolutely essential.

I have stated, and it is one of the paradoxes of my political

economy which you will find on examination to be the expression of a final truth, that there is no such thing as a just or real cheapness, but that all things have their necessary price : and that you can no more obtain them for less than that price, than you can alter the course of the earth. When you obtain anything yourself for half-price, somebody else must always have paid the other half. But, in the sense either of having cost less labour, or of being the productions of less rare genius, there are, of course, some kinds of art more generally attainable than others ; and, of these, the kinds which depend on the use of the simplest means are also those which are calculated to have most influence over the simplest minds. The disciplined qualities of line-engraving will scarcely be relished, and often must even pass unperceived, by an uneducated or careless observer ; but the attention of a child may be excited, and the apathy of a clown overcome, by the blunt lines of a vigorous woodcut.

To my own mind, there is no more beautiful proof of benevolent design in the creation of the earth, than the exact adaptation of its materials to the art-power of man. The plasticity and constancy under fire of clay ; the ductility and fusibility of gold and iron ; the consistent softness of marble ; and the fibrous toughness of wood, are in each material carried to the exact degree which renders them provocative of skill by their resistance, and full of reward for it by their compliance : so that the delight with which, after sufficiently intimate study of the methods of manual work, the student ought to regard the excellence of a masterpiece, is never merely the admiration of difficulties overcome, but the sympathy, in a certain sense, both with the enjoyment of the workman in managing a substance so pliable to his will, and with the worthiness, fitness, and obedience of the material itself, which at once invites his authority, and rewards his concessions.

But of all the various instruments of his life and genius, none are so manifold in their service to him as that which the forest leaves gather every summer out of the air he breathes. Think of the use of it in house and furniture alone. I have

lived in marble palaces, and under frescoed loggie, but have never been so comfortable in either as in the clean room of an old Swiss inn, whose walls and floor were of plain deal. You will find also, in the long run, that none of your modern æsthetic upholstery can match, for comfort, good old English oak wainscot ; and that the crystalline magnificence of the marbles of Genoa and the macigno of Florence can give no more pleasure to daily life than the carved brackets and trefoiled gables which once shaded the busy and merry streets, and lifted the chiming carillons above them, in Kent and Picardy.

As a material of sculpture, wood has hitherto been employed chiefly by the less cultivated races of Europe ; and we cannot know what Orcagna would have made of his shrine, or Ghiberti of his gates, if they had worked in olive wood instead of marble and bronze. But even as matters now stand, the carving of the pinnacled stalls in our northern cathedrals, and that of the foliage on the horizontal beams of domestic architecture, gave rise to a school of ornament of which the proudest edifices of the sixteenth century are only the translation into stone ; and to which our somewhat dull respect for the zigzags and dog-teeth of a sterner time has made us alike neglectful and unjust.*

But it is above all as a medium of engraving that the easy submission of wood to the edge of the chisel,—I will use this plain word, if you please, instead of burin,—and the tough durability of its grain, have made it so widely serviceable to us for popular pleasure in art ; but mischievous also, in the degree in which it encourages the cheapest and vilest modes of design. The coarsest scrawl with a blunt pen can be reproduced on a wood-block with perfect ease by the clumsiest engraver ; and there are tens of thousands of vulgar artists who can scrawl with a blunt pen, and with no trouble to themselves, something that will amuse, as I said, a child or a clown. But there is not one artist in ten thousand who can draw even simple objects rightly with a perfectly pure line ; when such a line is drawn, only an extremely skilful engraver can repro-

* Compare 'Bible of Amiens,' p. 14, "aisles of aspen, orchards of apple, clusters of vine."

duce it on wood ; when reproduced, it is liable to be broken at the second or third printing ; and supposing it permanent, not one spectator in ten thousand would care for it.

There is, however, another temptation, constant in the practice of wood-cutting, which has been peculiarly harmful to us in the present day. The action of the chisel on wood, as you doubtless are aware, is to produce a white touch on a black ground ; and if a few white touches can be so distributed as to produce any kind of effect, all the black ground becomes part of the imagined picture, with no trouble whatever to the workman : so that you buy in your cheap magazine a picture, —say four inches square, or sixteen square inches of surface, —in the whole of which there may only be half an inch of work. Whereas, in line-engraving, every atom of the shade has to be worked for, and that with extreme care, evenness and dexterity of hand ; while even in etching, though a great quantity of the shade is mere blurr and scabble and blotch, a certain quantity of real care and skill *must* be spent in covering the surface at first. Whereas the common woodcut requires scarcely more trouble than a schoolboy takes with a scrawl on his slate, and you might order such pictures by the cartload from Coniston quarries, with only a clever urchin or two to put the chalk on.

But the mischief of the woodcut, considered simply as a means in the publisher's hands of imposing cheap work on the purchaser, is trebled by its morbid power of expressing ideas of ugliness or terror. While no entirely beautiful thing can be represented in a woodcut, every form of vulgarity or unpleasantness can be given to the life ; and the result is, that, especially in our popular scientific books, the mere effort to be amusing and attractive leads to the publication of every species of the abominable. No microscope can teach the beauty of a statue, nor can any woodcut represent that of a nobly bred human form ; but only last term we saw the whole Ashmolean Society held in a trance of rapture by the inexplicable decoration of the posteriors of a flea ; and I have framed for you here, around a page of the scientific journal which styles itself 'Knowledge,' a collection of woodcuts out of a scientific

survey of South America, presenting collectively to you, in designs ignorantly drawn and vilely engraved, yet with the peculiar advantage belonging to the cheap woodcut, whatever, through that fourth part of the round world, from Mexico to Patagonia, can be found of savage, sordid, vicious, or ridiculous in humanity, without so much as one exceptional indication of a graceful form, a true instinct, or a cultivable capacity.

The second frame is of French scientific art, and still more curiously horrible. I have cut these examples, not by any means the ugliest, out of 'Les Pourquoi de Mademoiselle Suzanne,' a book in which it is proposed to instruct a young lady of eleven or twelve years old, amusingly, in the elements of science.

In the course of the lively initiation, the young lady has the advantage of seeing a garde champêtre struck dead by lightning; she is par parenthèse entertained with the history and picture of the suicide of the cook Vatel; somebody's heart, liver, and forearm are dissected for her; all the phenomena of nightmare are described and portrayed; and whatever spectres of monstrosity can be conjured into the sun, the moon, the stars, the sky, the sea, the railway, and the telegraph, are collected into black company by the cheap engraver. *Black company* is a mild word: you will find the right phrase now instinctively adopted by the very persons who are most charmed by these new modes of sensation. In the 'Century' magazine for this month, the reviewer of some American landscape of this class tells us that Mr. ———, whoever he is, by a series of bands of black and red paint, has succeeded in entirely reproducing the '*Demoniac*' beauty of the sunset.

I have framed these French cuts, however, chiefly for purposes of illustration in my last lecture of this year, for they show you in perfect abstract all the wrong,—*wrong* unquestionably, whether you call it *Demoniac*, *Diabolic*, or *Æsthetic*,—against which my entire teaching, from its first syllable to this day, has been straight antagonist. Of this, as I have said, in my terminal address: the first frame is for to-day enough representation of ordinary English cheap-trade woodcutting in its necessary limitation to ugly subject, and its disrespect

for the very quality of the material on which its value depends, elasticity. There is this great difference between the respect for his material proper to a workman in metal or marble, and to one working in clay or wood, that the former has to exhibit the actual beauty of the substance itself, but the latter only its special capacity of answering his purpose. A sculptor in marble is required to show the beauty of marble-surface, a sculptor in gold its various lustre, a worker in iron its ductile strength. But the wood-cutter has not to exhibit his block, nor the engraver his copper-plate. They have only to use the relative softness and rigidity of those substances to receive and multiply the lines drawn by the human hand; and it is not the least an admirable quality in wood that it is capable of printing a large blot; but an entirely admirable one that by its tough elasticity it can preserve through any number of impressions the distinctness of a well cut line.

Not admirable, I say, to print a blot; but to print a pure line unbroken, and an intentionally widened space or spot of darkness, of the exact shape wanted. In my former lectures on Wood Engraving I did not enough explain this quite separate virtue of the material. Neither in pencil nor pen drawing, neither in engraving nor etching, can a line be widened arbitrarily, or a spot enlarged at ease. The action of the moving point is continuous; you can increase or diminish the line's thickness gradually, but not by starts; you must drive your plough-furrow, or let your pen glide, at a fixed rate of motion; nor can you afterwards give more breadth to the pen line without overcharging the ink, nor by any labour of etching tool dig out a cavity of shadow such as the wood engraver leaves in an instant.

Hence, the methods of design which depend on irregularly expressive shapes of black touch, belong to wood exclusively; and the examples placed formerly in your school from Bewick's cuts of speckled plumage, and Burgmaier's heraldry of barred helmets and black eagles, were intended to direct your attention to this especially intellectual manner of work, as opposed to modern scribbling and hatching. But I have now removed these old-fashioned prints, (placing them, however, in always

accessible reserve,) because I found they possessed no attraction for inexperienced students, and I think it better to explain the qualities of execution of a similar kind, though otherwise directed, which are to be found in the designs of our living masters,—addressed to existing tastes,—and occupied with familiar scenes.

Although I have headed my lecture only with the names of Leech and Tenniel, as being the real founders of 'Punch,' and by far the greatest of its illustrators, both in force of art and range of thought, yet in the precision of the use of his means, and the subtle boldness to which he has educated the interpreters of his design, Mr. Du Maurier is more exemplary than either; and I have therefore had enlarged by photography,—your thanks are due to the brother of Miss Greenaway for the skill with which the proofs have been produced,—for first example of fine wood-cutting, the heads of two of Mr. Du Maurier's chief heroines, Mrs. Ponsonby de Tomkyns, and Lady Midas, in the great scene where Mrs. Ponsonby takes on herself the administration of Lady Midas's at home.

You see at once how the effect in both depends on the coagulation and concretion of the black touches into masses relieved only by interspersed sparkling grains of incised light, presenting the realistic and vital portraiture of both ladies with no more labour than would occupy the draughtsman but a few minutes, and the engraver perhaps an hour or two. It is true that the features of the elder of the two friends might be supposed to yield themselves without difficulty to the effect of the irregular and blunt lines which are employed to reproduce them; but it is a matter of no small wonderment to see the delicate profile and softly rounded features of the younger lady suggested by an outline which must have been drawn in the course of a few seconds, and by some eight or ten firmly swept parallel penstrokes right across the cheek.

I must ask you especially to note the successful result of this easy method of obtaining an even tint, because it is the proper, and the inexorably required, method of shade in classic wood-engraving. Recently, very remarkable and admirable efforts have been made by American artists to repre-

sent flesh tints with fine textures of crossed white lines and spots. But all such attempts are futile; it is an optical law that transparency in shadows can only be obtained by dark lines with white spaces, not white lines with dark spaces. For what we feel to be transparency in any colour or any atmosphere, consists in the penetration of darkness by a more distant light, not in the subduing of light by a more distant darkness. A snowstorm seen white on a dark sky gives us no idea of transparency, but rain between us and a rainbow does; and so throughout all the expedients of chiaroscuro drawing and painting, transparent effects are produced by laying dark over light, and opaque by laying light over dark. It would be tedious in a lecture to press these technical principles farther; it is enough that I should state the general law, and its practical consequence, that no wood-engraver need attempt to copy Correggio or Guido; his business is not with complexions, but with characters; and his fame is to rest, not on the perfection of his work, but on its propriety.

I must in the next place ask you to look at the aphorisms given as an art catechism in the second chapter of the 'Laws of Fesole.' One of the principal of these gives the student, as a test by which to recognize good colour, that *all the white in the picture is precious, and all the black, conspicuous*; not by the quantity of it, but the impassable difference between it and all the coloured spaces.

The rule is just as true for wood-cutting. In fine examples of it, the black is left for local colour only—for dark dresses, or dark patterns on light ones, dark hair, or dark eyes; it is never left for general gloom, out of which the figures emerge like spectres.

When, however, a number of Mr. Du Maurier's compositions are seen together, and compared with the natural simplicity and aerial space of Leech's, they will be felt to depend on this principle too absolutely and undisguisedly; so that the quarterings of black and white in them sometimes look more like a chess-board than a picture. But in minor and careful passages, his method is wholly exemplary, and in the next example I enlarge for you,—Alderman Sir Robert admiring

the portraits of the Duchess and the Colonel,—he has not only shown you every principle of wood-cutting, but abstracted for you also the laws of beauty, whose definite and every year more emphatic assertion in the pages of 'Punch' is the ruling charm and most legitimate pride of the immortal periodical. Day by day the search for grotesque, ludicrous, or loathsome subject which degraded the caricatures in its original, the 'Charivari,' and renders the dismally comic journals of Italy the mere plagues and cancers of the State, became, in our English satirists, an earnest comparison of the things which were graceful and honourable, with those which were graceless and dishonest, in modern life. Gradually the kind and vivid genius of John Leech, capable in its brightness of finding pretty jest in everything, but capable in its tenderness also of rejoicing in the beauty of everything, softened and illumined with its loving wit the entire scope of English social scene; the graver power of Tenniel brought a steady tone and law of morality into the license of political contention; and finally the acute, highly trained, and accurately physiological observation of Du Maurier traced for us, to its true origin in vice or virtue, every order of expression in the mixed circle of metropolitan rank and wealth: and has done so with a closeness of delineation the like of which has not been seen since Holbein, and deserving the most respectful praise in that, whatever power of satire it may reach by the selection and assemblage of telling points of character, it never degenerates into caricature. Nay, the terrific force of blame which he obtains by collecting, as here in the profile of the Knight-Alderman, features separately faultful into the closest focus, depends on the very fact that they are *not* caricatured.

Thus far, the justice of the most careful criticism may gratefully ratify the applause with which the works of these three artists have been received by the British public. Rapidly I must now glance at the conditions of defect which must necessarily occur in art primarily intended to amuse the multitude, and which can therefore only be for moments serious, and by stealth didactic.

In the first place, you must be clear about 'Punch's' poli-

tics. He is a polite Whig, with a sentimental respect for the Crown, and a practical respect for property. He steadily flatters Lord Palmerston, from his heart adores Mr. Gladstone; steadily, but not virulently, caricatures Mr. D'Israeli; violently and virulently castigates assault upon property, in any kind, and holds up for the general ideal of perfection, to be aimed at by all the children of heaven and earth, the British Hunting Squire, the British Colonel, and the British Sailor.

Primarily, the British Hunting Squire, with his family. The most beautiful sketch by Leech throughout his career, and, on the whole, in all 'Punch,' I take to be Miss Alice on her father's horse;—her, with three or four more young Dians, I had put in one frame for you, but found they ran each other too hard,—being in each case typical of what 'Punch' thinks every young lady ought to be. He has never fairly asked how far every young lady *can* be like them; nor has he in a single instance endeavoured to represent the beauty of the poor.

On the contrary, his witness to their degradation, as inevitable in the circumstances of their London life, is constant, and for the most part, contemptuous; nor can I more sternly enforce what I have said at various times on that subject than by placing permanently in your schools the cruelly true design of Du Maurier, representing the London mechanic with his family, when Mr. Todson is asked to amuse 'the dear creatures' at Lady Clara's garden tea.

I show you for comparison with it, to-day, a little painting of a country girl of our Westmoreland type, which I have given to our Coniston children's school, to show our hill and vale-bred lassies that God will take care of their good looks for them, even though He may have appointed for them the toil of the women of Sarepta and Samaria, in being gatherers of wood and drawers of water.

I cannot say how far with didactic purpose, or how far in carelessly inevitable satire, 'Punch' contrasts with the disgrace of street poverty the beauties of the London drawing-room,—the wives and daughters of the great upper middle class, exalted by the wealth of the capital, and of the larger manufacturing towns.

These are, with few exceptions, represented either as receiving company, or reclining on sofas in extremely elegant morning dresses, and surrounded by charming children, with whom they are usually too idle to play. The children are extremely intelligent, and often exquisitely pretty, yet dependent for great part of their charm on the dressing of their back hair, and the fitting of their boots. As they grow up, their girlish beauty is more and more fixed in an expression of more or less self-satisfied pride and practised apathy. There is no example in 'Punch' of a girl in society whose face expresses humility or enthusiasm—except in mistaken directions and foolish degrees. It is true that only in these mistaken feelings can be found palpable material for jest, and that much of 'Punch's' satire is well intended and just.

It seems to have been hitherto impossible, when once the zest of satirical humour is felt, even by so kind and genial a heart as John Leech's, to restrain it, and to elevate it into the playfulness of praise. In the designs of Richter, of which I have so often spoken, among scenes of domestic beauty and pathos, he continually introduces little pieces of play,—such, for instance, as that of the design of the 'Wide, Wide World,' in which the very young puppy, with its paws on its—relatively as young—master's shoulder, looks out with him over the fence of their cottage garden. And it is surely conceivable that some day the rich power of a true humorist may be given to express more vividly the comic side which exists in many beautiful incidents of daily life, and refuse at last to dwell, even with a smile, on its follies.

This, however, must clearly be a condition of future human development, for hitherto the perfect power of seizing comic incidents has always been associated with some liking for ugliness, and some exultation in disaster. The law holds—and holds with no relaxation—even in the instance of so wise and benevolent a man as the Swiss schoolmaster, Topffer, whose death, a few years since, left none to succeed him in perfection of pure linear caricature. He can do more with fewer lines than any draughtsman known to me, and in several plates of his 'Histoire d'Albert,' has succeeded in entirely

representing the tenor of conversation with no more than half the profile and one eye of the speaker.

He generally took a walking tour through Switzerland, with his pupils, in the summer holidays, and illustrated his exquisitely humorous diary of their adventures with pen sketches, which show a capacity of appreciating beautiful landscape as great as his grotesque faculty ; but his mind is drawn away from the most sublime scene, in a moment, to the difficulties of the halting-place, or the rascalities of the inn ; and his power is never so marvellously exerted as in depicting a group of roguish guides, shameless beggars, or hopeless cretins.

Nevertheless, with these and such other materials as our European masters of physiognomy have furnished in portraiture of their nations, I can see my way to the arrangement of very curious series of illustrations of character, if only I could also see my way to some place wherein to exhibit them.

I said in my opening lecture that I hoped the studies of the figure initiated by Mr. Richmond might be found consistent with the slighter practice in my own schools ; and I must say, in passing, that the only real hindrance to this, but at present an insuperable one, is want of room. It is a somewhat characteristic fact, expressive of the tendencies of this age, that Oxford thinks nothing of spending £150,000 for the elevation and ornature, in a style as inherently corrupt as it is un-English, of the rooms for the torture and shame of her scholars, which to all practical purposes might just as well have been inflicted on them in her college halls, or her professors' drawing-rooms ; but that the only place where her art-workmen can be taught to draw, is the cellar of her old Taylor buildings, and the only place where her art-professor can store the cast of a statue, is his own private office in the gallery above.

Pending the now indispensable addition of some rude work-room to the Taylor galleries, in which study of the figure may be carried on under a competent master, I have lent, from the drawings belonging to the St. George's Guild, such studies of

Venetian pictures as may form the taste of the figure-student in general composition, and I have presented to the Ruskin schools twelve principal drawings out of Miss Alexander's Tuscan book, which may be standards of method, in drawing from the life, to students capable of as determined industry. But, no less for the better guidance of the separate figure class in the room which I hope one day to see built, than for immediate help in such irregular figure study as may be possible under present conditions, I find myself grievously in want of such a grammar of the laws of harmony in the human form and face as may be consistent with whatever accurate knowledge of elder races may have been obtained by recent anthropology, and at the same time authoritative in its statement of the effect on human expression, of the various mental states and passions. And it seems to me that by arranging in groups capable of easy comparison, the examples of similar expression given by the masters whose work we have been reviewing, we may advance further such a science of physiognomy as will be morally useful, than by any quantity of measuring of savage crania: and if, therefore, among the rudimentary series in the art schools you find, before I can get the new explanatory catalogues printed, some more or less systematic groups of heads collected out of 'Punch,' you must not think that I am doing this merely for your amusement, or that such examples are beneath the dignity of academical instruction. My own belief is that the difference between the features of a good and a bad servant, of a churl and a gentleman, is a much more useful and interesting subject of enquiry than the gradations of snub nose or flat forehead which became extinct with the Dodo, or the insertions of muscle and articulations of joint which are common to the flesh of all humanity.

Returning to our immediate subject, and considering 'Punch,' as the expression of the popular voice, which he virtually is, and even somewhat obsequiously, is it not wonderful that he has never a word to say for the British manufacturer, and that the true citizen of his own city is represented by him only under the types, either of Sir Pompey Bedell or

of the more tranquil magnate and potentate, the bulwark of British constitutional principles and initiator of British private enterprise, Mr. John Smith, whose biography is given with becoming reverence by Miss Ingelow, in the last but one of her 'Stories told to a Child'? And is it not also surely some overruling power in the nature of things, quite other than the desire of his readers, which compels Mr. Punch, when the squire, the colonel, and the admiral are to be at once expressed, together with all that they legislate or fight for, in the symbolic figure of the nation, to represent the incarnate John Bull always as a farmer,—never as a manufacturer or shopkeeper, and to conceive and exhibit him rather as paymaster for the faults of his neighbours, than as watching for opportunity of gain out of their follies?

It had been well if either under this accepted, though now antiquated, type, or under the more poetical symbols of Britannia, or the British Lion, 'Punch' had ventured oftener to intimate the exact degree in which the nation was following its ideal; and marked the occasions when Britannia's crest began too fatally to lose its resemblance to Athena's, and liken itself to an ordinary cockcomb,—or when the British Lion had—of course only for a moment, and probably in pecuniary difficulties—dropped his tail between his legs.

But the aspects under which either British Lion, Gallic eagle, or Russian bear have been regarded by our contemplative serial, are unfortunately dependent on the fact that all his three great designers are, in the most narrow sense, London citizens. I have said that every great man belongs not only to his own city but to his own village. The artists of 'Punch' have no village to belong to; for *them*, the street corner is the face of the whole earth, and the two only quarters of the heavenly horizon are the east and west—End. And although Leech's conception of the Distinguished Foreigner, Du Maurier's of the Herr Professor, and Tenniel's of La Liberté, or La France, are all extremely true and delightful—to the superficial extent of the sketch by Dickens in 'Mrs. Lirriper's Lodgings,'—they are, effectively, all seen with Mrs. Lirriper's eyes; they virtually represent of the Con-

continent little more than the upper town of Boulogne ; nor has anything yet been done by all the wit and all the kindness of these great popular designers to deepen the reliance of any European nation on the good qualities of its neighbours.

You no doubt have at the Union the most interesting and beautiful series of the Tenniel cartoons which have been collectively published, with the explanation of their motives. If you begin with No. 38, you will find a consecutive series of ten extremely forcible drawings, casting the utmost obloquy in the power of the designer upon the French Emperor, the Pope, and the Italian clergy, and alike discourteous to the head of the nation which had fought side by side with us at Inkerman, and impious in its representation of the Catholic power to which Italy owed, and still owes, whatever has made her glorious among the nations of Christendom, or happy among the families of the earth.

Among them you will find other two, representing our wars with China, and the triumph of our missionary manner of compelling free trade at the point of the bayonet : while, for the close and consummation of the series, you will see the genius and valour of your country figuratively summed in the tableau, subscribed,—

‘ John Bull defends his pudding.’

Is this indeed then the final myth of English heroism, into which King Arthur, and St. George, and Britannia, and the British Lion are all collated, concluded, and perfected by Evolution, in the literal words of Carlyle, ‘like four whale eubs combined by boiling’? Do you wish your Queen in future to style herself *Placentæ*, instead of *Fidei Defensor*? and is it to your pride, to your hope, or even to your pleasure, that this once sacred as well as sceptred island of yours, in whose second capital city Constantine was crowned ;—to whose shores St. Augustine and St. Columba brought benediction ;—who gave her Lion-hearts to the Tombs of the East,—her Pilgrim Fathers to the Cradle of the West ;—who has wrapped the sea round her for her mantle, and breathes with her strong bosom the air of every sign in heaven ;—is it

to your good pleasure that the Hero-children born to her in these latter days should write no loftier legend on their shields than 'John Bull defends his pudding'?

I chanced only the other day on a minor, yet, to my own mind, very frightful proof of the extent to which this caittif symbol is fastening itself in the popular mind. I was in search of some extremely pastoral musical instrument, whereby to regulate the songs of our Coniston village children, without the requirement of peculiar skill either in master or monitor. But the only means of melody offered to me by the trade of the neighbourhood was this so-called 'harmonicon,'—purchaseable, according to your present notions, cheaply, for a shilling; and with this piece of cheerful mythology on its lid gratis, wherein you see what 'Gradus ad Parnassum' we prepare for the rustic mind, and that the virtue and the jollity of England are vested only in the money-bag in each hand of him. I shall place this harmonicon lid in your schools, among my examples of what we call liberal education,—and, with it, what instances I can find of the way Florence, Siena, or Venice taught their people to regard themselves.

For, indeed, in many a past year, it has every now and then been a subject of recurring thought to me, what such a genius as that of Tenniel would have done for us, had we asked the best of it, and had the feeling of the nation respecting the arts, as a record of its honour, been like that of the Italians in their proud days. To some extent, the memory of our bravest war has been preserved for us by the pathetic force of Mrs. Butler; but her conceptions are realistic only, and rather of thrilling episodes than of great military principle and thought. On the contrary, Tenniel has much of the largeness and symbolic mystery of imagination which belong to the great leaders of classic art: in the shadowy masses and sweeping lines of his great compositions, there are tendencies which might have won his adoption into the school of Tintoret; and his scorn of whatever seems to him dishonest or contemptible in religion, would have translated itself into awe in the presence of its vital power.

I gave you, when first I came to Oxford, Tintoret's picture of the Doge Mocenigo, with his divine spiritual attendants, in the cortile of St. Mark's. It is surely our own fault, more than Mr. Tenniel's, if the best portraits he can give us of the heads of our English government should be rather on the occasion of their dinner at Greenwich than their devotion at St. Paul's.

My time has been too long spent in carping ;—but yet the faults which I have pointed out were such as could scarcely occur to you without some such indication, and which gravely need your observance, and, as far as you are accountable for them, your repentance. I can best briefly, in conclusion, define what I would fain have illustrated at length, the charm, in this art of the Fireside, which you tacitly feel, and have every rational ground to rejoice in. With whatever restriction you should receive the flattery, and with whatever caution the guidance, of these great illustrators of your daily life, this at least you may thankfully recognize in the sum of their work, that it contains the evidence of a prevalent and crescent beauty and energy in the youth of our day, which may justify the most discontented 'laudator temporis acti' in leaving the future happily in their hands. The witness of ancient art points often to a general and equal symmetry of body and mind in well trained races ; but at no period, so far as I am able to gather by the most careful comparison of existing portraiture, has there ever been a loveliness so variably refined, so modestly and kindly virtuous, so innocently fantastic, and so daintily pure, as the present girl-beauty of our British Islands : and whatever, for men now entering on the main battle of life, may be the confused temptations or inevitable errors of a period of moral doubt and social change, my own experience of help already received from the younger members of this University, is enough to assure me that there has been no time, in all the pride of the past, when their country might more serenely trust in the glory of her youth ;—when her prosperity was more secure in their genius, or her honour in their hearts.

LECTURE VI.

The Hill-Side.

GEORGE ROBSON AND COPLEY FIELDING.

IN the five preceding lectures given this year, I have endeavoured to generalize the most noteworthy facts respecting the religious, legendary, classic, and, in two kinds, domestic, art of England. There remains yet to be defined one, far-away, and, in a manner, outcast, school, which belongs as yet wholly to the present century; and which, if we were to trust to appearances, would exclusively and for ever belong to it, neither having been known before our time, nor surviving afterwards,—the art of landscape.

Not known before,—except as a trick, or a pastime; not surviving afterwards, because we seem straight on the way to pass our lives in cities twenty miles wide, and to travel from each of them to the next, underground: outcast now, even while it retains some vague hold on old-fashioned people's minds, since the best existing examples of it are placed by the authorities of the National Gallery in a cellar lighted by only two windows, and those at the bottom of a well, blocked by four dead brick walls fifty feet high.

Notwithstanding these discouragements, I am still minded to carry out the design in which the so-called Ruskin schools were founded, that of arranging in them a code of elementary practice, which should secure the skill of the student in the department of landscape before he entered on the branches of art requiring higher genius. Nay, I am more than ever minded to fulfil my former purpose now, in the exact degree in which I see the advantages of such a method denied or refused in other academies: and the beauty of natural scenery increasingly in danger of destruction by the gross interests and disquieting pleasures of the citizen. For indeed, as I before stated to you, when first I undertook the duties of this professorship, my own personal liking for landscape made me

extremely guarded in recommending its study. I only gave three lectures on landscape in six years, and I never published them ; my hope and endeavour was to connect the study of Nature for you with that of History ; to make you interested in Greek legend as well as in Greek lakes and limestone ; to acquaint you with the relations of northern hills and rivers to the schools of Christian Theology ; and of Renaissance town-life to the rage of its infidelity. But I have done enough,—and more than enough,—according to my time of life, in these directions ; and now, justified, I trust, in your judgment, from the charge of weak concession to my own predilections, I shall arrange the exercises required consistently from my drawing-classes, with quite primary reference to landscape art ; and teach the early philosophy of beauty, under laws liable to no dispute by human passion, but secure in the grace of Earth, and light of Heaven.

And I wish in the present lecture to define to you the nature and meaning of landscape art, as it arose in England eighty years ago, without reference to the great master whose works have been the principal subject of my own enthusiasm. I have always stated distinctly that the genius of Turner was exceptional, both in its kind and in its height : and although his elementary modes of work are beyond dispute authoritative, and the best that can be given for example and exercise, the general tenor of his design is entirely beyond the acceptance of common knowledge, and even of safe sympathy. For in his extreme sadness, and in the morbid tones of mind out of which it arose, he is one with Byron and Goethe ; and is no more to be held representative of general English landscape art than Childe Harold or Faust are exponents of the total love of Nature expressed in English or German literature. To take a single illustrative instance, there is no foreground of Turner's in which you can find a flower.

In some respects, indeed, the vast strength of this unfol-
lowable Eremitic of a master was crushing, instead of edifying,
to the English schools. All the true and strong men who
were his contemporaries shrank from the slightest attempt at
rivalry with him on his own lines ;—and his own lines were

cast far. But for him, Stanfield might have sometimes painted an Alpine valley, or a Biscay storm; but the moment there was any question of rendering magnitude, or terror, every effort became puny beside Turner, and Stanfield meekly resigned himself to potter all his life round the Isle of Wight, and paint the Needles on one side, and squalls off Cowes on the other. In like manner, Copley Fielding in his young days painted vigorously in oil, and showed promise of attaining considerable dignity in classic composition; but the moment Turner's Garden of Hesperides and Building of Carthage appeared in the Academy, there was an end to ambition in that direction; and thenceforth Fielding settled down to his quiet presidency of the old Water-colour Society, and painted, in unassuming replicas, his passing showers in the Highlands, and sheep on the South Downs.

Which are, indeed, for most of us, much more appropriate objects of contemplation; and the old water-colour room at that time, adorned yearly with the complete year's labour of Fielding, Robson, De Wint, Barrett, Prout, and William Hunt, presented an aggregate of unaffected pleasantness and truth, the like of which, if you could now see, after a morning spent among the enormities of luscious and exotic art which frown or glare along your miles of exhibition wall, would really be felt by you to possess the charm of a bouquet of bluebells and cowslips, amidst a prize show of cactus and orchid from the hothouses of Kew.

The root of this delightfulness was an extremely rare sincerity in the personal pleasure which all these men took, not in their own pictures, but in the *subjects* of them—a form of enthusiasm which, while it was as simple, was also as romantic, in the best sense, as the sentiment of a young girl: and whose nature I can the better both define and certify to you, because it was the impulse to which I owed the best force of my own life, and in sympathy with which I have done or said whatever of saying or doing in it has been useful to others.

When I spoke, in this year's first lecture, of Rossetti, as the chief intellectual force in the establishment of the modern Romantic School; and again in the second lecture promised,

at the end of our course, the collection of the evidence of Romantic passion in all our good English art, you will find it explained at the same time that I do not use the word Romantic as opposed to Classic, but as opposed to the prosaic characters of selfishness and stupidity, in all times, and among all nations. I do not think of King Arthur as opposed to Theseus, or to Valerius, but to Alderman Sir Robert, and Mr. John Smith. And therefore I opposed the child-like love of beautiful things, in even the least of our English Modern Painters, from the first page of the book I wrote about them to the last,—in Greek Art, to what seemed to me then (and in a certain sense is demonstrably to me now) too selfish or too formal,—and in Teutonic Art, to what was cold in a far worse sense, either by boorish dulness or educated affectation.

I think the two best central types of Non-Romance, of the power of Absolute Vulgarity in selfishness, as distinguished from the eternal dignity of Reverence and Love, are stamped for you on the two most finished issues of your English currency in the portraits of Henry the Eighth and Charles the Second. There is no interfering element in the vulgarity of them, no pardon to be sought in their poverty, ignorance, or weakness. Both are men of strong powers of mind, and both well informed in all particulars of human knowledge possible to them. But in the one you see the destroyer, according to his power, of English religion; and, in the other, the destroyer, according to his power, of English morality: culminating types to you of whatever in the spirit, or dispirit, of succeeding ages, robs God, or dishonours man.

I named to you, as an example of the unromantic art which was assailed by the pre-Raphaelites, Vandyke's sketch of the 'Miraculous Draught of Fishes.' Very near it, in the National Gallery, hangs another piscatory subject,* by Teniers, which I will ask you carefully also to examine as a perfect type of the Unromantic Art which was assailed by the gentle enthusi-

* No. 817, 'Teniers' Chateau at Perck.' The expressions touching the want of light in it are a little violent, being strictly accurate only of such pictures of the Dutch school as Vanderneer's 'Evening Landscape,' 152, and 'Canal Scene,' 732.

asm of the English School of Landscape. It represents a few ordinary Dutch houses, an ordinary Dutch steeple or two,—some still more ordinary Dutch trees,—and most ordinary Dutch clouds, assembled in contemplation of an ordinary Dutch duck-pond ; or, perhaps, in respect of its size, we may more courteously call it a goose-pond. All these objects are painted either grey or brown, and the atmosphere is of the kind which looks not merely as if the sun had disappeared for the day, but as if he had gone out altogether, and left a stable lantern instead. The total effect having appeared, even to the painter's own mind, at last little exhilaratory, he has enlivened it by three figures on the brink of the goose-pond,—two gentlemen and a lady,—standing all three perfectly upright, side by side, in court dress, the gentlemen with expansive boots, and all with conical hats and high feathers. In order to invest these characters with dramatic interest, a rustic fisherman presents to them as a tribute,—or, perhaps, exhibits as a natural curiosity, a large fish, just elicited from the goose-pond by his adventurous companions, who have waded into the middle of it, every one of them, with singular exactitude, up to the calf of his leg. The principles of National Gallery arrangement of course put this picture on the line, while Tintoret* and Gainsborough are hung out of sight ; but in this instance I hold myself fortunate in being able to refer you to an example, so conveniently examinable, of the utmost stoop and densest level of human stupidity yet fallen to by any art in which some degree of manual dexterity is essential.

This crisis of degradation, you will observe, takes place at the historical moment when by the concurrent power of avaricious trade on one side, and unrestrained luxury on the other, the idea of any but an earthly interest, and any but proud or carnal pleasures, had been virtually effaced throughout Europe ; and men, by their resolute self-seeking, had literally at last ostracised the Spiritual Sun from Heaven, and

* The large new Tintoret wholly so, and the largest Gainsborough, the best in England known to me, used merely for wall furniture at the top of the room.

lived by little more than the *snuff* of the wick of their own mental stable lantern.

The forms of romantic art hitherto described in this course of lectures, were all distinctly reactionary against the stupor of this Stygian pool, brooded over by Batavian fog. But the first signs of re-awakening in the vital power of imagination were, long before, seen in landscape art. Not the utmost strength of the great figure painters could break through the bonds of the flesh. Reynolds vainly tried to substitute the age of Innocence for the experience of Religion—the true genius at his side remained always Cupid unbinding the girdle of Venus. Gainsborough knew no goddesses other than Mrs. Graham or Mrs. Siddons; Vandyke and Rubens, than the beauties of the court, or the graces of its corpulent Mythology. But at last there arose, and arose inevitably, a feeling that, if not any more in Heaven, at least in the solitary places of the earth, there was a pleasure to be found based neither on pride nor sensuality.

Among the least attractive of the mingled examples in your school-alcove, you will find a quiet pencil-drawing of a sunset at Rome, seen from beneath a deserted arch, whether of Triumph or of Peace. Its modest art-skill is restricted almost exclusively to the expression of warm light in the low harmony of evening; but it differs wholly from the learned compositions and skilled artifices of former painting by its purity of unaffected pleasure and rest in the little that is given. Here, at last, we feel, is an honest Englishman, who has got away out of all the Camere, and the Loggie, and the Stanze, and the schools, and the Disputas, and the Incendios, and the Battaglias, and busts of this god, and torsos of that, and the chatter of the studio, and the rush of the corso;—and has laid himself down, with his own poor eyes and heart, and the sun casting its light between ruins,—possessor, he, of so much of the evidently blessed peace of things,—he, and the poor lizard in the cranny of the stones beside him.

I believe that with the name of Richard Wilson, the history of sincere landscape art, founded on a meditative love of Nature, begins for England: and, I may add, for Europe, without

any wide extension of claim ; for the only continental landscape work of any sterling merit with which I am acquainted, consists in the old-fashioned drawings, made fifty years ago to meet the demand of the first influx of British travellers into Switzerland after the fall of Napoleon.

With Richard Wilson, at all events, our own true and modest schools began, an especial direction being presently given to them in the rendering effects of aerial perspective by the skill in water-colour of Girtin and Cousins. The drawings of these two masters, recently bequeathed to the British Museum, and I hope soon to be placed in a well-lighted gallery, contain quite insuperable examples of skill in the management of clear tints, and of the meditative charm consisting in the quiet and unaffected treatment of literally true scenes.

But the impulse to which the new school owed the discovery of its power in *colour* was owing, I believe, to the poetry of Scott and Byron. Both by their vivid passion and accurate description, the painters of their day were taught the true value of natural colour, while the love of mountains, common to both poets, forced their illustrators into reverent pilgrimage to scenes which till then had been thought too desolate for the spectator's interest, or too difficult for the painter's skill.

I have endeavoured, in the 92nd number of 'Fors Clavigera,' to give some analysis of the main character of the scenery by which Scott was inspired ; but, in endeavouring to mark with distinctness enough the dependence of all its sentiment on the beauty of its rivers, I have not enough referred to the collateral charm, in a Borderer's mind, of the very mists and rain that feed them. In the climates of Greece and Italy, the monotonous sunshine, burning away the deep colours of every thing into white and grey, and wasting the strongest mountain streams into threads among their shingle, alternates with the blue-fiery thundercloud, with sheets of flooding rain, and volleying musketry of hail. But throughout all the wild uplands of the former Saxon kingdom of Northumbria, from Edwin's crag to Hilda's cliff, the wreaths of softly resting mist, and wandering to and fro of capricious shadows of clouds, and drooping swathes, or flying fringes, of the benignant western

rain, cherish, on every moorland summit, the deep fibred moss,—embalm the myrtle,—gild the asphodel,—enchant along the valleys the wild grace of their woods, and the green elf land of their meadows ; and passing away, or melting into the translucent calm of mountain air, leave to the open sunshine a world with every creature ready to rejoice in its comfort, and every rock and flower reflecting new loveliness to its light.

Perhaps among the confusedly miscellaneous examples of ancient and modern, tropic or arctic art, with which I have filled the niches of your schools, one, hitherto of the least noticeable or serviceable to you, has been the dark Copley Fielding drawing above the fire-place ;—nor am I afraid of trusting your kindness with the confession, that it is placed there more in memory of my old master, than in the hope of its proving of any lively interest or use to you. But it is now some fifty years since it was brought in triumph to Herne Hill, being the first picture my father ever bought, and in so far the foundation of the subsequent collection, some part of which has been permitted to become permanently national at Cambridge and Oxford. The pleasure which that single drawing gave on the morning of its installation in our home was greater than to the purchaser accustomed to these times of limitless demand and supply would be credible, or even conceivable ;—and our back parlour for that day was as full of surprise and gratulation as ever Cimabue's joyful Borgo.

The drawing represents, as you will probably—not—remember, only a gleam of sunshine on a peaty moor, bringing out the tartan plaids of two Highland drovers, and relieved against the dark grey of a range of quite featureless and nameless distant mountains, seen through a soft curtain of rapidly drifting rain.

Some little time after we had acquired this unobtrusive treasure, one of my fellow students,—it was in my undergraduate days at Christ Church—came to Herne Hill to see what the picture might be which had afforded me so great ravishment. He had himself, as afterwards Kingslake and Curzon, been urged far by the thirst of oriental travel ;

the chequer of plaid and bonnet had for him but feeble interest after having worn turban and capote; and the grey of Scottish hillside still less, to one who had climbed Olympus and Abarim. After gazing blankly for a minute or two at the cheerless district through which lay the drovers' journey, he turned to me and said, "But, Ruskin, what is the use of painting such very bad weather?" And I had no answer, except that, for Copley Fielding and for me, there was no such thing as bad weather, but only different kinds of pleasant weather—some indeed inferring the exercise of a little courage and patience; but all, in every hour of it, exactly what was fittest and best, whether for the hills, the cattle, the drovers—or my master and me.

Be the case as it might,—and admitting that in a certain sense the weather *might* be bad in the eyes of a Greek or a Suraeen,—there was no question that to us it was not only pleasant, but picturesque; and that we set ourselves to the painting of it, with as sincere desire to represent the—to our minds—beautiful aspect of a mountain shower, as ever Titian a blue sky, or Angelico a golden sphere of Paradise. Nay, in some sort, with a more perfect delight in the thing itself, and less coloring of by our own thoughts or inventions. For that matter, neither Fielding, nor Robson, nor David Cox, nor Peter de Wint, nor any of this school, ever had much thought or invention to disturb them. They were, themselves, a kind of contemplative cattle, and flock of the field, who merely liked being out of doors, and brought as much painted fresh air as they could, back into the house with them.

Neither must you think that this painting of fresh air is an entirely easy or soon managed business. You may paint a modern French emotional landscape with a pail of whitewash and a pot of gas-tar in ten minutes, at the outside. I don't know how long the operator himself takes to it—of course some little more time must be occupied in plastering on the oil-paint so that it will stick, and not run; but the skill of a good plasterer is really all that is required,—the rather that in the modern idea of solemn symmetry you always make the bottom of your picture, as much as you can, like the top.

You put seven or eight streaks of the plaster for your sky, to begin with ; then you put in a row of bushes with the gas-tar, then you rub the ends of them into the same shapes upside down—you put three or four more streaks of white, to intimate the presence of a pool of water—and if you finish off with a log that looks something like a dead body, your picture will have the credit of being a digest of a whole novel of Gaboriau, and lead the talk of the season.

Far other was the kind of labour required of even the least disciple of the old English water-colour school. In the first place, the skill of laying a perfectly even and smooth tint with absolute precision of complex outline was attained to a degree which no amateur draughtsman can have the least conception of. Water-colour, under the ordinary sketcher's mismanagement, drops and dries pretty nearly to its own fancy,—slops over every outline, clots in every shade, seams itself with undesirable edges, speckles itself with inexplicable grit, and is never supposed capable of representing anything it is meant for, till most of it has been washed out. But the great primary masters of the trade could lay, with unerring precision of tone and equality of depth, the absolute tint they wanted without a flaw or a retouch ; and there is perhaps no greater marvel of artistic practice and finely accurate intention existing, in a simple kind, greater than the study of a Yorkshire waterfall, by Girtin, now in the British Museum, in which every sparkle, ripple, and current is left in frank light by the steady pencil which is at the same instant, and with the same touch, drawing the forms of the dark congeries of channelled rocks, while around them it disperses the glitter of their spray.

Then further, on such basis of well-laid primary tint, the old water-colour men were wont to obtain their effects of atmosphere by the most delicate washes of transparent colour, reaching subtleties of gradation in misty light, which were wholly unthought of before their time. In this kind the depth of far-distant brightness, freshness, and mystery of morning air with which Copley Fielding used to invest the ridges of the South Downs, as they rose out of the blue Sus-

sex champaign, remains, and I believe must remain, insuperable, while his sense of beauty in the cloud-forms associated with higher mountains, enabled him to invest the comparatively modest scenery of our own island,—out of which he never travelled,—with a charm seldom attained by the most ambitious painters of Alp or Apennine.

I vainly tried in writing the last volume of 'Modern Painters' to explain, even to myself, the course or nature of the pure love of mountains which in boyhood was the ruling passion of my life, and which is demonstrably the first motive of inspiration with Scott, Wordsworth, and Byron. The more I analyzed, the less I could either understand, or justify, the mysterious pleasure we all of us, great or small, had in the land's being up and down instead of level; and the less I felt able to deny the claim of prosaic and ignobly-minded persons to be allowed to like it level, instead of up and down. In the end I found there was nothing for it but simply to assure those recusant and grovelling persons that they were perfectly wrong, and that nothing could be expected, either in art or literature, from people who like to live among snipes and widgeons.

Assuming it, therefore, for a moral axiom that the love of mountains was a heavenly gift, and the beginning of wisdom, it may be imagined, if we endured for their sakes any number of rainy days with philosophy, with what rapture the old painters were wont to hail the reappearance of their idols, with all their cataracts refreshed, and all their copse and crags respangled, flaming in the forehead of the morning sky. Very certainly and seriously there are no such emotions to be had out of the hedged field or ditched fen; and I have often charitably paused in my instances in 'Fors Clavigera' that our squires should live from year's end to year's end on their own estates, when I reflected how many of their acres lay in Leicestershire and Lincolnshire, or even on duller levels, where there was neither good hunting nor duck-shooting.

I am only able to show you two drawings in illustration of these sentiments of the mountain school, and one of those is only a copy of a Robson, but one quite good enough to repre-

sent his manner of work and tone of feeling. He died young, and there may perhaps be some likeness to the gentle depth of sadness in Keats, traceable in his refusal to paint any of the leaping streams or bright kindling heaths of Scotland, while he dwells with a monotony of affection on the clear repose of the northern twilight, and on the gathering of the shadow in the mountain gorges, till all their forms were folded in one kingly shroud of purple death. But over these hours and colours of the scene his governance was all but complete; and even in this unimportant and imperfectly rendered example, the warmth of the departing sunlight, and the depth of soft air in the recesses of the glen, are given with harmony more true and more pathetic than you will find in any recent work of even the most accomplished masters.

But of the loving labour, and severely disciplined observation, which prepared him for the expression of this feeling for chiaroscuro, you can only judge by examining at leisure his outlines of Scottish scenery, a work of whose existence I had no knowledge, until the kindness of Mrs. Inge advised me of it, and further, procured for me the loan of the copy of it laid on the table; which you will find has marks placed in it at the views of Byron's Lachin-y-Gair, of Scott's Ben Venue, and of all Scotsmen's Ben Lomond,—plates which you may take for leading types of the most careful delineation ever given to mountain scenery, for the love of it, pure and simple.

The last subject has a very special interest to *me*; and—if you knew all I could tell you, did time serve, of the associations connected with it—would be seen gratefully by you also. In the text descriptive of it, (and the text of this book is quite exceptionally sensible and useful, for a work of the sort), Mr. Robson acknowledges his obligation for the knowledge of this rarely discovered view of Ben Lomond, to Sir Thomas Acland, the father of our own Dr. Henry Acland, the strength of whose whole life hitherto has been passed in the eager and unselfish service of the University of Oxford. His father was, of all amateur artists I ever knew, the best draughtsman of mountains, not with spasmodic force, or lightly indicated feeling, but with firm, exhaustive, and unerring delineation of their

crystalline and geologic form. From him the faith in the beauty and truth of natural science in connection with art was learned happily by his physician-son, by whom, almost unaided, the first battles were fought—and fought hard—before any of you eager young physiologists were born, in the then despised causes of natural science and industrial art. That cause was in the end sure of victory, but here in Oxford its triumph would have been long deferred, had it not been for the energy and steady devotion of Dr. Acland. Without him—little as you may think it—the great galleries and laboratories of this building, in which you pursue your physical-science studies so advantageously, and so forgetfully of their first advocate, would not yet have been in existence. Nor, after their erection, (if indeed in this there be any cause for your thanks), would an expositor of the laws of landscape beauty have had the privilege of addressing you under their roof.

I am indebted also to one of my Oxford friends, Miss Symonds, for the privilege of showing you, with entire satisfaction, a perfectly good and characteristic drawing by Copley Fielding, of Cader Idris, seen down the vale of Dolgelly; in which he has expressed with his utmost skill the joy of his heart in the aerial mountain light, and the iridescent wildness of the mountain foreground; nor could you see enforced with any sweeter emphasis the truth on which Mr. Morris dwelt so earnestly in his recent address to you—that the excellence of the work is, *cæteris paribus*, in proportion to the joy of the workman.

There is a singular character in the colouring of Fielding, as he uses it to express the richness of beautiful vegetation; he makes the sprays of it look partly as if they were strewn with jewels. He is of course not absolutely right in this; to some extent it is a conventional exaggeration—and yet it has a basis of truth which excuses, if it does not justify, this expression of his pleasure; for no colour can possibly represent vividly enough the charm of radiance which you can see by looking closely at dew-sprinkled leaves and flowers.

You must ask Professor Clifton to explain to you why it is that a drop of water, while it subdues the hue of a green leaf

or blue flower into a soft grey, and shows itself therefore on the grass or the dock-leaf as a lustrous dimness, enhances the force of all warm colours, so that you never can see what the colour of a carnation or a wild rose really is till you get the dew on it. The effect is, of course, only generalized at the distance of a paintable foreground ; but it is always in reality part of the emotion of the scene, and justifiably sought in any possible similitude by the means at our disposal.

It is with still greater interest and reverence to be noted as a physical truth that in states of joyful and healthy excitement the eye becomes more highly sensitive to the beauty of colour, and especially to the blue and red rays, while in depression and disease all colour becomes dim to us, and the yellow rays prevail over the rest, even to the extremity of jaundice. But while I direct your attention to these deeply interesting conditions of sight, common to the young and old, I must warn you of the total and most mischievous fallacy of the statements put forward a few years ago by a foreign oculist, respecting the changes of sight in old age. I neither know, nor care, what states of senile disease exist when the organ has been misused or disused ; but in all cases of disciplined and healthy sight, the sense of colour and form is absolutely one and the same from childhood to death.

When I was a boy of twelve years old, I saw nature with Turner's eyes, he being then sixty ; and I should never have asked permission to resume the guidance of your schools, unless now, at sixty-four, I saw the same hues in heaven and earth as when I walked a child by my mother's side.

Neither may you suppose that between Turner's eyes, and yours, there is any difference respecting which it may be disputed whether of the two is right. The sight of a great painter is as authoritative as the lens of a camera lucida ; he perceives the form which a photograph will ratify ; he is sensitive to the violet or to the golden ray to the last precision and gradation of the chemist's defining light and intervalled line. But the veracity, as the joy, of this sensation,—and the one involves the other,—are dependent, as I have said, first on vigour of health, and secondly on the steady looking for

and acceptance of the truth of nature as *she* gives it you, and not as you like to have it—to inflate your own pride, or satisfy your own passion. If pursued in that insolence, or in that concupiscence, the phenomena of all the universe becomes first gloomy, and then spectral; the sunset becomes demonic fire to you, and the clouds of heaven as the smoke of Acheron.

If there is one part more than another which in my early writing deservedly obtained audience and acceptance, it was that in which I endeavoured to direct the thoughts of my readers to the colours of the sky, and to the forms of its clouds. But it has been my fate to live and work in direct antagonism to the instincts, and yet more to the interests, of the age; since I wrote that chapter on the pure traceries of the vault of morning, the fury of useless traffic has shut the sight, whether of morning or evening, from more than the third part of England; and the foulness of sensual fantasy has infected the bright beneficence of the life-giving sky with the dull horrors of disease, and the feeble falsehoods of insanity. In the book professing to initiate a child in the elements of natural science, of which I showed you the average character of illustration at my last lecture, there is one chapter especially given to aerial phenomena—wherein the cumulus cloud is asserted to occur “either under the form of a globe or a half-globe,” and in such shape to present the most exciting field for the action of imagination. What the French artistic imagination is supposed to produce, under the influence of this excitement, we find represented by a wood-cut, of which Mr. Maedonald has reproduced for you the most sublime portion. May I, for a minute or two, delay, and prepare you for, its enjoyment by reading the lines in which Wordsworth describes the impression made on a cultivated and pure-hearted spectator, by the sudden opening of the sky after storm?—

“ A single step, that freed me from the skirts
Of the blind vapour, opened to my view
Glory beyond all glory ever seen
By waking sense or by the dreaming soul !

The appearance, instantaneously disclosed,
 Was of a mighty city—boldly say
 A wilderness of building, sinking far
 And self-withdrawn into a boundless depth,
 Far-sinking into splendour—without end!
 Fabric it seemed of diamond and of gold,
 With alabaster domes, and silver spires,
 And blazing terrace upon terrace, high
 Uplifted; here, serene pavilions bright,
 In avenues disposed; there, towers begirt
 With battlements that on their restless fronts
 Bore stars—illumination of all gems!
 By earthly nature had the effect been wrought
 Upon the dark materials of the storm
 Now pacified; on them, and on the coves
 And mountain-steeps and summits, whereunto
 The vapours had receded, taking there
 Their station under a cerulean sky.”

I do not mean wholly to ratify this Wordsworthian statement of *Arcana Cœlestia*, since, as far as I know clouds myself, they look always like clouds, and are no more walled like castles than backed like weasles. And farther, observe that no great poet ever tells you that he saw something finer than anybody ever saw before. Great poets try to describe what all men see, and to express what all men feel; if they cannot describe it, they let it alone; and what they say, say ‘boldly’ always, without advising their readers of that fact.

Nevertheless, though extremely feeble poetry, this piece of bold Wordsworth is at least a sincere effort to describe what was in truth to the writer a most rapturous vision,—with which we may now compare to our edification the sort of object which the same sort of cloud suggests to the modern French imagination.

It would be surely superfluous to tell you that this representation of cloud is as false as it is monstrous; but the point which I wish principally to enforce on your attention is that all this loathsome and lying defacement of book pages, which looks as if it would end in representing humanity only in its skeleton, and nature only in her ashes, is all of it founded first on the desire to make the volume saleable at

small cost, and attractive to the greatest number, on whatever terms of attraction.

The significant change which Mr. Morris made in the title of his recent lecture, from Art and *Democracy*, to Art and *Plutocracy*, strikes at the root of the whole matter; and with wider sweep of blow than he permitted himself to give his words. The changes which he so deeply deplored, and so grandly resented, in this once loveliest city, are due wholly to the deadly fact that her power is now dependent on the Plutocracy of Knowledge, instead of its Divinity. There are indeed many splendid conditions in the new impulses with which we are agitated,—or it may be inspired; but against one of them, I must warn you, in all affection and in all duty.

So far as you come to Oxford in order to get your living out of her, you are ruining both Oxford and yourselves. There never has been, there never can be, any other law respecting the wisdom that is from above, than this one precept,—“Buy the Truth, and sell it not.” It is to be costly to you—of labour and patience; and you are never to sell it, but to guard, and to give.

Much of the enlargement, though none of the defacement, of old Oxford is owing to the real life and the honest seeking of extended knowledge. But more is owing to the supposed money value of that knowledge; and exactly so far forth, her enlargement is purely injurious to the University and to her scholars.

In the department of her teaching, therefore, which is entrusted to my care, I wish it at once to be known that I will entertain no question of the saleability of this or that manner of art; and that I shall steadily discourage the attendance of students who propose to make their skill a source of income. Not that the true labourer is unworthy of his hire, but that, above all, in the beginning and first choice of industry, his heart must not be the heart of an hireling.

You may, and with some measure of truth, ascribe this determination in me to the sense of my own weakness and want of properly so-called artistic gift. That is indeed so; there are hundreds of men better qualified than I to teach practical

technique: and, in their studios, all persons desiring to be artists should place themselves. But I never would have come to Oxford, either before or now, unless in the conviction that I was able to direct her students precisely in that degree and method of application to art which was most consistent with the general and perpetual functions of the University.

Now, therefore, to prevent much future disappointment and loss of time both to you and to myself, let me forewarn you that I will not assist out of the schools, nor allow in them, modes of practice taken up at each student's fancy.

In the classes, the modes of study will be entirely fixed; and at your homes I cannot help you, unless you work in accordance with the class rules,—which rules, however, if you do follow, you will soon be able to judge and feel for yourselves, whether you are doing right, and getting on, or otherwise. This I tell you with entire confidence, because the illustrations and examples of the modes of practice in question, which I have been showing you in the course of these lectures, have been furnished to me by young people like yourselves; like in all things except only,—so far as they are to be excepted at all,—in the perfect repose of mind, which has been founded on a simply believed, and unconditionally obeyed, religion.

On the *repose* of mind, I say; and there is a singular physical truth illustrative of that spiritual life and peace which I must yet detain you by indicating in the subject of our study to-day. You see how this foulness of false imagination represents, in every line, the clouds not only as monstrous,—but *tumultuous*. Now all lovely clouds, remember, are *quiet* clouds,—not merely quiet in appearance, because of their greater height and distance, but quiet actually, fixed for hours, it may be, in the same form and place. I have seen a fair-weather cloud high over Coniston Old Man,—not *on* the hill, observe, but a vertical mile above it,—stand motionless,—changeless,—for twelve hours together. From four o'clock in the afternoon of one day I watched it through the night by the north twilight, till the dawn struck it with full crimson, at four of the following July morning. What is glorious and good in the heavenly cloud, you can, if you will, bring also into your lives,—which are in-

deed like it, in their vanishing, but how much more in their *not* vanishing, till the morning take them to itself. As this ghastly phantasy of death is to the mighty clouds of which it is written, 'The chariots of God are twenty thousand, even thousands of angels,' are the fates to which your passion may condemn you,—or your resolution raise. You may drift with the phrenzy of the whirlwind,—or be fastened for your part in the pacified effulgence of the sky. Will you not let your lives be lifted up, in fruitful rain for the earth, in scatheless snow to the sunshine,—so blessing the years to come, when the surest knowledge of England shall be of the will of her heavenly Father, and the purest art of England be the inheritance of her simplest children?

APPENDIX.

THE foregoing lectures were written, among other reasons, with the leading object of giving some permanently rational balance between the rhapsodies of praise and blame which idly occupied the sheets of various magazines last year on the occasion of the general exhibition of Rossetti's works; and carrying forward the same temperate estimate of essential value in the cases of other artists—or artistes—of real, though more or less restricted, powers, whose works were immediately interesting to the British public, I have given this balance chiefly in the form of qualified, though not *faint*, praise, which is the real function of just criticism; for the multitude can always see the faults of good work, but never, unaided, its virtues: on the contrary, it is equally quick-sighted to the vulgar merits of bad work, but no tuition will enable it to condemn the vices with which it has a natural sympathy; and, in general, the blame of them is wasted on its deaf ears.

When the course was completed, I found that my audiences had been pleased by the advisedly courteous tone of comment to which I had restricted myself; and I received not a few congratulations on the supposed improvement of my temper and manners, under the stress of age and experience. The tenor of this terminal lecture may perhaps modify the opinion of my friends in these respects; but the observations it contains are entirely necessary in order to complete the serviceableness, such as it may be, of all the preceding statements.

In the first place, may I ask the reader to consider with himself why British painters, great or small, are never right *altogether*? Why their work is always, somehow, flawed,—never in any case, or even in any single picture, thorough?

Is it not a strange thing, and a lamentable, that no British artist has ever lived, of whom one can say to a student, "Imitate him—and prosper;" while yet the great body of minor artists are continually imitating the master who chances to be in fashion; and any popular mistake will carry a large majority of the Britannie mind into laboriously identical blunder, for two or three artistic generations?

I had always intended to press this question home on my readers in my concluding lecture; but it was pressed much more painfully home on myself by the recent exhibition of Sir Joshua at Burlington House and the Grosvenor. There is no debate that Sir Joshua is the greatest figure-painter whom England has produced,—Gainsborough being sketchy and monotonous* in comparison, and the rest virtually out of court. But the gathering of any man's work into an unintended mass, enforces his failings in sickening iteration, while it levels his merits in monotony;—and after shrinking, here, from affection worthy only of the Bath Parade, and mourning, there, over negligence 'fit for a fool to fall by,' I left the rooms, really caring to remember nothing, except the curl of hair over St. Cecilia's left ear, the lips of Mrs. Abington, and the wink of Mrs. Nesbitt's white cat.

It is true that I was tired, and more or less vexed with myself, as well as with Sir Joshua; but no bad humour of mine alters the fact, that Sir Joshua was always affected,—often negligent,—sometimes vulgar,—and never sublime; and that, in this collective representation of English Art under highest patronage and of utmost value, it was seen, broadly speaking, that neither the painter knew how to paint, the patron to preserve, nor the cleaner to restore.

If this be true of Sir Joshua, and of the public of Lords and Ladies for whom he worked,—what are we to say of the multitude of entirely uneducated painters, competing for the patronage of entirely uneducated people; and filling our annual exhibitions, no more with what Carlyle complains of as the Correggiosities of Correggio, but with what perhaps may be

* "How *various* the fellow is!" Gainsborough himself, jealous of Sir Joshua at the 'private view.'

enough described and summed under the simply reversed phrase—the Incorregeiosities of Incorreggio.

And observe that the gist of this grievous question is that our English errors are those of very amiable and worthy people, conscientious after a sort, working under honourable encouragement, and entirely above the temptations which betray the bulk of the French and Italian schools into sharing, or consulting the taste only of the demi-monde.

The French taste in this respect is indeed widely and rapidly corrupting our own, but such corruption is recognizable at once as disease : it does not in the least affect the broad questions concerning all English artists that ever were or are, why Hunt can paint a flower, but not a cloud ; Turner, a cloud, but not a flower ; Bewick, a pig, but not a girl ; and Miss Greenaway a girl, but not a pig.

As I so often had to say in my lecture on the inscrutability of Clouds, I leave the question with you, and pass on.

But, extending the inquiry beyond England, to the causes of failure in the art of foreign countries, I have especially to signalize the French contempt for the 'Art de Province,' and the infectious insanity of centralization, throughout Europe, which collects necessarily all the vicious elements of any country's life into one mephitic cancer in its centre.

All great art, in the great times of art, is *provincial*, showing its energy in the capital, but educated, and chiefly productive, in its own country town. The best works of Correggio are at Parma, but he lived in his patronymic village ; the best works of Cagliariat, Venice, but he learned to paint at Verona ; the best works of Angelico are at Rome, but he lived at Fesole : the best works of Luini at Milan, but he lived at Luino. And, with still greater necessity of moral law, the cities which exercise forming power on style, are themselves provincial. There is no Attic style, but there is a Doric and Corinthian one. There is no Roman style, but there is an Umbrian, Tuscan, Lombard, and Venetian one. There is no Parisian style, but there is a Norman and Burgundian one. There is no London or Edinburgh style, but there is a Kentish and Northumbrian one.

Farther,—the tendency to centralization, which has been fatal to art in all times, is, at *this* time, pernicious in totally unprecedented degree, because the capitals of Europe are all of monstrous and degraded architecture. An artist in former ages might be corrupted by the manners, but he was exalted by the splendour, of the capital; and perished amidst magnificence of palaces: but now—the Board of Works is capable of no higher skill than drainage, and the British artist floats placidly down the maximum current of the National Cloaca, to his Dumeiad rest, content, virtually, that his life should be spent at one end of a cigar, and his fame expire at the other.

In literal and fatal instance of fact—think what ruin it is for men of any sensitive faculty to live in such a city as London is now! Take the highest and lowest state of it: you have, typically, Grosvenor Square,—an aggregation of bricks and railings, with not so much architectural faculty expressed in the whole cumber of them as there is in a wasp's nest or a worm-hole;—and you have the rows of houses which you look down into on the south side of the South-Western line, between Vauxhall and Clapham Junction. Between those two ideals the London artist must seek his own; and in the humanity, or the vermin, of them, worship the aristocratic and scientific gods of living Israel.

In the chapter called 'The Two Boyhoods' of 'Modern Painters,' I traced, a quarter of a century ago, the difference between existing London and former Venice, in their effect, as schools of art, on the minds of Turner and Giorgione. I would reprint the passage here: but it needs expansion and comment, which I hope to give, with other elucidary notes on former texts, in my October lectures. But since that comparison was written, a new element of evil has developed itself against art, which I had not then so much as seen the slightest beginnings of. The description of the school of Giorgione ends ('Modern Painters,' vol. v., p. 291) with this sentence,—

“Ethereal strength of Alps, dreamlike, vanishing in high procession beyond the Torcellan shore; blue islands of Paduan hills, poised in the golden west. Above, free winds and fiery clouds ranging at their will; *brightness out of the north,*

and balm from the south, and the Stars of the Evening and Morning clear in the limitless light of arched heaven and circling sea."

Now if I had written that sentence with foreknowledge of the approach of those malignant aerial phenomena which, beginning ten years afterwards, were to induce an epoch of continual diminution in the depth of the snows of the Alps, and a parallel change in the relations of the sun and sky to organic life, I could not have set the words down with more concentrated precision, to express the beautiful and healthy states of natural cloud and light, to which the plague-cloud and plague-wind of the succeeding æra were to be opposed. Of the physical character of these, some account was rendered in my lectures at the London Institution; of their effect on the artistic power of our time, I have to speak now; and it will be enough illustrated by merely giving an accurate account of the weather yesterday (20th May, 1884).

Most people would have called it a fine day; it was, as compared with other days of the spring, exceptionally clear: Helvellyn, at a distance of fifteen miles, showing his grassy sides as if one could reach them in an hour's walk. The sunshine was warm and full, and I went out at three in the afternoon to superintend the weeding of a bed of wild raspberries on the moor. I had put no upper coat on—and the moment I got out of shelter of the wood, found that there was a brisk and extremely cold wind blowing steadily from the southwest—*i. e.*, straight over Black Coomb from the sea. Now, it is perfectly normal to have keen *east* wind with a bright sun in March, but to have keen *south-west* wind with a bright sun on the 20th of May is entirely abnormal, and destructive to the chief beauty and character of the best month in the year.

I have only called the wind keen,—bitter, would have been nearer the truth; even a young and strong man could not have stood inactive in it with safety for a quarter of an hour; and the danger of meeting it full after getting hot in any work under shelter was so great that I had instantly to give up all idea of gardening, and went up to the higher moor to study the general state of colour and light in the hills and sky.

The sun was—the reader may find how high for himself, three o'clock P.M., on 20th May, in latitude 55° : at a guess, 40 degrees; and the entire space of sky under him to the horizon—and far above him towards the zenith—say 40 degrees all round him, was a dull pale grey, or dirty white,—very full of light, but totally devoid of colour or sensible gradation. Common flake-white deadened with a little lamp-black would give all the colour there was in it,—a mere tinge of yellow ochre near the sun. This lifeless stare of the sky changed gradually towards the zenith into a dim greyish blue, and then into definite blue—or at least what most people would call blue, opposite the sun answering the ordinary purpose of blue pretty well, though really only a bluish grey. The main point was to ascertain as nearly as possible the depth of it, as compared with other tints and lights.

Holding my arm up against it so as to get the shirt sleeve nearly in full sunlight, but with a dark side of about a quarter its breadth, I found the sky quite vigorously dark against the white of the sleeve; yet vigorously also detached in light beyond its dark side. Now the dark side of the shirt sleeve was pale grey compared to the sunlighted colour of my coat-sleeve. And that again was luminous compared to its own dark side, and that dark side was still not black. Count the scale thus obtained. You begin at the bottom with a tint of russet not reaching black; you relieve this distinctly against a lighter russet, you relieve that strongly against a pale warm grey, you relieve that against the brightest white you can paint. Then the sky-blue is to be clearly lighter than the pale warm grey, and yet as clearly darker than the white.

Any landscape artist will tell you that this opposition cannot be had in painting with its natural force;—and that in all pictorial use of the effect, either the dark side must be exaggerated in depth, or the relief of the blue from it sacrificed. But, though I began the study of such gradation just half a century ago, carrying my “cyanometer” as I called it—(a sheet of paper gradated from deepest blue to white), with me always through a summer’s journey on the Continent in 1835

I never till yesterday felt the full difficulty of explaining the enormous power of contrast which the real light possesses in its most delicate tints. I note this in passing for future inquiry ; at present I am concerned only with the main fact that the *darkest part of the sky-blue opposite the sun* was lighter, by much, than pure white in the shade in open air—(that is to say, lighter by much than the margin of the page of this book as you read it)—and that therefore the total effect of the landscape was of diffused cold light, against which the hills rose clear, but monotonously grey or dull green—while the lake, being over the whole space of it agitated by strong wind, took no reflections from the shores, and was nothing but a flat piece of the same grey as the sky, traversed by irregular blackness from more violent squalls. The clouds, considerable in number, were all of them alike shapeless, colourless, and lightless, like dirty bits of wool, without any sort of arrangement or order of action, yet not quiet ;—touching none of the hills, yet not high above them ; and whatever character they had, enough expressible by a little chance rubbing about of the brush charged with cleanings of the palette.

Supposing now an artist in the best possible frame of mind for work, having his heart set on getting a good Coniston subject ; and any quantity of skill, patience, and whatsoever merit you choose to grant him,—set, this day, to make his study ; what sort of study can he get ? In the first place, he must have a tent of some sort—he cannot sit in the wind—and the tent will be always unpegging itself and flapping about his ears—(if he tries to sketch quickly, the leaves of his sketch-book will all blow up into his eyes *) ;—next, he cannot draw a leaf in the foreground, for they are all shaking like aspens ; nor the branch of a tree in the middle distance, for they are all bending like switches ; nor a cloud, for the clouds have no outline ; nor even the effect of waves on the lake surface, for the catspaws and swirls of wind drive the dark spaces over it like feathers. The entire form-value of the reflections, the colour of them and the sentiment, are lost ; (were it sea instead of lake, there would be no waves, to call

* No artist who knows his business ever uses a block book.

waves, but only dodging and swinging lumps of water—dirty or dull blue according to the nearness to coast). The mountains have no contrast of colour, nor any positive beauty of it: in the distance they are not blue, and though clear for the present, are sure to be dim in an hour or two, and will probably disappear altogether towards evening in mere grey smoke.

What sort of a study can he make? What sort of a picture? He has got his bread to win, and *must* make his canvas attractive to the public—somehow. What resource has he, but to try by how few splashes he can produce something like hills and water, and put in the vegetables out of his head?—according to the last French fashion.

Now, consider what a landscape painter's work used to be, in ordinary spring weather of old times. You put your lunch in your pocket, and set out, any fine morning, sure that, unless by a mischance which needn't be calculated on, the forenoon, and the evening, would be fine too. You chose two subjects handily near each other, one for A.M., the other for P.M.; you sate down on the grass where you liked, worked for three or four hours serenely, with the blue shining through the stems of the trees like painted glass, and not a leaf stirring; the grasshoppers singing, flies sometimes a little troublesome, ants, also, it might be. Then you ate your lunch—lounged a little after it—perhaps fell asleep in the shade, woke in a dream of whatever you liked best to dream of,—set to work on the afternoon sketch,—did as much as you could before the glow of the sunset began to make everything beautiful beyond painting: you meditated awhile over that impossible, put up your paints and book, and walked home, proud of your day's work, and peaceful for its future, to supper.

This is neither fancy,—nor exaggeration. I have myself spent literally thousands of such days in my forty years of happy work between 1830 and 1870.

I say nothing of the gain of time, temper, and steadiness of hand, under such conditions, as opposed to existing ones; but we must, in charity, notice as one inevitable cause of the loose and flimsy tree-drawing of the moderns, as compared

with that of Titian or Mantegna, the quite infinite difference between the look of blighted foliage quivering in confusion against a sky of the colour of a pail of whitewash with a little starch in it ; and the motionless strength of olive and laurel leaf, inlaid like the wreaths of a Florentine mosaic on a ground of lapis-lazuli.

I have, above, supposed the effects of these two different kinds of weather on mountain country, and the reader might think the difference of that effect would be greatest in such scenery. But it is in reality greater still in lowlands ; and the malignity of climate most felt in common scenes. If the heath of a hill side is blighted,—(or burnt into charcoal by an improving farmer,) the form of the rock remains, and its impression of power. But if the hedges of a country lane are frizzled by the plague wind into black tea,—what have you left ? If the reflections in a lake are destroyed by wind, its ripples may yet be graceful,—or its waves sublime ;—but if you take the reflections out of a ditch, what remains for you—but ditch-water ? Or again, if you take the sunshine from a ravine or a cliff ; or flood with rain their torrents or waterfalls, the sublimity of their forms may be increased, and the energy of their passion ; but take the sunshine from a cottage porch, and drench into decay its hollyhock garden, and you have left to you—how much less, how much worse than nothing ?

Without in the least recognizing the sources of these evils, the entire body of English artists, through the space now of some fifteen years, (quite enough to paralyze, in the young ones, what in their nature was most sensitive,) have been thus afflicted by the deterioration of climate described in my lectures given this last spring in London. But the deteriorations of noble subject induced by the progress of manufactures and engineering are, though also without their knowledge, deadlier still to them.

It is continually alleged in Parliament by the railroad, or building, companies, that they propose to render beautiful places more accessible or habitable, and that their ‘works’ will be, if anything, decorative rather than destructive to the

better civilized scene. But in all these cases, admitting, (though there is no ground to admit) that such arguments may be tenable, I observe that the question of sentiment proceeding from association is always omitted. And in the minds even of the least educated and least spiritual artists, the influence of association is strong beyond all their consciousness, or even belief.

Let me take, for instance, four of the most beautiful and picturesque subjects once existing in Europe,—Furness Abbey, Conway Castle, the Castle of Chillon, and the Falls of Schaffhausen. A railroad station has been set up within a hundred yards of the Abbey,—an iron railroad bridge crosses the Conway in front of its castle; a stone one crosses the Rhine at the top of its cataract, and the great Simplon line passes the end of the drawbridge of Chillon. Since these improvements have taken place, no picture of any of these scenes has appeared by any artist of eminence, nor can any in future appear. Their portraiture by men of sense or feeling has become for ever impossible. Discord of colour may be endured in a picture—discord of sentiment, never. There is no occasion in such matters for the protest of criticism. The artist turns unconsciously—but necessarily—from the disgraced noblesse of the past, to the consistent baseness of the present; and is content to paint whatever he is in the habit of seeing, in the manner he thinks best calculated to recommend it to his customers.

And the perfection of the mischief is that the very few who are strong enough to resist the money temptation, (on the complexity and fatality of which it is not my purpose here to enlarge,) are apt to become satirists and reformers, instead of painters; and to lose the indignant passion of their freedom no less vainly than if they had sold themselves with the rest into slavery. Thus Mr. Herkomer, whose true function was to show us the dancing of Tyrolese peasants to the pipe and zither, spends his best strength in painting a heap of promiscuous emigrants in the agonies of starvation: and Mr. Albert Goodwin, whom I have seen drawing, with Turnerian precision, the cliffs of Orvieto and groves of Vallombrosa, must

needs moralize the walls of the Old Water-colour Exhibition with a scattering of skeletons out of the ugliest scenes of the 'Pilgrim's Progress,' and a ghastly sunset, illustrating the progress—in the contrary direction—of the manufacturing districts. But in the plurality of cases the metropolitan artist passively allows himself to be metropolized, and contents his pride with the display of his skill in recommending things ignoble. One of quite the best, and most admired, pieces of painting in the same Old Water-colour Exhibition was Mr. Marshall's fog effect over the Westminster cab-stand; while, in the Royal Institution, Mr. Severn in like manner spent all his power of rendering sunset light in the glorification of the Westminster clock tower. And although some faint yearnings for the rural or marine are still unextinguished in the breasts of the elder academicians, or condescendingly tolerated in their sitters by the younger ones,—though Mr. Leslie still disports himself occasionally in a punt at Henley, and Mr. Hook takes his summer lodgings, as usual, on the coast, and Mr. Collier admits the suggestion of the squire's young ladies, that they may gracefully be painted in a storm of primroses,—the shade of the Metropolis never for an instant relaxes its grasp on their imagination; Mr. Leslie cannot paint the barmaid at the Angler's Rest, but in a pair of high-heeled shoes; Mr. Hook never lifts a wave which would be formidable to a trim-built wherry; and although Mr. Fildes brought some agreeable arrangements of vegetables from Venice; and, in imitation of old William Hunt, here and there some primroses in tumblers carried out the sentiment of Mr. Collier's on the floor,—not all the influence of Mr. Matthew Arnold and the Wordsworth Society together obtained, throughout the whole concourse of the Royal or plebeian salons of the town, the painting of so much as one primrose nested in its rock, or one branch of wind-tossed eglantine.

As I write, a letter from Miss Alexander is put into my hands, of which, singularly, the closing passage alludes to the picture of Giorgione's, which I had proposed, in terminating this lecture, to give, as an instance of the undisturbed art of a faultless master. It is dated "Bassano Veneto, May 27th,"

and a few sentences of the preceding context will better present the words I wish to quote.

“I meant to have told you about the delightful old lady whose portrait I am taking. Edwige and I set out early in the morning, and have a delightful walk up to the city, and through the clean little streets with their low Gothic arcades and little carved balconies, full of flowers; meeting nobody but contadini, mostly women, who, if we look at them, bow, and smile, and say ‘*Serva sua.*’ The old lady told us she was always ready to begin her sitting by six o’clock, having then finished morning prayers and breakfast: pretty well for eighty-five, I think: (she says that is her age.) I had forgotten until this minute I had promised to tell you about our visit to Castelfranco. We had a beautiful day, and had the good fortune to find a fair going on, and the piazza full of contadini, with fruit, chickens, etc., and many pretty things in wood and basket work. Always a pretty sight; but it troubled me to see so many beggars, who looked like respectable old people. I asked Loredana about it, and she said they *were* contadini, and that the poverty among them was so great, that although a man could live, poorly, by his work, he could never lay by anything for old age, and when they are past work they have to beg. I cannot feel as if that were right, in such a rich and beautiful country, and it is certainly not the case on the estate of Marina and Silvia; but I am afraid, from what I hear, that our friends are rather exceptional people. Count Alessandro, Marina’s husband, always took an almost paternal care of his contadini, but with regard to other contadini in these parts, I have heard some heartbreaking stories, which I will not distress you by repeating. Giorgione’s Madonna, whenever I see it, always appears to me more beautiful than the last time, and does not look like the work of a mortal hand. It reminds me of what a poor woman said to me once in Florence, ‘What a pity that people are not as large now as they used to be!’ and when I asked her what made her suppose that they were larger in old times, she said, looking surprised, ‘Surely you cannot think that the people who built the Duomo were no larger than *we* are?’”

Anima Toscana gentillissima,—truly we cannot think it, but larger of heart than you, no ;—of thought, yes.

It has been held, I believe, an original and valuable discovery of Mr. Taine's that the art of a people is the natural product of its soil and surroundings.

Allowing the art of Giorgione to be the wild fruitage of Castelfranco, and that of Brunelleschi no more than the exhalation of the marsh of Arno ; and perceiving, as I do, the existing art of England to be the mere effluence of Grosvenor Square and Clapham Junction,—I yet trust to induce in my readers, during hours of future council, some doubt whether Grosvenor Square and Clapham Junction be indeed the natural and divinely appointed produce of the Valley of the Thames.

BRANTWOOD,

Whit-Tuesday, 1884.

INDEX.

- ACHILLES' shield, 275. *See* HOMER, 275.
- ACLAND, Dr. Henry, his work at Oxford, 347.
——— Sir Thomas, his art powers; and Robson, 347.
- ADMIRATION defined, 272.
- ÆGINA, marbles of, their enjoyment, 292-293.
- ÆSCHYLUS, Dante's use of, 277.
- ALEXANDER, Miss ('Francesca') her art-gift, 266-267; to what it appeals, 253; letter to Author from, quoted, 331, 341 *seq.*; her life, 265; works of: 'Ida,' 266, 297, 314: 'Roadside Songs of Tuscany,' drawings from; plans for their use, 300; twelve given to Oxford, 329; portrait of Beatrice degli Ontani, 297-298; portrait of St. Christopher, 299-300; preface to, quoted, 297, 312.
- ALLINGHAM, Mrs., her art gift, 312; children by, 311; 'Tea-party,' 312; 'Toyshop,' *ib.*
- ALMA TADEMA. *See* TADEMA, 286.
- AMERICA, author's prejudice against, 265; engraving in, 325; government survey of U. S., 302; South, illustrations of, 323.
- ANGELICO, children by, 310; best works of, at Rome, 337, 357.
- ANIMALS, fables about, 305-306.
- "ANIMUS" defined, 284.
- 'ARABIAN NIGHTS,' the, 273.
- ARISTOPHANES, use of myths by, 275.
- ARNOLD, Mr. Matthew, 365.
- ART: ancient, its methods inadequate, 275-276; centralization fatal to, 358; for children to be graceful and serious, 305-306; children and legendary art, 391; Christianity and, 261, 267; creative and realistic, 283; criticism of, 355; decline of, its period, 340; delight of artists in their work, 338; didactic, English dislike of, 282; English, its recent development, 354; European, its rise, 287; and fall, 287; execution, mystery of idea no ground for bad, 278; for both noble conception and good work are needed, 280; finish in, 269, 292; great, is delicate, 316; great, is praise, 283; is provincial, 358; imitation and suggestion in, 279; legendary, and children, 301; masterpiece of, ground of delight in a, 320; materials provided by nature, and the needs of, 320; multiplication of, its methods, 319; national, to be studied in its rise, 286; patronage, 356; the product of a nation's surroundings, 367; public appreciation of, 356; realistic, 283; and *see* REALISM; romantic, 338 *seq.*; salability of, 360; schools of, head and body, 291; are provincial, not metropolitan, 357; sight, the unaided, and, 316; study of, 286; surroundings of, the, 354; teaching in Oxford, *see* AUTHOR, 254.

ARTHUR, King, 339.

ARTIST, no English, *altogether* right, 355; life of, in great cities, 358; effect of modern weather on, 363.

ATHENA, her presence to be imagined, 304.

ATHLETICISM, useful and useless, 286, 299.

AUTHOR, the. 1. *Personal*.—His education, books 'Evenings at Home,' 308; fairy stories, 362; taught by Copley Fielding, 343; his feelings, not talked of by him, 258; his friends, young artists among, 262; "laudator temporis acti," 335; his love of colour, 258; landscape, 386; mountains, 346; (*e.g.* Ben Lomond, 347), music, 258; sunshine, *ib.*; his manners as a critic, 356; painting days spent in 1830-49, 361; his prejudice against Americans, 265; his sight the same in age and youth, 349; Swiss inns liked better than Genoese palaces by, 321; his religion, 259; at Brantwood, May 20, 1884 (weather described), 359; at Royal Academy, etc., 1883, 284, 357; and at Grosvenor Gallery, 358; in Venice (1876) teaches young lady to draw, 264; (1880) copies Carpaccio's St. Ursula, 291. *See* CONISTON, FIELDING, LEIGHTON, and MAROCHETTI, 293, 348, 278.

2. *Teaching of*.—On art, he teaches what is not what he thinks, beautiful, 258; on landscape, his early works, 254; later lectures on, unpublished, 357; likes minute work, 270; said to teach people to see, 258; study of head *and* body, 291, 300; on clouds and sky, his early work, 350 *see* "Clouds"); Oxford work, resumes the chair, 253; plans for, 255, 263, 281, 337, 352; pupils, 335; Tintoret given to, 335; Turners given to, 318; Political Economy, paradoxes of his, 319.

3. *His Writings*.—(a) General Character:—courteous tone of his comments, 356; cannot express all he sees, 258, 259; impulse of his best, 355; romantic love of his subject, *ib.*; serious parts of, 263; sermons, his art lectures not to be *ib.*

(b) Particular works referred to:—

'Aratra Pentelici,' on portraiture and Greek art, 291.

'Adriadne Florentina,' on Florentine engraving, 311; on methods of wood-cutting, 324.

'Art of England,' notes to to be avoided, 270; object of, 356; plan of, 336; its style, 356.

'Fors Clavigera' No. 340; on Scott's scenery, 342; *passim*, squires to live on their lands, 346.

'Laws of Fésole,' general teaching of, 290; great art is praise, 283; tests of good colour, 326.

'Modern Painters' its aim, 339; on the Dutch school, 271; Vol. II. on admiration, 273; III. on Peter drowning, 270; V. on mountains, 350; on the sky, 350; on the 'Two Boyhoods,' 358 *seq.*

'Our Fathers have told us' ('Bible of Amiens,' p. 14), 322.

'Queen of the Air,' on myths, 275.

'Storm Cloud of Nineteenth Century,' 359 *et seq.*

BARRETT and the Old Water Colour Society, 338.

BEATRICE degli Ontani *See* ALEXANDER, 298.

BEAUTY, and goodness, 297; dependent on law, 297-298.

BELIEF. *See* FAITH, FANCY, 303.

BENEDICTINE MS., Monte Cassino, 286.

BERLIN, Holbein's 'George Guysen,' 292.

BERTHA, Queen, the spinner, 299.

BEWICK, draws children in mischief only, 311; magnifying glass needed for his vignettes, 264; can draw a pig, but not a girl, 357; plumage in his woodcuts, 324.

BIBLE, the, and Roman Catholics, 299.

BIBLE, quoted:—

'And God saw that it was good' . . .	Genesis i. 10 . . .	page 297
'He maketh me to lie down in green pastures'	Psaln xxiii. 2 . . .	" 317
'The chariots of God are twenty thousand'	Psaln lxviii. 17 . . .	" 354
'Buy the truth and sell it not' . . .	Proverbs xxiii. 23 . . .	" 252
'The weaned child shall put his hand on the cockatrice' den'	Isaiah xii. 8 . . .	" 208
'Rachel weeping for her children because they were not'	Jeremiah xxxi. 15 . . .	" 260
'He hath put down the mighty' . . .	Luke i. 52 . . .	" 273
'My peace I leave with you' . . .	John xiv. 27 . . .	" 268
'Peter girt his fisher's coat unto him' . . .	John xxi. 7 . . .	" 270
'Gallio cared for none of those things' . . .	Acts xviii. 17 . . .	" 317
'More than conquerors through him that loved them' . . .	Romans, viii. 37 . . .	" 259
'No death, neither sorrow, nor crying' . . .	Revelation xxi. 4 . . .	" 260

BIRKETT FOSTER. *See* FOSTER, 312.

BLAKE'S 'Job,' 307.

BOOKS: on art, rarity of good, 268; cheap, their result, 352; choice of, by public libraries 265; French, on science for a child, 323-324, 350; illustrations in modern, 301 *seq.*, 313.

BOTTICELLI, Sandro, classic and Gothic art united in, 287; frescoes on education, 290-291; Favonian breeze, 272.

BRANTWOOD, weather at (May 20, 1884), 359 *seq.*

BRETT, John, sunshine in his pictures, 257.

BRITISH MUSEUM, Elgin marbles but no Gothic marbles in the, 284; Girtin's and Cousin's drawings, 342.

BULL, John, the farmer, 332; 'defends his pudding,' 334.

BURGMAYER'S woodcuts of heraldry, 324.

BURNE-JONES, E., chiaroscuro of, 280; colour of, 281; educated at Oxford, 276; friend of W. Morris, 277; of Rossetti, 273; a hero-worshipper, 283; knowledge of mythology, 277; outline perfect, 280; personification his gift, 273; photographs from his pictures, 282-283; pictures of: 'Danae' (Oxford schools), 280; 'Days of Creation,' 273, 278; 'Miss Gladstone' (portrait of), 281; 'Medea' (Oxford schools), 281; 'Psyche' (Oxford galleries), 280; 'Wheel of Fortune,' 278.

BURNS, on children, 'toddlin' wee things,' 311; romance in, 7.

BUTLER, Mrs. (Elizabeth Thompson), 334.

BYRON, and landscape art, 342; morbid ('Childe Harold'), 337; mountains, his love of, 346; romantic, 255; quoted, 'You have the Pyrrhic dance as yet' ('Don Juan,' iii. 86. 10), 295.

CAGLIARI, best works of, at Venice, 357.

CALDECOTT, M. Chesneau on, 313.

CAMILLA, 295.

CAMPBELL, Lord G., 'Log letters from the "Challenger,"' 309.

CARICATURE, 327. *See* 'PUNCH.'

- CARLYLE, T., on the British Lion, 333; on Correggio's correghiosities, 357; 'Sartor Resartus,' 288.

 WORK, goodness of, in proportion to our joy in it, 348.
 YOUTH, praise of modern English, 335.

NOTES
ON THE
CONSTRUCTION OF SHEEPFOLDS

ADVERTISEMENT.

MANY persons will probably find fault with me for publishing opinions which are not new ; but I shall bear this blame contentedly, believing that opinions on this subject could hardly be just if they were not 1800 years old. Others will blame me for making proposals which are altogether new ; to whom I would answer, that things in these days seem not so far right but that they may be mended. And others will simply call the opinions false and the proposals foolish—to whose good will, if they take it in hand to contradict me, I must leave what I have written—having no purpose of being drawn, at present, into religious controversy. If, however, any should admit the truth, but regret the tone of what I have said, I can only pray them to consider how much less harm is done in the world by ungraceful boldness, than by untimely Fear.

Denmark Hill,
Feb. 1851.

NOTES ON
THE CONSTRUCTION OF SHEEPFOLDS.

THE following remarks were intended to form part of the appendix to an essay on Architecture: But it seemed to me, when I had put them into order, that they might be useful to persons who would not care to possess the work to which I proposed to attach them; I publish them, therefore, in a separate form; but I have not time to give them more consistency than they would have had in the subordinate position originally intended for them. I do not profess to teach Divinity; and I pray the reader to understand this, and to pardon the slightness and insufficiency of notes set down with no more intention of connected treatment of their subject than might regulate an accidental conversation. Some of them are simply copied from my private diary; others are detached statements of facts, which seem to me significative or valuable, without comment; all are written in haste, and in the intervals of occupation with an entirely different subject. It may be asked of me, whether I hold it right to speak thus hastily and insufficiently respecting the matter in question? Yes. I hold it right to *speak* hastily: not to *think* hastily. I have not thought hastily of these things; and, besides, the haste of speech is confessed, that the reader may think of me only as talking to him, and saying, as shortly and simply as I can, things which, if he esteem them foolish or idle, he is welcome to cast aside; but which, in very truth, I cannot help saying at this time.

The passages in the essay which required notes, described the repression of the political power of the Venetian Clergy by the Venetian Senate ; and it became necessary for me—in supporting an assertion made in the course of the inquiry, that the idea of separation of Church and State was both vain and impious—to limit the sense in which it seemed to me that the word “Church” should be understood, and to note one or two consequences which would result from the acceptance of such limitation. This I may as well do in a separate paper, readable by any person interested in the subject ; for it is high time that *some* definition of the word should be agreed upon. I do not mean a definition involving the doctrine of this or that division of Christians, but limiting, in a manner understood by all of them, the sense in which the *word* should thenceforward be used. There is grievous inconvenience in the present state of things. For instance, in a sermon lately published at Oxford, by an anti Tractarian divine, I find this sentence,—“It is clearly within the province of the State to establish a national *church*, or *external institution of certain forms of worship* :” Now suppose one were to take this interpretation of the word “Church” given by an Oxford divine, and substitute it for the simple word in some Bible Texts, as for instance, “Unto the angel of the external institution of certain forms of worship of Ephesus,” &c. Or, “Salute the brethren which are in Laodicea, and Nymphas, and the external institution of certain forms of worship which is in his house,”—what awkward results we should have, here and there ! Now I do not say it is possible for men to agree with each other in their religious *opinions*, but it is certainly possible for them to agree with each other upon their religious *expressions* ; and when a word occurs in the Bible a hundred and fourteen times, it is surely not asking too much of contending divines to let it stand in the sense in which it there occurs ; and when they want an expression of something for which it does *not* stand in the Bible, to use some other word. There is no compromise of religious opinion in this : it is simply proper respect for the Queen’s English.

The word occurs in the New Testament, as I said, one hun-

dred and fourteen times.* In every one of those occurrences, it bears one and the same grand sense : that of a congregation or assembly of men. But it bears this sense under four different modifications, giving four separate meanings to the word. These are—

I. The entire Multitude of the Elect ; otherwise called the Body of Christ ; and sometimes the Bride, the Lamb's Wife ; including the Faithful in all ages ; Adam, and the children of Adam yet unborn.

In this sense it is used in Ephesians v. 25, 27, 32 ; Colossians i. 18, and several other passages.

II. The entire multitude of professing believers in Christ, existing on earth at a given moment ; including false brethren, wolves in sheep's clothing, goats, and tares, as well as sheep and wheat, and other forms of bad fish with good in the net.

In this sense it is used in 1 Cor. x. 32 ; xv. 9 ; Galatians i. 13, 1 Tim. iii. 5, &c.

III. The multitude of professed believers, living in a certain city, place, or house. This is the most frequent sense in which the word occurs, as in Acts vii. 38 ; xiii. 1 ; 1 Cor. i. 2 ; xvi. 19, &c.

IV. Any assembly of men : as in Acts xix. 32, 41.

That in a hundred and twelve out of the hundred and fourteen texts, the word bears some one of these four meanings, is indisputable.† But there are two texts in which, if the word had alone occurred, its meaning might have been doubtful. These are Matt. xvi. 18, and xviii. 17.

The absurdity of founding any doctrine upon the inexpressibly minute possibility that in these two texts, the word might have been used with a different meaning from that which it bore in all the others, coupled with the assumption that the

* I may, perhaps, have missed count of one or two occurrences of the word ; but not, I think, in any important passages.

† The expression " House of God," in Tim. iii. 15, is shown to be used of the congregation by 1 Cor. iii. 16, 17.

I have not noticed the word *κυριακή* (*oikía*), from which the German " Kirche," the English " Church," and the Scotch " Kirk," are derived, as it is not used with that signification in the New Testament.

meaning was this or that, is self-evident : it is not so much a religious error as a philological solecism ; unparalleled, so far as I know, in any other science but that of divinity.

Nor is it ever, I think, committed with open front by Protestants. No English divine, asked in a straightforward manner for a Scriptural definition of "the Church," would, I suppose, be bold enough to answer "the Clergy." Nor is there any harm in the common use of the word, so only that it be distinctly understood to be not the Scriptural one ; and therefore to be unfit for substitution in a Scriptural text. There is no harm in a man's talking of his son's "going into the Church : " meaning that he is going to take orders ; but there is much harm in his supposing this a Scriptural use of the word, and therefore, that when Christ said, "Tell it to the Church," He might possibly have meant, "Tell it to the Clergy."

It is time to put an end to the chance of such misunderstanding. Let it but be declared plainly by all men, when they begin to state their opinions on matters ecclesiastical, that they will use the word "Church" in one sense or the other ;—That they will accept the sense in which it is used by the Apostles, or that they deny this sense, and propose a new definition of their own. We shall then know what we are about with them—we may perhaps grant them their new use of the term, and argue with them on that understanding ; so only that they will not pretend to make use of Scriptural authority, while they refuse to employ Scriptural language. This, however, it is not my purpose to do at present. I desire only to address those who are willing to accept the Apostolic sense of the word Church, and with them, I would endeavor shortly to ascertain what consequences must follow from an acceptance of that Apostolic sense, and what must be our first and most necessary conclusions from the common language of Scripture* respecting these following points :—

* Any reference, *except* to Scripture, in notes of this kind would of course be useless : the argument from, or with the Fathers is not to be compressed into fifty pages. I have something to say about Hooker ; but I reserve that for another time, not wishing to say it hastily, or to leave it without support.

1. The distinctive characters of the Church.
2. The Authority of the Church.
3. The Authority of the Clergy over the Church.
4. The connection of the Church with the State.

These are four separate subjects of question ; but we shall not have to put these questions in succession with each of the four Scriptural meanings of the word Church, for evidently its second and third meaning may be considered together, as merely expressing the general or particular conditions of the Visible Church, and the fourth signification is entirely independent of all questions of a religious kind. So that we shall only put the above inquiries successively respecting the Invisible and Visible Church ; and as the two last,—of authority of Clergy, and connection with State—can evidently only have reference to the Visible Church, we shall have, in all, these six questions to consider.

1. The distinctive characters of the Invisible Church.
2. The distinctive characters of the Visible Church.
3. The Authority of the Invisible Church.
4. The Authority of the Visible Church.
5. The Authority of Clergy over the Visible Church.
6. The Connection of the Visible Church with the State.

1. What are the distinctive characters of the Invisible Church ; that is to say, What is it which makes a person a member of this Church, and how is he to be known for such ?

Wide question—if we had to take cognizance of all that has been written respecting it, remarkable as it has been always for quantity rather than carefulness, and full of confusion between Visible and Invisible : even the article of the Church of England being ambiguous in its first clause : “The *Visible* Church is a congregation of Faithful men.” As if ever it had been possible, except for God, to see Faith! or to know a Faithful man by sight. And there is little else written on this question, without some such quick confusion of the Visible and Invisible Church ;—needless and unaccountable

confusion. For evidently, the Church which is composed of Faithful men, is the one true, indivisible, and indiscernible Church, built on the foundation of Apostles and Prophets, Jesus Christ himself being the chief corner-stone. It includes all who have ever fallen asleep in Christ, and all yet unborn, who are to be saved in Him ; its Body is as yet imperfect ; it will not be perfected till the last saved human spirit is gathered to its God.

A man becomes a member of this Church only by believing in Christ with all his heart ; nor is he positively recognizable for a member of it, when he has become so, by any one but God, not even by himself. Nevertheless, there are certain signs by which Christ's sheep may be guessed at. Not by their being in any definite Fold—for many are lost sheep at times : but by their sheep-like behavior ; and a great many are indeed sheep which, on the far mountain side, in their peacefulness, we take for stones. To themselves, the best proof of their being Christ's sheep is to find themselves on Christ's shoulders ; and, between them, there are certain sympathies (expressed in the Apostles' Creed by the term " communion of Saints"), by which they may in a sort recognise each other, and so become verily visible to each other for mutual comfort.

2. The Limits of the Visible Church, or of the Church in the Second Scriptural Sense, are not so easy to define ; they are awkward questions, these, of stake-nets. It has been ingeniously and plausibly endeavored to make Baptism a sign of admission into the Visible Church, but absurdly enough ; for we know that half the baptized people in the world are very visible rogues, believing neither in God nor devil ; and it is flat blasphemy to call these Visible Christians ; we also know that the Holy Ghost was sometimes given before Baptism,* and it would be absurdity to call a man on whom the Holy Ghost had fallen, an Invisible Christian. The only rational distinction is that which practically, though not professedly, we always assume. If we hear a man profess himself a believer in God and in Christ, and detect him in no

* Acts x. 44.

glaring and wilful violation of God's law, we speak of him as a Christian ; and on the other hand, if we hear him or see him denying Christ, either in his words or conduct, we tacitly assume him not to be a Christian. A mawkish charity prevents us from outspokening in this matter, and from earnestly endeavoring to discern who are Christians and who are not ; and this I hold * to be one of the chief sins of the Church in the present day ; for thus wicked men are put to no shame ; and better men are encouraged in their failings, or caused to hesitate in their virtues, by the example of those whom, in false charity, they choose to call Christians. Now, it being granted that it is impossible to know, determinedly, who are Christians indeed, that is no reason for utter negligence in separating the nominal, apparent, or possible Christian from the professed Pagan or enemy of God. We spend much time in arguing about efficacy of sacraments and such other mysteries ; but we do not act upon the very certain tests which are clear and visible. We know that Christ's people are not thieves—not liars—not busybodies—not dishonest—not avaricious—not wasteful—not cruel. Let us then get ourselves well clear of thieves—liars—wasteful people—avari-

* Let not the reader be displeased with me for these short and apparently insolent statements of opinion. I am not writing insolently, but as shortly and clearly as I can ; and when I seriously believe a thing, I say so in a few words, leaving the reader to determine what my belief is worth. But I do not choose to temper down every expression of personal opinion into courteous generalities, and so lose space, and time, and intelligibility at once. We are utterly oppressed in these days by our courtesies, and considerations, and compliances, and proprieties. Forgive me them, this once, or rather let us all forgive them to each other, and learn to speak plainly first, and, if it may be, gracefully afterwards ; and not only to speak, but to stand by what we have spoken. One of my Oxford friends heard, the other day, that I was employed on these notes, and forthwith wrote to me, in a panic, not to put my name to them: for fear I should "compromise myself." I think we are most of us compromised to some extent already, when England has sent a Roman Catholic minister to the second city in Italy, and remains herself for a week without any government, because her chief men cannot agree upon the position which a Popish cardinal is to have leave to occupy in London.

cious people—cheating people—people who do not pay their debts. Let us assure them that they, at least, do not belong to the Visible Church; and having thus got that Church into decent shape and cohesion, it will be time to think of drawing the stake-nets closer.

I hold it for a law, palpable to common sense, and which nothing but the cowardice and faithlessness of the Church prevents it from putting in practice, that the conviction of any dishonorable conduct or wilful crime, of any fraud, falsehood, cruelty, or violence, should be ground for the excommunication of any man:—for his publicly declared separation from the acknowledged body of the Visible Church: and that he should not be received again therein without public confession of his crime and declaration of his repentance. If this were vigorously enforced, we should soon have greater purity of life in the world, and fewer disensions about high and low churches. But before we can obtain any idea of the manner in which such law could be enforced, we have to consider the second question, respecting the Authority of the Church. Now Authority is twofold: to declare doctrine and to enforce discipline; and we have to inquire, therefore, in each kind,—

3. What is the authority of the Invisible Church? evidently, in matters of doctrine, all members of the Invisible Church must have been, and must ever be, at the time of their deaths, right in the points essential to Salvation. But, (A.) we cannot tell who *are* members of the Invisible Church.

(B.) We cannot collect evidence from deathbeds in a clearly stated form.

(C.) We can collect evidence, in any form, only from some one or two out of every sealed thousand of the Invisible Church. Elijah thought he was alone in Israel; and yet there were seven thousand invisible ones around him. Grant that we had Elijah's intelligence; and we could only calculate on collecting the $\frac{1}{7000}$ th part of the evidence or opinions of the part of the Invisible Church living on earth at a given moment; that is to say, the seven-millionth or trillionth of its collective evidence. It is very clear, therefore, we cannot hope

to get rid of the contradictory opinions, and keep the consistent ones, by a general equation. But, it has been said there are no contradictory opinions ; the Church is infallible. There was some talk about the infallibility of the Church, if I recollect right, in that letter of Mr. Bennett's to the Bishop of London. If any Church be infallible, it is assuredly the Invisible Church, or body of Christ ; and infallible in the main sense it must of course be by its definition. An Elect person must be saved and therefore cannot eventually be deceived on essential points ; so that Christ says of the deception of such, "If it were possible," implying it to be impossible. Therefore, as we said, if one could get rid of the variable opinions of the members of the Invisible Church, the constant opinions would assuredly be authoritative : but for the three reasons above stated, we cannot get at their constant opinions : and as for the feelings and thoughts which they daily experience or express, the question of Infallibility—which is practical only in this bearing—is soon settled. Observe St. Paul, and the rest of the Apostles, write nearly all their epistles to the Invisible Church :—Those epistles are headed,—Romans, "To the beloved of God, called to be saints ;" 1 Corinthians, "To them that are sanctified in Christ Jesus ;" 2 Corinthians, "To the saints in all Achaia ;" Ephesians, "To the saints which are at Ephesus, and to the faithful in Christ Jesus ;" Philippians, "To all the saints which are at Philippi ;" Colossians, "To the saints and faithful brethren which are at Colosse ;" 1 and 2 Thessalonians, "To the Church of the Thessalonians, which is in God the Father, and the Lord Jesus ;" 1 and 2 Timothy, "To his own son in the faith ;" Titus, to the same ; 1 Peter, "To the Strangers, Elect according to the foreknowledge of God ;" 2 Peter, "To them that have obtained like precious faith with us ;" 2 John, "To the Elect lady ;" Jude, "To them that are sanctified by God the Father, and preserved in Jesus Christ and called."

There are thus fifteen epistles, expressly directed to the members of the Invisible Church. Philemon and Hebrews, and 1 and 3 John, are evidently also so written, though not so expressly inscribed. That of James, and that to the Gala-

tians, are as evidently to the Visible Church: the one being general, and the other to persons "removed from Him that called them." Missing out, therefore, these two epistles, but including Christ's words to His disciples, we find in the Scriptural addresses to members of the Invisible Church, fourteen, if not more, direct injunctions "not to be deceived."* So much for the "Infallibility of the Church."

Now, one could put up with Puseyism more patiently, if its fallacies arose merely from peculiar temperaments yielding to peculiar temptations. But its bold refusals to read plain English; its elaborate adjustments of tight bandages over its own eyes, as wholesome preparation for a walk among traps and pitfalls; its daring trustfulness in its own clairvoyance all the time, and declarations that every pit it falls into is a seventh heaven; and that it is pleasant and profitable to break its legs;—with all this it is difficult to have patience. One thinks of the highwayman with his eyes shut, in the Arabian Nights; and wonders whether any kind of scourging would prevail upon the Anglican highwayman to open "first one and then the other."

4. So much, then, I repeat for the infallibility of the Invisible Church, and for its consequent authority. Now, if we want to ascertain what infallibility and authority there is in the Visible Church, we have to alloy the small wisdom and the light weight of Invisible Christians, with large per-centage of the false wisdom and contrary weight of Undetected Anti-Christians. Which alloy makes up the current coin of opinions in the Visible Church, having such value as we may choose—its nature being properly assayed—to attach to it.

There is, therefore, in matters of doctrine, *no such thing* as the Authority of the Church. We might as well talk of the authority of the morning cloud. There may be light *in* it, but the light is not of it; and it diminishes the light that it gets; and lets less of it through than it receives, Christ being its sun. Or, we might as well talk of the authority of a flock

* Matt. xxiv. 4; Mark xiii. 5; Luke xxi. 8; 1 Cor. iii. 18, vi. 9, xv. 33; Eph. iv. 14, v. 6; Col. ii. 8; 2 Thess. ii. 3; Heb. iii. 13; 1 John i. 8, iii. 7; 2 John 7, 8.

of sheep—for the Church is a body to be taught and fed, not to teach and feed: and of all sheep that are fed on the earth, Christ's Sheep are the most simple (the children of this generation are wiser): always losing themselves; doing little else in this world *but* lose themselves;—never finding themselves; always found by Some One else; getting perpetually into sloughs, and snows, and bramble thickets, like to die there, but for their Shepherd, who is for ever finding them and bearing them back, with torn fleeces and eyes full of fear.

This, then, being the No-Authority of the Church in matter of Doctrine, what Authority has it in matters of Discipline?

Much, every way. The sheep have natural and wholesome power (however far scattered they may be from their proper fold) of getting together in orderly knots; following each other on trodden sheepwalks, and holding their heads all one way when they see strange dogs coming; as well as of casting out of their company any whom they see reason to suspect of not being right sheep, and being among them for no good. All which things must be done as the time and place require, and by common consent. A path may be good at one time of day which is bad at another, or after a change of wind; and a position may be very good for sudden defence, which would be very stiff and awkward for feeding in. And common consent must often be of such and such a company on this or that hillside, in this or that particular danger,—not of all the sheep in the world: and the consent may either be literally common, and expressed in assembly, or it may be to appoint officers over the rest, with such and such trusts of the common authority, to be used for the common advantage. Conviction of crimes, and excommunication, for instance, could neither be effected except before, or by means of, officers of some appointed authority.

5. This, then, brings us to our fifth question. What is the Authority of the Clergy over the Church?

The first clause of the question must evidently be,—Who *are* the Clergy? and it is not easy to answer this without begging the rest of the question.

For instance, I think I can hear certain people answering, That the Clergy are folk of three kinds,—Bishops, who overlook the Church; Priests, who sacrifice for the Church; Deacons, who minister to the Church: thus assuming in their answer, that the Church is to be sacrificed *for*, and that people cannot overlook and minister to her at the same time; which is going much too fast. I think, however, if we define the Clergy to be the “Spiritual Officers of the Church,”—meaning, by Officers, merely People in office,—we shall have a title safe enough and general enough to begin with, and corresponding too, pretty well, with St. Paul’s general expression *προϊσταμένοι*, in Rom. xii. 8, and 1 Thess. v. 13.

Now, respecting these Spiritual Officers, or office-bearers, we have to inquire, first, What their Office or Authority is, or should be; secondly, Who gave, or should give, them that Authority? That is to say, first, What is, or should be the *nature* of their office; and secondly, What the *extent* or force of their authority in it? for this last depends mainly on its derivation.

First, then, What should be the offices, and of what kind should be the authority of the Clergy?

I have hitherto referred to the Bible for an answer to every question. I do so again; and behold, the Bible gives me no answer. I defy you to answer me from the Bible. You can only guess, and dimly conjecture, what the offices of the Clergy *were* in the first century. You cannot show me a single command as to what they shall be. Strange, this: the Bible give no answer to so apparently important a question! God surely would not have left His word without an answer to anything His children ought to ask. Surely it must be a ridiculous question—a question we ought never to have put, or thought of putting. Let us think of it again a little. To be sure,—it *is* a ridiculous question, and we should be ashamed of ourselves for having put it:—What should be the offices of the Clergy? That is to say, What are the possible spiritual necessities which at any time may arise in the Church, and by what means and men are they to be supplied;—evidently an infinite question. Different kinds of necessities must be met

by different authorities, constituted as the necessities arise. Robinson Crusoe, in his island, wants no Bishop, and makes a thunderstorm do for an Evangelist. The University of Oxford would be ill off without its Bishop ; but wants an Evangelist besides ; and that forthwith. The authority which the Vaudois shepherds need, is of Barnabas, the son of Consolation ; the authority which the City of London needs, is of James, the son of Thunder. Let us then alter the form of our question, and put it to the Bible thus ; What are the necessities most likely to arise in the Church ; and may they be best met by different men, or in great part by the same men acting in different capacities ? and are the names attached to their offices of any consequence ? Ah, the Bible answers now, and that loudly. The Church is built on the Foundation of the Apostles and Prophets, Jesus Christ himself being the corner-stone. Well ; We cannot have two foundations, so we can have no more Apostles or Prophets :—then, as for the other needs of the Church in its edifying upon this foundation, there are all manner of things to be done daily ;—rebukes to be given ; comfort to be brought ; Scripture to be explained ; warning to be enforced ; threatenings to be executed ; charities to be administered ; and the men who do these things are called, and call themselves, with absolute indifference, Deacons, Bishops, Elders, Evangelists, according to what they are doing at the time of speaking. St. Paul almost always calls himself a deacon, St. Peter calls himself an elder, 1 Pet. v. 1, and Timothy, generally understood to be addressed as a bishop, is called a deacon in 1 Tim. iv. 6—forbidden to rebuke an elder, in v. 1, and exhorted to do the work of an evangelist, in 2 Tim. iv. 5. But there is one thing which, as officers, or as separate from the rest of the flock, they *never* call themselves,—which it would have been impossible, as so separate, they ever *should* have called themselves ; that is—*Priests*.

It would have been just as possible for the Clergy of the early Church to call themselves Levites, as to call themselves (ex officio) Priests. The whole function of Priesthood was, on Christmas morning, at once and forever gathered into His Person who was born at Bethlehem ; and thenceforward, all

who are united with Him, and who with Him make sacrifice of themselves; that is to say, all members of the Invisible Church, become at the instant of their conversion, Priests; and are so called in 1 Pet. ii. 5, and Rev. i. 6, and xx. 6, where, observe, there is no possibility of limiting the expression to the Clergy; the conditions of Priesthood being simply having been loved by Christ, and washed in His blood. The blasphemous claim on the part of the Clergy of being *more* Priests than the godly laity—that is to say, of having a higher Holiness than the Holiness of being one with Christ,—is altogether a Romanist heresy, dragging after it, or having its origin in, the other heresies respecting the sacrificial power of the Church officer, and his repeating the oblation of Christ, and so having power to absolve from sin:—with all the other endless and miserable falsehoods of the Papal hierarchy; falsehoods for which, that there might be no shadow of excuse, it has been ordained by the Holy Spirit that no Christian minister shall once call himself a Priest from one end of the New Testament to the other, except together with his flock; and so far from the idea of any peculiar sanctification, belonging to the Clergy, never entering the apostles' minds, we actually find St Paul defending himself against the possible imputation of inferiority: “If any man trust to himself that he is Christ's, let him of himself think this again, that, as he is Christ's, even so are we Christ's” (2 Cor. x. 7). As for the unhappy retention of the term Priest in our English Prayer-book, so long as it was understood to mean nothing but an upper order of Church officer, licensed to tell the congregation from the reading-desk, what (for the rest) they might, one would think, have known without being told,—that “God pardoneth all them that truly repent,”—there was little harm in it; but, now that this order of Clergy begins to presume upon a title which, if it mean anything at all, is simply short for Presbyter, and has no more to do with the word Hierens than with the word Levite, it is time that some order should be taken both with the book and the Clergy. For instance, in that dangerous compound of halting poetry with hollow Divinity, called the *Lyra Apostolica*, we find much versification on the sin of

Korah and his company : with suggested parallel between the Christian and Levitical Churches, and threatening that there are "Judgment Fires, for high-voiced Korahs in their day." There are indeed such fires. But when Moses said, "a Prophet shall the Lord raise up unto you, like unto me," did he mean the writer who signs γ in the *Lyra Apostolica*? The office of the Lawgiver and Priest is now for ever gathered into One Mediator between God and man ; and THEY are guilty of the sin of Korah who blasphemously would associate themselves in his Mediatorship.

As for the passages in the "Ordering of Priests" and "Visitation of the Sick" respecting Absolution, they are evidently pure Romanism, and might as well not be there, for any practical effect which they have on the consciences of the Laity ; and had much better not be there, as regards their effect on the minds of the Clergy. It is indeed true that Christ promised absolving power to His Apostles : He also promised to those who believed, that they should take up serpents, and if they drank any deadly thing, it should not hurt them. His words were fulfilled literally ; but those who would extend their force to beyond the Apostolic times, most extend both promises, or neither.

Although, however, the Protestant laity do not often admit the absolving power of their clergy, they are but too apt to yield, in some sort, to the impression of their greater sanctification ; and from this instantly results the unhappy consequence that the sacred character of the Layman himself is forgotten, and his own Ministerial duty is neglected. Men not in office in the Church suppose themselves, on that ground, in a sort unholy ; and that, therefore, they may sin with more excuse, and be idle or impious with less danger, than the Clergy : especially they consider themselves relieved from all ministerial function, and as permitted to devote their whole time and energy to the business of this world. No mistake can possibly be greater. Every member of the Church is equally bound to the service of the Head of the Church ; and that service is pre-eminently the saving of souls. There is not a moment of a man's active life in which he may

not be indirectly preaching; and throughout a great part of his life he ought to be *directly* preaching, and teaching both strangers and friends; his children, his servants, and all who in any way are put under him, being given to him as especial objects of his ministrations. So that the only difference between a Church officer and a lay member, is either a wider degree of authority given to the former, as apparently a wiser and better man, or a special appointment to some office more easily discharged by one person than by many: as, for instance, the serving of tables by the deacons; the authority or appointment being, in either case, commonly signified by a marked separation from the rest of the Church, and the privilege or power* of being maintained by the rest of the Church, without being forced to labor with his hands or encumber himself with any temporal concerns.

Now, putting out of question the serving of tables, and other such duties, respecting which there is no debate, we shall find the offices of the Clergy, whatever names we may choose to give to those who discharge them, falling mainly into two great heads:—Teaching; including doctrine, warning, and comfort: Discipline; including reproof and direct administration of punishment. Either of which functions would naturally become vested in single persons, to the exclusion of others, as a mere matter of convenience: whether those persons were wiser and better than others or not: and respecting each of which, and the authority required for its fitting discharge, a short inquiry must be separately made.

I. Teaching.—It appears natural and wise that certain men should be set apart from the rest of the Church that they may make Theology the study of their lives: and that they should be thereto instructed specially in the Hebrew and Greek tongues; and have entire leisure granted them for the study of the Scriptures, and for obtaining general knowledge of the grounds of Faith, and best modes of its defence against all heretics: and it seems evidently right also, that with this Scholastic duty should be joined the Pastoral duty of constant visitation and exhortation to the people; for, clearly, the

* *ἐξουσία*, in 1 Cor. ix. 12. 2 Thess. iii. 9.

Bible, and the truths of Divinity in general, can only be understood rightly in their practical application; and clearly, also, a man spending his time constantly in spiritual ministrations, must be better able, on any given occasion, to deal powerfully with the human heart than one unpractised in such matters. The unity of Knowledge and Love, both devoted altogether to the service of Christ and his Church, marks the true Christian Minister; who I believe, whenever he has existed, has never failed to receive due and fitting reverence from all men,—of whatever character or opinion; and I believe that if all those who profess to be such, were such indeed, there would never be question of their authority more.

But, whatever influence they may have over the Church, their authority never supersedes that of either the intellect or the conscience of the simplest of its lay members. They can assist those members in the search for truth, or comfort their overworn and doubtful minds; they can even assure them that they are in the way of truth, or that pardon is within their reach: but they can neither manifest the truth nor grant the pardon. Truth is to be discovered, and Pardon to be won for every man by himself. This is evident from innumerable texts of Scripture, but chiefly from those which exhort every man to seek after Truth, and which connect knowing with doing. We are to seek after knowledge as silver, and search for her as for hid treasures; therefore, from every man she must be naturally hid, and the discovery of her is to be the reward only of personal search. The kingdom of God is as treasure hid in a field; and of those who profess to help us to seek for it, we are not to put confidence in those who say,—Here is the treasure, we have found it, and have it, and will give you some of it; but to those who say,—We think that is a good place to dig, and you will dig most easily in such and such a way.

Farther, it has been promised that if such earnest search be made, Truth shall be discovered: as much truth, that is, as is necessary for the person seeking. These, therefore, I hold, for two fundamental principles of religion,—that, without seeking, truth cannot be known at all; and that, by seeking,

it may be discovered by the simplest. I say, without seeking it cannot be known at all. It can neither be declared from pulpits, nor set down in Articles, nor in any wise "prepared and sold" in packages, ready for use. Truth must be ground for every man by himself out of its husk, with such help as he can get, indeed, but not without stern labor of his own. In what science is knowledge to be had cheap? or truth to be told over a velvet cushion, in half an hour's talk every seventh day? Can you learn chemistry so?—zoology?—anatomy? and do you expect to penetrate the secret of all secrets, and to know that whose price is above rubies; and of which the depth saith,—It is not in me, in so easy fashion? There are doubts in this matter which evil spirits darken with their wings, and that is true of all such doubts which we were told long ago—they can "be ended by action alone."*

As surely as we live, this truth of truths can only so be discerned: to those who act on what they know, more shall be revealed; and thus, if any man will do His will, he shall know the doctrine whether it be of God. Any man:—not the man who has most means of knowing, who has the subtlest brains, or sits under the most orthodox preacher, or has his library fullest of most orthodox books—but the man who strives to know, who takes God at His word, and sets himself to dig up the heavenly mystery, roots and all, before sunset, and the night come, when no man can work. Beside such a man, God stands in more and more visible presence as he toils, and teaches him that which no preacher can teach—no earthly au-

* (Carlyle, Past and Present, Chap. xi.) Can anything be more striking than the repeated warnings of St. Paul against strife of words; and his distinct setting forth of Action as the only true means of attaining knowledge of the truth, and the only sign of men's possessing the true faith? Compare 1 Timothy vi. 4, 20, (the latter verse especially, in connection with the previous three,) and 2 Timothy ii. 14, 19, 22, 23, tracing the connection here also; add Titus i. 10, 14, 16, noting "*in works they deny him,*" and Titus iii. 8, 9, "affirm constantly that they be careful to maintain good works; but avoid foolish questions;" and finally, 1 Timothy i. 4—7: a passage which seems to have been especially written for these times.

thority gainsay. By such a man, the preacher must himself be judged.

Doubt you this? There is nothing more certain nor clear throughout the Bible: the Apostles themselves appeal constantly to their flocks, and actually *claim* judgment from them, as deserving it, and having a right to it, rather than discouraging it. But, first notice the way in which the discovery of truth is spoken of in the Old Testament: "Evil men understand not judgment; but they that seek the Lord understand all things," Proverbs xxviii. 5. God overthroweth, not merely the transgressor or the wicked, but even "the words of the transgressor," Proverbs xxii. 12, and "the counsel of the wicked," Job v. 13, xxi. 16; observe again, in Proverbs xxiv. 4, "My son, eat thou honey, because it is good—so shall the knowledge of wisdom be unto thy soul, when thou hast *found it*, there shall be a reward;" and again, "What man is he that feareth the Lord? him shall he teach in the way that he shall choose;" so Job xxxii. 8, and multitudes of places more; and then, with all these places, which express the definite and personal operation of the Spirit of God on every one of His people, compare the place in Isaiah, which speaks of the contrary of this human teaching: a passage which seems as if it had been written for this very day and hour. "Because their fear towards me is taught by the *precept of men*; therefore, behold the wisdom of their wise men shall perish, and the understanding of their prudent men shall be hid." (xxix. 13, 14.) Then take the New Testament, and observe how St. Paul himself speaks of the Romans, even as hardly needing his epistle, but able to admonish one another; "*Nevertheless, brethren, I have written the more boldly unto you in some sort, as putting you in mind.*" (xv. 15.) Any one, we should have thought, might have done as much as this, and yet St. Paul increases the modesty of it as he goes on; for he claims the right of doing as much as this, only "because of the grace given to me of God, that I should be the minister of Jesus Christ to the Gentiles." Then compare 2 Cor. v. 11, where he appeals to the consciences of the people for the manifestation of his having done his duty; and observe in

verse 21 of that, and 1 of the next chapter, the "pray" and "beseech," not "command;" and again, in chapter vi. verse 4, "approving ourselves as the ministers of God." But the most remarkable passage of all is 2 Cor. iii. 1, whence it appears that the churches were actually in the habit of giving letters of recommendation to their ministers; and St. Paul dispenses with such letters, not by virtue of his Apostolic authority, but because the power of his preaching was enough manifested in the Corinthians themselves. And these passages are all the more forcible, because if in any of them St. Paul had claimed absolute authority over the Church as a teacher, it was no more than we should have expected him to claim, nor could his doing so have in anywise justified a successor in the same claim. But now that he has not claimed it—who, following him, shall dare to claim it? And the consideration of the necessity of joining expressions of the most exemplary humility, which were to be the example of succeeding ministers, with such assertion of Divine authority as should secure acceptance for the epistle itself in the sacred canon, sufficiently accounts for the apparent inconsistencies which occur in 2 Thess. iii. 14, and other such texts.

So much, then, for the authority of the Clergy in matters of Doctrine. Next, what is their authority in matters of Discipline. It must evidently be very great, even if it were derived from the people alone, and merely vested in the clerical officers as the executors of their ecclesiastical judgments, and general overseers of all the Church. But granting, as we must presently, the minister to hold office directly from God, his authority of discipline becomes very great indeed; how great, it seems to me most difficult to determine, because I do not understand what St. Paul means by "delivering a man to Satan for the destruction of the flesh." Leaving this question, however, as much too hard for casual examination, it seems indisputable that the authority of the Ministers or court of Ministers should extend to the pronouncing a man Excommunicate for certain crimes against the Church, as well as for all crimes punishable by ordinary law. There ought, I think, to be an ecclesiastical code of laws; and a man ought to have jury trial,

according to this code, before an ecclesiastical judge ; in which, if he were found guilty, as of lying, or dishonesty, or cruelty, much more of any actually committed violent crime, he should be pronounced Excommunicate ; refused the Sacrament ; and have his name written in some public place as an excommunicate person until he had publicly confessed his sin and besought pardon of God for it. The jury should always be of the laity, and no penalty should be enforced in an ecclesiastical court except this of excommunication.

This proposal may sound strange to many persons ; but assuredly this, if not much more than this, is commanded in Scripture, first in the (much abused) text, “Tell it unto the Church ;” and most clearly in 1 Cor. v. 11—13 ; 2 Thess. iii. 6 and 14 ; 1 Tim. v. 8 and 20 ; and Titus iii. 10 ; from which passages we also know the two proper degrees of the penalty. For Christ says, Let him who refuses to hear the Church, “be unto thee as an heathen man and a publican.” But Christ ministered to the heathen, and sat at meat with the publican ; only always with declared or implied expression of their inferiority ; here, therefore, is one degree of excommunication for persons who “offend” their brethren ; committing some minor fault against them ; and who, having been pronounced in error by the body of the Church, refuse to confess their fault or repair it ; who are then to be no longer considered members of the Church ; and their recovery to the body of it is to be sought exactly as it would be in the case of a heathen. But covetous persons, railers, extortioners, idolaters, and those guilty of other gross crimes, are to be entirely cut off from the company of the believers ; and we are not so much as to eat with them. This last penalty, however, would require to be strictly guarded, that it might not be abused in the infliction of it, as it has been by the Romanists. We are not, indeed, to eat with them, but we may exercise all Christian charity towards them, and give them to eat, if we see them in hunger, as we ought to all our enemies ; only we are to consider them distinctly as our *enemies* : that is to say, enemies of our Master Christ ; and servants of Satan.

As for the rank or name of the officers in whom the authori-

ties, either of teaching or discipline, are to be vested, they are left undetermined by Scripture. I have heard it said by men who know their Bible far better than I, that careful examination may detect evidence of the existence of three orders of Clergy in the Church. This may be; but one thing is very clear, without any laborious examination, that "bishop" and "elder" sometimes mean the same thing, as, indisputably, in Titus i. 5 and 7, and 1 Pet. v. 1 and 2, and that the office of the bishop or overseer was one of considerably less importance than it is with us. This is palpably evident from 1 Timothy iii., for what divine among us, writing of episcopal proprieties, would think of saying that bishops "must not be given to wine," must be "no strikers," and must not be "novices?" We are not in the habit of making bishops of novices in these days; and it would be much better that, like the early Church, we sometimes run the risk of doing so; for the fact is we have not bishops enough—by some hundreds. The idea of overseership has been practically lost sight of, its fulfilment having gradually become physically impossible, for want of more bishops. The duty of a bishop is, without doubt, to be accessible to the humblest clergymen of his diocese, and to desire very earnestly that all of them should be in the habit of referring to him in all cases of difficulty; if they do not do this of their own accord, it is evidently his duty to visit them; live with them sometimes, and join in their ministrations to their flocks, so as to know exactly the capacities, and habits of life of each; and if any of them complained of this or that difficulty with their congregations, the bishop should be ready to go down to help them, preach for them, write general epistles to their people, and so on: besides this, he should of course be watchful of their errors—ready to hear complaints from their congregations of inefficiency or aught else; besides having general superintendence of all the charitable institutions and schools in his diocese, and good knowledge of whatever was going on in theological matters, both all over the kingdom and on the continent. This is the work of a right overseer; and I leave the reader to calculate how many additional bishops—and those hard-

working men, too—we should need to have it done even decently. Then our present bishops might all become archbishops with advantage, and have general authority over the rest.*

As to the mode in which the officers of the Church should be elected or appointed, I do not feel it my business to say anything at present, nor much respecting the extent of their authority, either over each other or over the congregation, this being a most difficult question, the right solution of which evidently lies between two most dangerous extremes—insubordination and radicalism on one hand, and ecclesiastical tyranny and heresy on the other: of the two, insubordination is far the least to be dreaded—for this reason, that nearly all real Christians are more on the watch against their pride than their indolence, and would sooner obey their clergyman, if possible, than contend with him; while the very pride they suppose conquered often returns masked, and causes them to make a merit of their humility and their abstract obedience, however unreasonable: but they cannot so easily persuade themselves there is a merit in abstract *disobedience*.

Ecclesiastical tyranny has, for the most part, founded itself on the idea of Vicarianism, one of the most pestilent of the Romanist theories, and most plainly denounced in Scripture. Of this I have a word or two to say to the modern “Vicarian.” All powers that be are unquestionably ordained of God; so

* I leave, in the main text, the abstract question of the fitness of Episcopacy unapproached, not feeling any call to speak of it at length at present; all that I feel necessary to be said is, that bishops being granted, it is clear that we have too few to do their work. But the argument from the practice of the Primitive Church appears to me to be of erroneous weight,—nor have I ever heard any rational plea alleged against Episcopacy, except that, like other things, it is capable of abuse, and had sometimes been abused; and as, altogether clearly and indisputably, there is described in the Bible an episcopal office, distinct from the merely ministerial one; and, apparently, also an Episcopal officer attached to each church, and distinguished in the Revelations as an Angel, I hold the resistance of the Scotch Presbyterian Church to Episcopacy to be unscriptural, futile, and schismatic.

that they that resist the Power, resist the ordinance of God. Therefore, say some in these offices, We, being ordained of God, and having our credentials, and being in the English Bible called ambassadors for God, do, in a sort, represent God. We are Vicars of Christ, and stand on earth in place of Christ. I have heard this said by Protestant clergymen.

Now the word ambassador has a peculiar ambiguity about it, owing to its use in modern political affairs; and these clergymen assume that the word, as used by St. Paul, means an Ambassador Plenipotentiary; representative of his King, and capable of acting for his King. What right have they to assume that St. Paul meant this? St. Paul never uses the word ambassador at all. He says simply, "We are in embassy from Christ; and Christ beseeches you through us." Most true. And let it further be granted, that every word that the clergyman speaks is literally dictated to him by Christ; that he can make no mistake in delivering his message; and that, therefore, it is indeed Christ himself who speaks to us the word of life through the messenger's lips. Does, therefore, the messenger represent Christ? Does the channel which conveys the waters of the Fountain represent the Fountain itself? Suppose, when we went to draw water at a cistern, that all at once the Leaden Spout should become animated, and open its mouth and say to us, See, I am Vicarious for the Fountain. Whatever respect you show to the Fountain, show some part of it to me. Should we not answer the Spout, and say, Spout, you were set there for our service, and may be taken away and thrown aside* if anything goes wrong with you. But the Fountain will flow for ever.

Observe, I do not deny a most solemn authority vested in every Christian messenger from God to men. I am prepared to grant this to the uttermost; and all that George Herbert says, in the end of the Church-porch, I would enforce, at another time than this, to the uttermost. But the Authority is simply that of a King's messenger; not of a King's Representative. There is a wide difference; all the difference between humble service and blasphemous usurpation.

* "By just judgment be deposed." Art. 26.

Well, the congregation might ask, grant him a King's messenger in cases of doctrine,—in cases of discipline, an officer bearing the King's commission. How far are we to obey him? How far is it lawful to dispute his commands?

For, in granting, above, that the Messenger always gave his message faithfully, I granted too much to my adversaries, in order that their argument might have all the weight it possibly could. The Messengers rarely deliver their message faithfully; and sometimes have declared, as from the King, messages of their own invention. How far are we, knowing them for King's messengers, to believe or obey them?

Suppose for instance, in our English army, on the eve of some great battle, one of the colonels were to give this order to his regiment. "My men, tie your belts over your eyes, throw down your muskets, and follow me as steadily as you can, through this marsh, into the middle of the enemy's line," (this being precisely the order issued by our Puseyite Church officers.) It might be questioned, in the real battle, whether it would be better that a regiment should show an example of insubordination, or be cut to pieces. But happily in the Church, there is no such difficulty; for the King is always with his army: Not only with his army, but at the right hand of every soldier of it. Therefore, if any of their colonels give them a strange command, all they have to do is to ask the King; and never yet any Christian asked guidance of his King, in any difficulty whatsoever, without mental reservation or secret resolution, but he had it forthwith. We conclude then, finally, that the authority of the Clergy is, in matters of discipline, large (being executive, first, of the written laws of God, and secondly, of those determined and agreed upon by the body of the Church), in matters of doctrine, dependent on their recommending themselves to every man's conscience, both as messengers of God, and as themselves men of God, perfect, and instructed to good works.*

* The difference between the authority of doctrine and discipline is beautifully marked in 2 Timothy ii. 25, and Titus ii. 12—15. In the first passage, the servant of God, teaching divine doctrine, must not strive, but must "in meekness instruct those that oppose themselves;" in

6. The last subject which we had to investigate was, it will be remembered, what is usually called the connection of "Church and State." But, by our definition of the term Church, throughout the whole of Christendom, the Church (or society of professing Christians) is the State, and our subject is therefore, properly speaking, the connection of the lay and clerical officers of the Church; that is to say, the degrees in which the civil and ecclesiastical governments ought to interfere with or influence each other.

It would of course be vain to attempt a formal inquiry into this intricate subject;—I have only a few detached points to notice respecting it.

There are three degrees or kinds of civil government. The first and lowest, executive merely; the government in this sense being simply the National Hand, and composed of individuals who administer the laws of the nation, and execute its established purposes.

The second kind of government is deliberative; but in its deliberation, representative only of the thoughts and will of the people or nation, and liable to be deposed the instant it ceases to express those thoughts and that will. This, whatever its form, whether centred in a king or in any number of men, is properly to be called Democratic. The third and highest kind of government is deliberative, not as representative of the people, but as chosen to take separate counsel for them, and having power committed to it, to enforce upon them whatever resolution it may adopt, whether consistent with their will or not. This government is properly to be called Monarchical, whatever its form.

I see that politicians and writers of history continually run into hopeless error, because they confuse the Form of a government with its Nature. A government may be nominally vested in an individual; and yet if that individual be in such fear of those beneath him, that he does nothing but what he

the second passage, teaching us "that denying ungodliness and worldly lusts he is *to live soberly, righteously, and godly in this present world,*" the minister is to speak, exhort, and rebuke with ALL AUTHORITY—both functions being expressed as united in 2 Timothy iv. 3.

supposes will be agreeable to them, the Government is Democratic ; on the other hand, the Government may be vested in a deliberative assembly of a thousand men, all having equal authority, and all chosen from the lowest ranks of the people ; and yet if that assembly act independently of the will of the people, and have no fear of them, and enforce its determinations upon them, the government is Monarchical ; that is to say, the Assembly, acting as One, has power over the Many, while in the case of the weak king, the Many have power over the One.

A Monarchical Government, acting for its own interests, instead of the people's, is a tyranny. I said the Executive Government was the hand of the nation ;—the Republican Government is in like manner its tongue. The Monarchical Government is its head.

All true and right Government is Monarchical, and of the head. What is its best form, is a totally different question ; but unless it act *for* the people, and not as representative of the people, it is no government at all ; and one of the grossest blockheadisms of the English in the present day, is their idea of sending men to Parliament to “represent *their* opinions.” Whereas their only true business is to find out the wisest men among them, and send them to Parliament to represent their *own* opinions, and act upon them. Of all puppet-shows in the Satanic Carnival of the earth, the most contemptible puppet-show is a Parliament with a mob pulling the strings.

Now, of these three states of government, it is clear that the merely executive can have no proper influence over ecclesiastical affairs. But of the other two, the first, being the voice of the people, or voice of the Church, must have such influence over the Clergy as is properly vested in the body of the Church. The second, which stands in the same relation to the people as a father does to his family, will have such farther influence over ecclesiastical matters, as a father has over the consciences of his adult children. No absolute authority, therefore, to enforce their attendance at any particular place of worship, or subscription to any particular Creed.

But indisputable authority to procure for them such religious instruction as he deems fittest,* and to recommend it to them by every means in his power ; he not only has authority, but is under obligation to do this, as well as to establish such disciplines and forms of worship in his house as he deems most convenient for his family : with which they are indeed at liberty to refuse compliance, if such disciplines appear to them clearly opposed to the law of God ; but not without most solemn conviction of their being so, nor without deep sorrow to be compelled to such a course.

But it may be said, the Government of a people never does stand to them in the relation of a father to his family. If it do not, it is no Government. However grossly it may fail in its

* Observe, this and the following conclusions depend entirely on the supposition that the Government is part of the Body of the Church, and that some pains have been taken to compose it of religious and wise men. If we choose, knowingly and deliberately, to compose our Parliament, in great part, of infidels and Papists, gamblers and debtors, we may well regret its power over the Clerical officer ; but that we should, at any time, so compose our Parliament, is a sign that the Clergy themselves have failed in their duty, and the Church in its watchfulness ;— thus the evil accumulates in re-action. Whatever I say of the responsibility or authority of Government, is therefore to be understood only as sequent on what I have said previously of the necessity of closely circumscribing the Church, and then composing the Civil Government out of the circumscribed Body. Thus, all Papists would at once be rendered incapable of share in it, being subjected to the second or most severe degree of excommunication—first, as idolaters, by 1 Cor. v. 10 ; then, as covetous and extortioners, (selling absolution,) by the same text ; and, finally, as heretics and maintainers of falsehoods, by Titus iii. 10, and 1 Tim. iv. 1.

I do not write this hastily, nor without earnest consideration both of the difficulty and the consequences of such Church Discipline. But either the Bible is a superannuated book, and is only to be read as a record of past days ; or these things follow from it, clearly and inevitably. That we live in days when the Bible has become impracticable, is if it be so! the very thing I desire to be considered. I am not setting down these plans or schemes as at present possible. I do not know how far they are possible ; but it seems to me that God has plainly commanded them, and that, therefore, their impracticability is a thing to be meditated on.

duty, and however little it may be fitted for its place, if it be a Government at all, it has paternal office and relation to the people. I find it written on the one hand,—“Honor thy Father;” on the other,—“Honor the King;” on the one hand,—“Whoso smiteth his Father, shall be put to death;” * on the other,—“They that resist shall receive to themselves damnation.” Well, but, it may be farther argued, the Clergy are in a still more solemn sense the Fathers of the People, and the People are the beloved Sons; why should not, therefore, the Clergy have the power to govern the civil officers?

For two very clear reasons.

In all human institutions certain evils are granted, as of necessity; and, in organizing such institutions, we must allow for the consequences of such evils, and make arrangements such as may best keep them in check. Now, in both the civil and ecclesiastical governments there will of necessity be a certain number of bad men. The wicked civilian has comparatively little interest in overthrowing ecclesiastical authority; it is often a useful help to him, and presents in itself little which seems covetable. But the wicked ecclesiastical officer has much interest in overthrowing the civilian, and getting the political power into his own hands. As far as wicked men are concerned, therefore, it is better that the State should have power over the Clergy, than the Clergy over the State.

Secondly, supposing both the Civil and Ecclesiastical officer to be Christians; there is no fear that the civil officer should under-rate the dignity or shorten the serviceableness of the minister; but there is considerable danger that the religious enthusiasm of the minister might diminish the serviceableness of the civilian. (The History of Religious Enthusiasm should be written by some one who had a life to give to its investigation; it is one of the most melancholy pages in human records, and one the most necessary to be studied.) Therefore, so far as good men are concerned, it is better the State should have power over the Clergy, than the Clergy over the State.

* Exod. xxi. 15.

This we might, it seems to me, conclude by unassisted reason. But surely the whole question is, without any need of human reason, decided by the history of Israel. If ever a body of Clergy should have received independent authority, the Levitical Priesthood should; for they were indeed a Priesthood, and more holy than the rest of the nation. But Aaron is always subject to Moses. All solemn revelation is made to Moses, the civil magistrate, and he actually commands Aaron as to the fulfilment of his priestly office, and that in a necessity of life and death: "Go and make an atonement for the people." Nor is anything more remarkable throughout the whole of the Jewish history than the perfect subjection of the Priestly to the Kingly Authority. Thus Solomon thrusts out Abiathar from being priest, 1 Kings ii. 27; and Jehohaz administers the funds of the Lord's House, 2 Kings xii. 4, though that money was actually the Atonement Money, the Ransom for Souls (Exod. xxx. 12).

We have, however, also the beautiful instance of Samuel uniting in himself the offices of Priest, Prophet, and Judge; nor do I insist on any special manner of subjection of Clergy to civil officers, or *vice versa*; but only on the necessity of their perfect unity and influence upon each other in every Christian Kingdom. Those who endeavor to effect the utter separation of ecclesiastical and civil officers, are striving, on the one hand, to expose the Clergy to the most grievous and most subtle of temptations from their own spiritual enthusiasm and spiritual pride; on the other, to deprive the civil officer of all sense of religious responsibility, and to introduce the fearful, godless, conscienceless, and soulless policy of the Radical and the (so called) Socialist. Whereas, the ideal of all government is the perfect unity of the two bodies of officers, each supporting and correcting the other; the Clergy having due weight in all the national councils; the civil officers having a solemn reverence for God in all their acts; the Clergy hallowing all worldly policy by their influence; and the magistracy repressing all religious enthusiasm by their practical wisdom. To separate the two is to endeavor to separate the daily life of the nation from God, and to map out the domin-

ion of the soul into two provinces—one of Atheism, the other of Enthusiasm. These, then, were the reasons which caused me to speak of the idea of separation of Church and State as Fatuity ; for what Fatuity can be so great as the not having God in our thoughts ; and, in any act or office of life, saying in our hearts, “There is no God.”

Much more I would fain say of these things, but not now : this only, I must emphatically assert, in conclusion :—That the schism between the so called Evangelical and High Church parties in Britain, is enough to shake many men’s faith in the truth or existence of Religion at all. It seems to me one of the most disgraceful scenes in Ecclesiastical history, that Protestantism should be paralyzed at its very heart by jealousies, based on little else than mere difference between high and low breeding. For the essential differences, in the religious opinions of the two parties, are sufficiently marked in two men whom we may take as the highest representatives of each—George Herbert and John Milton ; and I do not think there would have been much difficulty in attuning those two, if one could have got them together. But the real difficulty, nowadays, lies in the sin and folly of both parties : in the superciliousness of the one, and the rudeness of the other. Evidently, however, the sin lies most at the High Church door, for the Evangelicals are much more ready to act with Churchmen than they with the Evangelicals ; and I believe that this state of things cannot continue much longer ; and that if the Church of England does not forthwith unite with herself the entire Evangelical body, both of England and Scotland, and take her stand with them against the Papacy, her hour has struck. She cannot any longer serve two masters ; nor make curtsies alternately to Christ and anti-Christ. That she *has* done this is visible enough by the state of Europe at this instant. Three centuries since Luther—three hundred years of Protestant knowledge—and the Papacy not yet overthrown ! Christ’s truth still restrained, in narrow dawn, to the white cliffs of England and white crests of the Alps ;—the morning star paused in its course in heaven ;—the sun and moon stayed, with Satan for their Joshua.

But how to unite the two great sects of paralyzed Protestants? By keeping simply to Scripture. The members of the Scottish Church have not a shadow of excuse for refusing Episcopacy; it has indeed been abused among them; grievously abused; but it is in the Bible; and that is all they have a right to ask.

They have also no shadow of excuse for refusing to employ a written form of prayer. It may not be to their taste—it may not be the way in which they like to pray; but it is no question, at present, of likes or dislikes, but of duties; and the acceptance of such a form on their part would go half way to reconcile them with their brethren. Let them allege such objections as they can reasonably advance against the English form, and let these be carefully and humbly weighed by the pastors of both churches: some of them ought to be at once forestalled. For the English Church, on the other hand, *must* cut the term Priest entirely out of her Prayer-book, and substitute for it that of Minister or Elder; the passages respecting absolution must be thrown out also, except the doubtful one in the Morning Service, in which there is no harm; and then there would be only the Baptismal question left, which is one of words rather than of things, and might easily be settled in Synod, turning the refractory Clergy out of their offices, to go to Rome if they chose. Then, when the Articles of Faith and form of worship had been agreed upon between the English and Scottish Churches, the written forms and articles should be carefully translated into the European languages, and offered to the acceptance of the Protestant churches on the Continent, with earnest entreaty that they would receive them, and due entertainment of all such objections as they could reasonably allege; and thus the whole body of Protestants, united in one great Fold, would indeed go in and out, and find pasture; and the work appointed for them would be done quickly, and Antichrist overthrown.

Impossible: a thousand times impossible!—I hear it exclaimed against me. No—not impossible. Christ does not order impossibilities, and He *has* ordered us to be at peace,

one with another. Nay, it is answered—He came not to send peace, but a sword. Yes, verily : to send a sword upon earth, but not within His Church ; for to His Church He said, “My Peace I leave with you.”

THE END.
